Convergent, (73) converging. *Læffingia*, g. 82. p. 53.
Conoid, cone-like. *Sitene conoidea*, s. 6223.
Constricted, (74) tightened or contracted in some particular place. *Sálix lanceolata*, s. 13601.
Converging, approaching together. *Datúra férox*, s. 2164.
Convez, rising in a circular form. *Piper rubellum*, s. 543.
Convezo-plane, plane on one side, convex on the other. *Cárex vulpina*, s. 1384.
Convoluted, (75) rolled together. *Crócus*, g. 93. p. 30.
Coralloid, like coral. *Chóndria kalifórmis*, s. 15291.
Cordate, heart-shaped. *Cáma variabilis*, s. 9.
Coriaceous, leathery. *Chionánthus virginicus*, s. 152.
Corneous, horny, of the consistence of horn. *Spharóccus corneus*, s. 15301.
Corniculate, having processes like small horns. *Mesembryanthemum procumbens*, s. 7251.
Cornute, horned. *Eucalyptus coronáta*, s. 7003.
Corona, (76) literally a crown: applied in botany to the crown-like cup which is found at the orifice of the tube of the corolla in *Narcissus*, *Pancrátium*, and others. *Brodiaea*, g. 114 p. 31.
Corpuscle, a small body; a particle of any thing. *Secamóne*, g. 577. p. 114.
Corroborant, strengthening, having the power to give strength. *Melissa*, g. 1278. (note.)
Corrosive, having the power of wearing away. *Sapindus*, g. 926. (note.)
Corrugated, wrinkled or shrivelled. *Páspalum stoloniferum*, s. 926.
Cortical, of or belonging to the bark. *Línium*, g. 701. (note.)
Corymb, (77) a raceme or panicle in which the stalks of the lower flowers are longer than those of the upper, so that the flowers themselves are all on the same level. *Centránthus rúber*, s. 110.
Corymbosæ, formed or arranged after the manner of a corymb. *Lopézia coronáta*, s. 103.
Corymbulose, formed or arranged in many small corymbs. *Crássula corymbulosa*, s. 3887.
Cosmetic, beautifying. *Dipsácus*, g. 262. (note.)
Costæ literally ribs: applied by botanists sometimes to the midrib of a leaf, and sometimes to any projecting round elevations having the same direction as the axis of the fruit. *Morchélla*, g. 2386. (note.)
Costate, ribbed. *Jungermánia furcáta*, s. 15004.
Cotyledons, (78) seed leaves. *Hórdeum*, g. 210. (note.)
Cowlèd-leaved, a thing is said to be cowlèd or cucullate when its end is curved inwards in such a manner as to represent the cowl or hood of a monk. *Lachemália bifóllia*, s. 4898.
Crenæ, notches. *Saxifraga umbrósa*, s. 6063.
Crenatè, (79) notched. *Cáma lambáta*, s. 8.
Crenature, the notching. *Prásium minus*, s. 8718.
Crenulate, full of notches. *Sálvia pomifera*, s. 370.
Crest, 80 applied to some elevated appendage terminating a particular organ: a stamen is crested when the filament projects beyond the anther, and becomes dilated. *Kampféria*, g. 12 p. 1.
Cribiform, riddled with holes like a sieve. *Peziza erubrosa*, s. 16265.
Cribose, perforated like a sieve. *Parinárium*, g. 870. p. 257.
Crisp, when leaves are very much undulated at the

margin, they are called crisp or curled. *Cóstus villosissimus*, s. 66.
Cruciate, (81) shaped like a Maltese cross: a flower is said to be cruciate when four equal petals are placed opposite each other at right angles. *Gentiána septentída*, s. 3360.
Cruciferous, the name of a particular family of plants bearing cruciate flowers. p. 536.
Crustaceous, having a hard brittle shell. *Hellénia*, g. 9. p. 1.
Crystalline, consisting of, or resembling, crystals. *Mesembryanthemum lanceolátum*, s. 7382.
Cucullate, (82) hooded, cowlèd; see *Cowlèd*. *Calathéa*, g. 3. p. 1.
Culm, the stem of grasses, scitamineous plants, and the like. *Maránta arundinácea*, s. 18.
Culmiferous, producing culms. *Triticum spélta*, s. 1235.
Cultrate, (83) shaped like a pruning-knife. *Crássula cultráta*, s. 3880.
Cuneate, wedge-shaped. *Teúcrium cubénsis*, s. 8117.
Cup, the same as *corona*; see that word, g. 711. p. 236.
Cupule, (84) the cup of an acorn, and of all amentaceous plants. p. 1017.
Cupuliform, or *Cupulate*, shaped like a reversed bell. p. 982.
Cuspidate, (85) like the point of a spear, a leaf is cuspidate, when it is suddenly tapered to a point. *Tritónia rósea*, s. 664.
Cutaneous, relating to the skin. *Scabiósa*, g. 264. (note.)
Cuticle, the scarf skin, or epidermis. *Chára*, g. 2295. (note.)
Cut-toothed, (86) cut and toothed at the same time. *Plantágo macrorrhíza*, s. 1708.
Cyathiform, cup-shaped, concave. *Narcissus pulchélius*, s. 4025.
Cylindrical, having the form of a cylinder. *Dicranum Scottianum*, s. 14724.
Cylindrical, cylinder-shaped. *Salicórnia rádicans*, s. 116.
Cylindrico-campanulate, cylindrically bell-shaped. *Encalypta*, g. 2222. p. 896.
Cymbiform, (87) boat-shaped. *Valléisa glábra*, s. 2456.
Cyme, (88) a mode of inflorescence, resembling a flattened panicle. *Scirpus lacústris*, s. 861.
Cynose, flowering in cymes. *Róchea cynósa*, s. 3866.

D.

Decandrous, having ten stamens. *Phytolácea abysinica*, s. 6573.
Deciduous, falling off. Leaves which are shed annually are said to be deciduous: as are also trees that annually lose their leaves. *Olea excelsa*, s. 141.
Declinate, curved downwards. *Zingiber zerámbet*, s. 56.
Decoction, a preparation or digest by boiling water. *Cónila*, g. 58. (note.)
Decomposed, (89) a leaf is said to be decomposed when it is twice pinnated; a panicle when its branches are also pinnated. *Linociera compácta*, s. 474.
Decorticated, disbarbed. *Amýgdalus*, g. 1128. (note.)
Decumbent, lying down. *Chloránthus inconspicuus*, s. 121.
Decurrent, (90) running down. *Lopézia coronáta*, s. 103.
Decursive, having a tendency to run down. *Actinóthus heliánthi*, s. 3591.
Decussated, when two right lines cross each other at right angles they are said to decussate; leaves are often placed in this position. *Ixóra parviflora*, s. 1746.
Deflexed, turned downwards. *Schizánthus pinnátus*, s. 272.
Dehiscent, (91) gaping; an expression applied to the mode in which the anthers or the fruit burst open and discharge their contents. p. 896.
Deliquescent, melting away upon exposure to air. p. 979.

Delta-leaved, Deltoïd, (92) shaped like the Greek Δ . Mesembryanthemum, g. 1146. p. 437.

Demulcent, having the property of softening any thing. Málva, g. 1472. (note.)

Dentate, (93) having the margin divided into incisions resembling teeth. Veronica acúta, s. 196.

Dentato-ciliate, having the margin dentate and tipped with ciliae. Sonchus arvensis, s. 11106.

Dentato-sinuate, (94) scolopend and toothed. Hypochaeris glabra, s. 11319.

Denticulate, being finely dentate. Circaea lutetiana, s. 457.

Denticulations, small toothings. Bossiaea scolopendrium, s. 10121.

Dentiform, tooth-shaped. Barbaraea plantaginea, s. 8390.

Dentifrice, powder made to scour the teeth. Acacia, g. 2127. (note.)

Deobstruent, having the power of removing obstructions, a term of medicine. Agrimonia, g. 1101. (note.)

Dependent, hanging down. Moraea spathacea, s. 826.

Depressed, pressed downward. Thalia, g. 4. p. 1.

Deputed, purified, cleansed. Oxalis, g. 1065. (note.)

Despante, to throw off in froth or scum. Cecropia, g. 5043. (note.)

Detergent, Detersive, having the power of cleansing. Phyalis, g. 448. (note.)

Diandrous, having two stamens. Boerhaavia hirsuta, s. 107.

Diaphanous, transparent. Encalypta ciliata β alpina, s. 14385.

Diaphoretic, promoting perspiration. Sambucus, g. 680. (note.)

Dichotomous, (95) a stem that ramifies in pairs. Phrynium dichotomum, s. 28.

Dicocous, having two cocci, p. 78.

Didymous, two united. Priva mexicana, s. 8675.

Didynamous, (96) having two long stamens and two short ones in the same flower, each pair being collateral. Stenochilus, g. 1333. p. 493.

Dietetics, relating to food or diet. Saccharum, g. 215. (note.)

Diform, two forms; used to express irregularity. Anacamperos rotundifolia, s. 6629.

Diffuse, scattered, widely spread. Veronica saxatilis, s. 223.

Diffusible, such as may be spread. Amygdalus, g. 1128. (note.)

Digitate, (97) fingered, shaped like the hand spread open. Veronica digitata, s. 255.

Digitiform, formed like fingers. Mesembryanthemum incompactum, s. 7408.

Digynous, two styles or female organs. Salsia crética, s. 401.

Diluent, something diluting. Melissa, g. 1278. (note.)

Dimidiate, (98) halved, divided into two parts. p. 895.

Diacious, when a plant bears female flowers on one individual, and males on another, it is called diacious. Valeriana dioica, s. 544.

Discoid, (99) When in Compositae the florets are all tubular, the head of flowers is said to be discoid. In other cases, when the florets of the centre of a head of flowers are more perfect than the rest, they are called discoid. Finally, when any thing is dilated into something which may be compared to a disk, the term discoid is also made use of. Valeriana discoides, s. 563.

Discus, or *Disk*, the fleshy annular process that surrounds the ovary of many flowers: also the surface of a leaf; also the centre of a head of flowers of Compositae. Anoplia, g. 504. p. 113.

Discutient, having the power to scatter the matter of tumours. Artemisia, g. 1721. (note.)

Dissepiment, (100) the partitions by which a seed vessel is divided internally. Elytraria, g. 45. p. 9.

Distichous, (101) two-rowed: producing leaves or flowers in two opposite rows. Schœnus, g. 119. p. 31.

Ditrichotomous, (102) divided in twos or threes; a stem continually dividing into double or treble ramifications. Trichodium caninum, s. 1001.

Diuretic, having the power of promoting the flow of urine. Bromelia, g. 726. (note.)

Divaricate, growing in a straggling manner. Veronica pinnata, s. 219.

Dodecandrous, having twelve stamens. Rivina dodecandra, s. 1511.

Dolabriform, (103) axe-shaped. Stizolobium, g. 1551. p. 399.

Dorsal, growing on the back. Kæmpferia rotunda, s. 67.

Drastic, applied to medicines which act violently. Dictamnus, g. 997. (note.)

Drupe, (104) a kind of fruit consisting of a fleshy succulent rind, and containing a hard stone in the middle. Olea, g. 52. p. 9.

Dyspeptic, difficulty of digestion. Artemisia, g. 1721. (note.)

E.

Echinated, (105) covered with prickles like an echinus or hedgehog. Amomum subulatum, s. 79.

Edible, eatable. Eleusine, g. 200. (note.)

Effuse, (106) literally poured forth; applied to inflorescence, it means a kind of panicle with a very loose one-sided arrangement. Junco effusus, s. 4327.

Electuaries, a medicine of conserves and powders in the consistence of honey. Prunus domestica, s. 7045.

Elephantiasis, a disease in which the limbs become prodigiously swollen and finally fall off. Smilax, g. 2081. (note.)

Ellipsoid, (107) like an ellipsis. Nasturtium amphibium, s. 8970.

Elliptic-lanceolate, (108) a form between elliptical and lanceolate. Olea americana, s. 140.

Elongated, lengthened. Canna gigantea, s. 6.

Emarginate, (109) having a small notch in the end. Canna coccinea, s. 3.

Embossed, (110) projecting in the centre like the boss or umbo of a round shield or target. Protea umbonalis, s. 1327.

Embracing, (11) a leaf is said to embrace a stem when it clasps it round with its base. Salsia amplexicaulis, s. 428.

Emetic, that which produces vomiting. Primula vulgaris, s. 5020.

Emmenagogue, any medicine that promotes menstruation. Ligusticum, g. 665. (note.)

Emollient, softening. Triumfetta, g. 1087. (note.)

Emulsions, medicines made of bruised oily seeds and water. Amygdalus, g. 1128. (note.)

Ensate, or *Ensisiform*, (111) shaped like a sword with a straight blade. Aloe candelicans, s. 444.

Epidermis, the outer skin of the bark. Larus, g. 954. (note.)

Epiphyllous, (112) growing upon a leaf. Jungermannia epiphylla, s. 15003.

Epiphytes, plants which grow upon other plants without deriving any nutriment from them. Catasctum, g. 1889. (note.)

Equidistant, equally distant. Egepodium, g. 652. p. 116.

Equilateral, having equal sides. Aloe reticulata, s. 4392.

Equitant, (113) a mode of veneration, or of arrangement of leaves with respect to each other, in which the sides or edges alternately overlap each other. Moraea iridioides, s. 827.

Erecto-patent, between erect and spreading. Dicranum glaucum, s. 14715.

Eroded, (114) gnawed, bitten; a term used to express a particular kind of irregular denticulation. Salsia pinnata, s. 377.

Eroso-dentate, the toothing being eroded. Lycopodium clavatum, s. 14632.

Errhine, promoting a discharge of mucus from the nostrils. Asarum, g. 1072. (note.)

Escharotic, having the power to scar or burn the skin. Juniperus, g. 2113. (note.)

Esculent, good for food. Oxystelma esculentum, s. 3226.

Estuaries, arms of the sea, mouths of a river. *Polýgonum amphistatum*, s. 5368.
Elatated, whitened by being kept from air and light. *Triticum spelta*, p. 70. (note.)
Evanescant, quickly vanishing. *Heracleum*, g. 672. p. 117.
Exserted, unfolded. *Ancilóna*, g. 89. (note.)
Excavated, hollowed out. *Bórigo*, g. 341. p. 109.
Eccentric, (115) lying off from the centre. *Agáricus ulmárius*, s. 15924.
Escoriate, stripped of the bark or skin. *Bromélia Karátas*, g. 725. (note.)
Escarvánt, projecting or running beyond the edge or point of any thing. *Tórtola subuláta*, s. 14751.
Ezotic, foreign. p. 1.
Expectorant, any thing that promotes the discharge of mucus from the chest. *Sambúcus nigra*, p. 225. (note.)
Erserted, (116) projecting beyond something else. *Jasminum revolutum*, s. 179.
Escutated, dried up. *Papáver*, g. 1170. (note.)
Extra-axillary, above or on the outside of the axils. *Mesembryanthemum*, g. 1145. (note.)
Extra-foliarious, away from the leaves, or inserted in a different place from them. *Echites bispinósa*, s. 240.
Ezavie, whatever is cast off by plants or animals. *Cactus*, g. 1111. (note.)

F.

Fecula, the nutritious powder of wheat or of other things. *Codárium*, g. 30. p. 8.
Falcate, or *Falciform*, (117) bent like a sickle. *Dactyloctenium*, g. 201. p. 33.
Falcato-scand, bent on one side like a sickle. *Dicranum longifóllum*, s. 14717.
Falsely two-valved, having two valves which are not of the same nature as other valves. *Hákea*, g. 210. p. 77.
Farinaceous, full of flour. *Triticum*, g. 266. (note.)
Fascicles, parcels or bundles. *Maránta obliqua*, s. 19.
Fasciculate, (118) arranged in bundles or parcels. *Asphathus*, g. 1538. (note.)
Fastigate, (119) tapering to a narrow point like a pyramid. *Salicornia procumbens*, s. 118.
Fauces, (120) the jaws; the gaping part or orifice of a monopetalous flower. *Aváca*, g. 2197. (note.)
Favose, (11) pitted or excavated like the cells of a honeycomb. *Thrinicia*, g. 1633. p. 641.
Feathery, resembling a feather. *Arundinária*, g. 219. p. 35.

Fibrifuge, efficacious in moderating fever. *Swieténia tetrifóga*, s. 5867.
Feculent, muddy, thick with sediment. *A'loe*, g. 770. (note.)
Fecundation, the act of making fruitful. *Jasione*, g. 547. (note.)
Feroces, (121) thickly set with spines, p. 443.
Ferruginous, iron-colored, rusty. *Sideritis*, g. 1352. (note.)
Fibrilose, (122) covered with little strings or fibres. 489.
Fibrous, (123) being composed of fibres. *Scirpus multicaulis*, s. 858.
Fiddle-tipped, (124) having a lip resembling the figure of a fiddle. *Zingiber panduratum*, s. 55.
Filiform, shaped like a thread. *Mautisia*, g. 16. p. 1.
Fimbriate, (125) fringed. *Eleusine*, g. 210. p. 33.
Finger-parted, 97, divided into lobes having a fanciful resemblance to the five fingers of a human hand. *Verónica verna*, s. 254.
Fistular, or *Fistulous*, hollow like a pipe. *Monárda media*, s. 556.
Flaccid, feeble, weak. *Cánna fáccida*, s. 15.
Flexile, capable of being bent in different directions, pliable. *Pavlinia*, g. 923. (note.)
Flexuous, having a bent or undulating direction. *Alpinia cardamumum*, s. 48.
Flexuose-recurved, bent backward in a flexuose or undulated manner. *Dicranum crispum*, s. 14723.

Flocci, little tufts like wool. p. 983.
Flora horologica, flowers which expand at particular hours, whence they are a sort of timekeepers. *Anagallis*, g. 357. (note.)
Floral envelopes, the calyx, bracteer, and corolla, which envelope the inner parts of the flower are all so called. p. 1.
Florets, (126) little flowers; chiefly applied to those which constitute what were formerly called compound flowers. *Festuca vivipara*, s. 1091.
Floriferous, that which bears flowers. *Cólcichium*, g. 851. (note.)
Flosculous, compound flowers, consisting of many tubulose monopetalous florets. *Cárduus*, g. 1663. p. 680.
Foliaceous, (127) having the form of leaves. *Pinckéya*, g. 492. p. 113.
Folicle, (128) a particular kind of seed-vessel. *Hákea*, g. 210. p. 177.
Footstalks, (129) the stalks of either flowers or leaves. *Avena*, g. 171. (note.)
Fornicate, (130) arched. *Rosróca*, g. 7. p. 1.
Fragmentary, composed of fragments. *Lecidéa microphýlla*, s. 15440.
Fringed, (125) having a border like a fringe. *Cánna gláca*, s. 16.
Front, the leaves of palms. *Sábal*, g. 855. p. 212.
Frontal, that which is in front. *Kæmpféria rotúnda*, s. 67.
Frosted, (131) covered with glittering particles, as if fine dew had been congealed upon it. *Anomathéca*, g. 106. p. 31.
Fractification, all those parts composing the flower and fruit of plants. *Poa alpina*, p. 67. (note.)
Frurescent, or *Frurescose*, shrubby. *Piper*, g. 77. (note.)
Fugacious, that which lasts but for a short time. *Utricularia*, g. 53. (note.)
Fulvous, tawny yellow or fox-colored. *Sanseviéra fulva cincta*, s. 4343.
Fungous, having the substance of fungi or mushrooms. *Cachrys*, g. 677. p. 177.
Funicle, (132) the little stalk by which a seed is attached to the placenta. *Cardamine*, g. 1392. p. 536.
Furcate, forked. *A'juga furcata*, s. 8099.
Furfuraceous, scaly, mealy, scurfy. *Agáricus granulatus*, s. 15745.
Fuscos, blackish-brown. *Brúnia ericoides*, s. 3005.
Fusiform, (133) spindle-shaped. *Selinum palástre*, s. 5060.

G.

Galeate, (134) helmeted; the upper lip of a ringent corolla is the galea of that corolla. *Tourétina*, g. 1299. p. 492.
Gelatine, jelly; a term of chemistry. p. 924.
Gelatinous, consisting of jelly. *Chrysophyllum*, g. 424. (note.)
Geminate, doubled. *Didymodon*, g. 2231. (note.)
Gemmae, (135) leafy buds as distinguished from aubstra or flower buds. *Brýum*, g. 2440. (note.)
Geoponic, relating to agriculture. *Columbélia*, g. 1785. (note.)
Germ, or *Germen*, the old name of the ovarium. *Muscári*, g. 821. (note.)
Germen inferior, (136) fruit below the flower. p. 1.
Germination, the first act of vegetation in a seed. *Triticum spelta*, p. 70. (note.)
Gibbous, protuberant. *Maránta gibba*, s. 23.
Glabrous, smooth. *Aspérula levigáta*, s. 1611.
Gladiate, (111) shaped like a short straight sword. *Eryngium aquáticum*, s. 3495.
Glandular, having glands. *Schw'ńekia*, g. 42. p. 9.
Glaucous, or *Glaucine*, having something of a bluish hoary appearance. *Mesembryanthemum glaucescens*, g. 7273.
Glaucous, having a decided hoary grey surface. *Cánna gláca*, s. 16.
Globose, or *Globular*, (136) round or spherical. *Pin-guicula lusitanica*, s. 322.

Glochidate, having hairs, the ends of which are split and hooked back, so that the hook is double. *Thrinacia hispida*, s. 11175.
Glomerate, (137) gathered into a round heap or head. *Conyza glomerata*, s. 11850.
Glottis, the throat. *Acácia*, g. 2127. (note.)
Glumaceous, plants are said to be glumaceous when their flowers are like those of grasses. *Cládium*, g. 74. p. 11.
Glume, (138) a part of the floral envelopes of a grass. *Anthoxáanthum*, g. 76. p. 11.
Gluten, a chemical principle. *Triticum*, g. 206. (note.)
Glutinous, adhesive. *Sálvia glutinosa*, s. 398.
Grained, (139) the segments of the flowers of *Rumex* have tubercles which are called grains. *Rúmex paténtia*, s. 4997.
Graniform, formed like grains of corn. *Mesembryanthemum parvifolium*, s. 7441.
Granular, covered as if with grains. *Gálium ánglicum*, s. 1618.
Gregarious, herding together. *Agáricus fúsipes*, s. 15857.
Grooved, furrowed, channelled, marked with grooves. *Caúcalis*, g. 626. p. 15.
Grainous, clubbed, knotted, contracted at intervals into knots. *Aconitum napéllus*, g. 1205. (note.)
Gynandrous, (140) having the stamens and style combined in one body. *O'rchis*, g. 1859.
Gyrose, turned round like a crook. *Urédo gyrósa*, s. 16640.

H.

Habit, features or general appearance of a plant. *Dicliptera*, g. 48. p. 9.
Hæmorrhages, copious bleeding. *Acácia*, g. 2127. (note.)
Hæmorrhoid, a kind of disease. *Ornithógalum*, g. 802. (note.)
Hastate, (141) formed like the head of a halbert. *Sálvia canariénsis*, s. 372.
Hastato-lanceolate, between halbert shaped and lanceolate. *Dicranum vírium*, s. 14728.
Hastato-sagittate, between halbert-shaped and arrow-shaped. *A'rum maculátum*, s. 13472.
Haulm, dead stems of herbs. *Dioscórea*, g. 2085. (note.)
Helmet, (134) the same as *Galea*; see *Galeate*. *Monárda*, g. 60. p. 10.
Herbaceous, a plant the stem of which perishes annually. *Maránta arundinácea*, s. 18.
Hermaphrodite, consisting of two sexes. *Hippúris*, g. 23. (note.)
Hexagonal, six-sided. *I'ris ochroleúca*, s. 782.
Hexandrous, (142) having six stamens. *Gardénia hexándra*, s. 2834.
Hexangular, six-angled. *I'ris graminea*, s. 795.
Hexapetalous, having six petals. *Furcra'a cubénsis*, s. 4105.
Hilum, (143) the scar or mark on a seed which indicates the place by which it adhered to the placenta. *A'chras*, g. 427. p. 111.
Hirsute, rough with soft hairs. *Pánicum milliáceum*, s. 948.
Hispid, rough with stiff hairs. *Justicia ciliáris*, s. 288.
Hoary, covered with white down. *O'lea oleáster*, s. 135.
Homogeneous, having a uniform nature, or principle, or composition. *Draparnáldia tenuis*, s. 15105.
Honey-pore, (144) the pore in flowers which secretes honey. *Geissorhiza roch'nsis*, s. 646.
Honey-scales, (145) the scales in flowers which secrete honey. *Cotyldón*, g. 1060. p. 341.
Honey-spots, the spots in flowers which secrete honey. *Rúta*, g. 998. p. 339.
Hooded, (130) being curved or hollowed at the end into the form of a hood. *Hippocratéa*, g. 83. p. 30.
Horn, (146) any long subulate process in a flower is called a horn. *Zingiber*, g. 10. p. 1.

Husks, the dry envelopes of either flowers or fruits. *Sporóbulus*, g. 159. (note.)
Hyaline, crystalline, transparent. *Diatóma*, g. 2260. p. 924.
Hybrid, mule; partaking of the nature of two species. *Syringa chinénsis* ð *rothomagénsis*, s. 161.
Hydragogue, that which removes dropsy. *Euphórbia*, g. 1103. (note.)
Hygrometrical, indicating the approach of moisture. *Ávena stérilis*, p. 60. (note.)
Hypercatharsis, a medicine that produces too powerful effects as a purgative. *Verátrum*, g. 2158. (note.)
Hypocrateriform, salver-shaped. *Galipéa*, g. 41. p. 9.
Hypogynous, (147) situated below the ovary. *Serúria*, g. 234. p. 77.
Hypophyllous, (148) under the leaf. *Eríneum gríseum*, s. 16392.

I.

Iced, (131) covered with particles like icicles. *Mesembryanthemum pisiforme*, s. 7210.
Ice-drops, transparent processes resembling icicles. *Mesembryanthemum glaciále*, s. 7377.
Imbricate, (149) laid one over another like tiles. *Maránta obliqua*, s. 19.
Incised, (150) cut, separated by incisions. *Verónica austriaca*, s. 239.
Incrassated, (151) becoming thicker by degrees. *Tétraphis Browniána*, s. 14682.
Incurved, bending inward. *Roscóea*, g. 7. p. 1.
Incurve-recurved, bending inwards and then backwards. *Mesembryanthemum lineolátum*, s. 7302.
Indehiscent, not dehiscing. *Néslia*, g. 1426. p. 567.
Indigenous, native of a country. *Crúcus*, g. 93. (note.)
Indurated, hardened. *Mílium*, g. 141. p. 32.
Indusium, (152) the membrane that encloses the thecae of ferns. *Polybótrya*, g. 2168. p. 876.
Inflated, blown up. *Amómum sylvéstre*, s. 78.
Inflexed, bending inward. *Dicliptera*, g. 48. p. 9.
Inflorescence, disposition of flowers. *Chloránthos*, g. 25. (note.)
Infundibuliform, funnel-shaped. *Tritónia fenestráta*, s. 672.
Innocuous, harmless. *Gomphocárpus*, g. 587. p. 115.
Inspissated, thickened; spoken of sap or other liquor. *A'tropa*, g. 446. (note.)
Intenerating, having the power of making tender or softening. *Cárcia*, g. 5095. (note.)
Internodes, the space between the joints of plants. *Bambósa*, g. 752. (note.)
Interpetiolar, between the petioles or leafstalks. *Microlóma*, g. 578. (note.)
Interstices, spaces between one thing and another. *Pimpinélla*, g. 635. p. 116.
Intramarginal, within the margin. *Listéra*, g. 1876. p. 749.
Inverse, inverted. *Sántalum*, g. 307. p. 79.
Involucels, (153) the partial involucre of umbelliferous plants. *Caúcalis platycárpus*, s. 3528.
Involucral, having an involucre. *Ammóhium*, g. 1681. (note.)
Involucrated, covered with an involucre. *Penicillária*, g. 148. p. 32.
Involucre, or *Involucrum*, (154) the bractæ which surround the flowers of Umbelliferae in a whorl. *Caúcalis platycárpus*, s. 3528.
Involute, rolled inwards. *Mora'a*, g. 116. p. 31.

J.

Joints, the places at which the pieces of the stem are articulated with each other. *Boerhaávia erecta*, s. 105.
Juliform, (155) formed like an amentum or catkin. *Brýum iuláceum*, s. 14816.

K.

- Kaliform**, formed like *Salsola kali*, a sea-coast plant. *Chondria kaliformis*, s. 15291.
Keel, (51) when the midrib of a leaf or petal is sharp and elevated externally it is called a keel. p. 31.
Kneel, or **Knee-jointed**, bent like the knee-joint. *Aconitum tortuosum*, s. 7867.

L.

- Labellum**, (156) the front segment of an orchideous or other flower. *Ionopsis*, g. 1919. p. 750.
Lacinia, segments of any thing. *Parnicia cyclosclis*, s. 15581.
Laciniate, cut or divided into segments. *Phlomis laciniata*, s. 8365.
Lactescens, yielding milky juice. *Maclura aurantiaca*, s. 13256.
Lacuna, little pits or depressions. p. 948.
Lacunosus, covered with little pits or depressions. *Hellebora crispa*, s. 16200.
Lavigated, smoothed. *Cnethera glauca*, s. 5459.
Lamellated, (157) divided by plates internally. *Musa*, g. 721. (note.)
Lamina, literally a plate; it is mostly applied to the leaf of a plant considered without its petiole. *Beta cicla*, p. 207. (note.)
Lanceolate, (158) lance or spear shaped. *Cistus*, g. 11. p. 1.
Lanceolato-subulate, between lanceolate and subulate. *Sphagnum cuspidatum*, s. 14653.
Lateral, on one side. *Alpina nitans*, s. 43.
Lax, loose, not compact. *Zingiber roseum*, s. 59.
Leaflets, (159) small parts of compound leaves. *Cordium acutifolium*, s. 153.
Legume, or **Legumen**, (160) a pod; the fruit of leguminous plants. *Gompholobium*, g. 954 (note.)
Leguminous, plants which bear legumes, such as the pea, the bean, the kidneybean. p. 8.
Lenticular, shaped like a lens. *Kyllinga*, g. 129. p. 31.
Lentiform, in form like a lens. *Rivina*, g. 253. p. 78.
Leprous, covered with spots or scales. *Rhododendron ferrugineum*, s. 5923.
Lid, (161) the calyx which falls off from the flower in a single piece. *Eucalyptus*, g. 1126. p. 409.
Ligula, (162) the membrane at the top of the petiole of grasses and other plants. *Zingiber panduratum*, s. 53.
Ligulate, (163) strap-shaped. *Anilema sinicum*, s. 595.
Limbate, having a colored or dilated surface. *Erica oppositifolia*, s. 5265.
Linear, when the two sides are parallel. *Canna*, g. 1. p. 1.
Linear-ensate, long sword-shaped. *Márica californica*, s. 833.
Linguiform, or **Lingulate**, (164) tongue-shaped. *Hamañthus coccineus*, s. 4149.
Lipped, (156) having a distinct lip or labellum. *Roscoea*, g. 7. p. 1.
Lithontriptic, having the power of breaking the stone in the bladder. p. 1075.
Lobets, (165) small lobes. *Geranium sanguineum*, s. 9644.
Lochial, relating to the natural discharges consequent upon childbirth. *Aristolochia*, g. 1934 (note.)
Locomotion, motion from place to place. *Mimosa*, g. 2124. (note.)
Loculaments, partitions or cells of a seed vessel. *Cystocera*, g. 2329. p. 97.
Locular, (166) a fruit is called unilocular if it contains but one cell (a), bilocular if two cells (b), trilocular if three (c), and so on. *Fedia*, g. 72. p. 11.
Loment, (167) a kind of legume falling in pieces when ripe. *Mullera*, g. 1567. p. 597.
Lomentaceous, bearing pericarpia, called lomenta. *Eruaria*, g. 1445. p. 539.
Lorate, (163) shaped like a thong or strap. *Panicratium littorale*, s. 4602.

- Lubricate**, to make slippery. *Acacia*, g. 2127. (note.)
Lucid, bright, shining. *Sálvia leucatiolia*, s. 3921.
Lunale, or **Lunulate**, (168) shaped like a half moon. *Cestrum auriculatum*, s. 2465.
Lurid, a color between purple, yellow, and grey. *Mora*: a lurida, s. 828.
Lymphatic, of or belonging to lymph or sap. p. 874.
Lyrate, (169) lyre-shaped. *Sálvia lyrata*, s. 450.

M.

- Macerate**, to decompose by steeping in water or other liquid. *Mentha*, g. 1251. (note.)
Marginal, relating to the margin. *Hellebora*, g. 9. p. 1.
Masticatory, grinding or chewing with the teeth. *Pimpinella*, g. 635. (note.)
Math, an old term for crop. *Alopecurus*, g. 164. (note.)
Matrix, a place where any thing is generated or formed. *Calothrix*, g. 2286. p. 925.
Medulla, the pith of a plant. p. 1053.
Medullary, relating to the pith of plants. *Mimosa*, g. 2124 (note.)
Melanomaceous, partaking of the nature or appearance of *Melanostoma*. p. 300.
Meliferous, honey-bearing. *Anchusa*, g. 332 (note.)
Membranaceous, or **Membranous**, having the texture of a membrane. *Chionanthus maritima*, s. 153.
Menstruum, a liquor used as a dissolvent. *Hanñculus*, g. 1233. (note.)
Neshes, the openings in any tissue. *Mougeotia*, g. 2200. p. 925.
Micacious, glittering, shining. *Watsonia*, g. 101. (note.)
Midrib, (170) the large vein which passes from the petiole to the apex of a leaf. *Pothos*, g. 252. (note.)
Military, granulate resembling many seeds. *Citrus medica*, p. 653. (note.)
Mitiform, (171) formed like a mitre. p. 895.
Mobility, the power of motion. *Mimosa*, g. 2124. (note.)
Monadelphous, (172) having the filaments cohering in a tube. *Lyxia monadelphia*, s. 629.
Monandrous, (173) having one stamen. *Alchemilla alphanes*, s. 1519.
Moniliform, torne'd like a necklace, that is to say, with alternate swellings resembling beads and contractions. *Heliophila amplexicaulis*, s. 9312.
Monocotyledons, having one seed leaf. p. 236.
Monœcious, having the one sex in one flower, and the other in another. *Schaenus monoecus*, s. 847.
Monopetalous, having one petal. p. 9.
Monosepalous, having one sepal or division of the calyx. *Pontederia*, g. 730. p. 257.
Mordant, that which enables vegetable matter or tissue to receive dyes or coloring matter, and to retain them. p. 1064.
Mottled, marked with blotches of color of unequal intensity passing insensibly into each other. *Syringa persica*, s. 162.
Mucilage, a turbid slimy fluid. *Sálvia*, g. 62. (note.)
Mucronate, (174) pointed sharp. *Crispérnum intermedium*, s. 127.
Mucronulate, having a little hard point. *Banksia integrifolia*, s. 1459.
Mulch, a gardener's term for the placing manure about the roots of trees on the surface of the ground. *Rosa*, g. 1148. (note.)
Multifarious, very numerous; or arranged in many rows. *Alce rigidá*, s. 4387.
Multipartite, much divided. *Pteronia stricta*, s. 11492.
Multiplex, much multiplied. *Selágo fasciculata*, s. 8657.
Muricated, covered with short sharp points. *Panicum muricatum*, s. 949.
Muricato-hispid, covered with short sharp points and rigid hairs or bristles. *Bryonia scabrilla*, s. 13588.

N.

Naiades, nymphs of the springs and fountains; a particular order of Monocotyledonous plants. p. 772.
Narcotic, producing sleep or torpor. *Bromus*, g. 184. (note.)
Navicular, (175) boat-shaped. *Airópsis*, g. 160. p. 32.
Neck, the upper tapering end of bulbs is called the neck. *Crinum samatráneum*, s. 4184.
Nectariferous, bearing honey. *Swértia*, g. 599. p. 115.
Nectary, or *Nectarium*, (144, 145.) that part of a flower which produces honey. *Alpinia Allóghas*, s. 51.
Nerves, the strong veins upon leaves or flowers. *Canna rubricaulis*, s. 11.
Nervimotion, the power of motion in leaves. *Mimósa*, g. 2124. (note.)
Nervose, or *Nervine*, composed of nerves. *Eránthemum pulchellum*, s. 312.
Neuter, neither male or female. *Anthoxánthum*, g. 76. p. 11.
Nidulant, nestling; lying among any thing as a bird in its nest. *Samýða*, g. 1034. s. 340.
Nidus, the nest of any thing. *Alcyonidium*, g. 2277. (note.)
Nodding, (177) having a drooping position. *Verónica complicata*, s. 190.
Nodi, (178) the articulations of plants: the place where one joint is articulated with another. *Sporóchnus villosus*, s. 15353.
Nodose, having many nodi or knots. *Póa serótina*, s. 1187.
Nodules, small hard knots. *Ischæmum aristatum*, s. 14230.
Notch-flowered, having the flower notched at the margin. *Verónica crenulata*, s. 185.
Nucamentaceous, producing nuts. *Búnias*, g. 1444. p. 539.
Nucleus, the kernel. *Myrica Fáya*, s. 13869.

O.

Ob is used in the composition of Latin technical terms, to indicate that a thing is inverted; for instance, obovate is inversely ovate, obovate inversely cordate, and so on.
Occidental, coming from the west. *Alpinia occidentális*, s. 42.
Ochraceous, having the color of clay or yellow ochre. *Oscillatória ochracea*, s. 15118.
Octandrous, (179) having eight stamens. *Rivina octándra*, s. 1511.
Octogynous, (180) having eight styles. *Phytolácea octándra*, s. 6572.
Official, any thing that is, or has been, used in the shops. *Kæmpfériá Galánga*, s. 68.
Oleaginous, having the qualities of oil. *Rivina*, g. 253. (note.)
Oleraceous, esculent, eatable. *Ranónculus*, g. 1233. (note.)
Oliveaceous, having the qualities of olives. p. 924.
Opercular, (161) covered with a lid. p. 749.
Operculiform, having the figure and position of a round lid of something. *Opercularía*, g. 250. p. 78.
Operculum, (161) a lid. p. 874.
Opiate, having the power of opium. *Dictámnus*, g. 597. (note.)
Orbicular, or *Orbiculate*, a plane surface circumscribed by a circle. *Farsétia*, g. 1397. p. 586.
Orchideous, of or belonging to the natural order of Orchideæ. p. 748.
Orifice, an opening. *Schwénkia*, g. 42. p. 9.
Ossified, become like bone. *Cóix*, g. 1951. p. 768.
Ova, the eggs of any thing. *Palmiflía*, g. 2265. (note.)
Oval, having the figure of an ellipse. *Corispermum*, g. 26. p. 1.
Ovarium, or *Ovary*, (176) the part of the flower in which the young seeds are contained. *Hæmodórum*, g. 111. p. 31.
Ovate, (181) egg-shaped. *Maránta Týnchat*, s. 92.
Ovato-acuminata, (182) egg-shaped, and tapering to a point. *Cárex ovális*, s. 13080.

Ovato-cylindrical, (183) egg-shaped, with a convoluted cylindrical figure. *Dilymodon purpúreum*, s. 14762.
Ovato-deltoid, triangularly egg-shaped. *Bítula álba*, s. 13188.
Ovato-rotundate, roundly egg-shaped. *Pháscum múticum*, s. 14660.
Overlapping, when the margin of one thing lies upon that of another, it is said to overlap. *Cyclámen vérum*, s. 2051.
Ovoid, (181) egg-like. *Psorálea Lupinéllus*, s. 10758.
Ovules, (176) the young seeds of plants contained in the ovarium. *Nemóphila*, g. 386. p. 110.

P.

Palate, (184) the mouth of a ringent flower. *Pinguicula edéntula*, s. 327.
Paleaceous, abounding with chaffy scales. *Broméla Karátas*, s. 4114. (note.)
Palmated, or *Palmatifid*, (185) divided so as to resemble a hand. *Curúma Zedoária*, s. 80.
Panduriform, (186) having the figure of a fiddle. *Kæmpfériá panduráta*, s. 70.
Panicled, (187) loose-spiked. *Maránta*, g. 2. p. 1.
Pannary, useful for making bread. *Triticum*, g. 206. (note.)
Papilionaceous, (188) butterfly-shaped flowers. p. 538
Papillose, producing small glandular excrescences like nipples. *Onosmódium hispidum*, s. 1930.
Pappus, (189) the crown of the fruit of *Compositæ*, and similar plants. *Centránthus*, g. 20. p. 1.
Papulose, producing small glands like pimples. *Mesembryánthemum parvisólium*, s. 7442.
Parabolically, in form like a parabola. *Aloc brevifólla*, s. 4435.
Parenchyma, all the parts of plants which consist of cellular tissue only. *Solorina*, g. 2331. p. 948.
Parietal, being attached to the sides of an ovarium instead of its axis. *Glóuba*, g. 15. p. 1.
Potent, spread out or expanded. *Lycopódium anótinum*, s. 14636.
Potent-reflexed, spread out and turned back. *Cárex pauciflóra*, s. 13069.
Patulous, slightly spreading. *Centaurea babylónica*, s. 12613.
Pectinate, (190) resembling the teeth of a comb. *Verónica orientális*, s. 237.
Pectoral, relating to the breast. *Trápa*, g. 308. (note.)
Pedatifid, (191) cut into lobes, the lateral ones of which do not radiate from the petiole like the rest. *Saxifraga pedatifida*, s. 6089.
Pedicellate, slightly stalked. *Céstrum tinctórium*, s. 2475.
Pedicels, small footstalks of flowers. *Commelina cælestis*, s. 592.
Peduncle, the common footstalk of flowers. *Cánna Lambérti*, s. 5.
Pellicle, a thin skin. *Papýrus*, g. 128. (note.)
Pellucid, bright, transparent. *Mesembryánthemum réptans*, s. 7278.
Peltate, (192) when the petiole is fixed in the disk instead of the mar.in. *Piper peltatum*, s. 514.
Pencilled, (193) marked in lines as if with a pencil. *Crócus lagenariórus* *g* pencilatus, s. 612.
Pendulous, drooping, hanging down. *Curúma angustifólia*, s. 91.
Pentagonal, having five angles. *Piquéria*, g. 1704. p. 663.
Pentagynous, (194) having five styles. *Phytolácea abyssínica*, s. 6573.
Pentandrous, (194) having five stamens. *Portlândia grandiflóra*, s. 9632.
Pentapetalous, (194) having five petals. p. 115.
Perennial, lasting many years without perishing. *Aspicárra úrens*, s. 132.
Perfoliate, (195) when the stem passes through the base of the leaf. *Verónica perfoliáta*, s. 251.
Perianthium, the envelope that surrounds the flower; this term is applied when the calyx cannot be distinguished from the corolla. *Gomphréna perúnis*, s. 5178.

Pericarp, the seed vessel. *Deeringia*, g. 563. (note.)
Perichætal, (196) leaves which in mosses surround the base of the stalk of the theca. p. 895.
Perigynous, (197) inserted into the calyx. *Larbræa*, g. 1069. p. 341.
Peristome, (198) the rim which surrounds the orifice of the theca of a moss. p. 895.
Perithecium, **Peridium**, or **Perisporium**, different kinds of envelopes of the reproductive organs of Fungi. *Pyrénula*, g. 2337. p. 948.
Persistent, remaining, not falling off. *Codárium*, g. 30. p. 8.
Perivious, having a passage through which anything can be transmitted. *Prímula*, g. 350. p. 110.
Petaloid, like a petal. *Damaónium*, g. 859. p. 241.
Petals, (194) divisions of the corolla. p. 1.
Petiolate, having footstalks. *Alpinia malaccénsis*, s. 46.
Petioles, footstalks of leaves. *Cissus heterophýlla*, s. 1780.
Petiolules, little petioles. *Erythrina*, g. 1521. (note.)
Pezizoid, like a *Peziza*; a kind of fungus resembling a cup in figure. p. 1021.
Phænogamous, such plants as are visibly furnished with sexual organs. p. 108.
Phagedenic, eating, corroding; a gnawing of the stomach; also applied to ulcerous sores. *A'uthemis*, g. 1778. (note.)
Pharmaceutical, relating to the art of pharmacy. *Astrágalus Tragacátha*, p. 637. (note)
Phthisis pulmonalis, consumption of the lungs. *Acácia*, g. 2127. (note.)
Pileate, (199) having a cap or lid like the cap of a mushroom. *Cúscuta chilénsis*, s. 1811.
Pileus, the cap of a mushroom. p. 978.
Piliferous, bearing hairs. *Sphenógyme dentáta*, s. 12528.
Piliform, formed like down or hairs. *Grimmia pulvináta*, s. 14690.
Pilose, slightly hairy. *Monárda Kalmiána*, s. 363.
Pimpled, covered with minute pustules resembling pimples. *Saxifraga liguláta*, s. 6051.
Pinnæ, or **Pinnulæ**, the segments of a pinnated leaf. *Calceolária pinnáta*, s. 315.
Pinnate, (200) a leaf is so called when it is divided into numerous smaller leaves or leaflets. *Codárium acutifólium*, s. 133.
Pinnatifid, (201) a leaf is so called when it is divided into lobes from the margin nearly to the midrib. *Centrántus calcitrápa*, s. 112.
Piquancy, sharpness, pungency. *Spilánthes*, g. 1695. (note.)
Pisiform, formed like peas. *Lagétta*, g. 909. p. 300.
Pistillum, or **Pistil**, (202) the columnar body situate in the centre of a flower, consisting commonly of three parts, viz. the ovary, style, and stigma. *Knáppia*, g. 142. p. 32.
Pitchers, (203) hollow leaves so called. *Nepenthes distillatória*, s. 14077.
Pith, medulla occupying the centre of a stem or shoot. *Mélica*, g. 193. (note.)
Pituitous, discharging mucus. *Pánax*, g. 2166. (note.)
Plane, flat. *Matricária*, g. 1771. p. 604.
Plano-compressed, compressed down to a flattish surface. *Poinciána*, g. 977. p. 339.
Plethoric, having a full habit. *Juniperus*, g. 2113. (note.)
Plicate, (204) plaited. *Nicotiána repánda*, s. 2206.
Plumose, (205) feathery, resembling feathers. *Centrántus*, g. 20. p. 1.
Plumula, (206) the young leaves in the embryo. p. 1053.
Plurilocular, (207) having many cells. p. 1085.
Pod, (161) a kind of seed vessel such as that of the pea tribe. *Epimédium*, g. 297. p. 79.
Polyandrous, (208) having more stamens than 20. *Royéna ambigua*, s. 6037.
Polygamous, a plant is said to be polygamous when some flowers are male, others female, and others hermaphroditic. *Rhagódiá*, g. 562. p. 114.
Polygonous, (208) having numerous styles. *Royéna ambigua*, s. 6037.
Polyptalous, (209) having many separate petals. p. 10.

Polyspermous, (210) having many seeds. p. 1066.
Pome, an apple. *Pýrus*, g. 1133.
Pores, apertures in the cuticle through which transpiration takes place. *Lasiopétalum*, g. 523. p. 113.
Porrect, extended forward. *Bauhinia aurita*, s. 5768.
Pouch, a little sack or bag at the base of some petals and sepals. *Nigritélla*, g. 1869.
Prænomem, the first name of several; in plants it is the same as the generic name. *Crácus*, g. 93. (note.)
Præcocty, ripe before the usual time. *Dáctine Mezécum*, p. 333. (note.)
Prismatic, formed as a prism. *Polycnémum arvénse*, s. 599.
Processes, protrusions either natural or monstrous. *Orthotrichum*, g. 2233. p. 896.
Proliferous, a plant is said to be proliferous when it forms young plants in abundance about its roots. *Scirpus Lúzuia*, s. 867.
Prominences, protuberant risings from the surface. *Colutéa arboréscens*, s. 10484.
Propendent, hanging forward and downward. *Cæsia vittáta*, s. 4831.
Prurient, stinging. p. 1061.
Pubescent, down, closely pressed to the surface. *Fragária véscá*, s. 7566.
Pullulating, budding. *Conférva paténs β prolifera*, s. 15177.
Pulverised, reduced to powder. *Crácus*, g. 93. (note.)
Pulvinate, become cushion-shaped. *Grimmia pulvináta*, s. 14690.
Pulvinuli, little cushions. p. 948.
Punctiform, formed like points. *Peziza punctáta*, s. 16267.
Pungent, stinging or pricking. *Corispérmum Redóvskii*, s. 126.
Pustular, or **Pustulate**, covered with glandular excrecences like pustules. *Pelargónium pustulosum*, s. 9621.
Pustules, pimples or little blisters. *Brunsvigia Rádula*, s. 4215.
Pyriiform, shaped like the fruit of a pear. *Paullinia pinnáta*, s. 5612.

Q.

Quadrangular, four-angled. *Dorsténia Houstóni*, s. 1526.
Quadrifarious, arranged in four rows or ranks. *Struthiola imbricáta*, s. 1487.
Quadrifid, divided four times. *Plantágo*, g. 278. p. 78.
Quadriglandular, having four glands. *Majághia glandulifera*, s. 6373.
Quartz, a species of stone. *Laúrus cinnamómum*, s. 5640.
Quaternary, succeeding by fours. p. 76.
Quaternate-pinnate, (211) pinnate; the pinnæ being arranged in fours. *Anthýllis tetraphýlla*, s. 10211.
Quinate, in fives. *Póthos pentaphýlla*, s. 1506.
Quinquefid, (212) divided into five. *Cissus*, g. 305. (note.)
Quintuple, five times multiplied. *Ephédra*, g. 2115 p. 819.

R.

Racemes, (213) a particular arrangement of flowers, when they are arranged around a filiform simple axis, each particular flower being stalked. *Alpinia nántas*, s. 43.
Racemose, flowering in racemes. *Verónica Barreliéri*, s. 212.
Rachis, (214) that part of a culm which runs up through the ear of corn, and consequently the part that bears the flowers in other plants. *Pápalum*, g. 139. p. 31.
Radiant, or **Radiate**, (215) a flower is said to be radiant, when, in a cluster or head of florets, those of the circumference or ray are long and spreading, and unlike those of the disk. *Scabiósa canescens*, s. 1569.

- Radical**, proceeding from the root. *Phrynium capitatum*, s. 27.
- Radical**, producing roots from the stem. *Marcgravia*, g. 1163. (note.)
- Radicule**, (216) that end of the embryo which is opposite to the cotyledons. p. 537.
- Rádium**, (217) the ray of compound flowers. *Solidago canadensis*, s. 12066.
- Ramenta**, little brown withered scales with which the stems of some plants, especially ferns, are covered. *Rhodomela lycopodioides*, s. 15280.
- Ramentaceous**, (218) covered with ramenta. *Euphorbia fragifera*, s. 6793.
- Ramifications**, subdivision of roots or branches. *Eragrostis pilosa*, s. 1207.
- Ramose**, branched. *Tlex*, g. 315. (note.)
- Ramuli**, twigs or small branches. *Draparnaldia*, g. 2284. p. 925.
- Raphe**, in seeds this is the channel of vessels which connects the chalaza with the hilum; in umbelliferous plants it is the line of junction of the two halves of which their fruit is composed. *Búbon*, g. 640. p. 116.
- Rationale**, the reason of a thing. *Solanum*, g. 451. (note.)
- Receptacle**, (219) that part of the fructification which supports the other parts. *Pollichia*, g. 21. p. 1.
- Recesses**, the bays or sinuses of lobed leaves. *Sisymbrium obtusangulum*, s. 9169.
- Rectangular**, right-angled. *Teucrium asiaticum*, s. 8114.
- Rectilinear**, right-lined. *Bombax eriáthos*, s. 9942.
- Rectum**, an intestine. *Anthémis*, g. 1778. (note.)
- Recurved**, bent backward. *Zingiber*, g. 10. p. 1.
- Recurvo-patent**, bent back and spreading. *Grimmia apocarpa*, s. 14687.
- Reflexed**, bent backward. *Canna gigantéa*, s. 6.
- Reflexed recesses**, sinuses of leaves which are bent backward from the ordinary direction of the surface of a leaf. p. 165.
- Refrigerant**, producing coolness. *Oxális*, g. 1065. (note.)
- Reniform**, (220) kidney-shaped. *Leptánthus reniformis*, s. 736.
- Reperand**, (221) a leaf having a margin undulated and unequally dilated is said to be reperand. *Eránthemum bicolor*, s. 313.
- Reperand-dentate**, reperand and toothed. *Doronicum Pardaliánches*, s. 12189.
- Repellant**, that which turns you away from any thing. *A tropa*, g. 445. (note.)
- Replicate**, folded back. *Cyclópia*, g. 916. (note.)
- Resolutive**, or **Resolutive**, having the power to dissolve. *Argemóné*, g. 172. (note.)
- Resolvent**, having the power of dissolving. *Curcúma*, g. 14. (note.)
- Restricting**, astringent. *Bérberis*, g. 829. (note.)
- Resupinate**, inverted in position, so that that which was in front becomes at back. *Hedýchiun*, g. 6. p. 1.
- Reticulated**, resembling a net. *Hákea unduláta*, s. 1435.
- Retuse**, (222) abruptly blunt. *Hedýchiun flavum*, s. 36.
- Revolvte**, rolled back. *Canna speciosa*, s. 13.
- Rhomboidal**, (225) like a rhombus. *Sálvia mexicána*, s. 385.
- Rhomboid-ovate**, rhomboidally egg-shaped. *Chenopodium atriplicis*, s. 3416.
- Rib**, (170) the projecting vein of any thing. *Curcúma rubescens*, s. 83.
- Rigid**, stiff. *Notela'a rigida*, s. 157.
- Ringent**, (223) gaping. *Justicia*, g. 47. p. 9.
- Ringed**, making an incision resembling a ring all round a branch. *Liriodéndron*, g. 1216. (note.)
- Rotate**, (224) a monopetalous corolla, the limb of which is flat and the tube very short, is called rotate. *Valerianélla discoidea*, s. 563.
- Rotundo-ovate**, roundly egg-shaped. *Cárex fúlva*, s. 13123.
- Rubefacient**, any thing which reddens the skin, or raises slight cutaneous inflammation. *Euphorbia*, g. 1163. (note.)
- Rudiment**, when an organ is imperfectly developed, botanists call such developement a rudiment. *Molinia*, g. 194. p. 33.
- Rufous**, reddish orange-colored, or rusty. *Canna glaucá ß rúfa*, s. 16.
- Rugose**, rough or coarsely wrinkled. *Calcolária rugosa*, s. 317.
- Rugulose**, finely wrinkled. *Sálvia chamædryoides*, s. 386.
- Runcinate**, (226) hooked back, applied to the lobes of leaves. *Héspéris runcináta*, s. 9161.
- Runcinato-dentate**, hooked back and toothed. *Apárgia taráxaci*, s. 1166.
- Runners**, (229) procumbent shoots which root at their extremity. *Ranúculus saluginosus*, s. 8037.
- Rusty**, rust-colored. *Curcúma ferruginea*, s. 87.

S.

- Saccate**, bagged; having a bag or pouch; as many petals. *Calotropis*, g. 584. p. 115.
- Sagittate**, (227) shaped like an arrow-head. *Dorstenia arifolia*, s. 1528.
- Salivation**, a discharge of saliva from the glands of the mouth. *Plumbágo*, g. 324. (note.)
- Samará**, (228) a kind of winged seed vessel; the same as what the English call key. *O'rnus*, g. 69. p. 11.
- Sapil**, agreeable to the palate. *Nelámbium*, g. 1213. (note.)
- Saponaceous**, soapy. *Æsculus*, g. 866. p. 296.
- Sarmentose**, (229) producing sarmenta or runners. *Echites biflora*, s. 2355.
- Sawed**, resembling the teeth of a saw. *Coldénia procumbens*, s. 1833.
- Scabrous**, rough with little asperities. *Sálvia runcináta*, s. 459.
- Scates**, any small processes resembling minute leaves; also the leaves of the involucrem of *Compositæ*. *Pollichia*, g. 21. p. 1.
- Scandent**, climbing. *Píper*, g. 77. (note.)
- Scape**, (231) a stem rising from the root and bearing nothing but flowers. *Maránta comósa*, s. 24.
- Scariosé**, or **Scarios**, membranous and dry. *Bufónia tenuifolia*, s. 1813.
- Schistous**, rocky, formed of the rock called schist. *O'lea*, g. 32. (note.)
- Scion**, a shoot intended for a graft. *Caméllia*, g. 1476. (note.)
- Scorice**, cinders. *Caméllia*, g. 1476. (note.)
- Scrobiculate**, excavated into little pits or hollows. *Antennária*, g. 1745. p. 683.
- Serotiform**, formed like a double bag. *Ellisia*, g. 432. p. 111.
- Scurfy**, covered with scales resembling scurf. *Eústénia*, g. 265. p. 110.
- Scutate**, formed like an ancient round buckler. *Ptiléa*, g. 2311. p. 925.
- Secund**, (232) arranged on one side only: the same as unilateral, which is better. p. 917.
- Sedges**, a tribe of marsh plants so called. p. 31.
- Segments**, parts of any thing. p. 1.
- Semi**, half.
- Seminal**, belonging to the seed. *Scabiósa*, g. 264. (note.)
- Semination**, seeding. *Crócus*, g. 93. (note.)
- Sepals**, (233) the segments of the calyx. *Sebré'a*, g. 281. p. 98.
- Septa**, (166) the partitions that divide the interior of the fruit. *Rulingia*, g. 704. p. 118.
- Septiflorous**, bearing septa. *Ramónáda*, g. 374. p. 110.
- Serrated**, (230) like the teeth of a saw. *Mayténus boária*, s. 134.
- Serrulations**, notchings like those of a saw. *Agáve yuccafolia*, s. 4093.
- Sessile**, without footstalks. *Zostéra*, g. 24. p. 1.
- Setaceo-rostrate**, having a beak with the figure of a bristle. *Cárex ampullácea*, s. 13162.
- Setaceous**, resembling a bristle in shape. *Justicia nigricans*, s. 282.
- Setæ**, bristles. *Schœ'nus nigricans*, s. 845.
- Setiform**, (234) formed like a bristle. *Rósa hibérnica*, s. 7501.

Scligerous, or *Selose*, covered with bristles. *Knáppia*, g. 142, p. 32.
Sheath, the lower part of the leaf that surrounds the stem. *Zostéra*, g. 24, p. 1.
Sherds, the fragments of potting employed by gardeners to drain their flower-pots. *Prótea*, g. 231. (note.)
Shield, (29) a broad table-like process in the flower of *Stapélia* and its allies. *Huérnia clavígera*, s. 3351.
Sialagogue, having the power of exciting saliva. p. 533.
Silicated, coated or mixed with flint. *Astrágalus tragacantha*, p. 637. (note.)
Siliceous, flinty. *Laurus cinnamómum*, g. 934. (note.)
Silicle, (235) the small round pod of Cruciferae. *Lunária*, g. 1395, p. 533.
Sitque, (236) the long taper pod of Cruciferae. *Brásica*, g. 1432.
Simple, the reverse of compound. p. 1.
Sinuate, or *Sinuosc*, (237) bending in and out. *Lycópium europæus*, s. 338.
Sinuato-dentate, sinuate and toothed. *Leóntodon palóstris*, s. 11156.
Sinus, the bays or recesses formed by the lobes of leaves or other bodies. *Hamamélis virginica*, s. 1814.
Soboliferous, (238) producing young plants from the root. *A'loc brévis*, s. 443.
Soddened, soaked. *Prótea*, g. 231. (note.)
Somniferous, causing sleep. *Primula véris*, s. 2022.
Soporific, causing sleep. *Hámulus*, g. 2074. (note.)
Sorediferous, (239) bearing soredia. *Ramalina*, g. 2355, p. 949.
Sori, (152) the patches of fructification on the back of the fronds of ferns. p. 925.
Spadix, (240) a spike protracted from a spathe. *Zostéra*, g. 24, p. 1.
Spatha, a broad sheathing leaf enclosing flowers arranged upon a spadix. *Hedýchium spícium*, s. 34.
Spathaceous, furnished with a spathe. p. 1.
Spathulate, (241) shaped like a spatula, a knife so called. *Canna gigantéa*, s. 6.
Sphaeate, withered or dead. *Senécio ægyptius*, s. 11911.
Spherical, round like a sphere. *Alpínia nútans*, s. 43.
Spheroidal, almost like a sphere. *Cáctus latispínus*, s. 6852.
Spherules, (242) minute spheres. *Stromatosphæ'ria concentrica*, s. 16260.
Spike, (244) flowers sessile upon a long rachis. *Maránta lítea*, s. 20.
Spines, indurated branches or processes formed of woody fibre, and not falling off from the part that bears them. *Ancístium*, g. 68, p. 10.
Spiniform, formed like a spine. *Mesembryánthemum spinifórmé*, s. 7363.
Spinous, full of spines. *Alpínia cérnea*, s. 44.
Spinulose, having a tendency to produce small spines. *Mesembryánthemum spinuliferum*, s. 7421.
Spinulose, covered with small spines. *Rhécum Ribes*, s. 5667.
Spiral, (253) circularly involved. *Cóstus spirális*, s. 65.
Sporules, that part in Cryptogamous plants which answers to the seeds of other plants. p. 874.
Sporidiferous, bearing sporules. *Phállus impudicus*, s. 16336.
Spurious, counterfeit. *I'ris spúria*, s. 781.
Spurs, (243) long processes resembling horns produced by various parts of the flower. *Curcúma*, g. 14, p. 1.
Squamiform, like scales. *Sántalum*, g. 307, p. 79.
Squarrose, (244) spreading rigidly at right angles, or in a greater degree. *Zingiber squarrosúm*, s. 60.
Squinancy, an inflammation in the throat. *Aspécula*, g. 268. (note.)
Stamen, (245) the male organ of a flower. p. 1.
Staminiferous, producing stamina. *Campánula*, g. 463, p. 112.
Standard, (188) the upper segment of the flower of Leguminosæ. *Thermópsis*, g. 944, p. 38.
Stellate, in the manner of a star. *Schwénkia*, g. 42, p. 9.

Stellate, resembling little stars. *Onósma taúricum*, s. 1907.
Sterile, barren. *Amómum grandifórum*, s. 74.
Sternutatory, qualities which provoke sneezing. *Primula vulgáris*, g. 330. (note.)
Stigma, (246) the female organ of a flower. *Canna*, g. 1, p. 1.
Stimulating, exciting. *Cinna*, g. 161. (note.)
Stimuli, stinging hairs. *U'rtica árdens*, s. 13230.
Stipes, (247) the stalk of Fungi. p. 978.
Stipitate, having a short stalk. *Aspidistra*, g. 759, p. 238.
Stipulaceous, having appendages called stipulæ. *Solanum peruvianum*, s. 2516.
Stipulary, occupying the place of stipulæ. *Paléurus australis*, s. 2896.
Stipules, (248) small scales at the base of the petiole of certain leaves. *Spermacóce stylosa*, s. 1653.
Stoloniferous, (249) having creeping roots. *Sesléria elongata*, s. 1075.
Stolons, root shoots. *Agróstis*, g. 156. (note.)
Stomachic, relating or agreeable to the stomach. *Kæmpferia*, g. 12. (note.)
Strangury, a disease, and produced on plants by tight ligatures. *Ornithógalum*, g. 862. (note.)
Strata, layers, beds. *Cápsicum*, g. 433. (note.)
Strike, small streaks, channels, or furrows. p. 877.
Striated, having strææ. *Alpínia racemósa*, s. 41.
Strigæ, little, rigid, unequal, irregular hairs. *Chára hispida*, s. 15199.
Strigose, having strigæ. *Lithospérmum arvénse*, s. 1827.
Stropholate, surrounded by protuberances. *Húvea*, g. 1536, p. 599.

Struma, a wen or protuberance. p. 903.
Strumose, or *Strumous*, covered with strumæ. *Mesembryánthemum gróssum*, s. 7422.
Style, (250) the stalk which intervenes between the ovarium and stigma, bearing the latter. p. 1.
Styptic, having the power to staunch blood. *Rhús*, g. 681. (note.)
Sub, in composition, signifies subordinate, or somewhat.
Succedaneum, coming in the place of another. *Tárca*, g. 758. (note.)
Succulent fleshy and filled with juice. *Blitum*, g. 28. (note.)
Sudorific, having the power of producing perspiration. *Sálvia*, g. 62. (note.)
Suffruticose, shrubby in a slight degree. *Spermacóce suffruticósa*, s. 1656.
Sulcate, furrowed. *Vibórgia*, g. 1523, p. 599.
Supernatant, floating on the surface of any thing. *A'loc*, g. 770. (note.)
Suppurate, to generate matter. *Rhús*, g. 681. (note.)
Supra-decompound, doubly compound. *Scirpus sylváticus*, s. 868.
Surculi, young shoots. *Erythrónium*, g. 782. (note.)
Suture, the line formed by the cohesion of two parts. *Mirbélia*, g. 967, p. 338.
Syngenesous, (251) belonging to the nineteenth class of the sexual system. *Phlóx*, g. 369. (note.)
Synthetical, combining; opposed to analytical. *Gil-lénia*, g. 1142. (note.)
Syphilitic, useful in the cure of syphilis. *Chenopódium*, g. 611. (note.)

T.

Tails, (252) the long feathery or hairy terminations of certain fruits. *Clemátis chinénsis*, s. 7968.
Tap-root, a root which penetrates deep and perpendicularly into the ground without dividing. *Crinum defixum*, s. 4182.
Tartarous, consisting of tartar. *Lecidéa cónfluens*, s. 15384.
Teated, resembling the figure of the teat of animals. *A'chras*, g. 47, p. 111.
Tendrils, (253) the curling twining organs by which some plants lay hold of others. *Vitis indica*, s. 2858.

Tenesmus, a disposition to go to stool, without the power of evacuation. *A'nthemis*, g. 1778. (note.)
Tepid, lukewarm. *A'nthemis*, g. 1778. (note.)
Terebinthinate, consisting of turpentine. *A'bies balsamea*, p. 805. (note.)
Terete, taper, round and long. *Ilákea obliqua*, s. 1423.
Terminal, ending, or at the top. *Maránta lítea*, s. 281.
Ternary, consisting of threes. *Valerína*, g. 78. (note.)
Ternate, (254) growing together in threes. *Hedýchium elátum*, s. 31.
Tessellated, variegated by squares. *Sarcocéphalus*, g. 498, p. 113.
Testa, the skin or integument of the seed. *Psidium*, g. 1118, p. 409.
Testaceous, having a pale brown color. *Mesembryáanthemum testáceum*, s. 7430.
Tetrachotomous, (255) a stem that ramifies in fours. *Euphórbia*, g. 1103 (note.)
Tetrandrous, (256) having four stamens. *Collinsónia anisáta*, s. 469.
Tetrapetalous, (256) having four petals. p. 1069.
Tetrapetalous, (256) having four sepals. p. 1069.
Thalamus, (258) that part of a flower which rises from below the ovary and sometimes supports the outer envelopes. p. 539.
Thallus, (257) that part which bears the fructification of Lichens. p. 874.
Thecæ, the cases that contain the sporules of Cryptogamic plants. p. 874.
Threads, long delicate hairs. *Anacámpseros filamentósa*, s. 6632.
Throat, (120) the orifice of a flower. *Justícia pícta*, s. 285.
Thyrse, (259) a kind of dense panicle like that of the lilac. *A'juga turcáta*, s. 8099.
Thyrsoid, resembling a particular kind of panicle called a thyrus. p. 85.
Tomentose, densely and closely hairy. *Thýmus tomentósus*, s. 8414.
Tomentum, dense close hair. *Grevillea buxifólia*, s. 1418.
Tonic, bracing, corroborative. *Sálvia*, g. 62. (note.)
Toothed, (260) divided so as to resemble teeth. *Pólichia*, g. 21. p. 1.
Toothletted, furnished with little teeth. *Sálvia paniculáta*, s. 402.
Topical, local, confined to some particular place. *Papáver*, g. 1170. (note.)
Torose, uneven; alternately elevated and depressed. *Papáver híbridum*, s. 7659.
Tortuose, twisted. *Helíánthemum Fumána*, s. 7773.
Tortulose, slightly torose. *Echítos torósa*, s. 2357.
Torus, (258) the same as thalamus, which sec. *Sisýmbrium*, g. 1422. p. 537.
Trapeziform, in the shape of a trapezium. *Borónia serruláta*, s. 5091.
Trapezoid, like a trapezium. *Adántum villósum*, s. 14554.
Triandrous, (261) having three stamens. p. 30.
Trichotomous, (102) branches divided in threes. *Trichídium decómbens*, s. 1000.
Tricuspidate, (262) having three points. *A'llium Pórrum*, s. 4617.
Trifarious, arranged in triple rank. *A'loe tortuósa*, s. 4386.
Trifid, divided in three. *Mantisia*, g. 16. p. 1.
Trilocular, (166) having three cells. *Leptospermum triloculare*, s. 6931.
Tripetaloid, appearing as if furnished with three petals. *Tillándsia xiphioídes*, s. 4144.
Tripetalous, having three petals. *Elatine hydropíper*, s. 5635.
Triquetrous, having three sides or angles. *A'loe reticuláta*, s. 4392.
Triparted, reduced to powder by pounding. *Amýgdalus*, g. 1128. (note.)
Tropical, belonging to the torrid zone. *Conocárpus*, g. 544. (note.)
Truncate, (263) blunt, as if cut off. *Hedýchium spicátum*, s. 34.
Tuberculate, covered with knobs or tubercles. *Ranúnculus parviflórus*, s. 8073.

Tuberos, (264) bearing solid fleshy roundish roots like the potato. *Cánna edúlis*, s. 12.
Tubers, roots so called. *Curcúma*, g. 14. (note.)
Tumid, swelling. *Secále orientále*, s. 1267.
Tunic, a coat. *Crocus pusillus*, s. 606.
Tunicated, having a coat. *A'llium Pórrum*, s. 4617.
Turbinate, (265) having the figure of a top. *Salicórnia*, g. 22. p. 1.
Turgid, swollen, puffed up. *Brómus praténsis*, s. 1132

U.

Umbellules, (153) divisions of an umbel. *Caúcalis daucóides*, s. 3524.
Umbels, (154) the round tuft of flowers produced by the carrot, &c. *Boerháavia scándens*, s. 108.
Umbilicus, (266) the cord which attaches the seed to the receptacle. *Bérberis*, g. 829. p. 239.
Umbonate, (267) having a top in the centre like that of the ancient shield. *Cucurbita Melopépo*, s. 13566.
Unarmed, destitute of prickles or spines, which are the arms of plants. *Corispérmum hyssopifólium*, s. 124.
Uncinate, (268) hooked. *Píper adúcum*, s. 502.
Unctuous, fat, oily. *Anchúsa*, g. 333. (note.)
Undulate, waved. *Sálvia pomifera*, s. 370.
Undulato-rugose, rugose or rugged and waved. *Stromatosphé'ria defístá*, s. 16361.
Ungueated, furnished with a short unguis. *Alpinia galánga*, s. 40.
Unguis, (269) the taper base of a petal. *Diánthus*, p. 372. (note.)
Unilateral, one-sided. *Brachypódium lolíaceum*, s. 1147.
Unilocular, (166) one-celled. *Calépiná*, g. 1441. (note.)
Unisexual, being of one sex. *Próckia*, g. 1179. (note.)
Urceolate, (270) pitcher-shaped. *Camphorósmá*, g. 254 p. 78.
Uterine, belonging to the womb. *Acácia*, g. 2127. (note.)
Uterus, the womb. p. 981.
Utricle, or *Utriculus*, a little bottle or bladder. *Salicórnia*, g. 22. p. 1.
Uvula, the gland of the throat. *Acácia*, g. 2127 (note.)

V.

Valvular, (271) or *Valved*, consisting of valves or seed cells. p. 895.
Varicose, (272) swollen here and there. *Pterocárpus*, g. 1515. p. 598.
Vascular, (273) consisting of tissue in a very succulent enlarged state. *Potamojócton*, g. 317. (note.)
Vaulted, (274) formed or placed like the roof of a vault. *Gladiolus namaquénsis*, s. 709.

FIRST
ADDITIONAL SUPPLEMENT
TO
LOUDON'S ENCYCLOPÆDIA OF PLANTS
COMPRISING
THE SPECIFIC CHARACTER, DESCRIPTION,
CULTURE, HISTORY, APPLICATION IN THE ARTS,
AND EVERY OTHER DESIRABLE PARTICULAR RESPECTING
ALL THE PLANTS
ORIGINATED IN, OR INTRODUCED INTO,
BRITAIN,
BETWEEN THE FIRST PUBLICATION OF THE WORK IN 1829,
AND
JANUARY, 1840.

PREPARED BY W. H. BAXTER, JUN., UNDER THE DIRECTION OF J. C. LOUDON
AND REVISED BY GEORGE DON, F.L.S.

FIRST
ADDITIONAL SUPPLEMENT
TO
THE ENCYCLOPÆDIA OF PLANTS;
BRINGING DOWN THE WORK TO MARCH, 1839.

Prepared by WILLIAM H. BAXTER, under the Direction of J. C. LOUDON;
and finally revised by GEORGE DON, F.L.S.

N.B. A † prefixed to genera or species indicates that such genera or species have been already registered, but are here repeated with more perfect details.

Page 8. CLASS II. — DIANDRIA. 2 STAMENS.

Order I. MONOGYNIA. 2 Stamens. 1 Style.

2500. 47a. *Belopérone*. Calyx 5-parted. Upper lip of corolla concave, lower one trifid. Stigma subulate. Capsule compressed from the base to the middle and empty; but swollen, and containing 4 seeds at top.
2501. 64a. *Streptocarpus*. Cal. 5-cleft. Cor. tubularly funnel-shaped; limb 5-lobed, nearly equal, oblique. Stam. 4; 2 front ones fertile; the other 2 tubercle-formed and sterile. Valves of capsule twisted. Stigma 2-lobed. Seed minute, naked.
-

Page 30. CLASS III. — TRIANDRIA. 3 STAMENS.

Order I. MONOGYNIA. 3 Stamens. 1 Style.

2502. 80a. *Béteklia*. Cal. 1-toothed, deciduous. Cor. funnel-shaped, 5-lobed. Caps. 1-celled, 1-seeded.
2503. 94a. *Streptanthera*. Perianth 6-parted; tube very short. Anthers twisted round each other. Ovar. 6-angled, also a little twisted. Ovula kidney-shaped.
2504. 107a. *Anisanthus*. Spathe 2-valved, subringent. Perianth unilabiate; limb equal, 6-parted; upper segment long, cochleariform. Stigmas 3, dilated, entire. Capsule triangular, 3-valved. Seeds cumulated, winged.
2505. 114a. *Dietes*. Flower 6-parted, equal, spreading. Stigmas petal-like, bifid.
2506. 114b. *Leucocoryne*. Perianth salver-shaped, 6-parted, 3 fertile combined, and the 3 sterile on the limb, fleshy, and sometimes antheriferous. Style terete. Stigma simple.
2507. 114c. *Triteleia*. Perianth funnel-shaped, 6-cleft. Stamens 6; upper ones opposite the petals. Stigma 3-lobed. Ovarium many-seeded.
2508. 117a. *Sisyrinchium*. Spathe 2-lvd. Calyx 0. Petals 6. Filaments connate. Style 1. Caps. 3-celled, inferior.
2509. 117b. *Renealmia*. Perianth 6-parted. Filaments connate or distinct. Stigmas 3, involute, filiform, acute. Capsule obovate. Seeds angular.
-

Page 76. CLASS IV. — TETRANDRIA. 4 STAMENS.

Order I. MONOGYNIA. 4 Stamens. 1 Style.

2510. 237a. *Conospermum*. Cal. ringent; Upper lip 2-lobed. Nut papose, inversely cone-shaped.
2511. 237b. *Eutrýccras*. Cal. 4-parted. Cor. 4-petaled. Style arcuate. Nut subulate.
2512. 238a. *Anadèmia*. Calyx nearly regular. Gland 0. Follicle 1-seeded.
2513. 238b. *Agrostachys*. Calyx regular. Filaments distinct. Stigma lateral. Ovary 1-seeded.
2514. 295a. *Lipóstoma*. Limb of cal. 4-parted. Cor. tubular at base, and ventricose at throat, bearded inside. Stam. inserted in throat. Style capillary. Stigm. 2, subulate, hispid. Caps. globose, 2-celled, opercul. many-seeded, often 1-celled. Seeds small, angular, scabrous.
2515. 306a. *Berthamia*. Flowers disposed in heads. Invol. of 4 petal-like parts. Cal. 4-toothed. Petals 4, fleshy. Fruit constituted of many pomes grown together. Endocar. 2-celled. Seeds solit. and pendul. in each cell.

MONOGYNIA.

Essential specific Character.

- 16713 Lvs. discolor. Inf. petals emargin. Flws. didymous peduncul. Brac. cuneate convol. Inner limb of cor. trifid
 16714 Probably not distinct from *C. flaccida*. The lvs. are shorter, less glauc. Inner pet. distinctly cuspid. and unequal
 16715 Lvs. oblong-ovate abrupt acumin. Flws. mostly in pairs on short pedun. Brac. broad-ellip. concave rounded
 16716 Stemless, Lvs. elliptic blotched above, beneath purplish
 16717 Leaves oblong costately veined glaucous beneath, Heads sessile many-flowered
 16718 Leaves distich. spread. horizont. oblong apicul. lucid little undul. short. th. petioles, Heads termin. obl. Brac.
 obtuse undul. loose short. th. flws.
 16719 Leaves oblong-lanceolate acuminate, Scape erect rigid terete
 16720 Leaves acuminate 2-in. broad, Bracteas ciliated 1-flowered

- 16721 Leaves few oblong-acute, Spike capitate, Bracteas of a fine deep rose-red colour margined with a white line
 16722 Stemless, Lvs. suborbicul. acute varieg. above, Flws. few radic. fascic. erect sess. Outer limb shorter, Inner
 16723 Lvs. oblong dimidiato-cordate petiolate, Spike termin. Outer bract or spatha elegantly nerved transv. striped

and Miscellaneous Particulars.

publish a figure and description, however imperfect, of one of the noblest plants that has graced the pages of the *Bot. Mag.*"

CLASS II. — DIANDRIA.

MONOGYNIA.

- 16724 Leaves elliptic-oblong tapering to base taper-pointed with serrated edges
 16725 Lvs. oblong approach. ovate coriaceous glossy waved acumin. Panic. termin. Cal. with 4 minute imbric. bract. at
 16726 Lvs. ellipt.-lanceol. attenuated both extrem. white and veined below wrinkled, Branches very slightly wart.
 16727 Lvs. altern. pinnate, Leaflets 7 ovato-lanceol. or oblong acumin. Pedun. elongate. 1-flwd. Segm. of cor. 5-6
 16728 Pedic. erect, Tube of cor. much longer than cal. Lower lip middle segm. bicornute lateral linear, Upper lip
 16729 Tube of cor. equal in length to cal. Lat. segm. equal in length to the middle which is bifid. Upper lip ov.-acum.
 16730 Lateral segm. of lower lip shorter than middle one which is sagittate, Upper segm. rhomboid-oblong retuse
 16731 Spikes terminal, Bract. rounded convex entire veined, Tube of cor. a little swollen upwards
 16732 Pedun. axill. & termin. often prolif. sometimes wanting, Bract. constituting dbl. invol. Tube of cor. very long
 curved remark. twisted

History, Use, Propagation, Culture,

51. *Calceolaria*. The varieties and hybrids of this genus, which have been raised in different parts of the country, are almost innumerable, and some of them are of very great beauty. They are all of the easiest culture, and require very little heat. Most of them continue flowering several weeks, and some of them the greater part of the summer.

- 16733 Bran. swoll. at joints, Lvs ovate-acum. obsc. serr. Flws. in short axil. 2-3-flwd. racem. erect, Bract. 4.5 base each fl. lin.-fl. [Brac. and cal. segms. subul. short. th. cor.]
- 16734 Stem joints short tumid in middle, Lvs. obl.-lan. very acumin. wavy minutely downy, Panic. termin. crowded.
- 16735 Lvs. on long pet. ovate-atten. at base sharply acumin. retic. Bract. numer. outer ovate-lanceol. inner lin. Cor. very long, Up lip erect ent. low. revol. 3-toothed.
- 16736 Lvs. obl. atten. both extrem. acute subcrenul. Racemes term. Flws. fascic. Cal. & brac. lin. thd., Cor. spid.
- 16737 Lvs. ovate acumin. crenat. Panic. large termin. Flws. remotely fascicul. subsess. disposed in slender elongated racemes
- 16738 Spikes axill. Brac. bracteol. and leaves lanceolate, Anthers calcarate at base
- 16739 Lvs. subsess. obl.-lan. acumin. very entire, Brac. small, Cal. segms. obt. Tube bent, Spike termin. subsimp.
- 16740 Lvs. larger & broader than those of *C. integrifolia*. The whole plant clothed with viscid pubescence
- 16741 Leaves lanceolate-acumin. canescent beneath, Corymbs paniced, Pedicels elongated
- 16742 Leaves ovate petiolate denticulate pubesc. lower ones acute at base, Corymbs umbellate few-flowered
- 16743 A hybrid between *C. corymbosa* and *C. arachnoidea*, with ochraceous and dirty-purple flowers [ovate bluntish
- 16744 Lvs. obl.-ovate bluntish much veined & rugose, hispidly hairy, Stem erect, very hairy, Segm. of cal. broadly
- 16745 Lvs. rather obtuse atten. at base velvety above beneath clothed with long hairs and small scale-lk. brist. serr. Cal. peltate deeply 4 cleft
- 16746 Stem lvs. cordate decuss. upper ones smaller entire with few long scat. hairs on their surfaces, Calyx downy [bellate
- 16747 Lvs. linear atten. at both ends lined distinct. serr. Teeth reflexed, 2-in. long 2 lines broad, Pedun. comp. um-
- 16748 Whole plant clothed with white wool, Lvs. ovate or oblong, Flws. corymbosc, Calyxes 3-nerved
- 16749 Lvs. ovate acute waved nerved, Lower ones atten. at base and connate, Upper ones nearly cord. sessile, Pan. spreading
- 16750 Herb clothed with white cobwebbed-wool, Lvs. ligulately-oblong little toothed petioles 5-in. long, Peduncles terminal twin [fulvous
- 16751 Stemless, Lvs. radical ovate rhomboid rosulate serrated nerved, Scapes generally 2-3-flwd. pilose
- 16752 Leaves ovate biserrated, Branches dependent bluntly tetragonal of a rusty purple colour
- 16753 Lvs. ovate-lanceol. sharply serr. pubesc. Pedun. collected into term. panic. generally 4-flwd. shorter than lvs. [sess. Infl. cymose many-fld.
- 16754 Stem pilose, Lower lvs. ovate-oblong obtuse petiolate, Upper ones sessile, Lower lip of cor. very large
- 16755 Stem cal. & bract. beset with glandul. hairs, Stem lvs. oblong-lanceol. undul. thd.: upper ones ent. ov. acum.
- 16756 Radical lvs. many: stem lvs. few: 2 lower ones subpet.: upper ones sess. Pedic. racem. 1-flwd. Caps papery. [fulvous
- 16757 Rad. lvs. obov. rather spatul. obtuse uneq. thd. Stem lvs. ov. pointed alm. ent. Corymbs forked 10-30-fld. Ped. [filif. clthd. gland. pubes.
- 16758 Radical lvs. ovate somewhat obtuse, Corymbs few-flowered [revol. obsol. 3-thd.
- 16759 Lvs. ovate-acumin. rounded at base: lower ones serr.: upper quite ent. Lower lip much wider than upper
- 16760 Lvs. obl.-lanceol. narrowed at base sharply & remotely toothed, Bract. ciliated often purplish or yellowish [gland. & viscid
- 16761 Lvs. ovate-cord. 2-3-in long glabrous obtuse rather wavy, Flws. erect oppos. subsecund, Bract. ovate acute
- 16762 Lvs. cord.-ovate acumin. toothed, Whorls 6-flwd. Bract. decid. very large broadly ovate, nerved red
- 16763 Lvs. oval obtuse rounded or cuneate at base irreg. crenated in middle nearly glabrous, Whorls 2-flwd. Cal. [usually cld.
- 16764 Lvs. cord.-ovate crenated hoary beneath, Bract. decid. Galea villose
- 16765 An undescribed species, introduced by Lagasca.
- 16766 Racemes branched, Flowers fewer & smaller than those of *S. phlomoides*
- 16767 Lvs. ovate acum. crenate-sinuate: upperm. ent. Fls. in dist. about 6-flwd. whorls each wh. supported by 2 ov.-acum. awned concave streaked bracts
- 16768 Lvs. petiol. broadly ov. acute subcord. at base, Rac. loose verticill. few-flwd. Upper lip of cor. entire toothed: Lower acute

16769 The only species

and Miscellaneous Particulars.

2501. *Streptocarpus*. This plant is very readily increased by seed, or by division of the root, and thrives best in a light rich soil. It is a very ornamental stove herbaceous plant, and well deserving of cultivation.

- 16783 Flowers unibracteate, Filaments incurvedly spreading puberulous geniculated above.

- 16784 Leaves ensif. bluntnish cut in the middle, Scape 1-2-flwd. Segments of perianth ovate himaculate in the middle
 16785 Lvs. ensif. acute mucron. striated, Scape smth. 2-4-flwd. Per. 6-parted, Segm. of limb closely imbric. ovate
 blunt keeled [of the perianth
 16786 Stem leafy erect branched, Leaves nerved mucronate, Spike 3-4-flwd. Spathe awned 3 times as long as the tube
 16787 Spathes marked with linear spots, Segm. of limb oblong. Scape many-spiked, Spikes pendulous
 16788 Scape cylindric. smooth 2-4-flwd. Spathe 2-valved, Valves ov. lacer. membr. veined, Segm. 6 erect acute keeled
 16789 Scape few-flowered longer than the leaves, Leaves acute, Perianth funnel-shaped, Tube filiform, Segments
 lanceolate acute, Branches of style elongated

and Miscellaneous Particulars.

the Horticultural Society's garden; and they are described at length in the Society's Transactions where, also, many of the sorts are beautifully figured.

History, Use, Propagation, Culture.

105. *Gladifolus*. Some valuable additions have been lately made to this beautiful genus, of which the most splendid is unquestionably *G. natalensis*, which is also very hardy, and of easy propagation and culture as the *G. communis*.

- 16790 Lvs. 3-nerved, Scape few-flwd. Segments of cor. ringent even somewhat transparent
 16791 Lvs. very narrow, Scape 2-flwd. Tube equal to the spathe, Segments lanceolate obtuse
 16792 Lvs. linear ensif. ribbed slightly glaucous, Tube scarcely equal to the spathe [hollow
 16793 Lvs. narrowly linear elong. straight rigid promin. 2-nerved, Lower segm. of fl. obovately ovate spoon-shaped
 16794 Lvs. broadly ensif. acumin. ribbed, Spike distich. about 10-flwd. Tube shorter than outer spathe, Segm. ovate-oblong recurved and wavy
 16795 Leaves ensif. bicostate obscured nerved, Spikes tern. 10-12-flwd. Sheath dbl. convolute, Tube $\frac{1}{2}$ length of fl. campan. spreading
 16796 Lvs. 8-9 green nerved acute twisted

16797 Nearly allied to *A. juncæa*, but differs in having longer tube to flower, greater irregularity of limb and form of spots at base of 3 anterior segments

16798 Scape simple erect, Lvs. ensif. linear acute smooth nerved, Flowers distichous

16799 Lvs. equal linear ensif. Scape round branch at top

16800 Lvs. distichous ensif. spirally twisted, Scape branched compressed leafy many-flowered

16801 Lvs. linear glaucous, Limb lacinate lanceolate, Stamens sterile subulate obtuse

16802 Lvs. ovate-lanceolate, Limb linear-lanceolate

16803 Lvs. linear glaucous, Scape longer, Involucrum with pedicels twice as short, Umbel many-flwd

16804 Lvs. linear, Involucrum sheathed: at top bifid, Peduncle filiform shorter

16805 Crested, Scape 2-flowered, Leaves falcate shorter, Spathe 2-leaved

16806 Scape nearly round tl. flatt. twist. about 3-flwd. Spathe 3-bracts: outer nearly 1 ft. long very narr. atten. Germ. [12 furrows and 12 obtuse angles

16807 Sheath radical long surrounding the leaves, Lvs. very long thick quadrangular striated very glaucous

16808 Lvs. in tufts rigid erect linear-ensif. tough, Stem angl. leafy, Ovar. on long stalks not enclosed in flor. leaves somewh. 3-cornered, Stigm. 2-lbd. short

16809 Stem 3-4-flwd. Lvs. linear-ensif. striat. acumin. slightly falcate, Peduncle shorter than foliaceous spathe

16810 Lvs. linear-ensif. striat. Pedunc. 4-5 in. long, Pedic. $\frac{1}{3}$ in. long also very slender, Pet. 6 oblong-spathul. retuse [mucron. Caps. pear-sh. pubes.

16811 Foliage minutely hairy, Scape erect longer than lvs. somct. divided bearing mostly 3 fascicles of flws. Flws. with little heart sh. spot at base

16812 Pedun. solit. or 2-4, Spathe diphyl. Bract. scariose convolute, Col. of fil. long densely covered with longish gland. yellow hairs [sever. very frag. nodding

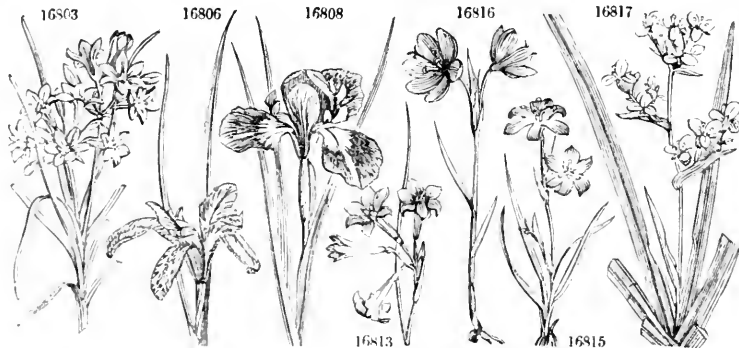

16813 Lvs. very narrow glauc. subul. at apex, Spath. consist. of bract. membran. at margin lowerm. sharpest, Flws.

16814 Stem remarkably compressed, Spathe lanceol. condupl. green with broad white membr. margin. Germ. glandr.

16815 Bulb ovate, Lvs. mostly radic. dply. striat. sheathing, Spathe 2 unequal lvs. about 2-flwd. Pedun. 1-in. long curved, Ov. oblong glabrous

16816 Stem terete simple, Lvs. lanceol. veined, Spathe gener. 3-flwd. Segm. of cor. spatulate, Root bulbous

16817 Lvs. oval-oblong pointed smooth on both sides, Flowers in long racemes

and Miscellaneous Particulars.

16815. *Sisyrinchium speciosum* is a lovely species, found about Valparaiso, on sandy hills; to be brought to perfection, it requires to be planted in dry light soil, and placed in a warm sunny situation in the green-house.

History, Use, Propagation, Culture.

2514. *Lipostoma*. The species of this genus thrive in any kind of light soil, and cuttings root readily in the same, under a hand-glass, in a little heat.

2515. *Benthamia*. A very desirable, nearly hardy shrub, which, perhaps, might be rendered hardier by grafting it

CLASS IV. — TETRANDRIA.

MONOGYNIA.

- 16818 Lvs. linear-lingulate : upperm. quite entire : lower ones sub 3-fid. Calyx silky, Stigma smooth
 16819 Lvs. hard stiff glandul. on both sides : upper 1 or 2-trifid cune. & 1 or 2cc. twisted at base, Heads of flw. crowd.
 16820 Lvs. coriaceous lanc.-lingul. or subspathul. faintly 3-nerved, Branches & perianth smooth
- 16821 Lvs. subulat.-filif. imbricated, Spikes shorter than the axillary peduncle
 16822 Lvs. lanceol.-linear acute mucron. slightly pubescent somewhat obliquely twisted
- 16823 Leaves lanceolate coriaceous serrated, Panicle corymbose
- 16824 Lvs. pinnatifid slightly hairy, Lobes cuneiform, Follicle viscid
- 16825 The only species
- 16826 Bran. hoary slightly angul. Lvs. lin. revol. at edge with small mucro somet. 2 or 3-fid at point densely hairy
 ben. Cal. extern. silky
- 16827 Lvs. spathulato oblong mucronate pubes. on both sides, Racemes corymb. Pedicels and calyx smooth
 16828 Lvs. oblong-obovate obtuse mucron. : above pubescent : beneath very downy pale grey, Racemes recurved
 16829 Lvs. pinn. segm. altern. lin.-obl. obt. : above downy with patent ferrug. hairs : below silky with adpressed hairs
 16830 Lvs. pinnatif. segm. acute smooth and veiny above hoary beneath, Racemes panic. Peria. & pistil very smooth
- 16831 Cespitose bearing many rooting stems, Lvs. spathul. rather hairy, Peduncle termin. 1-flwd. elongated
- 16832 Procumbent, Lvs. 8-9 in a whorl & are as well as stems hispid, Style clavate much exerted bifid at apex
- 16833 Lvs. sessile rhomb.-ovate acute very entire imbricated or spreading, Bract. few naked.
- 16834 Lvs. petiol. ovate-lanceol. taper. into petioles firm much acuminate rather revol., Stip. white glandul. downy
 setosely jagged, Panic. loose at ends of bran.
- 16835 Plant hairy, Lvs. roundish undulated spreading
- 16836 Lvs. cordate-acumin. shining on both sides. Bract. connate, Pedun. axill. 1-flwd. Tube clavato-funn.-shaped
- 16837 Petiol. numer. filiform dichot. sparingly hairy more abund. at swollen joints, Petals flat
 16838 Lvs. tritern. leaf. cord.-ovate petiol. hairy, Rac. many-flwd. Sep. lin. obt. Petals ov.-lanc. inner ones spurred
 twice long. th. outer ones
 16839 Lvs. tritern. leaf. ovate-oblong petiol. smooth

16840 The only species

and Miscellaneous Particulars.

on *Cornus sanguinea*. It is readily propagated, either by seeds or by cuttings. The fruit, when ripe, somewhat resembles that of the arbutus, but is much larger. The flesh is yellowish white, rather insipid, but not unpleasant; although a little bitter; and, as Mr. Royle informs us, it is eaten by the inhabitants of the hills in the Himalayæ.

Page 108. CLASS V. — PENTANDRIA. 5 STAMENS.

Order 1. MONOGYNIA. 5 Stamens. 1 Style.

2516. 319a. *Douglasia*. Caps. cartilaginous, 1-celled, 5-valved. Cor. infundibuliform; tube ventricose; limb flat, 5-parted. Stigma a minute depressed cup. Seeds 2, peltate oblong, convex on outside, concave on inside.
2517. 369a. *Collonia*. Cal. campanulate, 5-cleft. Cor. salver-sh., tube slender. Stam. inserted towards middle of tube. Cells of caps. 1-2-seeded.
2518. 375a. *Eitoca*. Cor. deciduous. Ovar. pilose. Placentas linear, 4, or many, ovulate. Caps. half 2-celled.
2519. 381a. *Nierenbérgeria*. Cor. with long slender tube and equal dilated limb. Stam. exserted; filamen. combined at base. Stigm. transverse or peltate.
2520. 381b. *Petúnia*. Cor. with short tube and dilated rather uneq.-limb. Stam. unequal, enclosed.
2521. 381a. *Pharbitis*. Ovarium 5-celled; cells 3-seeded.
2522. 388a. *Gútia*. Cal. campanul., 5-cleft. Cor. funnel-sh. or subcampan. Stamens inserted in throat. Cells of caps. many-seeded.
2523. 388b. *Egocóloa*. Cal. tubularly campanulate, 5-cleft. Cor. somewhat salver-shaped. Stams. inserted in the upper part of tube. Cells of caps. many-seeded.
2524. 388c. *Limánthus*. Cal. tubular, with 5 strong green nerves, terminating in subul. recurv. teeth at apex. Cor. funnel-sh. Anthers filiform, hardly sagittate at base.
2525. 388d. *Hugúfia*. Cal. tubul. campanul. Cor. funnel-sh. Tube short, exserted. Stam. inserted at throat. Anthers linear sagittate.
2526. 388e. *Lepiosiphon*. Cal. tubul. campan.; lobes linear, subulate. Cor. funnel-sh.; tube very long, slender; limb campanul., 5-cleft, with oval very entire lobes. Stamens inserted at throat. Cells of caps. many-seeded.
2527. 388f. *Fenzlia*. Cal. tubul. campanul., deeply 5-cleft, with membranous sinuses and linear acutish erect segms. Cor. somewhat funnel-sh.; tube short; limb 5-parted. Anthers ovate-sagittate, a little exserted.
2528. 394a. *Milichrus*. Cal. many-bracteate. Cor. rotate or urceolate, furnished with 5 fascicles of glands near the base inside; segments half-bearded.
2529. 394a. *Sphenotoma*. Cal. bibracteate. Cor. salver-sh., with slender tube, coarctate throat, and blunt beardless limb. Stam. epipetalous. Hypogynous scales 5. Placent. hanging from top of central column.
2530. 399b. *Trochodrpa*. Cal. bibracteate. Cor. campanul.; limb spreading, bearded. Stam. exserted. Ovarium 10-celled. Drupe baccate.
2531. 400a. *Ponceléa*. Cal. foliaceous. Cor. short, campanul., 5-cleft, beardless. Stam. hypogynous. Anther peltate below middle, with marginate dissepiment. Hypogynous scales 0. Placentas adnate to central column.
2532. 400b. *Cosmetia*. Cal. foliaceous. Cor. tubular. Stam. epipetalous, adnate to ciliated tops of filaments. Hypogynous scales 5. Placentas adnate to central column.
2533. 413a. *Pachypodium*. Stam. enclosed. Anthers nearly sess., adhering. ?Hypogynous scales 0. Cor. salver-sh., with equal obtuse segments. Foliolles ovate.
2534. 424a. *Nyctcrisition*. Cal. and cor. 5-parted. Stam. 5, all fertile. Ovarium 5-celled; cells 1-seeded. Stigma obtuse, almost entire. Seeds bony, albuminous.
2535. 462a. *Waldenbérgeria*. Cor 3-5-lobed at apex, rarely divided to middle. Stam. 3-5, free; filaments rather broadest at base. Style enclosed, pilose, most so towards upper part. Stigmas 2-5. Ovar. combined with tube of cal. Caps. 2-5-celled, each opening by so many valves at apex, which bear each a dissepiment in middle. Seeds very numer. minute.
2536. 462z. *Právia*. Limb of cal. 5-toothed. Cor. cleft on back, even to base; limb 5-parted, unilabiate. Stam. combined above. Anthers cohering; two lower ones mucronate. Stigma 2-lobed. Caps. baccate, crowned.
2537. 464y. *Túpa*. Cal. spherical, 5-parted. Cor. cleft on back almost to base; limb divided into 5 segms., which are all united at their tips. Stam. combined almost to base; anthers cohering, bearded. Stigma 2-lobed, protruding. Caps. 2-celled, many-seeded.

2538. 461z. *Siphocampylus*. Limb of cal. 5-parted. Tube of cor. curved, undivided, ventricose in middle; limb 5-parted, bilabiate. Stamens and anthers combined; anth. bearded. Caps. 2-celled, 2-valved, dehiscent.
2539. 467a. *Lechenaultia*. Calyx superior. Cor. with tube on upper side. Anth. at first cohering. Stigma obsolete, bilabiate in bottom of indusium. Caps. prismatic, 2-celled, 4-valved. Seed cubical or nucamentaceous.
2540. 470a. *Brunonia*. Heads involucreate. Cal. 5-fid, 4-bracted. Cor. monopetalous, infundibuliform; limb 5-parted. Stam. 5, hypogynous. Anth. connate. Ovar. 1-seeded. Seed exalbuminous.
2541. 478a. *Lycycteria*. Cal. with an ovate tube, and 5-parted irregular limb, ciliated with glands. Cor. funnel-sh., tube gibbous at base, limb 5-parted and campanulate. Stigma capitate. Berry roundish, 5-celled, crowned by calyx; cells many-seeded.
2542. 491a. *Luculia*. Calyx 5-parted, segms. foliaceous. Cor. tubular; limb 5-lobed, imbricate in aestivation. Stigma bipartite. Caps. 2-celled. Seed samaroid, surrounded by jagged membranous margin.
2543. 496a. *Ucudria*. Cal. tubularly urceolate, 5-cleft. Caps. pedicellate, clavate, attenuate at base. Flws. less crowded than in *Nauclaea*.
2544. 509a. *Collèta*. Calyx campanulate, coloured. Petals 0. Anth. 1-2-celled, reniform or ovate. Disk cup-sh. Style simple, elongated. Fruit dehiscent, containing 3 nuts.
2545. 509b. *Retanilla*. Calyx urceolate, 5-cleft. Petals cucullate, sessile. Stam. enclosed. Anth. reniform, 1-celled. Disk covering bottom of calyx. Style simple. Fruit containing a 3-celled nut.
2546. 509c. *Trevida*. Cal. turbinate, 5-cleft. Petals cucullate. Stamens enclosed. Anthers 1-celled, reniform. Disk almost wanting. Style long, hairy. Caps. membranous, 2-valved, 1-seeded.
2547. 518a. *Colocœma*. Cal. 5-parted. Disk adnate to base of cal. with 5-lobed margin. Petals 5, with spreading border. Anth. terminated by minute sessile gland. Caps. of 5 horned carpels.
2548. 529a. *Escallonia*. Tube of the calyx semiglobose, adnate to ovarium; limb 5-toothed or 5-lobed. Petals 5, arising from calyx. Stam. 5. Anthers ovate-oblong. Stigma peltate. Style filiform, permanent. Caps. baccate. Seeds numerous.
2549. 540a. *Erpétion*. In every respect the same as *Viola*, but the sepals are hardly drawn out at base, and the lower petal is not drawn out into a spur; but furnished with a small gibbosity. Anth. without appendages.
2550. 241a. *Hymenanthera*. Sepals imbricate. Petals at length reflexed. Structure of stamens, as in *Viola*, but joined at base into monadelphous disk, with a scale at back of each. Caps. rather baccate, 2-celled; cells 1-seeded.
2551. 565a. *Oplotoëca*. Cal. semi-5-fid, bibracteate. Cor. 0. Nectar, tubular, 5-toothed. Anth. 5, sessile at mouth of tube of nectarium, and alternate with its teeth. Utriculus 1-seeded. Style undivided. Stigma capitate.

Order 2. DIGYNIA. 5 Stamens. 2 Styles.

2552. 578a. *Harrisöndia*. Cor. urceolate, 5-toothed, throat naked. Crown of stam. of 5 pieces, each with a fleshy process or tooth.
2553. 578b. *Turædia*. Calyx 5-parted. Corolla campanulate. Corona simple of 5 retuse exserted pieces opposite the petals. Pollen masses ventricose. Stigma acuminate bipartite. Gynostegium none.
2554. 579a. *Philibertia*. Corona double; outer one annular, entire, fleshy, undulated; inner one inserted on the top of the gynostegium of 5 entire fleshy segments. Cor. urceolate, sinuately 5-lobed, furnished with small teeth between the segments.
2555. 590a. *Physianthus*. Cor. tubular. Tube inflato-ventricose; limb 5-fid, connivent.
2556. 592a. *Tylophora*. Corona simple, 5-ld.; leaflets depressed, fleshy, toothless inside, pressed to the gynostegium. Pollen masses transverse or ascending. Cor. rotate.

Order 3. TRIGYNIA. 5 Stamens. 3 Styles.

2557. 684a. *Stackhoüsia*. Calyx 5-parted. Petals 5, joined by the claws. Stamens unequal, alternating with the petals. Stigma acute, simple. Capsule trilocous.

History, Use, Propagation, Culture,

369. *Phlox*. All the phloxes are elegant plants; the lower-growing sorts are most ornamental on rockwork, and the taller kinds in beds or borders. Of the latter by far the most splendid is *P. Drummondii*, which, with *Pentstemon chamædifolia*, ought to be in every flower-garden.

- 16848 Lvs. ovate acuminate pubescent crowded on the stem
 16849 Lvs. ovate acuminate with a mucro at the point slightly pubescent and silvery
- [nearly to base persist.]
 16850 Lvs. crowded ovate-lanceol. acute keeled on upper side ciliat. Scape villous, Umbel many-flwd. Cal. 5-lobed
 16851 Lvs. oblong acuminate smooth above and slight downy beneath, Capsule large
 16852 Lvs. linear mucron. slightly pubescent underneath
- 16853 Lvs. lin. obtuse subamplex. closely hairy, Bran. rigid hoary subverticil., Flws. subumbell. on long pedunc
- 16854 Lvs. oblong acute serrat. powdery beneath, Flws. verticil., Invol. leafy, Tube of cor. very long, Segms. entire
 16855 Lvs. lanceolate smooth
 16856 Lvs. ovate oblong
 16857 Lvs. ovato-lanceolate
 16858 Lvs. oblong-lanceol. acute rigid cartilaginous margin beneath glaucous, Umbel few-flowered, Calyx acum. thid
- [than cal.]
 16859 Lvs. spatul. obl. rugose slightly hairy above densely woolly below, Umbel many-flwd. Tube scarcely longer
 16860 Lvs. oval-subrotund petiol. very ent. or obtusely crec. Umbel few-flwd. loose nodding, Invol. 4-lob. Leall. spurred at base
 16861 Lvs. obl. obovate undul. smooth repando-dentic. Flws. umbellate nodding, Cal. tubular 5-lob
- 16862 Lvs. oblong entire
- 16863 Lvs. cordate minutely toothed, Segm. of cor. oblong obtuse
 16864 Lvs. variable either Ivy-sh. hastate heart-sh. arrow-sh. or irreg. corlae. alw. plaited middle lobe somewhat much extend. Cal. segs. reflex short sharp $\frac{1}{4}$ twist
 16865 Stem ascending branched slightly winged, Lvs. sessile cordate-ovate scabrous at the margins
- 16866 Differs from *A. Monelli* in the cor. below of brilliant blue-purple above paler and redder ben. the eye or centre yellow minutely and irregul. crenat.
- 16867 Stems downy scabr. spot. Lvs. refl. glabr. shining above; lower narr. lanceol.; upper cordate acute, Teeth of cal. lanceol. mucron. spread.
- 16868 Lvs. oblong-cordate acum. edges scabrous, Pedic. and cal. downy, Segms. long awned
 16869 Stem clothed with long pat. hairs, Lvs. lower oppos. oblong-spath. : upper altern. oblong acute arist. Segms. of cor. very acum. reflexed [Cal. teeth subul. lin. Tube much long. th. cal.]
- 16870 Stem rather downy, Upper lvs. broadly lanceo. oppos. and altern. lower, ovate, Bran. downy few-flwd. compact,
 16871 Proccumbent, Panic. loose fastigiate, Pedic. generally twin. Cal. teeth very long subulate
 16872 Bran. clthd. with hair-lik. down as well as pedun. and cal. Lvs. lan. acute atten. at base smoothish ciliat. Tube hairy erect twice long than cal.
- 16873 Shrubby, Lvs. lin. acum. pungent dilated somewhat ciliat. at base edges callous. Branches of corymb. 3-flwd.
 16874 Stem roughish obscure. spot. Lvs. lanc.-acum. glabr. both sides shining; upper ones broadest, Tube of cor. 3 times longer than cal. [corymb form thyrsoid raceme]
- 16875 Lvs. lower linear: middle obl.-lan. : upper cord.-ovate, Teeth of cal. ovate shortly acum. erect, Bran. of
 16876 Stem glabr. at bottom downy at top, Lvs. obl.-lan. acute scabr. above undul. scabr. edges, Panic. loose, Cal. teeth subul. straight
- [crowded shorter than invol.]
 16877 Prostrate, Lower lvs. pinnatif. and cut: upper cuneate pinnatif. or cut, Invol. lvs. oblong acute entire, Flws.

and Miscellaneous Particulars.

2517. *Collomia*. A genus of annual plants of the easiest culture, requiring only to be sown in the open ground in spring. Some of the species are pretty, and deserving of cultivation.

History, Use, Propagation, Culture,

2518. *Eitoca*. A genus of showy hardy annuals. They succeed best on rockwork, in dry, sandy, or gravelly soil.

2519. *Nierembergia*. All the species are exceedingly elegant when in blossom. In the open border they succeed well from May to Sep., and in large patches have a very pleasing appearance. In the autumn it is necessary to pot a

- 16878 Lvs. lanceol. linear; upper one ovate lanceol. entire or deeply 2-4-toothed at apex
- 16879 Lvs. obl. lanceol. entire shining ciliat. with glands, Cal. villous glandul. Cor. ventricose
- 16880 Lvs. ovate-lanceol. quite entire opaque uniform: upper ones downy beneath
- 16881 Lvs. pinnate, Leaf. linear entire, Cal. deeply 5-cleft, Stamens enclosed
- 16882 Proemib., Lvs. deeply pinnatif. almost pinnate, Segms. oblong linear entire or slightly cut, Cal. nearly 5-part.
- 16883 Lvs. lanceol.-oblong obtuse, Cal. clothed with black glands, Segments long, subulate
- 16884 Lvs. pinnate, Leaf. ovate-roundish mucronulate, Segms. of corolla obtuse crenulated
- 16885 Lvs. pinnate, Leaf. ovate-obtuse glabrous, Segments of corolla ovate acutish
- [lateral and term. Rac. corymb.
- 16886 Lvs. pinnate, Leaf. altern. very uneq. obl.-ovate some sess. others petiol. pinnatif. lobed & cut pubes. Pedunc.
- 16887 Lvs. bipinnatifid, Leaf. oblong dentately pinnatifid, Cal. segments oblong-linear hispid
- 16888 Stem slender branching, Calyx linear 5-cleft, Corolla spreading 5 ovate obtuse lobes
- 16889 Lvs. pinnatifid or bipinnatifid, Ovula 20 or more to each placenta
- 16890 Lvs. linear or lanceol. quite entire sometimes trifid or bipinnatifid. Placenta 20 or many ovulate
- [several abortive
- 16891 Lvs. silky on both sides pinnatif.: upper leaves linear entire, Stam. 3 times as long as cor. Plac. many-ovul.
- 16892 Stem dichotomously divaricate, Leaves all ovate undivided. Placent. 12-20-ovulate
- 16893 Lvs. ovate acute quite entire, Cor. about twice as long as calyx, Placenta 8-10-ovulate
- 16894 Herb clothed with clammy pilli, Lvs. cordate ovate rather angul. serrat. Racemes elongated forked and simple
- 16895 Lvs. sinuately lobed sub-tomentose as well as petiol. and bran. Points of corolla elongated, Calyx 2 3-lobed
- [of pedun. Cal. dply. 5-partite
- 16896 Glabr. & glauc. Lvs. oppos. & connate ovate or ov.-obl. 3-5-nrvd. very acute passing into subul. bracts. at base
- [segms. obov. 3-nerved
- 16897 Herb clothed with glandul. pubesc. Lvs. oppos. & altern. roundish-obov. petiol. Cal. large campan. foliaceous
- 16898 Herb downy, Lvs. linear subspathul. obtuse, Cal. segms. linear bluntnish much short. than tube of corolla
- 16899 Herb glabrous erect filiform, Lvs. lin.-lanceol. acute or obtuse, Tube of cor. glandul. as are the filaments
- 16900 Herb smoothish, Lvs. linear acumin., Cal. segms. acumin. much shorter than tube of cor.
- [times long. than cal.
- 16901 Lower lvs. altern. ovate-oblong obt. pubesc. attenuated, Floral lvs. sess. cord.-ovate oppos. Tube of cor. 3-4
- 16902 Lvs. linear obt. Cor. funnel-sh. tube scarcely longer than cal. Segms. emarginate, Style clavate
- 16903 Lvs. ovate on short petioles acute, Cor. ventricose, Segms. ovate acute, Flws. axillary solitary pedunculate
- [twice as long as cal.
- 16904 A hybrid between *P. nyctaginiflora* & *P. intermedia*, with ovate acutish lvs. Cal. segms. ligulate, & tube of cor.
- [cup-shaped
- 16905 Arboreous, Lvs. uneq. cord.-ovate naked on long petiol. Tube of cor. slightly curv. mouth contract. limb small
- 16906 Lvs. stem-clasping cord.-lanc. acumin. Tube of cor. long filif. 5 times longer than foliac. cal. Lobes of cor. ovate-lanc. acute
- [Seg. ov. obt. emar. somew. uneq.
- 16907 Root lvs. obl. spathul. stem lvs. sess. half-stem-clasp. acumin. hardly repand. Cor. salver-sh. Tube long clav.
- 16908 Lvs. broad-lanc. acumin. nndul. on longish petiol. Panic. few-flwd. Tube of cor. elong. Segms. roundish obt.
- 16909 Lvs. fleshy ov.-lan., lower petiol. Flws. axill. solit. Cal. many parted, Caps. many-celled, Segms. of cor. obt. deeply veined
- [thickened
- 16910 Lvs. cord. roundish 3-lobd. Lobes acute, Pedun. many-flwd. longer than petioles, Cor. campanulate, Tube
- 16911 Lvs. quinately digit. leaf. lanc. quite ent. margins undulat. Pedun. as long as petiol. Infor. cymose, Sep. imbric. obt. eq. Cor. funnel-sh.
- [to petiol. Pedun. axil. 3-4-flowered somewh. racem.
- 16912 Lvs. altern. membran. truly cord. deep broad sinus at base sharply acumin. wavy on surt. much veined ab. eq.
- 16913 Lvs. cord. petiol. with very dp. sinus at base 3.5-lobd. in palmated manner, lobes very uneq. Petiol. much short. th. lvs. Pedun. axill. solit. 5-7-flwd.
- 16914 Tuberos, Lvs. trilob. lower lobe rounded at base imbricated, Pedun. axill. many-flwd. Petiol. short. Cor. infundib. limb crispate
- 16915 Lvs. cord.-acumin. pubesc. ent. & 3-lobed auricul. divergent, Pedun. leafy subbifid. Sepals ovato-lanceol. acute

and Miscellaneous Particulars.

few plants of each species, and preserve them in the green-house through the winter. They seldom ripen their seeds, but are all readily propagated by cuttings, and thrive best in light rich soil.

2520. *Petunia*. Culture, propagation, &c., same as that of *Nierembergia*.

2521. *Pharbitis*. A genus of very showy, tender, twining annuals. They thrive best in light rich soil, or a mixture of loam and decayed leaves.

History, Use, Propagation, Culture,
 2522. *Gylia*. Elegant hardy annuals of the easiest culture, the seeds requiring only to be sown in the open border in spring. The larger the quantity of each grown together, the more showy their appearance.
 2523. *Ego'chilola*. A genus of singular, but by no means showy, plants, requiring the same treatment as those of *Gylia*.
 2524. *Linanthus*. Culture, propagation, &c., the same as those of *Gylia*.

- 16216 Lvs. pinnatif. lobes few broad little-toothed, Cor. scarcely longer than calyx, Placentas 2-ovulate
 †2294 Nearly related to *N. parviflora*, but differs in flws. being twice the size & calycine append. being larger & longer
 16217 Petioles auriculate dilat. at base, Cor. twice as long as cal. Lvs. while oppos. connate at base
 16218 Lvs. 3-4-lbd., on each side entire or cut, Petiol. without append. Cor. twice as long as cal. Placent. 10-12-ovul.
 16219 Lvs. oppos. pinnatif. lobes 5-9 alm. ent. Cor. rotate very pilose bottom & obov. segms. Placent. about 10-ovul.
 Seed strophiolate smooth

- 16220 Corolla 3 times longer than the calyx
 16221 Corolla twice longer than cal. Flws. one half smaller than those of *G. limiflora*
 16222 Corolla hardly exceeding the calyx, Habit of *Arenaria tenuifolia*

- 16230 Lvs. pectin.-pinn. Leaf. linear acumin. Tube of cor. 5 times longer than cal. Limb spread. Segms. acute obl. [or ovate flat
 16231 Lvs. pectin.-pinn. clthd. cobwebbed villi as are bract., Leaf. or segms. lin. mucron. Segms. of limb ov.-lanc. [acumin. channelled
 16232 Lvs. glabr. bipinn. Flws. usually solit. Corymbs loose on long pedunc. Cor. 4 times longer than calyx
 16233 Lvs. pinnatif. Lobes ovate, Flws. somewhat glomer. Cor. 3 times longer than the cal.
 16234 Lvs. pinnatif. rather woolly at length glabr. Segm. oblong lanc. ent. or cut, Flws. nearly solit. divaric. panic.
 Cor. twice long. than cal.
- 16230 Lvs. pinnatif. lower ones bipinnate, Segms. linear, Flws. solit. term. panic. Cor. about twice length of calyx
 16231 Lvs. bipinnate, Leaf. or segms. linear subul. Corymbs 3-6-flwd. virgately panic. Corolla about 3 times longer
 than calyx. [Cal. segms. subul.
 16232 Lvs. pinnatif. Segms. narrow obl. sinuat., Pedun. axill. solit. 1-3-flwd. Cor. tubular hardly long. than cal.
 16233 Lvs. so newb. bipinnate smoothish, Segms. linear, Corymbs 3-10-flwd. Pedun. very long, Cor. hardly twice
 longer than cal. [than cor.
 16234 Lvs. 2 or 3-pinn. Segms. or leaf. linear subul. Cal. rather woolly, Cor. twice longer than cal. Stam. shorter
 16235 Lvs. bipinnatif. Segms. linear cut, Flws. sess. dispersed in dense heads, Cor. longer than cal. Stam. shorter
 than cor.

- 16232 Lvs. pinnate, Leaf. ent. or cut lobes lanc. lin. very acute spinose, Cal. segms. lanceol. Flws. glomerate termin.

- 16233 Lvs. opposite sessile palmate, with 3 to 5 linear-subulate segments

- 16234 Lvs. numerous nearly all pinnatif. glabr. Tube of cor. longer than cal. Stam. about equal in length to cor.
 16235 Lvs. short simple or furnished with 1-2-segm. on each side toment. Tube of cor. exerted, Stam. exceeding cor.
 16236 Lvs. elongated simple or pinnatif. clothed with loose white wool, Tube of cor. longer than cal. Stam. shorter
 than cor.
 16237 Lvs. lower elongated simple glabr. upper short pinnatif. woolly, Tube of cor. shorter than cal. Stam. equal
 to cor.
 16238 Lvs. 7-11-cleft, Segms. subul. straight margins revolute. Tube of cor. hardly twice longer than limb, Filam.
 very short
 16239 Lvs. 5-7-cleft, Segms. oblong-linear, Tube of cor. 2 or 3 times longer than limb, Stam. 3 times shorter than limb
 of cor.
 16240 Lvs. ditto, Tube of cor. about 4 times longer than limb, Style scarcely equal to corolla
 16241 Lvs. ditto, Tube of cor. 4 times longer than limb, Stams. hardly $\frac{1}{2}$ shorter than limb of cor. Style little exerted
 16242 Lvs. 9-11-cleft, Segms. subul. erect margins revolute, Tube of corolla shorter than limb

- 16243 Herb nearly simple glabr. or downy, Lvs. oppos. lin. ent. Flws. 1-3 together pedunculate, Cor. nearly 1 in. long

and Miscellaneous Particulars.

2525. *Huebna*. Culture, propagation, &c., the same as those of *Gilia*.
 2526. *Leptosiphon*. All the species of this genus are very pretty showy plants, and are well worth cultivating in every garden. Culture, &c., of *Gilia*.
 2527. *Fenzia*. Culture and propagation the same as those of *Leptosiphon*.

390. *HOITZIA* mexicana Lam.; syn. No. 2302. In p. 142., *Lesèlia coccinea* G. Don, *Cântua Hoitzia* W., *H. coccinea* Poir.

History, Use, Propagation, Culture,

2528. *Melichros*. FINE shrubs, bearing elegant flowers, and therefore desirable plants for all collections. They thrive best in an equal mixture of sand, loam, and peat; cuttings of the young wood root readily in sand under a bell-glass.

2529. *Sphenotoma*. Culture, &c., the same as those of *E'pacris*.

2530. *Trochocarpa*. Culture and propagation as for *Andersoua*.

2531. *Ponceletia*. Culture and propagation the same as for *E'pacris*

- 16944 Lvs. ovate reflexed, Flowers axill. whole forming spike, Cor. 2-3 times longer than cal. campanulate
 [long. than ciliat cal.]
- 16945 Lvs. lanc. nearly sess. atten. at apex, mucron. Pedun. 3 times shorter than cal. Tube of cor. prisinate twice
 16946 Lvs. ovate sessile tapering to apex, Corolla 3 or 4 times longer than calyx
- 16947 Lvs. ovate-lanceol. very spreading, Flws. spicate axill. solit. secund, Tube of cor. campan. much long. than
 segms. of calyx
- 16948 Lvs. lanceol. very spreading, Flws. spreading axill. solit. secund, Tube of cor. ovate segms. of cal. acute ciliated
- 16949 Lvs. narrow-lanceol. acumin. flat striat. beneath margins scabr. Cal. segms. very acute naked eq. to tube of cor.
- 16950 Lvs. ellip.-lanc. acumin. concave 5-nrvd. mucron. petiol. marg. ciliat. Cor. cylind. ventric. Tube exceed.
 very acute cal.
- 16951 Lvs. lanceol. very acute erectly spread. ending in pungent pellucid mucron, Cal. segms. acute, margins naked
- 16952 Cor. rotate, Cal. villous, Lvs. lanceol. lin. pilose on both sides and on margins
- 16953 Cor. urceol. Cal. pilose, Lvs. lanc. atten. very acute mucron. concave many-nrvd. with membran. dentic. edges
 [fringed with long hairs]
- 16954 Flor. branch much long. than ovate spikes. Caul. lvs. lanc.-subul. spread or recurv. Bran. lvs. adpress. Lvs.
 16955 Flor. branch much long. than ovate spikes. Caul. lvs. lanc.-ensif. erectish. Branch lvs. adpressed
- 16956 The only species
- 16957 The only species
- 16958 The only species
- 42339 The only species
- 16959 Stems tuberous at base, Lvs. oblong toment. beneath glabr. above, Prickles straight subulate
- 16960 Lvs. linear or lanceol. toment. beneath glabr. above, Prickles filiform setaceous
- 16961 Lvs. oblong-ovate with revolute edges, Flws. terminal cymose
- 16962 Lvs. ovate-oblong acute, Flws cymose, Cymose subumbellate
- 16963 Lvs. oblong-acumin. flat, Segms of limb. broad-rhomboid obtuse
- 16964 Lvs. oblong-lanceol. undul. glabr. Cal. teeth or. Segms. of cor. convex. crenul. Cymes divaricate
- 16965 Lvs. lanceol.-acumin. approxim. sometimes 3 in a whorl. Cymes many-flwd. Cal. segms. & bract. lin. lanc. acute
- 16966 Lvs. oblong-ovate with emarg. acumen shining ab. elthd. with silky rusty down ben. as are cal. & branchlets
- 16967 Lvs. ov.-acumin. narr. at base serr. elthd. silky strigae ab. and dense fusc. pili ben. Heads glob. on long
 pedun. Stams enclosed
- 16968 Lvs. lanc.-obl. acute both ends on long pet. sharply toothed puberul. Racemes axill. much short. than lvs.
 Pedic and Pedun. velvety
- 16969 Lvs. ellip.-obl. acute downy beneath, Flws. termin. solit. Segms. of cor. crispately crenat. spread. Tube twice
 long. than 3-lobed tubul. cal.
- 16970 Leaf uneq. complic. much undul. approxim. altern. ones minute, Pedic. articul. Cal. & Cor. 5-angled glabrous
- 16971 Plant clothed with clammy down, Lvs. cordate angul. toothed at base on long petioles, Racemes umbellate
- 16972 Lvs. petiol. obl. coriac. shining entire rather veiny, Pedun. term. & axill. gener. 1-flwd., Lobes of cor. blunt and
 plicae mucron. long. than lobes [campanul. segms. reflex. Stigma. dilat. concave
- 16973 Arboresecent, Lvs. twin ovate and cordate very entire, Rac. solit. from axill. of bran. secund. Cor. fleshy rotate-
 16974 Shrubby evergreen, Stem erect, branched, ferrugin. pubescent, Lvs. petiolate ovate-oblong blunt green above
 brownish pubescent beneath

and Miscellaneous Particulars.

2532. *Cosmilia*. Culture and propagation resembling those of *E'parcis*.

2533. *Pachynodion*. Very pretty succulent shrubs. They succeed best in a mixture of lime-rubbish, sand, and loam. Cuttings root readily in sand under a hand-glass. The plants should be kept moderately dry, when in a dormant state.

2534. *Nycteristion*. Propagation and culture same as those of *Chrysophellum*.

History, Use, Propagation, Culture,

2535. *Wahlenbergia.* The seeds of the annual sp. of this genus require to be raised on a hot-bed; and, when sufficiently strong, planted into the open border, in a sheltered situation. The perennial sp. grow freely in loam, peat, and sand, and strike root readily under a hand glass.

2536. *Præita.* Plants of this genus are readily increased by division of the root, or by seed; and thrive best in a mixture of loam, peat, and sand.

2537. *Tapa.* The species of this genus are deserving cultivation in every collection, on account of the beauty and singularity of their flowers. They are generally raised from imported seeds; and, when the plants are sufficiently strong, may be planted in the border under a south wall, but require to be potted in the autumn, and placed in the green-house during winter. *T. Feuillèi* yields a dangerous poison in Chile.

- 16975 Lvs. ovate-lance. short-acumin. scabrous on both surfaces rounded at base, Cal. segms. linear villous
- 16976 Lvs. scarcely petiolate ovate or subcordate scabrous above and on the nerves beneath, Corymbs terminal
- 16977 Stem creeping
- 16978 Stems diffused, Lvs. reniform-cordate deeply serrated, Peduncle usually 2-flwd. Segms. of calyx toothed, [Cor. rotate
- 16979 Glabrous, Stems branched, lower lvs. roundish; upper ones linear spatulate deeply serrated, Pedunc. corym.
- 16980 Stems filif. creeping hairy, Lvs. roundish-cord. serr. petiol. hairy both surf. oblique at base, Pedic. solit. Cal. segms. lin. subul.
- 16981 Lvs. lanceolate cuspidate, doubly serrated, decurrent at the base, Bracts convolute, Calyx toothed subulate, Anthers glabrous
- 16982 Stem erect thick suffrut. at base simple leafy, Lvs. ov.-lance. sess. decurrent clothed sof. whitish down, Raceme term. spicate
- 16983 Glabrous, Lvs. lanceolate serrulated, Flowers racemose, Calyx spherulic 5-toothed
- 16984 Stem suffrut. simple glabr. Lvs. lin.-lance. serrul. quite glabr. both suris. Pedic. axill. shorter than lvs.
- 16985 Stem villous, Lvs. sess. ovate-oblong serrul. mucron. downy glauc. Raceme short leafy, Cor. downy
- 16986 Lvs. ov.-lan. mucron. sharply serrat. quite glabr. Racemes term. leafy, Tube of cor. little long. than cal. 2 lower anth. beard.
- 16987 Lvs. lan. acumin. unequally serrated attenuated at base, Flowers axillary solitary pedunculate
- 16988 Lvs obovate-lanceol. acumin. coarsely toothed glabrous shining, Rac. termin. simple secund
- 16989 Glabrous, Lvs. lanceol. acumin. erosely toothed, Raceme leafy, Peduncles naked, Segms. of cal. linear subulate
- 16990 Stem short decumb. at base densely leafy, Lvs. lanc. dentately oinnatif. downy atten. at base, Pedun. term. very long. Segms of cor. long. th. lvs. [subul. little toothed spread.
- 16991 Lvs. sess. lanceol. decur. sharply serrat. glabr. Pedic. axill. solit. long. th. lvs. Rac. termin. leafy, Cal. segms. 16992 Lvs. 5-6 in. long lanceol. much acumin. closely and acutely serrated
- 16993 Flws. axill. solit. bractless droop. Cor. bilabiate glabr. upper lip of cor. rounded ent.; lower tripart. segms. [euneat. Filam. glabrous
- 16994 Flws. axill. and term. bractless somewh. droop. Cor. bilab. downy outside: upper lip 2-lobed; lower tripart. Segms. oblate
- 16995 Lvs. undivided villous beneath as are scapes hairy spread. Cal. segms. longitud. feathered apex somewhat acute
- 16996 Whorls capit. Lvs. oval acute both ends petiol. glabr. ciliat. toment. on outside upper ones connate
- 16997 Lvs. large ovate-ellipt. waved rath. acute on short petiol. upper sess. lower connate-petiol. downy glauc. ben. ciliat. on margin [beneath
- 16998 Flws. in verticill. heads. Cor. glabr. with elongated gibbous tube, Lvs. oval almost sess. glabr. ciliat. glauc.
- 16999 Spikes approx. vertic. heads of nearly sess. flws. Tube of cor. hairy ventric. in middle, Lvs. coriac. retic. ov. on short ped. glauc. ben. ciliat.
- 17000 Glabrous, Lvs. petiol. obl.-lance. shining above pale ben. Pedun. short 2-flwd. Tube of cor. very long filiform
- 17001 Hispid-pilose, Umbels pedunculate, Lvs. petiolate cordate ovate obtuse underneath glaucous

17002 The only species

2538. *Siphocampylus*. The sp. of this genus have all large, showy, scarlet, or red flowers, and well deserve a place in every stove. They are of easy culture. A mixture of loam, sand, and peat soil suits them best; in which cuttings strike readily under a hand-glass in heat.

2539. *Lechenaultia*. Elegant plants when in blossom. A mixture of turfy loam, peat, and sand suits them best; and cuttings of the young wood root freely in the same kind of soil under a hand-glass.

2540. *Brunonia*. Culture and propagation as for *Scaevola* in p. 169.

2541. *Lycetaria*. This is a beautiful shrub when in a flowering state, from the contrast between the deep green hue of its stem and lvs. and the reddish purple of its large bractees and berries. It is easily propagated by cuttings, or by seeds, which it produces in abundance.

History, Use, Propagation, Culture

2542. *Luculia gratissima*. It is impossible to conceive any thing more beautiful than this tree, when covered with its numerous cymes of fragrant flowers. A good rich light soil suits it best; and cuttings may, though with great difficulty, be rooted in sand, under a hand-glass.

2543. *Uncaria Gambier*. Gambier is the Malay name of an extract prepared from the leaves of this plant, and one of the drugs. It is not the only one, formerly called *Terra Japonica* in Europe. It is chewed by the natives, mingled with oetel leaf and areca, after the manner in which the cutch is used on the continent of India. (*Don's Mill.*)

2544. *Collètia*. A mixture of loam and peat appears to suit the plants of this genus best; and cuttings of the young wood will root freely in sand, under a hand-glass.

2545. *Retanilla*. Propagation, culture, &c., as for *Collètia*.

2546. *Trevoa*. For propagation, culture, &c., see *Collètia*.

17003 The only species.

17004 Lvs. ov.-obl. acute on short pet. smooth both surfs. Stips. ovate, Pedun. axill. solit. oppos., Bracteol. in middle: lower sterile covert. int. hooked spines

17005 Branches smooth, Lvs. obllq. cord. or ellipt. 3 nerved shining, Wing of fruit entire

17006 Bran. terete smooth, Lvs. obov.-obl. obt. acutely serrat. tapering and ent. at base, Pedun. slender flatten. about
 17007 Bran. smooth terete, Lvs. lanceol. finely serrat. Pedun. dichotom. 6-flwd. Flws. tetrandrous, Petals 4-lanceol. cordate [as long as lvs. 3-6-flwd.]

17008 Spines strong awl-sh., Fascicles scattered, Cal. oblong-cylindrical, Anth. nearly sess.

17009 Lvs. obovrd. quite entire 3-nrvd. Flws. sess. spiked rising from axillæ of scales

17010 Lvs. 3-nerved

17011 Lvs. ovate roundish hairy

17012 Branchlets pubesc. Lvs. lin. obl. obtuse, Peduncle 1-flwd. glabrous, Petals straight bluntnish

17013 Branchlets glabrous, Lvs. ovato-lanc. lower ones serrated upper ones quite entire, Cymes opposite the leaves

17014 Bran. twiggy pendent, Lvs. filif. acumin. flat above ben. semiterete, Flws. axill. solit. on short pedun. with several subul. imbric. bracts

17015 Branchl. rath. pubesc. Lvs. cuneif.-lanc. somewh. crenul. quite ent. middle nerve hairy, Panic. termin. many-flwd. Cal. puberul. Petals obovate

17016 Lvs. obl. cuneate at base acutish finely serrat. full of resin. dots ben. Panic. term. many-flwd. crowded intermixed with foliac. bract. Petals obov.-obl. [term. spike-formed erect, Petals obovate

17017 Hairy, Bran. somewh. trigon. Lvs. ellipt. obtuse on short petioles serrul. rather clammy above when young, Rac. [Cor. cylindrical, Limb revolute

17018 Lvs. oblong hairy viscid

17019 Lvs. oval acuminate smooth on both sides

17020 Lvs. obov.-lanceol. acute doubly serrat. glandul. at the base tapering at petiole, Pedun. simple or branched,

17021 Lvs. oblong-lanceolate serrulate clammy varnished, Corymbs 3-flwd. racemose, Corol. cylind. Limb spreading

17022 Stem simple erect, Lvs. ovato.-obl. petiol. entire hairy, Caps. pubesc. Stip. lanceolate ent. Pedun. about twice [as long as lvs.]

17023 Distinguished from *F. odorata* by its paler green herb. larger and paler flws. upper petals longer and narrower and lower broader and more distinctly emargin. Stip. also narrower

17024 Stem woody somew. angul. much bran. Lvs. cord. coriac. smooth even, Stip. and brac. fringed, Sepals lanceol

17025 Lvs. ovate acum. lbd. smth. above and slightly hairy beneath. [Pedun. erect. Caps. short. and round. th. *F. canina*

17026 Lvs. crowded renif. repandly toothed punct. Stips. lin.-awl.-sh. acumin. Petals reflex. 2 lateral ones bearded on upper side

17027 Lvs. oblong denticulated

and Miscellaneous Particulars.

2517. *Colconema pulchrum*. A beautiful little shrub, which thrives in a mixture of peat and sand, with a little loam. The tops of the young shoots, made into cuttings, and planted in sand under a bell-glass, root readily without heat.

2548. *Escalònia*. The species are fine evergreen half-hardy shrubs, and thrive best in a mixture of peat, sand, and loam. Cuttings strike readily in the same kind of soil, or in sand under a hand-glass.

2549. *Eriçyon*. Elegant little plants, that deserve to be cultivated in every garden. They are well adapted for rockwork, and are easily increased by separating their runners. They require the protection of a frame during winter.

2550. *Hymenanthèra*. A mixture of loam and peat suits the species of this genus best, and cuttings root readily in sand under a bell-glass.

†550. *RIBES* L. (*Ribes* of the Arabian physicians, found to be the *Rhèum Ribes*.) *Grossulacæ*. Sp.41—41.

History, Use, Propagation, Culture,

2557. *Stackhousia*. An interesting plant, as forming the type of a very small natural order bearing its name. See Lindl. *Nat. Sys.* ed. 2. p. 118.

Page 236. CLASS VI. — HEXANDRIA. 6 STAMENS.

Order I. MONOGYNIA. 6 Stamens. 1 Style.

- 2558. *Isomene*. Perianth 6-parted. Corona staminiferous, tube curved, cylindrical. Filaments short. Seeds fleshy, round. Scape solid.
- 2559. *Chorètia*. Perianth with a nearly straight cylindrical tube, and a spreading limb. Corona spreading. Filaments converging. Anthers versatile.
- 2560. *Coburghia*. Perianth drooping, with a long curved cylindrical tube, and a short half-spreading equal limb. Filaments equal. Stamens equal, connected by tubular membrane. Stigma blunt. Ovarium 3-sulcate. Scape solid.
- 2561. *Stenom-èsson*. Flowers drooping. Perianth with a nearly straight tube, constricted in the middle, and ventricose at the apex. Limb short, regular. Corona short. Stamens straight. Capsule ovate, 3-furrowed.
- 2562. *Burbaçèna*. Perianth funnel-shaped, 6-cleft, adnate to the ovarium. Filaments bifid. Anthers fixed to the back of the filaments in the division. Ovarium furnished with 6 rows of tubercles. Capsule 3-celled, many-seeded.
- 2563. *Pourvètia*. Calyx 3-parted, inferior. Corolla 3-parted, naked at base. Capsule 3-celled. Seeds naked.
- 2564. *Dyckia*. Calyx 3-parted. Segments concave. Corolla urceolately campanulate. Petals erect, fleshy at the base. Stamens monadelphous at the base. Ovarium tripartite. Cells many-seeded. Stigmas fringed.
- 2565. *Bilbèrgia*. Calyx 3-parted, unibracteate. Petals 3, convolute, with scales at the base. Stigmas 3, convolute. Capsule 3-celled, many-seeded.
- 2566. *Aëis*. Perianth drooping, campanulate, 6-parted. Stigma obsolete 3-lobed. Capsule 3-celled. Seeds fleshy angular. Spathe 2-valved.
- 2567. *Clvea*. Perianth tubular, 6-parted, deciduous. Segments imbricate; outer shorter than inner. Stam. equal inserted in orifice of tube. Anth. versatile. Ovarium inferior, 3-celled, many-seeded. Fruit berried indehiscent, 1-seeded from abortion. Seeds very smooth, transparent.
- 2568. *Pyroëtron*. Flowers sessile, funnel-shaped, erect. Segments equal, recurved at ends. Spathe bifid, equal. Stamens spreading in the throat. Ovarium 3-celled. Segments of stigma dilated. Scape 1-flowered, hollow.
- 2569. *Hippeistrum*. Perianth declinate, 6-parted; tube short, stamens declinate. Capsule 3-valved, 3-celled. Scape hollow, many-flowered.
- 2570. *Sceptrianthus*. Perianth funnel-shaped, with a long cylindrical tube, 6-parted spreading limb. Capsule 3-gonal, seeds in two rows.

 17066 Stem lvs. ternate, Leaf. somewh. palmately pinnatif. toothed, Segms. acute, Umbels many-rayed, Involutera 1-
 17067 Stem lvs. ternate, Leaf. pinnatifid deeply toothed, Umbels many-rayed, Stem from 10 to 12 feet high

TRIGYNIA.

[woolly

17068 Lvs. roundish oval quite ent. clthd. with stellate tomentum both surfs. grey ben. as well as bran. Corymbs term.
 17069 Lvs. 3-lbd. acumin. coarsely & bluntly dent. Petiol. glandless glabr. Corymbs termin. not radiant, Fruit obl. compressed

17070 Lvs. linear-lanceolate, Spike cylindrical elongated at top acutely conical, Segments acute, Stamens unequal

PENTAGYNIA.

[longer than ovarium

17071 Glabr. erect, Lvs. lanceol. acute 3-nrvd. Flws. corymbose, Cal. lvs. ov.-lanceol. acute keeled, Styles connate
 17072 Lvs. oblong lanceolate slightly hairy [racem. Brac. & sepals lanceol.-acumin.
 17073 Bran. angul. Lvs. scat. linear $\frac{3}{4}$ in. in length mucron. glabr. quite ent. slightly glauc. Flws. subcorymb. Fruit

[Cal.-ribs termin. about base of 5 blunt membran. segms.

17074 Lvs. spatul. 3-5-nrvd. below : coarsely reticul. above, Panic. bran. : bran. angul. in front rounded behind

and Miscellaneous Particulars.

17067 *Heracleum giganteum*, when growing on deep loamy soil, and liberally supplied with water when it is sending up its flower stalk will attain the height of 12 to 15 feet.

2571. *Haylockia*. Perianth cylindrical, with a widened throat and a half-spreading limb. Stamens conniving. Stigmas 3, recurved at ends. Capsule 3-gonal.

2572. *Cunningia*. Perianth campanulate, 6-cleft, deciduous, alternate. Segments ciliated. Anthers emarginate at the base, conniving. Stigma pruinose dot. Capsule 3-celled, few-seeded.

2573. *Faukia*. Perianth funnel-shaped, deciduous. Stamens and styles declinate. Stigma clavate, 3-gonal. Capsule 3-celled, many seeded. Seeds disposed in two rows in each cell, winged at end.

2574. *Cycloböthra*. Flowers drooping. Sepals glabrous, petals bearded, with a nectary, hollow in the middle. Capsule 3-winged. Seeds in single rows.

2575. *Rhinopetalum*. Perianth 6-leaved, deciduous ; each leaf furnished with a naked nectariferous hollow at the base, upper one horned on the back. Filaments bearded. Ovarium 3-gonal, 3-celled, many-seeded.

2576. *Charivoodia*. Perianth 3-parted. Filaments thickened in the middle. Stigma 3-cleft. Ovarium 3-celled.

2577. *Callipödra*. Perianth campanulate, 6-parted. Filaments petaloid, 2-lobed. Anthers sessile between the lobes. Ovarium stipitate, 3-celled, many-seeded. Stigma 3-lobed. Capsule 3-winged.

2578. *Lazmannia*. Corolla 6-parted, persistent. Filaments subulate, smooth, inserted in the base of corolla. Anther peltate. Capsule 3-celled. Seeds sub-solitary, peltate.

2579. *Barnardia*. Perianth 6-parted, spreading, persistent. Stamens dilated at base. Ovarium 3-celled, 3-seeded. Stigma simple.

2580. *Daulénia*. Inflorescence umbellate, sessile. Perianth tubular. Limb bilabiate. Upper lip short, 3-dentate, lower one tripartite. Ovarium 3 celled.

2581. *Camassia*. Perianth spreading, 6-lvd, upper leaf ascending, lower one deflexed, Stamens equal ascending. Ovarium 3-celled, many seeded. Stigma 3-toothed. Seed 6 in each cell.

2582. *Trichopetalum*. Calyx recurved. Petals bearded along the margins. Stamens equal. Stigma 3-angular. Capsule 3-celled, many-seeded. Seeds reniform.

2583. *Stipandra*. Perianth 6-parted, spreading, deciduous. Filaments curved, bearded, and swollen at top. Stigma simple. Capsule 3-celled, few-seeded.

2584. *Tricoryne*. Perianth 6-parted, spreading, deciduous. Stamens bearded. Ovarium tripartite ; lobes 2-seeded. Stigma simple. Pericarpis 3, clavate, 1-seeded.

2585. *Herreria*. Sepals 6, recurved. Style trigonal. Stigma sessile, 3-lobed, papillose. Capsule 3-winged, 3-celled, many-seeded. Seeds winged.

2586. *Geitonoplectrum*. Perianth 6-parted, spreading, deciduous. Filaments curved at apex. Anthers sagittate, conniving, longer than the filaments. Style 3-sulcate. Stigma simple. Berry few-seeded. Seeds nearly globose.
 2587. *Mahonia*. Sepals 6, guarded on the outside by 3 scales. Petals 6, without glands on the inside. Stamens furnished with a tooth on each side at top of the filament. Berries 3-9-seeded.
 2588. *Schraderia*. Cal. with ovate tube, and short truncate or sub-denticulated limb. Cor. funnel-sh., tube terete. Anth. 5-8 sess. lin. inserted into throat of cor., hardly exserted. Style short, bifid. Berries pea-sh., 3-4-sided, 2-4-celled. Cells many-seeded. Seeds minute.

History, Use, Propagation, Culture,

17088. *Anigozanthus Manglesi* is a singularly beautiful plant, for which, and for a number of other plants of rarity and beauty, the public is indebted to Robert Mangles, Esq., of Whitmore Lodge, Berks.

2589. *Sicphania*. Cal. 2-lobed. Petals 4. Torus small. Ovarium stipitate, oblong.

Order 3. TRIGYNIA. 6 Stamens. 3 Styles.

2590. *Calochortus*. Calyx 3-ld. Petals 3, bearded inside. Stigmas petaloid. Capsule 3-valved, 3-gonal. Seeds flat, inserted by single rows.

2591. *Merendera*. Perianth funnel-shaped, of 6 sepals. Petals on very long claws. Stamens inserted in the petals above the claws.

2592. *Livistonía*. Perianth double, both tripartite. Ovaria 3. Styles 3, combined. Stigma undivided. Berry 1-seeded.

MONOGYNIA.

17075 Perian. petal-lik. tube bluntly tetragon. thick, Segms. spreadg. like star quite distinct at base, cuneat.-obov. truncate yel. corona. [cron. tapering very much to base]

17076 Scape slender 4-fwd. Segms. perian. obov. mucronate somewhat reflexed twice as long as the cup-shaped truncate yel. corona.

17077 Corona plicate repand longer than the segms. Style longer than the corona, Leafs erect, Scape compressed.

17078 Lvs. lorately linear channelled on upper side keeled at back, Crown cylindr. curled 6-lobd. Lbs. round entire, Segms. of perian. obliq. ovate

17079 Segms. perian. ovate spreading, Corona funnel-shaped length of segms. Limb spreading deeply crenated

17080 Lvs. 9-10 in. long erect little spreadg. glauc. striat. and keeled at back upper side somewh. concave margin thickened, Segs. of perian. ov. or obov.-lanceol. cup 2½ in. long

17081 Lvs. expanded into a wing above the base, Wing plaited

17082 Lvs. 8 or 10 linear-oblong striated, Scape 2-edged 10-12-fwd. longer than lvs. Spathe lanceolate Segms of perian. [linear-lanceol. 6, Corona spreading rotate closely toothed

17083 Perian. yellowish marked with green, Tube slender, Limb and Style exceeding the Corona, Ovarium pedicellate

17084 Glauous, Scape 3-fwd. Tube long green, Limb white, Corona white rotate with a jagged border

17085 Lvs. glaucous acutish, Scape compressed green, Stamens enclosed

17086 Lvs. oblong-cord. Umbel 6-fwd. Segms. of perianth obl.-lanceol. Lateral teeth of filament very much elongat. and sometimes 2-ldd.

17087 Scape terete bearing umbel of about 7 flws. Spathe of 2 membranac. lvs. Perian. cylindric gradually widening [into cylind.-campan. limb

17088 Stem erect elthd. with short thick crimson persistent velvety down, Flws. in short termin. spiked raceme, Stigma capit. project. beyond tube

17089 Deep green, Flws. panicled, Perianth swelling towards the summit hairy, Segms. a little reflexed

17090 Lvs. linear keeled with spiny serratures, Ovarium elongated tuberculated

17091 Lvs. lanceol. very ent. acumin. glauc. and woolly ben. Pedic. shorter th. brac. quite smooth as is cal. Petals [straight 1-skld long. th. stam.

17092 Lvs. lin.-lanceol. very entire smooth acumin. ½ in. broad, Stem simple, Segms. of cor. revol. white, Stigma 3-fid. white [and rachis pubes. Brac. much long. th. pedic.

17093 Raceme many-fwd. elongat. Petals oblong-lanceol. obtuse twisted to one side concave with galeat. spur, Cal.

17094 Lvs. lanceol.-linear elongated ciliato-spinulose furfuraceous beneath, Racemes panicled villous

17095 The only species

17096 Lvs. lin.-ligul. ent. invol. at base, towards extrem. plane recurved acute, Spike simple, Rachis zigzag, Flws. [remote, Brac. ab. eq. to flws.

17097 Lvs. oblongo-lanceol. acuminate undulated recurved, Flowers aggregate sessile

17098 Lvs. ligulate acumin. furfuraceous, Spike ovate solitary scarcely higher th. lvs. Brac. ovate concave bright pink

and Miscellaneous Particulars.

History, Use, Propagation, Culture,

772. Tulipa. It appears to us highly probable that the greater number, and indeed perhaps the whole, of the above names, are only varieties.

- 17127 Lvs. spatul. about 7-nerved central rib hardly promin. behind in upper half reflect. at point and sides glauco. [pruinose ent. Pedun. 2-flwd.
 17128 Erect. Lvs. lin.-lanceol. twisted margins ciliated. Pedunc. bran. umbellate. Perianth 6-lvd. 3 outer ones ovato-
 17129 Stem erect, Lvs. lanceol. obtuse obsolete denticulated, Umbels many-flwd. Pedunc. angular [lanceol. serrated

17130 Limb of the perian. longer than tube with 3 blk. spots in the centre

- [Sheaths ciliat. on margins
 17131 Stem erect simple or bran. rounded glabr. jointed, Lvs. lin.-acuminated glabr. striated sheathing at base,
 17132 Stem dichotom. bran. and jointed: lower part glabr. upper densely hairy, Lvs. scarcely sheath. lanceol. wavy
 striat.: lower downy, upper densely hairy
 17133 Lvs. all radic. ov. acumin. striat. Bracteas lanceol. lower ones longer th. flws. upper one gradually smaller and
 [wider in proportion
 17134 Lvs. lanceol. nerved. Corolla campanulate [flwd. Brac. ov. twice as long as pedic.
 17135 Lvs. all radic. petiol. ov.-lanceol. very acute elegantly margined with white, Petiol. longer th. lvs. Rac. 12-14

- 17136 Stem glabrous, Leaves scattered lanceolate 3-nerved attenuated at both ends, Corolla tubularly campanulate
 [volute papillose bearded
 17137 Stem erect smooth, Lvs. scattered ovato-obl. nerved petiol. Bran. 1-flwd. Flws. drooping reflexed, Cor. ra-
 17138 Lvs. very narrow linear scattered, Perianth smooth revolute, Capsule turbinate

- [Lfts. ov. flat acute
 17139 Stem leafy 1-flwd. Lower lvs. obl.-lanceol. channeled acumin. undul. glauc. Upper ones lin. flat, Perian. oval.
 17140 Stem 1-flwd. glabrous, Flws. erect, Petals ovate lanceol. acuminated bearded at the apex, Lvs. ovate lanceol.
 ciliate, Bulbs woolly
 17141 Stem pubescent 1-flwd. 3 outer petals acute 3 inner ones obtuse and mucronate, Lvs. obl. lanceolate pubescent
 17142 Stem pubescent longer than that on lvs. Perianth campanulately spread. Segms. ellipt.-lanceol. acute bearded
 at apex margin involute [Filam. subulate
 17143 Lvs. lin.-lanceol. subconvolute glauc. Petals lanceol. obtuse very spreading 3 outer ones longest, Stam. equal
 17144 Scape pubescent scabrous, Lvs. flaccid, Segms. of perian. acumin. Stem 1-flwd.

- [acute glab. inner ones blunt ciliated
 17145 Glauous, Stem few-flwd. Lvs. channeled acuminated upper ones dilated at the base, Outer segms. of perianth
 17146 Stem 3-flowered one-leaved, Inner petals woolly

- [ovate-lanceol. acumin.
 17147 Umbel 2-3-flwd. Pedun. shorter than bract. Petals ovate obtuse serrulato-fimbriate, Flws. globose, Sepals
 17148 Umbel 2-3-flwd. Pedun. shorter than bract. Petals ovate very obtuse margin naked, Sepals ovate-lanceol. half
 length of petals
 17149 Lvs. lanceol. subconvolute, Flws. terminal solitary

17150 Stem upright simple densely leafy, Lvs. lin.-lanceol. cuspid. recurv. patent ent. Rac. terminal many-flwd

17151 Stem arborescent, Lvs. attenuated at both ends, Branches of panicle divaricate, Flws. nearly sessile

- [3-parted
 17152 Lvs. obl.-lanceol. subcomplic. obtuse, Segms. of perian. ovate-lanceol. acumin. reflex. nearly from base, Stigma

History, Use, Propagation, Culture,

2581. Camassia 17162 esculenta. "This plant is known by the natives under the name of *Quamash*; and the bulbs are carefully collected by them, and baked between hot stones, when they assume the appearance of baked pears, and are of an agreeable sweet taste. They form a great part of their winter stores. Though an agreeable food to Governor Lewis's party, they occasioned bowel complaints if eaten in any quantity. It is perfectly hardy, requiring to be planted in a peat border, and may be propagated either by seeds or bulbs. (*Pursh.*)

2585. *Herreria*. A singular, but desirable, hot-house climber, growing freely in any good soil.

2587. *Mahonia*. "The species are elegant evergreen shrubs, with yellow flowers and pinnate leaves. The latter

- [Segms. obl.-concave narrowed at base
 17160 Lvs. weak lin. channel. cuspid. rather angul. extern. Scape erect 6-angled, Rac. simple coulc. Perian. 6-leaved,
- 17161 Habit of *Massônia*, Umbel sessile
- 17162 Bulb ov. about size of hazel nut. Lvs. lin. acumin. channel. short. than scape broken back from weakness, Petlic. filif. $\frac{1}{4}$ in. long, Perian. 6-lvd. 2 in. in diam.
- 17163 Stem paniculate, Petals and sepals revolute, Flowers nodding
 17164 Scape 2-4-flowered rather leafy, Petals bearded capsules elongated
- 17165 Glaucous, Lvs. distinct twisted
- 17166 Stem terete leafy, Leaves flat, Umbels 5-7-flowered
- 17167 Lvs. lanceolate, Segments of perianth ovate obtuse
- 17168 Cymes terminal bipartite, Branches terete, Branchlets striated glabrous

 17175 Spines 3-parted and very stiff, Lvs. oblong or obl.-lanceol. nearly ent. toothed in various degrees somewt. deeply and coarsely veined, Rac. slender long loose [Rac. short many-flwd. corymbose
 17176 Spines trifid or simple, Lvs. oval cuneat. or ellipt. mucron. smooth under surf. glauc. ent. or spinulosely thd.
 17177 Spines scarcely any, Lvs. roundish coarsely toothed rather glauc. white ben. Rac. very short compact pendulous
- 17178 Lvs. 3-6 pairs with odd one lowest pair near base of pet. Leaf. ov.-lan. rath. distant 1-nrvd. 4 or 5 spiny teeth on each side, Rac. nearly erect
- 17179 Lvs. 4 pairs with odd one lowest pair distant from base of pet. Leaf. ov. approxim. cordate at base 1 nrvd. 9 or 6 spiny teeth on each side, Rac. erect [somewhat 3-5-nrvd. Rac. elongated
- 17180 Lvs. 5-6 pairs with odd one lower pair dist. from base of pet. Leaf. ov. acumin. 12 or 14 teeth on each side
- 17181 Lvs. 2-3 pairs with odd one roundish-ov. opaque spiny toothed, Rac. diffuse, Root creeping
- 17182 Lvs. pinnate and ternate, Leaflets ovate oblong acute thin flat and quite entire
- 17183 Lvs. obl.-acuminate, Pedunc. termin. solit. short, Heads of flws. surrounded by ent. involucr. Cor. 7-8-lobed
- 17184 Lvs. obl.-lanceol. acuminate scarcely longer than pedicels

resemble pretty much those of the ash, and hence, doubtless, the name of Ash-herberrry. Natives of the N. W. coast of Amer., and also of Nepal, and perhaps Japan. Though some botanists think that the characters ascribed to this genus, and those ascribed to *Berberis*, are not sufficient to keep them separate as genera; yet the habits of the species of one, as to the mode of growth, foliage, and inflorescence, are so distinct from those of the other, as to induce us to adopt *Mahonia*. The species in British gardens are all of comparatively slow growth, and admit of but slow multiplication by layers, and scarcely at all by cuttings. Some of them, however, seed freely, and are readily propagated in that way." (*Arch. Brit.* vol. ii. p. 399.)

History, Use, Propagation, Culture.

2590. *Calochortus*. A genus of very handsome bulbous plants, which may be planted in a warm border in the open air during the summer, but should be taken up as soon as the leaves are withered, and kept dry till they begin to shoot. when they may be potted and kept in the green-house till the spring frosts are over.

Page 300. CLASS VIII. — OCTANDRIA. 8 STAMENS.

Order 1. MONOGYNIA. 8 Stamens. 1 Style.

2594. *Chymocarpus*. Calyx persistent, valved in aestivation. Petals 2. Fruit baccate, composed of 3 1-seeded carpels.
 2595. *Arthrostemma*. Cal. turbinate or campanulate, usually beset with bristles or scales on outside, 4-lobed. Petals 4. Stigmas 8, glabrous Anthers oblong; having their connectives rather long, and bluntly bicarinate at base. Ovarium bristly at apex Capsule 4-celled.

TRIGYNIA.

- 17185 Stem 3.5-lvd. 2-flwd. Petals beautifully bearded at base, Capsule erect linear-oblong
- 17186 Stem 3.5-flwd. Sepals revol. Petals with wart-like tuft of very short firm hairs
- 17187 Stem few-lvd. sub-2-flwd. Sepals erect, Petals with oblong tuft of rather loose hairs a short distance above base
- 17188 Stem sub-3-flwd. Lvs. convolute shorter th. pedun. Petals cuneate rounded at apex transv. bearded about middle

17189 Anthers versatile, Lvs. lanceol.-linear spreading, Flowers rising at the leaves

17190 Leaves fan-shaped, Spathe divided, Flowers panicled

17191 Segments of fronds connected by threads, Stipes unarmed

CLAES VII. — HEPTANDRIA.

MONOGYNIA.

†5058 Leaf. 5 ellipt.-obl. tapering at both ends smooth as ls pet. axils of nvs. hairy on under surf. of lvs. Petals 4 longer than stams.

♂ *humilis* Bot. reg. 1318,

♂ *humilis pendula* A. B.

†5060 Leaf. 5-7 pubesc. beneath and above upon nerves, Petioles pubescent flattish towards the tip

†5059 Whole plant including young wood covered with pubescence, Flws. large and snowy

17192 Lvs. with rufous down on veins on upper side smooth beneath : rather plicate

[petals less spreading

17193 Lvs. large smooth on upper surface and shining, Flws. nearly as large as those of *Æsculus hippocastanum* but

17194 Stamens much longer than corolla, Racemes very long. Root stoloniferous

and Miscellaneous Particulars.

2593. *Pânia*. Middle-sized deciduous trees or shrubs, distinguishable from the horsechestnuts by the smoothness of their fruit, and the comparative smallness of their flowers, which have their petals erect and narrower. The leaves, also, are generally smaller and smoother. (*Arb. Brit.* p. 469.) Budding and grating are the most usual modes of propagation, though they are frequently increased from seed.

2596. *Godétia*. Limb of calyx reflexed. Capsule opening at angles. Placenta persistent. Stamens all alike. Chalaza of the seed crowned round the margin by a fringe.

2597. *Clárkia*. Limb of calyx 4-parted. Petals 4, tripartite. Caps. 4-celled. Seeds not pappous.

2598. *Eucharidium*. Tube of calyx above the ovarium, elongated, filiform, with a 4-parted deciduous limb. Petals 4, clawed, trifid. Capsule 4-celled, 4-valved, dehiscent. Seeds numerous.

2599. *Françoa*. Calyx 4-parted. Petals 4. Stamens distinct, 16, 8 of which are fertile. Anthers 2-celled. Capsule 4-gonal, 4-celled.

875. *Tropæolum* 17199 *tuberosum*. This species may be considered about as hardy as the potato, and, like it, produces eatable and agreeably flavoured tubers, Mr Lambert was the first, we believe, who grew these tubers in England, and presented them at table. When boiled, the tubers are of a soft pulpy substance, and Mr. Cameron says, in flavour resemble sea-kale, mixed with the hot taste of garden cress. The council of the Caledon Hort. Soc. considers the tubers to be of a very delicate flavour, resembling the richest asparagus. Mr. Young of Epsom found the

History, Use, Propagation, Culture,

MONOGYNIA.

- 17195 Leaflets 5-10 obl. or obovate little-toothed cuneated at base, Petals unguicul. rather longer than cal obtuse [quite entire
 17196 Leaflets 7 obovate lanceolate, Segments of calyx blunt
 17197 Tuberos, Stem slender climbing branched, Lvs. peltately divided, Segms. 6-7 obov. ent. cuspid. Petioles cirrhose
 17198 Lvs. peltate, Segms. 6-7 oblong-obov. ent. sess. Petals cuneif. Cal. segms. obtuse, Spur very short and very blunt
 17199 Lvs. peltate nerved 5-lobed transversely truncate at base smooth, Petals almost length of calyx

17200 Leaflets 5 ovate or ov.-lanceol. ent. stalked, Petals 2 sessile acute quite ent. shorter than calyx

- 17201 Lvs. linear, Peduncles axillary 1-flwd. Stamens much exserted, Ectasis [Crests of anths. plumose
 17202 Lvs. 5 in whorl reflexed woolly, Flws. termin. Bract. remote from cal. Tube of cor. cylind. inflated ribbed,
 17203 Lvs. 3-4 in whorl linear glabr. Flws. termin. racemose, Cal. bracteate, Cor. with inflated tube and short limb
 17204 Lvs. linear 5 in a whorl pubescent, Branchlets pilose, Corolla cylindrical glabrous constricted at apex, Syringödea
 17205 Glabr. Lvs. 4 in whorl linear spread. Flws. termin. pedicellate, Cor. ventricosely tubular, Border blunt, Bract. [Stam. and pist. enclosed aristate
 remote from cal. [white limb
 17206 Lvs. glabrous, Flws. termin. Bract. remote from and close to cal. Cal. large inflated, Tube of cor. obl. inflated,
 17207 Lvs. acerose, Corolla cylindrical, Limb short spreading [white limb
 17208 Glabrous, Lvs. lin. 4 in whorl, Flws. termin. crowded, Cor. with elongate ventricose tube dark neck and
 17209 Lvs. 4 in whorl lin. glabr. Flws. termin. Bract. remote from cal. Cor. ov.-globose with large open segments
 17210 Lvs. 4 in whorl linear glabrous, Flws. axillary racemose, Stam. and pist. enclosed
 17211 Branchl. villose, Lvs. in threes very narrow, Cor. campanulate, Style exserted, Stigma simple

- 17212 Lvs. 4 in whorl as well as bran. scabr. Flws. termin. erectish, Cor. ovate, Bract. remote from cal. Anth. crested
 17213 Hairy, Lvs. acicular ciliated with long hairs, Flws. in racemose terminal fascicles, Cor. campanulate
 17214 Lvs. 6 in whorl lin. flexuous recurved, Flws. termin. nearly sess. drooping capit. Bract. sess. Cor. curved ov.-obl. Anth. mutic
 17215 Lvs. 4 in whorl lin. glabr. Flws. termin. and axill. Bract. distant from cal. Cor. tubular drooping
 17216 Lvs. 6 in whorl crowded lanceol. each termin. by a hair, Flws. nrly. termin. drooping, Cor. cylindric contract. [little exserted
 17217 Glabrous, Lvs. lin. 5-6 in whorl, Flws. axill. and termin. drooping, Pedic. many-bracted, Cor. campanul. Style
 17218 Glabrous, Lvs. 3 in whorl, Flws. terminal, Cor. campanulate, Style exserted
 17219 Lvs. linear obtuse Corymbs 4-flwd. Cor. tubularly ventricose, Limb spreading, Stamens enclosed, Callista
 17220 Lvs. short blunt, Branchlets 3-4-flwd. Cor. ovate, Stamens enclosed, Erica [urceol. globose
 17221 Lvs. 4 in whorl hispida ciliated lin. spread. obt. Flws. termin. racemose pendul. Bract. remote from cal. Cor.
 17222 Lvs. obtuse, Flws. terminal, Pedicels about 3 together, Cal. reflexed, Cor. ovate ventricose
 17223 Lvs. short obtuse, Branchlets 3-4-flwd. Cor. tubular inflated towards the top Stamens enclosed, Syringödea
 17224 Lvs. 4 ? in a whorl lin. obt. Flws. lateral verticillate, Cor. with ventricose tube and spreading limb
 17225 Lvs. linear 3 in a whorl, Flws. early, Cor. tubular ventricose constricted at the mouth, Anthers enclosed

- 17226 Shrubby erect 4-gonally winged as are bran. Lvs. ov. acute serrul. glabr. on both surfs. shining above, Pedun. [axill. 3-flwd. longer than pet
 17227 Suffrutic pilose, Lvs. petiol. ov. serrul. 5-nrvd. discoloured beneath, Flws. termin. solit. Lobes of cal. 4 serrated at apex

- 17228 Lvs. oblong-lanceol. acute nrly. ent. rath. pilose thickish, Stem tall simple angul. Caps. oblong tetragonal
 17229 Stem branched pubesc. Lvs. obl. linear serrulated mucronate pubesc. beneath, Flws. sessile, Calyx angular, [somel. obl. somet. ov. rath. cord. all obt.
 Petals entire
 17230 Lvs. glauc. pubesc. of several shapes, lower spatulate on long pet. distant: upper close togeth. somewh. sess. [of stigma blunt spread.
 17231 Lvs. obl. ellipt. somewh. obtuse slightly sinuately toothed atten. at base, Stem bran. succulent soft with down
 as is fol.
 17232 Stems ascend. bran. pubesc. Lvs. lanceol. acute dentic. glabr. atten. at base, Petals wrinkled or plaited, Segms.

- 17233 Stem simple downy decumb. Lvs. lanceol. tapering at both ends margin. and slightly ciliat. [Caps. 4-winged
 Petals broad orboid.

and Miscellaneous Particulars.

tubers, when boiled, superior in flavour to any potato, though disposed to be watery and not boiling firm. (*Gard. Mag.* xiv. p. 254.)

264. *Chymocarpus*. For culture, &c., see *Tropæolum*.

265. *Arthrostemma*. Propagation, &c., the same as recommended for *Melastoma*.

History, Use, Propagation, Culture,

2596. *Godētia*. A genus of highly ornamental plants, separated by Spach from the genus *Ænothēra*. It contains all the species with purple flowers, which Dr. Lindley informs us will not mix with the yellow-flowered kinds, so as to form hybrids; neither do they close their petals in the sunshine, and thus forfeit all title to the name of Evening Primrose. Culture, &c., same as recommended for *Ænothēra*.

2597. *Clarkia*. A genus of very ornamental annuals, requiring the same treatment as that of the annual *Ænothēra*.

- 17234 Procumb. Lvs. pubes. altern. interruptedly pinnatif. sinuately toothed ent. at apex, Tube of cor. very long, Petals large obov. ent. 5-nrvd.
- 17235 Tomentose, Lvs. linear lanceol. toothed, Ovarium cylindrical, Petals 2-lobed, Stamens 4 fertile 4 sterile
- 17236 Glabrous, Stems decum. Lvs. linear lanceol. toothed, Capsules linear twisted, Root creeping
- †5450 Lvs. lanceol. atten. at both ends bluntish, Tube of cal. short, Caps. ovate triquetrous sess. angul. pilose
- 17237 Lvs. lanceol.-obl. mucron. tapering into petioles, Caps. obl.-cylindric. somewh. tetragonal pilose
- 17238 Lvs. glauc. quite ent. pubesc. lower ones broadly ov.: upper ov.-lanceol. Caps. bluntly 4-gonal tapering from base villous
- 17239 Lvs. lanceol. bluntish slightly toothed glauc. Stem round, Caps. cylindrically tetragonal [villous
- 17240 Lvs. linear-lanceol. somewh. denticul. puberulous, Stem bran. weak puberulous, Caps. 4-gonal atten. at apex
- 17241 Lvs. linear-lanceol. quite entire glabr. Stem ascending diffuse bran. Caps. round elongat. acute larger th. lvs.
- †5463 Lvs. linear spatulate, Stem bran. erect, Caps. furrowed cylindric. curved downy longer than bracteas
- 17242 Lvs. lanceol. glauc. ent. Caps. cylindric. atten. furrowed pubescent, Bran. long slender rod-like
- 17243 Lvs. linear-lanceol. slightly toothed, Anthers fiery red yellow at apex, Caps. linear sess. truncated
- 17244 Lvs. ovate-lanceol. ent. Caps. sess. ovate-oblong hairy
- 17245 Lvs. linear-oblong subdentated glabrous, Anthers crimson yellowish at summit
- 17246 Leaves linear, Petals deeply 3-lobed
- 17247 Leaves ovate dentated & entire, Petals rhomboid undivided
- β Has the flowers of a pale brick-red rather than rose colour
 γ Has the flowers semidouble
- 17248 Leaves lanceolate, Petals rhomboid entire
- 17249 Pubescent, Lvs. petiolate ovate entire, Flws. axillary solitary
- 17250 Bran. glabr. Lvs. 3 in whorl ov. acute denticul. on short petioles, Lobes of cal. oblong acute exceeding obov. [-spreading petals, Stigma 4 lobed
- α Lvs. 3-4 in whorl, Flws. pendul. solit. Petals equal to cal. Tube of cor. conical, Stigma ovate
- γ Lvs. in threes ovate toothed smooth as are bran. Calyx glob. half length of pendul. smooth filif. red pedun.
- δ Lvs. oppos. glabr. on long petioles remotely denticul. Pedic. axill. nodding puberul. length of cal. Cal. lobes obl. acute exceeding pets. Stigm. ent.
- 17251 Lvs. oppos. small ellipt.-obl. acutish dent. glabr. little Pedic. axill. shorter th. flws. Cal. funnel-sh. lbs. ov. acumin. Stigm. 4-lbd.
- 17252 Bran. erect slender rod-like, Lvs. pale green thin, Cal. segms. very narrow & subulate
- 17253 Bran. smoothish, Lvs. scatter. & oppos. petiol. ov.-cord. or oval quite ent. glauc. & glabr. Pedic. sub-aggreg. [short th. flws. Stig. undiv. Cal. lbs. reflexed, Stig. thick 4-lbd.
- 17254 Bran. puberul. Lvs. about oppos. small ov. or roundish ov. obt. almost ent. hairy above glabr. ben. Pedic. axill
- 17255 Glabr. Lvs. 3 in a whorl ov.-obl. acumin. at both ends petiol. quite ent. Panic. trichotom. nrly. naked, Cal. lbs.
- 17256 Diccious, Lvs. obovate, Calyx cylindrical, Petals roundish apiculated, Anthers enclosed [ov. acute reflexed
- 17257 Lvs. oppos. petiol. ov.-cord. acute denticul. glabr. Pedic. axill. short. th. flws.: upper ones racemose, Cal. lbs. ov.-lanceol. acute exceeds petals
- 17258 Lvs. oblong, Spikes short axillary & terminal, Cal. pubescent, Petals obovate obtuse, Stamens long
- 17259 Lvs. obl. obtuse, Panic. terminal branched hairy, Cal. pubescent, Bract. very short, Flws. pedicellate
- 17260 Lvs. ellipt. acute acumin. puberul. above: clothed with yellowish tomentum ben. Spks. simple, Pedun. short, Petals lanceol. acute hairy

TETRAGYNIA.

- 17261 Stemless, Lvs. petiolate, Racemes loose secund, Calycine segments lanceolate acute
- 17262 Caulscent, Lvs. sess. Rac. loose nodding, Cal. segms. dilated, Petals with involute margins
- 17263 Caulscent, Lvs. petiolate, Rac. spirate erect, Cal. segms. lanceol. obtuse nerveless

and Miscellaneous Particulars

2568. *Eucharidium*. A pretty and very neat little plant, seeds of which may be sown at any period of the spring or summer, as they will generally flower in about six weeks after sowing.

2599. *Francoa*. A genus of ornamental perennials, which are, however, found to be most useful if treated as half-hardy annuals, because, as perennials, they are too tender to endure the winter in the open air without protection. Besides this, they can only be propagated by seeds.

Page 338. CLASS X. — DECANDRIA. 10 STAMENS.

Order 1. MONOGYNIA. 10 Stamens. 1 Style.

2601. *Castanospèrmum*. Calyx somewhat bilabiate, with short tube; upper lip bifid, lower one 3-fid. Petals 5, papilionaceous, with wings and keel nearly equal in length. Legume stipitate, large, oblong-cylindrical, 2-valved, usually 4-seeded. Valves coriaceous, spongy inside.
 2602. *Reichardia*. Sepals 5, joined into campanulate crenulated calyx. Petals 6-10, somewhat papilionaceous. Stan. declinate, distinct, cohering together beneath middle by beard. Style filiform. Stigma dilated. Legume samaroid, ending in oblong wing.
 2603. *Eriostèman*. Calyx 5-parted. Petals 5, marcescent. Stamens unequal, free, fringed, tapering into a thread which bears the anthers. Fruit of 5, rarely 1-2, carpels.
 2604. *Phébatiua*. Calyx 5-cleft. Petals 5. Stamens unequal, smooth. Style and stigma 5-furrowed. Fruit of 5 capsular, 2-valved, 1-seeded carpels, girded by calyx.
 2605. *Picris*. Calyx 5-parted. Corolla tubular or ovate, with a contracted, 5-toothed, revolute mouth. Filaments dilated, furnished with two bristles at the tip. Anthers with short incumbent cells that open lengthwise. Style 5-cornered. Stigma truncate. Leaves coriaceous. Flowers drooping, terminal, racemose.
 2606. *Pernètlya*. Corolla globose, with a revolute limb. Anthers with the 2-cells 2-lobed at the tip; the lobes bifid. Hypogynous scales 10, 3-lobed, surrounding the ovary. Berry with 5 cells, the dehiscence loculicidal.
 2607. *Linnànthes*. Calyx 5-parted. Petals 5. Stamens 10. Nucule 5.
 2608. *Chetogàstra*. Calyx turbinate, pilose or scaly, 5-lobed. Petals 5. Filam. 10, glabrous. Anthers oblong, having connectives drawn out into simple or bifid spur, and sometimes only into 2 blunt tubercles. Ovarium bristly at apex. Capsules 5-celled.
 2609. *Ceratopetalum*. Limb of calyx 5-parted, permanent. Petals 5, linearly multifid, permanent or wanting. Anthers beaked. Capsule 1-seeded from abortion, dehiscent at apex. Leaves simple or ternate.
 2610. *Darwinia*. Tube of calyx drawn out into membranous deciduous limb, throat dilated. Lobes roundish, cordate. Stamens free. Ovarium 1-celled, 1-ovulate.

History, Use, Propagation, Culture.

1737. *Eriogonum*. A hardy herbaceous plant, which thrives in any common soil kept damp, and somewhat shaded. It is readily increased by cuttings of the well ripened shoots, planted in sand and peat, and covered with a bell-glass.

CLASS IX. — ENNEANDRIA.

MONOGYNIA.

17264 Lvs. obovate obl. glabrous above: pilose beneath as well as petioles & branches, Involucre 4-lvd. tomentose

[Peduncle scapiform, Involucre many-flwd.]

17265 Lvs. approximate at the base of the stem ovate rounded or cordate at the base cithd. with white wool beneath.

Order 2. DIGYNIA. 10 Stamens. 2 Styles.

2611. *Pachynema*. Stamens 7 or 10, free. Filaments broad and thick at base. Ovaries 2. Styles awl-shaped. Sepals and petals 5, but the petals soon fall off.

2612. *Adamia*. Limb of calyx with 5 short teeth. Petals 5. Styles ending in rather club-sh. 2-lobed stigmas. Berry crowned by teeth of calyx, somewhat 5-celled, many-seeded.

2613. *Tilima*. Free part of calyx inflated, 5-toothed, the adniring part confl. Petals 5, jagged. Styles 2-3, distinct. Capsule 1-celled, 2-valved at apex.

Order 3. TRIGYNIA. 10 Stamens. 3 Styles.

2614. *Stigmaphyllon*. Calyx 5-parted. 4 of the segments biglandular at the base. Petals unequal. Stamens unequal. Styles floraceous at apex. Samar. usually 3, one-seeded, winged at end.

2615. *Tiryallis*. Petals roundish, unguiculate. Stamens awl-shaped. Caps. triquetrous, separable into 3 parts; cells opening by outer angles.

2616. *Galpimia*. Calyx glandless. Petals unguiculate. Stamens nearly free. Drupe containing 3 1-seeded nuts, which open on the back.

2617. *Deutzia*. Calyx 5-cleft. Petals 5. Filaments flattened, tridentate at apex, middle tooth bearing the anther. Capsule 3-4-celled.

Order 5. PENTAGYNIA. 10 Stamens. 5 Styles.

2618. *Echereria*. Cal. 5-parted. Sepals erect, referable to leaves, united at very base, erect, thick, stiffish, thickest at middle nerve, and nearly 3-gonal at base, acute. Stamens shorter than petals, adnate to them at base. Carpels 5, ending each in subulate style.

2619. *Balbisia*. Calyx 5-leaved, involucred by 10 lineal bracteas. Petals spreading, obtuse. Stigma 5-lobed, sessile. Capsule 5-lobed, many-seeded. Seeds compressed.

2620. *Viscaria*. Calyx cylindrical, 5-toothed, naked. Petals 5, unguiculate, scales in the throat. Capsule 5-celled.

MONOGYNIA.

17266 Lvs. 13-19 elliptic obl. obtuse silky beneath, Upper petal length of the lateral ones, Legume 2-jointed wingless

17267 Lvs. subhastate pinnatifidly spinous, Pedicels with bracteæ at base

17268 Stems weak ascending, Lvs. ovate acute, Peduncles long terminal naked 3-flwd

17269 Plant hoary, Lvs. acicular, Flowers axillary

17270 Lvs. sessile cordate obtuse spiny-toothed, Flowers racemose drooping, Calyx pubescent

17271 Leaves opposite trifid, Lobes about equal entire spiny at apex, Ovary smooth

17272 Leaves opposite oblong-elliptic quite entire mucronate, Ovary villous

and Miscellaneous Particulars.

949. *Chorozema*. All the species are small shrubs, profusely covered with beautiful flowers; one of the handsomest is *C. Henclmannii*, which grows freely in sandy peat.

History, Use, Propagation, Culture,

2601. *Castanospermum.* The seeds are eaten by the natives about Moreton Bay on all occasions, and when roasted, have somewhat the flavour of Spanish chestnuts; and even Europeans, who have subsisted on them for two or three days together, have found no bad effects from them when roasted. For culture and propagation, see *Cerātōnia*.

977. *Poinciāna* 17282 *regia* is a magnificent tree, no less remarkable for its extreme beauty than for its rarity, having been found only in Madagascar, near Foul Point, where it is known by the name of *Tanahou*.

17281 *Gilliesii.* The flowers of this species have a disagreeable smell, and are considered by the common people of Chile to be injurious to the sight; hence the vernacular name *mal de ojos*. The shrub will not grow unless in irrigated places. (*Don's Mill. v. 2. p. 433.*)

2602. *Reichardia.* Culture and propagation the same as for *Poinciāna*.

2603. *Eriostemon.* A genus of beautiful shrubs with pink flowers, which deserve a place in every collection of green-house shrubs. They require the same treatment as *Phebalium*.

2604. *Phebalium.* An equal mixture of loam and peat suits this genus of plants, but care must be taken not to overwater them, or crowd them amongst other plants. Cuttings root freely in sand under a bell-glass, without heat.

1014. *Rhododendron.* " Under this genus, Professor D. Don has included the *Azalea*, which, however technically correct, appears to us injudicious in a practical point of view; and though we have followed his arrangement in this article, yet we have indicated two sections, containing the Indian or tender, and the Asiatic and American, or hardy, *azaleas*, which those who cultivate extensive collections of these shrubs may, if they choose, consider as constituting the genus *Azalea* as heretofore. Such persons, therefore, may view the genus *Azalea* as remaining exactly as it is in

- 17273 Leaves simple very crowded linear subulate with revolute margins smooth as are branches
- 17274 Heads many-flwd. Bract. shorter th. cal. Lvs. linear mucron. with revolute margins pubescent beneath
- 17275 Lvs. cordate ovate acute mucronate glabrous. Stipules scarious, Heads terminal
- 17276 Bran. ciner. pilose, Lvs. linear obtuse smooth both sides, Heads termin. subumbell. many-flwd. Brac. very short setaceous feathered
- 17277 Leaves linear acutish with revolute quite entire margins. Spikes interrupted terminal leafy
- 17278 Pubescent, Lvs. alternate ovate lanceolate, Flws. axillary twin
- 17279 The only species [erenate at marg. involute at base
- 17280 Unarmed, Lvs. abruptly bipinnate 11-18 pairs of pinnae which are 4 in. long horizontally patent, Petals orbicul.
- 17281 Unarmed, Lvs. bipinnate, Leaflets oblong, Petals glandular denticul. ciliat at apex, Legume acinacif. glandul. 1-seeded dry [Filam. hispid
- 17282 Cor. 6-petaled, Lvs. abruptly bipinnate prickly as are stems
- 17283 Lvs. linear lanceol ent. smth. Bran. triquetrous, Flws. axill. almost sess. solit. Cal. & pets. hoary on outside,
- 17284 Lvs. obl.-lanceol. acute glauc. ending in hooked mucro, Racemes umbellate 4-5-flwd. axillary or terminal
- 17285 Lvs. linear lanceol acute scaly beneath, Flws. terminal umbellate, Stamens exerted

- 5923 Lvs. oblong-lanceol. glabr. both surfs. wide lanceol. streak on upper side, Segms. of cor. ovate, acute, or lanc.
- ♂ Leaves subcordate coriaceous obtuse
- ♀ Leaves small
- ♂ Leaves lanceol. clothed with white tomentum beneath, Corymbs many-flwd. Ovarium tomentose 10-celled
- ♂ Corolla white marked by a few dull scarlet spots

and Miscellaneous Particulars.

our *Hortus Britannicus*." (*Arb. Brit.* vol. ii. p. 1130.) "Of all the genera in existence," G. Don observes, "*Rhododendron*" (under which he includes the *Azalea*) "comprises the most handsome, elegant, and showy shrubs for adorning shrubberies or planting singly on lawns." Though in Britain these plants are solely cultivated as ornamental, yet, in their native countries, they are not without their other uses. "The *Rhodora*," Mr. Royle observes, abound in stimulant, and even deleterious, properties. Thus *Rhododendron ponticum*, *R. maximum*, *R. ferrugineum*, and *R. chrysanthum*, are poisonous to cattle which feed on them; and yet, in moderate doses, are used in medicine for the cure of rheumatism, &c. *Azalea procumbens* L. and *Lætum* var. tea, but determines to the head. *Kalmia latifolia*, being more stimulant, is used as a tea, under the name of *Labrador palüstre* are accounted diuretic; and *L. latifolia* is accounted poisonous, and honey collected by bees from its flowers is of a deleterious nature, as is that of *Azalea pontica*, which was so injurious to the soldiers in the retreat of the Ten Thousand. In the Himalayan species, *R. aridæum* is more remarkable for its use as a timber tree than the other species. The flowers are eaten by the natives of India, are imported from Cashmere, under the names of *hoolas-kasmeeree* (Cashmere snuff) and *burg-i-tibbat* ("fillet leaf), though easily procurable within the British territories. It is remarkable that De Candolle mentions the employment in the United States, for a similar purpose, of the brown dust which adheres to the petals of *kalmias* and *rhododendrons*. The leaves of *R. lepidotum* (a species not yet introduced into Europe) are highly fragrant, and of a stimulant nature." (*Royle III.* 219.) Culture, propagation, and other particulars, see p. 144. and p. 328, 329.

History, Use, Propagation, Culture,

2608. *Chetogastra*. The species require a mixture of loam, peat, and sand; and young cuttings root readily in heat, under a hand-glass.
 2609. *Ceratopetalum*. A mixture of peat and loam suits this plant, and ripened cuttings root readily in sand, under a hand-glass.
 2610. *Darwinia*. Singular plants, requiring to be grown in a mixture of loam, peat, and sand; and young cuttings root readily in sand, under a hand-glass.
 2611. *Pachynema*. This shrub thrives well in a mixture of loam and peat, and cuttings root freely in sand, under a hand-glass.
 2612. *Adamia*. This shrub requires a mixture of loam, peat, and sand, and cuttings root readily in the same kind of soil, under a hand-glass. It is called *Bansook* by the natives.

- 17300 Stem somewh. 4-gonal clothed with adpressed villi, Lvs. petiol. broad lanceol. acum. serrulately ciliated 5-
 17301 Erect nearly simple, Stem 4-gonally terete villous, Lvs. almost sess. lanceol.-lin. acute quite ent. 3-5-nrvd.
 villous, Pedic. axill. 1-flwd.

17302 Leaves ternate, Flowers with petals

17303 Leaves acerose, Receptacle chafy, Style 3 times length of flowers, Calyx red

DIGYNIA.

17304 A little leafless shrub with the habit of *E'phedra*. The only species

17305 The only species

17306 Lvs. cordate lobed dentately serrated, Racemes elongated, Petals oblong-linear pinnatifidly jagged

17307 Lvs. ovate acute serrat. pilose, Racemes termin. tomentose rather compound at the base, Flws. usually trigynous

17308 Stem erect dichotom. branched, Lvs. obovate spatulate nrlly. smth. ciliat. on margins, Flws. axill. solitary

17309 Flws. aggreg. sess. Cal. scales broad mucronate with membranaceous margins longer than tube, Lvs. lanceol.
 many-nerved [lin. very long connate at base]

17310 Flws. numerous sess. in hemispherical heads leafy bracts at base, Cal. scales ov. acum. pressed to cal. Lvs.

17311 Stem erect, Flws. rather aggregate, Calycine scales 6 acuminate divaricating shorter than tube, Petals mul-
 tifold bearded, Lvs. lanceol.

TRIGYNIA.

17312 Lvs. glabr. sagittately hastate angular acute, Hind lobes truncate margined horned, Petiole biglandular at apex

17313 Lvs. ovate lanceol. glauc. green above white ben. Racemes short paniced, Petioles biglandul. at apex

17314 Lvs. ovate obtuse smooth glaucous beneath 1 tooth on each side at base, Petioles without glands

17315 Lvs. ovate acute sharply serrated pilose, Rac. terminal tomentose, Flowers usually trigynous

PENTAGYNIA.

17316 Lvs. orbicularly cuneated, Petiole thick, Flws. in spicate panicles

17317 Lvs. flat cuneiform acutely mucron. crowded at tops of branches, Pedic. spreadg. Flws. on short pedic. along
 bran. of panicle

17318 Lvs. oppos. obsoletely denticul. adnate: inferior ones broadly ellipt. superior sess. cord. Corymbs termin.
 17319 Lvs. opposite orbiculate denticulate [obtuse]

17320 Stem flat on ground at base ascending, Lvs. obl. alteru. obt. loosened at base, Cymes bifid glabrous, Petals 7

17321 Stem erect leafy, Pedun. umbelliferous 5-6-flwd. longer than lvs. Leaflets obovate, Petals crenated

17322 Stem erect branched, Pedun. long, Flws. subumbellate drooping before expansion, Leaflets 3 orbiculate sessile

and Miscellaneous Particulars.

2614. *Stigmaphyllon*. A handsome climber, propagated by cuttings.

2615. *Thryallis*. A mixture of loam and peat will suit this plant, and ripened cuttings will root in sand under a hand-glass, in heat.

2616. *Galphimia*. A genus of rather handsome shrubs, requiring the same treatment as *Thryallis*.

2617. *Deutzia*. A very showy free-flowering shrub, which deserves a place in every collection. It is readily propagated by cuttings or layers. According to Kämpfer, the wood is used by the cabinetmakers in Japan for making their very finest pegs, for which its hardness and toughness render it well adapted.

2618. *Echeveria*. Culture, propagation, &c., see *Crassula*, in p. 230.

1065. *Oxalis* 17321 *crinata*. The tubers of this plant are produced in considerable plenty, and are often 2 in. long and 1 in. in diameter. When raw, they are slightly subacid, but on being boiled they lose it entirely, and taste

History, Use, Propagation, Culture

very much like the potato, for which they might form occasionally an agreeable substitute at table. It is a native of Peru, and is cultivated abundantly in the gardens about Lima, as a salad, for which purpose its succulent stems, and acid flavour, seem strongly to recommend it. It grows freely in the open border, and is readily increased by cuttings, as well as by the tubers, which require to be taken up and treated as potatoes." (*Sw. Fl. Gar.*, 2. s. 125.)

2619. *Balbisia*. A showy conservatory plant, which may be increased by cuttings, but is apt to damp off; if kept in health, it is very handsome.

- 17323 Stem erect fleshy leafy, Pedun. bifid corymbosely racem. at apex 4 times longer th. lvs. Lflts. obcord. Petals crenated at apex [very long]
- 17324 Stem decumb. bran. Leaflets. lln. sess. acute, Pedun. much higher than lvs. Bract. approaching cal. Styles
- 17325 Hairy nearly stemless, Scape 1-flwd. drooping before expansion, Leaflets 3 obcordate
- 17326 Stem fleshy scaly, Leaflets lln. obt. pilose beneath, Flws. umbellate, Pedicels and petioles twisted fleshy
- 17327 Stemless, Scares 2-3-flwd. Leaflets, 3 obcordate [lvs. with 2 bracts ab. middle]
- 17328 Stemless, Lflts roundish obcord. bright purple and dotted with shining golden dots beneath, Scares longer th.
- 17329 Stemless, Lflts. 3 sess. broadly obcord. pubesc. ben. smth. ab. Scape compress. paniculately many-flwd. Petals truncate uneq. cren.
- 17330 Bulb large scaly stemless, Lflts. 4 large obcord. pilose glauc. ben. on short pilose petioles, Umbels many-flwd. and styles bearded [middle]
- 17332 Stem very short leafy, Lflts. 6 ovate clothed with close-pressed villi, Scares longer than lvs. with 2 bracts in
- 17333 Stem very short leafy, Flowers pale crimson
- 17334 Stipe fleshy, Leaflets 3 obcordate ciliated pubesc. Scape 3 5-flwd. bifurcate, Calyx ciliated
- 17335 Stemless smooth, Lflts. 3 cuneate 2-lobed, Lobes diverging, Scape many flwd. Sepals ovate

17336 Lvs. usually alternate with linear pilose segms. Peduncles much longer than lvs.

17337 Lvs. ovate and lanceolate pubescent, Flowers solitary, Petals cym

17338 Stems tufted diffuse, Flws. in dichotom. bundles 1-flwr. in each fork on long peduncles, Lvs. leathery, Radic. [lvs. spatul. on long footst. Stem lvs. cord. sess.]

17339 Lvs. linear channelled, Stem ones opposite subulate, Petals jagged

17340 Stems not clammy, Petals entire, Lvs. lanceol. linear ciliated at base

Order 3. TRIGYNIA. 12 Stamens. 3 Styles.

2622. *Poinsettia*. Involucrum 1-lvd, androgynous, 5-celled at base, appendiculate outside, nectariferous. Flowers pedicellate, naked: male ones monandrous, in two rows; female ones solitary. Germen 3-lobed. Lobes 1-seeded.

Order 6. DODECAGYNIA. 12 Stamens. 12 Styles.

2623. *Cephalotus*. Calyx coloured, 6-cleft. Stamens 12. Anthers didymous, glandular on the back. Ovaries 6, distinct. Styles terminal. Chenia 1-seeded.

MONOGYNIA.

17341 Stem diffuse bran., Lvs. scattered cylindr. acute with pilose axils, Flws. 3-4-together termin. crowd surround. [by whorl of lvs. and crowned hairs.]

17342 Stem erectish bran. at base, Lvs. obl.-cylindr. rather compressed obtuse dotted axillary fascic. of hairs erect adpressed, Flws. termin. usually solit.

17343 Glaucous, Lvs. fleshy rhomboid acute petiolate, Raceme simple loose, Calyx spotted, Petals obcordate.

17344 Glabrous diffuse, Lvs. spatul. acute elongat. at base, Flws. racemose, Pedicels and bracteas very short

17345 Lvs. fleshy obovate-obtuse elongat. into petiole somew. d coloured ben., Rac. bending, the pedicel drooping after the falling of the petals [base, Pedic. little long. th. bract.]

17346 Glauc., Stems numer. prostrate leafy, Lvs. linear, Common pedunc. termin. naked simple or bran., Rac. corym

and Miscellaneous Particulars.

2620. *Viscaria*. Culture as in the common catchfly.

2621. *Calandrinia*. A genus of ornamental succulent plants, generally treated as annuals, although properly they are not so, as they may be preserved in the green-house through the winter, and in time, so treated, *C. grandiflora* will become shrubby. They require to be plauted in hot dry exposed places.

Order 1. MONOGYNIA. Many perigynous Stamens. 1 Style.

2624. *Melocactus*. Tube of calyx adhering to ovarium. Lobes 5-6, petaloid, crowning the young fruit. Petals 5-6, united into a long tube along with the sepals. Stamens disposed in many series. Stigma 5-rayed. Fruit smooth.
2626. *Echinocactus*. Sepals numerous, imbricate, adhering to the ovarium; outer ones in the form of an involucrem; inner ones petaloid. Style multifid at the apex, very sealy from the remains of the sepals.
2626. *Mammillaria*. Tube of calyx adhering to the ovarium. Lobes 5-6, coloured, crowning the young fruit. Petals 5-6, hardly distinguishable from the sepals. Stamens disposed in many series. Stigmas 5-7-cleft, very smooth.
2627. *Cereus*. Sepals numerous, imbricate, adhering to the base of the ovarium, united into an elevated tube. Outer sepals like a calyx; middle ones longer and coloured; innermost ones petaloid. Style multifid at the apex. Berry arcuate, tubercular, or sealy.
2628. *Epiphyllum*. Tube of calyx long, furnished with remote scale. Limb of cor. multifid, rosaceous, or ringent.
2629. *Opuntia*. Sepals numerous, foliaceous, adnate to the ovarium; upper ones flat and short; inner ones petaloid. Stigmas numerous, erect. Berry oval, umbilicate, tubercled, or spiny

History, Use, Propagation, Culture,

2622. *Poinsettia*. "Nothing can be more ornamental in the stove. The rose-like whorls of bractæ which terminate the branches have been seen on the large plants cultivated at Philadelphia as much as 20 in. across, and equal in colour to the finest tints of *Hibiscus Rosa sinensis*." (*Bot. Mag.*) A mixture of sand and loam suits this plant, and cuttings root readily in sand under a bell-glass in heat.

TRIGYNIA.

HEXAGYNIA.

- 17352 The only species

2630. *Pereskia*. Sepals numerous, foliaceous, adnate to the ovarium. Cor. rotate. Stigmas aggregate, spiral.
 Berry globose or ovate.
 2631. *Purshia*. Lobes of calyx obovate, obtuse. Petals and stamens arising from the calyx. Stamens about 20.
 Carpels 1-2, ovate-oblong, tapered into a short style, pubescent; each includes 1 ovule inserted into its base, and
 opens by a longitudinal cleft.
 2632. *Covania*. Cal. 5-cleft. Petals 5. Ovaries 5-14. Ovule erect. Styles terminal, continuous. Achenia awned
 with the plumose persistent styles. Embryo erect.

Order 2. DI-PENTAGYNIA. Many perigynous Stamens. 2 to 5 Styles.

2633. *Stranvaesia*. Cal. 5-toothed. Petals 5, concave, sessile, spreading, villous at base. Stamens 20, spreading.
 Ovary villous, superior, 5-celled. Cells containing 2 ovules. Fruit spherical, enclosed by the calyx, containing the
 superior, 5-valved, hard, brittle, dehiscent capsule. Seeds oblong, compressed. Testa cartilagineus. Radicle ex-
 serted. Leaves simple. Flowers corymbose.
 2634. *Kagenéckia*. Cal. saucer-shaped, furnished with a ring a little elevated on the inside, girding the ovaries.
 Petals wanting? Stamens 15, 5 of which alternate with the lobes of the calyx, the rest by pairs opposite the lobes.

MONOGYNIA.

- 17353 Subglobose umbilicate, Ribs 13 continuous somewhat undulated, Tubercles woolly bearing many short stiff
 straight spines, Petals acute (spreading)
 17354 Roundish cylindrical, Mammillæ large, conical rather angular disposed along 16 rather spiral ribs, Spines slender
 17355 Obovate, Mammillæ large, conical depressed disposed along 16-17 ribs, Spikes 8-10 long slender spreading
 17356 Nearly globose glaucous, Ribs 14 acute, Spines unequal spreading, Flowers very long
 17357 Nearly globose umbilicate, Ribs 9-10 undulated, Spines 5-6 straight black, Petals acuminate

- 17358 Oblong cylindrical, Spines 6-7 upper ones largest brown
 17359 Cylindrical proliferous, Axils naked, Spines 20 equal spreading [Petals nearly equal
 17360 Simple oval cylindrical, Mammillæ large conical obtuse, Spines 8-10 stiffish straight nearly equal spreading.

and Miscellaneous Particulars.

2625. *Cephalotus*. This plant grows best in turfy peat soil, and should be kept rather damp. If moss is allowed
 to grow on the surface of the soil it helps the growth and health of the plant. It is increased by seed.
 1111. *Cactus* to 2630, *Pereskia*. For propagation, culture, and other particulars relating to *Cactee*, see p. 410-415.;
 also, for some excellent remarks on the general treatment of *Cactee*, see *Gard. Mag.*, vol. xv. p. 83.

History, Use, Propagation, Culture,

2631. *Purshia*. A dry light soil suits this plant, and cuttings of the young wood will root in sand under a hand-glass.

17361 Globose subcylindrical, Mammillæ large, conical obtuse, Spines 14—16 strong straight nearly equal, Petals very unequal [acuminate]

17362 Oblong subcylindrical, Mammillæ large, subtetragonal, Spines 7—8 straight slender one longer than rest, Petals

17363 Branches diffuse creeping triangular, Spines 4—5 stiff spreading.

17364 Hybrid between *C. speciosissimus* and *C. flabelliformis* [linear obtuse]

17365 Stems creeping triangular, Spines numerous bristle-shaped, Flowers solitary from the centre of the bristles, Petals

17366 Branches deeply serrated naked, Tube of flower very long slender, Segms. of cor. lin. lanceol.

17367 Stem serrated repand, Tube of cor. short scaly unarmed

[Petals keeled]

17368 Branches seldom with any spines except when young, Cor. large ringent nearly four times longer than tube,

17369 Branches cuneate oblong undulated, Margins appearing curled from large crenatures

6904 Proliferous loose, Joints ovate, Spines setaceous

17370 Joints ovate oblong blunt at both ends, Spines setaceous length of the wool

6904 Lvs. ellipt. Prickles solitary in axils of lvs. fasciated on stems, Flowers panicled, Fruit globose

17371 Lvs. ellipt. acute tapering into short footstalks, Spines fasciated, Upper axils bearing thick rounded fleshy 3-5-flwd. pedunc., Petals obov. retuse soon reflected

17372 Stem with white shining epidermis. Lvs. sinuately toothed, Capsule naked 3-valved, Seed broadly marginate, Flws. in leafy panic.

17373 Stem branched hispid, Lvs. ovate lanceol. pinnatifid, Bract. pinnatifid, Petals 5 obovate cuspidate

17374 Lvs. ov. acumin. serrately denticul. rounded at the base 3-nerved, Flws. fewer and larger than in *P. vulgaris* and scentless [minute]

17375 Bark whitish, Lvs. broad-ovate acumin. toothed about 5-nrvd. hairy ben. Inflor. racemose, Lobes of cal. acumin. [level with stamens]

17376 Lvs. ovate-oval with long acuminate tip serrat. toothed 3-nrvd. hairy ben. Inflor. subracemose, Flws. 5-7 showy slightly scented

17377 Lvs. oval-ovate with long acuminate tip toothed pubes. ben. Flws. solitary or 2-3 together, Stigmas about

17378 Lvs. ovate acuminate denticulated toment. ben. Racemes termin., Pedicels oppos. Lobes of cal. ovate acute

17379 Peduncles angular short usually solitary, Lvs. ovate lanceol. acum. Calyx hairy 4-cleft, Petals hairy outside

17380 Subdecumbent, Lvs. grouped wedge-sh. ending in 2-3 teeth villose ab. toment. ben. Buds scaly, Stipules none, or minute

17381 Leaves wedge-shaped oblong pinnatifid plaited, Ovaries 14

and Miscellaneous Particulars.

2632. *Cordonia*. A handsome evergreen hardy shrub, with large showy blossoms resembling a small rose.

DI-PENTAGYNIA.

†1132. CRATEGUS. L. (*Kralos*, strength; hardness and strength of wood.) *Rosacæ* & *Pimeæ*. Sp. 27—27.

I. COCCINEÆ.—Leaves cordate, lobed, acutely serrated. Flowers and Fruit large. Plants large and of free and vigorous growth.

History, Use, Propagation, Culture,

1132. *Crataegus*. "Of all the genera of hardy deciduous ligneous plants in cultivation in British gardens, there is not one which, taking it altogether, can be compared with the genus *Crataegus*. . . . They are not only highly beautiful when in flower (a period which extends from the beginning of April to the end of July, commencing with *C. purpurea*, and ending with *C. coriata*), but also when they are covered with ripe fruit, which includes a period commencing with *C. purpurea* and *C. nigra*, in the beginning of July, and continuing till the following spring or summer ;

DI-PENTAGYNIA.

History, Use, Propagation, Culture,

2634. *Kageneckia* 17403 *cratægifolia*. The leaves of this plant are intensely bitter, and they are used by the

♂ sanguinolenta (flesh of fruit red or reddish)

♀ Bore pléno

♂ jáspida (bark striped with yellow)

♀ sativa D. c.

- 17395 Branlts. whitely toment. Lvs. oval acute crenat. glabr. ab. toment. ben. when young, Corymbs simple and
 17396 Lvs. ovate acumin. crenat. glabr. In adult state when young clthd. with yellowish toment. ben. Umbels termin.
 Pedic. and cal. woolly

α Leaves broadly ovate and obtuse

β Leaves ovate-oblong acute

γ Leaves flat oval-lanceol. broad undulat. unequally and deeply serrated, acumin. and cobwebbed above

δ Leaves oval obtuse concave somewhat simply serrated woolly above

ε Leaves large ovate-elliptic doubly serrated shining above and wrinkled, white beneath [webbed]

ζ Lvs. flat orbicularly ellipt. crenately serrat. retuse cuneated at base, smooth ab. hoary ben Bran. cob-

♀ Lvs. concave elliptic acumin. blistered; closely serrated at apex, but entire at base

- 17397 Lvs. cymes, and young bran. clthd with white toment. Lvs. ellipt. or obov.-ellipt. acumin. serrat. towards apex,
 Corymbs branched and termin.

- 17398 Buds woolly, Lfts. serrat. woolly ben. Petiole woolly, Pome globose [flwd. and long th. leaves

- 17399 Bran. cinnereous, Lvs. obl.-lanceol. acute on long pets. toment. ben. as well as cal. Fruit spheric. Corymbs many-

- 17400 Stem humile reclin. Lvs. obl. obt. toment. ben. as well as cal. Fruit pear-sh. Corymbs length of leaves

- 17401 Erect, Bran. pubes. Lvs. obl. or obov. abruptly acumin. smth. Fruit spherical as well as cal. quite glabr.

- 17402 Lvs. obl. or obov. acute glabr. Fruit spherical and as well as cal. glabr. Corymbs few-flwd. coarctate, Fruit

- falling off, Rac. upright many-flwd. [with vill. dist.]

- 17403 Lvs. oval-lanceol. smooth glaucous, Male and female flowers produced separately on the same plant

- 17404 Lvs. oval obt. at both ends mucronate finely serrat. sub-cord. at base, Rac. few-flwd. Cal. glabr. Fruit eatable

- 17405 Lvs. obl. obt. at both ends coarsely serrate in terminal portion glabr. Bract. and stipules feathery at tip soon
 falling off, Rac. upright many-flwd.

- 17406 Lvs. obl. obt. at both ends smooth ab. woolly ben. Cymes panicled pilose, Cal. quite smooth

- 17407 Branlts. woolly, Lvs. ellipt. mucron. coriac. crenulat. glabr. woolly ben. when young, Corymbs panicul.
 termin. white and woolly

- 17408 Lvs. orbicul. or ellipt. ending in mucro sometimes emargin. Stips. lin.-lanceol. membran. soon falling off,
 Cymes axill. few-flwd.

- 17409 Lvs. roundish pilose ben. evergreen, Peduncles 1-flowered

- 17410 Lvs. oblong obtuse pubescent beneath evergreen, Peduncles usually 1-flowered

- 17411 Lvs. ovate woolly beneath evergreen, Peduncles 2-3-flowered woolly

- 17412 Lvs. elliptical oblong more or less lobed toothed pale villose beneath, Panicle villose, Flws. very numerous

α Lvs. lanceol. Panicles consisting of racemes more or less spicated, Bark of branches yellowish

β Leaves shorter than those of var. α, Branches very short

γ Leaves ovate-oblong, Petals white, Bark of branches red

δ Leaves ovate-oblong, Petals white, Bark of branches reddish

ε Flowers nearly twice as large as those of the species

- 7132 δ crenata Ser. syn. S. obovata H & K. i savránica Ser. A. b. f. 436 ζ Besseriana Ser. syn. S. crenata Bess.

- 17413 Branlts. hairy, Lvs. ellipt. acute serrated at tip glabr. glauc. ben. Cymes termin. tomentose few-flowered

- 17414 Lvs. 5-7 lobed, Lobes oblong acumin. acutely & doubly serrated, Panic. cymose decomposed

- 17415 Lvs. pinnate toment. ben. Termin. lft. largest 7-lobed lateral ones 5-lobed. Corym. bran. contract. Carpels
 parallel villos

POLYGYNIA.

- 17416 Bran. flexuous setiger. Prickles few slender scattered, Lfts. folded together, uneq. with coarse dhl. serrat. Stips.
 pets. and sepals compound [ben. dply. serrat. Fruit ovate red

- 17417 Bran. slender coloured, Prickles stipular spreading little recurved, Stips. linear, Lfts. obl. wrinkled toment.

α setosa Ser. (bristly-calyced) λ globosa Desv. (globular-fruited) μ helleborina Ser. ν pillosula Ser. (pilose-

- 17439 Villous, Stems ascend. Lower lvs. 5-6 lfts. upper ones ternate, Lfts. obl.-cuneif. coarsely thd. hairy on both surfs. Cal. segms. ov.-acumin. [Panicles dichotomous few flw.]
- 17440 Stems erect covered with glandular hairs, Radic. lvs. pinnate upper ones sessile ternate, Stip. round membran.

- [dply. serrat. toment. ben]
- 17441 Stem erect hairy corymbosely panic. at apex, Lvs quinate lower ones petiolate upper aliu. sess. Lfts. lanceol.
- 7629 The only species
- ♁ The only form known in British gardens previously to about 1834-

Page 456. CLASS XIII. -- POLYANDRIA. STAMENS many, hypogynous, or inserted under the Ovary.

Order 1. MONOGYNIA. Stamens many, hypogynous. Style 1.

2635. *Ryànea*. Flowers hermaphrodite, apetalous, with petaloid ureolus between the stamens and pistil. Fruit baccate, indehiscent.
 2636. *Achlys*. Sepals 0. Petals 0. Flowers naked, disposed in a dense spike. Stamens numerous. Stigma dilated, hence concave. Ovary ovate, smooth, 1-celled, 1 ovule fixed to bottom of cell.
 2637. *Hunnemània*. Petals 4. Stamens indefinite. Stigma peltate, 4-furrowed, slightly 4-lobed. Capsule silique-formed, rather compressed, 10-ribbed, 1-celled, 2-valved.
 2638. *Lidia*. Calyx permanent, 5-7-parted; lobes oval. Petals 0. Stamens numerous, inserted in the disk. Anthers roundish. Ovary 1, ovate. Style filiform. Stigma 3-fid, rarely 4-fid. Berry dry, globose, pointed by the style, 6-8-seeded.
 2639. *Azàra*. Calyx 4-5-parted. Petals 0. Style awl-shaped. Stigma obtuse. Berry many-seeded.
 2640. *Læfia*. Calyx 5-parted, marcescent. Petals 5, or wanting. Stamens indefinite, hypogynous. Anthers roundish. Capsule fleshy, 3-5-valved, small, globose, acuminate with the style.
 2641. *Godóya*. Calyx of many deciduous sepals. Petals 5. Stamens numerous, disposed in many rows, or collected into five bundles. Anthers long, biprose. Style simple. Capsule 3-5-valved, 3-5-celled, with the edges of the valves bent inwards, forming the dissepiments, many-seeded. Seeds winged.
 2642. *Dendromècon*. Sepals 2, caducous. Petals 4. Stamens numerous, filif. Anthers linear. Stigmas 2, sessile, short. Capsule silique-formed, 1-celled, 2-valved. Placentæ marginal, filif. Seeds many, pear-shaped, smooth.

History, Use, Propagation, Culture.

2635. *Ryànea* 17442 *speciosa* is a beautiful and singular plant, deserving a place in every stove. Ripened cuttings root freely in sand, under a bell-glass, in heat. The plant thrives in vegetable mould with a little sand.
 2635. *Achlys* 17443 *triphylia*. This plant succeeds well in common garden soil, and is increased by division of the root.
 2637. *Hunnemània*. For culture, &c., see *Fachschtzian*, p. 1218.

2643. *Platystemon*. Sepals 3, caducous. Petals 6. Stamens numerous. Filaments dilat. Membrane cordate. Anthers linear. Ovaria numerous, linear, each terminated by a linear sessile stigma. Capsules distinct, torulose, articulated, indehiscent, transversely many-celled, hispid. Seeds pendulous, solitary in the cells.

2644. *Platystigma*. Sepals 3, ovate, deciduous, hairy. Petals 4-5. Stamens numerous. Filaments thread-like. Anthers linear, 2-celled, opening sideways. Stig. 3, ovate, acute, erect, divergent. Caps. oblong, attenuated at base, 3-celled, 3-furrowed, 3-valved, opening from top to base. Seeds numerous, minute, egg-shaped, black, smooth, shining.

2645. *Cálythrix*. Calyx drawn out into a cylindrical tube; lobes ending in a long bristle each. Stamens 10-30, free. Fruit dry, indehiscent, 1-celled.

Order 2. DI-TRIGYNIA. Stamens many, hypogynous. Styles 2, 3.

2646. *Pleuráandra*. Stamens 5-20, all leaning to one side, and fertile. Ovaries 2. Styles filiform. Sepals and petals 5.

Order 3. TETRAGYNIA. Stamens many, hypogynous. Styles four.

2647. *Eschschóltzia*. Stamens indefinite. Stigmas 4, 2 short and 2 long. Caps. elongated, silique-formed, 2-valved, 1-celled. Cal. calyptrate. Recept. expanded.

Order 5. POLYGYNIA. Stamens many, hypogynous. Styles many.

2648. *Talaúma*. Carpels disposed in spikes, 1-2-seeded, joined together into a strobile-like fruit opening valvately and irregularly on the outside. Calyx of 3 sepals.

MONOGYNIA.

1742 Under surface of the leaves stellately hairy on the ribs, Peduncles 1-flwd.

1743 Lifts. with very unequal sides upper side or front coarsely sinuate-toothed or lobed, Lobes blunt finely rayed with nerves

1744 Caps. hispid oval, Sepals hairy, Lvs. pinnatif. hairy lacinated part often terminating in bristles, Stems bran. and leafy [Lvs. cut, Lobules termin. by a bristle]

1745 Caps. hispid obov.-obl. Sepals bristly, Pedun. radice. very long covered with adpressed hairs, Lvs. pinnately lbd.

1746 Caps. smooth ellipt. Sepals hairy, Stem few-flwd. covered with stiff bristles, Lvs. somew. stem-claspg. glauc. sinuately pinnatif. [terminated by a bristle]

1747 Caps. smooth obov. Sepals rather setose, Stem smooth few-flwd. Lvs. stem-claspg. glauc. toothed each tooth

1748 Caps. smooth obov.-obl. Sepals hairy, Stem covered with numer. bristly hairs, Lvs. sess. hispid sinuately pinnatif. Lbs. ov. and distant

1749 Lvs. profoundly sinuat. or pinnatif. glaucescent, Nrvs. with prickly bristles, Flws. solit. Caps. oblong dply. 5-6-furrowed covered with smoothish reflex. prickles

1750 Lvs. sinuated smooth spiny-toothed, Nrvs. unarmed, Flws. panic. polyandr. Caps. bluntly quadrangul. almost unarmed

1751 Lvs. petiol. roundish-ov. obtuse 7-nrvd. central one remarkably swollen below, Petioles terete, Pedunc. elongat. 1-flwd. Petals twice length of cal. Pistils 6

1752 Leaves decomposed triternate glaucous, Lifts. linear bluntiss

1753 Lvs. obov. shining veiny those of the young plants small and spinosely-toothed those of adult ones larger and quite entire

1754 Leaves in pairs together larger one elliptical smaller one roundish, Flws. umbellate

1755 Lvs. in pairs quite entire larger one obovate smaller one roundish, Flws. in drooping spikes

1756 Flws. apetalous, Pedun. axill. many-flwd. sub-divided, Lvs. oblong acute somewhat crenated shining

17451

17452

and Miscellaneous Particulars.

2638. *Lúdia*. Shrubs with lateral, almost sessile, flowers, which thrive in a mixture of loam, sand, and peat; and ripened cuttings root freely in sand, under a hand-glass, in heat. The native name of *L. heterophylla* is *Bons sans écorce*.

2639. *Azára*. For propagation and culture see *Lúdia*.

2640. *Læ'tia*. Propagation and culture as recommended for *Lúdia*.

History, Use, Propagation, Culture,

2641. *Godoyia* is a genus of elegant trees worth cultivating. A mixture of sandy loam and peat suits them, and ripened cuttings root freely in sand, under a hand-glass, in heat.
 2642. *Dendromecon*. Requires some care to keep it through the winter,
 2643. *Platystemon*. Remarkable for the peculiar pale yellowish white colour of its flowers.

- 17457 Lvs. oblong bluntish obsolete serrul. Racemes axill. or termin. compound elongated, Cal. of 10 sepals
Stamens about 40
- 17458 The only species
- 17459 Whole plant hairy spreading, Lvs. lanceolate in threes, Scape solit. Carpels hairy
- 17460 Carpels smooth
- 17461 Stems very short and densely covered with leaves, Lvs. linear ent. amplexic. 1-nrvd. Pedunc. 1-flwd. slight y
hairy erect.
- 17462 Lvs. on short petioles scattered lax patent (less so and more crowd. In young bran.) tereti-filif. acute dotted,
Tube of cal. elongat. very narrow upwards
- 17463 Petals obov. mucronately acumin. longer th. cal. Stam. 30-35, Lvs. and flws. nearly sessile
- 17464 Petals oval mucronately cuspidate much longer than cal. Stamens 30-40, Flowers and leaves stipitate
- 17465 Lvs. somew. 3-nrvd. linear margins revolute canes. ben. Cal. 3-5-sepaled pilose, Sepals ovate acute, Capsules
[5-celled
Erect, Bran. hispid vill. Lvs. on short footstalks obt.-lanceol. obl. pubes. and waved at margins veiny ben.
Pedunc. cymose [Crown, Flowers cymose
- 17467 Lvs. alm. sess. ovate-lanceol. acute 3-nrvd. wrinkled smthish. ciliat. netted with veins ben. Nrvs. and veins
[broad
- 17468 Lvs. on short footstalks obl.-lanceol. 3-nrvd. acute undulat. somewhat denticul. and ciliat. rather hairy, Petals
broad cuneat. imbric. [broad cord. villose
- 17469 Lvs. broadly cord. acute, Margins waved denticul. ciliat. Pedun. bracteate somewhat cymose pilose, Sepals
17470 Lvs. narrow-lanceol. wrinkled reticul. ben. almost sess. Peduncles villose generally 3-flwd.
- 17471 Lvs. broad-ovate twisted at top acutish wrinkled and hoary ben. Footst. dilat. at base somewhat sheathing
Cymes 5 or 10-flowered [caute
- 17472 Lvs. alm. ses. tapering to base ov-obl. obt. wrinkled clthd. with starry pubes. Outer sepals broadly cordate
17473 Lvs. stalked cord.-ov. 3-nrvd. reticul. veined scabr. ab. clthd. with fascicled hairs ben. Margin fringed, Pedun.
pilose 2-3-flowered
- β Lvs. pubescent on both surfaces, Branches twiggy diffuse and rather prostrate

- 17474 Bran. rath. hairy clthd. with leprous toment. scabr. brownish grey, Lvs. sess. tapering to base obov-obl. rath.
[oblique hoary ben.
- 17475 Young bran. vill. toment. hoary, Lvs. toment. hoary obl.-lanc. tapering to base, Ped. very short 2-flwd. Cal. 5-sep.
17476 Bran. leprously white, Lvs. obov.-lanceol. white on both surfs. tapering to base pilose ab. scabr. from papillae
ben. Sepals 3 or 5 acute [Racemes axill. or termin. many-flowered
- 17477 Somewhat dichotom. Bran. Bran. rather tomentose cinereous, Lvs. lanceol.-obl. tapering to base hoary ben.
17478 Bran. simple hairy, Lvs. ovate-obl. acute sess. hairy, Pedun. and cal. hairy caescent, Pedun. solit. 1-flwd
inner sepals ovate acumin. [caescent nrvd. ben. furrowed ben
- 17479 Stem 4-gonal, Bark rough scaly, Bran. hispidly hairy, Lvs. ov.-obl. ending in petiole 3-nrvd. hispidly hairy
17480 Bran. twiggy, Lvs. a.tern. lin.-obl. hairy alm. sess. Pedun. solit. 1-flwd. almost oppos. the lvs. rameal or
termin. Cal. hairy [slender few-flowered
- 17481 Bran. dichotom. smthish. Lvs. minute ovate acute glabr. margins revolute on short footstalks, Racemes
17482 Bran. clthd. with hoary toment. Lvs. roundish or ovate obt. green and beset with hisp. hairs ab. and hoary
toment. ben. Rac. simple, Cal. pilose [Hairs cinereous
- 17483 Procumb. Bran. pilosely hairy, Lvs. green on both surfs. obl. ellipt. rather glabrous or with hairs in fascicles.
17484 Procumb. Bran. ascend. pilosely toment. caesc. Lvs. ov.-obl. green and strigosely pilose ab. hoary toment.
ben., Rac. simple few-flowered [Rac. long hairy bearded many-flwd.
- 17485 Bran. clothed with fascicled hairs, Lvs. hairy green both surfs. lower ones roundish-ovate upper ones ellipt.
17486 Bran. procumb. rather toment. Lvs. flat ov.-obl. acutish smth. ab. densely toment. ben. pale cinereous. Stips.
rath. pilose about eq. to petioles [Stips. awl-sh. pilose and bristly at tip
- 17487 Procumb. Bran. rath. toment. and hoary, Lvs. obl. revolute margins hoary toment. ben. greenish glauc. ab.
17488 Bran. rath. toment. Lvs. flat or hardly revolute at margins toment. hoary ben. greenish glauc. ab. lower lvs.
ov.-obl. obt. upper lanceol. acute [Stips. awl-sh. lin. longer than pets.
- 17489 Bran. hoary toment. at apex, Lvs. lanceol. acute margins revolute green and smthish ab. hoary toment. ben.
17490 Bran. toment. rath. hoary, Lvs. lanceol. acute flattish hoary toment. ben. green and rath. scabr. ab. Stips. lin.
ciliat. longer than pets. Cal. clthd. with violac. toment. [at top somewh. longer than lvs.
- 17491 Lvs. oblong flat or concave above hoary-toment. beneath green and glabr. above, Stips. obl.-lin. ciliat. bristly
17492 Bran. hairy-tomentose, Lower lvs. oval upper ones oblong-lanceol. green on both surfs. flat hairy, Cal. hairy,
Petals imbricate

and miscellaneous Particulars.

2641. *Platystigma*. A pretty little hardy annual, and requiring the usual treatment of such.
2645. *Celythrix*. A genus of singular plants, requiring the same treatment as that recommended for *Lüdia*,

and Miscellaneous Particulars.

Pæonia Moutan. The varieties of this species have lately been greatly increased, in consequence of plants having ripened seeds in various parts of France; and also the result of cross-fecundation with the herbaceous peony, both on the Continent and in England.

History, Use, Propagation, Culture.

2647. *Eschscholtzia*. The generic name *Chrysis* has been applied to this genus by Dr. Lindley, under the supposition that the name *Eschscholtz* was the same as that of *Elsholtz*, after whom another genus had been named. It has, however, since been proved that the names are quite distinct, therefore we retain that of *Eschscholtzia*. Showy flowers, which, though they will occasionally last several years as perennials, are grown as annuals, and are desirable for the flower-garden.

- 17515 Pet. ditto, Lvs. pubes. 5-lbd. lbs. dply. serrat. Brac. lanceol. villous clammy, Spur curved, Capsule smooth
 17516 Pet. ditto, Lvs. 3-5-parted, Lbs. narrow somew. pinnatif. acute upper lvs. 3-parted with entire lobes, Rac. lax, [long. th. pedicel. Caps. pubes.
 17517 Pet. dilat. and sheathing at base, Lvs. many-parted, Lbs. linear, Rac. elongat. crowded, Spur straight blunt rather
 17518 Stem erect slender a little bran. and rather pubes. at apex, Pedic. much longer than the awl-sh. bracteas
 17519 Lvs. petiolate tripartite segms. lin. cuneate ent. or dply. and uneq. bifid, upper ones narrowest, Rac. lax elongat. Rachis and pedicels downy

TETRAGYNIA.

- 17520 Stigmas 4 two longer than the others, Seeds globose almost black
 17521 Stem branching and leafy, Segms. of lvs. linear, Peduncle with funnel-shpd. appendage, Limb much dilated, Cal. long and acum. [large nearly flat
 17522 Stem dwarf densely bran. Segms. of lvs. linear wedge-sh. tridentate at apex, Cup of pedunc. funnel-sh. Limb

PENTAGYNIA.

- ♂ stellata (starred double blue & white flwd) ♂ degener (degenerate double blue & white flwd)
 17523 Spur incurved, Caps. very smooth, Stem 1-2-lwd. almost naked smooth, Sepals very blunt
 17524 Hybrid between *A. sibirica* and *A. vulgaris*
 17525 Spur straight equal in length to petals, Stamens equal in length to petals, Styles protruding
 17526 Spur straight very short equal in length to pet. Petals thrice as long as cal. Pedun. radic. 1-flwd. almost naked
 17527 Spur straight length of limb, Sepals oval, Stem few-flowered, Lvs. deeply divided [longer than petals
 17528 Spur straight much longer than petals and very short stamens, Styles not protruding, Sepals lanceol. much

POLYGYNIA.

- ♂ Differs from var. ♂ in having rather broader leaves and larger flws., and forms a broader and more compact
 ♂ Lvs. oblong-elliptical generally rusty beneath, Flws. somewhat contracted [tree or bush
 ♀ Has roundish leaves
 ♀ Lvs. oval-oblong, Flws. fully expanded
 ♂ Lvs. lanceol. pointed at both extremities wavy
 β Is a supposed hybrid between *M. glauca* and *M. tripetala*
 γ Lvs. ellipt. acute at both ends resembling those of *M. tripetala* but thicker smaller and glaucous beneath
 β Hardly distinguishable from *M. conspicua* except by the flws. which resemble in form those of *M. purpurea*
 γ Closely resembling var. β from which it differs in flowering somewhat earlier [var. *gracilis*
 ♂ A hybrid scarcely differing from var. γ
 β Leaves ovate oblong acute, Flws. greenish
 γ Leaves much larger than those of the species

- 17529 Lvs. ovate roundish somew. cuneated at base, Petals 12 thick oblong obtuse
 17530 Lvs. oblong acum. at both ends, Flws. 9-12 petaled outer ones short, Pedun. 1-flwd. rather droop. clthd. as are petioles of young lvs. with ruf. vill.

- 17531 Lvs. cuneate-obov. obt. under surf. as well as bran. clthd. with brown pubes. Flws. sess. Outer petals obov. much larger than cal.

- 17532 Lvs. large cord. 5-lbd. woolly ben. Lbs. broad ov. cut and cren. those of involucre. stalked woolly ben. smth.
 17533 Lvs. bitern. those of involucre. on very short stalks, Lbs. elongat. acum. Pedic. 2 pubescent. Sepals 5 elliptical

17331

and Miscellaneous Particulars.

2648. *Galaúma* is a genus of magnificent trees and shrubs, resembling magnolias. A mixture of loam, peat, and sand suits them. They may be increased by layers or inarching on *Magnolia obovata*, and ripened cuttings will root in sand, under a hand-glass, in heat.

Page 490. CLASS XIV. — DIDYNAMIA. 4 STAMENS, of which two are shorter than the others.

Order 1. GYMNOSPERMIA. Pericarpium divided into four lobes resembling naked seeds.

- 2649. *Lophänthus*. Calyx equal, or oblique, or subbilabiate, usually 15-nerved; superior teeth the largest. Corolla bilabiate. Stamens ascending, or diverging.
- 2650. *Aphanochilus*. Corolla tubular. Limb short, bilabiate. Anthers versatile. Cells divaricate. Lobes of gynophore shorter than ovarium.
- 2651. *Dysophytia*. Anthers terminal, also the younger ones confluent 1-celled. Stamens somewhat declinate. Corolla almost regular.
- 2652. *Pycnostachys*. Lower segment of corolla elongated, concave. Teeth of fructiferous calyx subulately spinose. Whorls of flowers spicate.
- 2653. *Sphæcele*. Calyx reticulately veined, 5-toothed, limb not dilated, teeth nearly equal. Tube of corolla ample. Cells of anthers linear, diverging.
- 2654. *Peritömia*. Achenia membranously winged. Segments of corolla flattish. Gynophore elongated, incurved, oblique at apex. Lips of calyx entire.
- 2655. *Roykea*. Calyx tubular at base, 10-nerved. Segment 5, equal, oblong, membranous.
- 2656. *Micromeria*. Tube of corolla rarely exerted. Calyx nearly equal. Superior stamens antheriferous.
- 2657. *Gardoquia*. Calyx tubular, somewhat incurved, with an equal or sub-bilabiate mouth. Tube of corolla much exerted. Stamens 1-3, now and then sterile.
- 2658. *Physotegia*. Calyx obscurely veined, inflated after inflorescence. Corolla much exerted, with an ample throat.
- 2659. *Cölcus*. Fructiferous calyx toothed, not spiny, with an open mouth. Filaments monadelphous. Lower segment of corolla elongated, concave.
- 2660. *Chibödia*. Upper lip of calyx entire, tube short, 13-nerved, lower one bifid. Anthers nutic, 2-celled.

Order 2. ANGIOSPERMIA. Seeds several, enclosed in an undivided pericarpium.

- 2661. *Pentaräphia*. Calyx adnate to the ovarium. Corolla superior. Ring of glands hardly present. Anthers connected by pairs.
- 2662. *Rytidophyllum*. Calyx adnate to the ovarium. Corolla superior. Epigynous ring thick and situated. Leaves stipulate.
- 2663. *Sinningia*. Corolla oblique, ringent, with only one gibbosity at base. Calyx adnate to the ovarium, angularly winged.
- 2664. *Amphicome*. Calyx tubular, 5-toothed. Corolla tubular, ventricose near base. Limb 5-lobed, ciliated. Stamens 4, didynamous, with rudiment of a fifth. Stigma bilamellate. Capsule siliquiforme. Seeds winged at both ends, and bearded.

GYMNOSPERMIA.

17542	1242. A'JUGA.					Sp. 12—11.

17534 Leaves of involucrem 3-5 cleft on short stalks with deeply toothed segments, Sepals 4-5 oval [umbellate
 17535 Radic. lvs. 3-5-parted segms. trifid very entire densely villous at margins those of involucre. undivided, Flws.

γ Is a very beautiful var. The sepals are cream-coloured, suffused with violet spots, Lvs. and bran. more hairy than those of the sp. [spreading at apex wavy

17536 Pedunc. 1-flwd. somewh. long. than lvs. Lvs. biternately decomposed, Lfts. ent. or 3-lobed, Sepals half-

17537 Pedunc. 1-flwd. Flws. campanulate tomentose, Sepals oblong, Lvs. pinnate, Leaflets ovate serrated pilose

17538 Pedunc. 3 1-flwd. Lvs. ternate smooth leaflets ovate entire flws. drooping

17539 Flowers axillary paniced, Leaves subbiternate villous, Leaflets cordate acuminate serrated 3-lobed, Sepals

17540 Lvs. spreading hairy ternate, Segms. ovate acute ent. Pedunc. 1-flwd. Sepals 6-8 obl. lanceol. acute membran-

17541 Pedunc. 1-flwd. not bractd. several togeth. Lvs. ternately parted, Segms. ovate-obl. acumin. incisely toothed,

Sep. ellipt.-obl. mucronul. spreading

2655. *Feldia*. Calyx 5-parted, enclosed in spathe-formed bractea, which is cleft on one side. Corolla tubularly ventricose. Limb equal, 5-lobed, sub-bilabiate. Stamens 5; 4 fertile exerted, sterile one enclosed. Stigma bilamellate. Berry spongy, longer than calyx.

2656. *Tecomia*. Calyx 5-toothed. Corolla with short tube and campanulate throat. Limb 5-lobed, sub-bilabiate. Lobes of anthers divaricate. Capsule siliqua-formed; dissepiment contrary. Seeds disposed in 2 rows, imbricate, winged, transverse.

2657. *Salpiglossis*. Calyx 5-angled, 5-cleft. Corolla funnel-shaped, 5-lobed. Lobes 2-lobed. Stamens didynamous, with rudiment of a fifth between the 2 longer ones. Style tongue-shaped at apex. Stigma truncate, transverse.

2658. *Calampelis*. Calyx semi-5-cleft. Corolla with tubular base, ventricose throat, and a contracted 5-lobed limb. Stamens 4, didynamous, without any rudiment of a fifth. Lobes of anthers obtuse, divaricate, distinct at apex. Wings of seeds repandly sinuated, emarginate at base.

2659. *Eccremocarpus*. Calyx membranous, 5-cleft, coloured. Corolla tubular, with an equal throat, and a 5 lobed equal limb. Stamens 4, didynamous, with the rudiment of a fifth. Anthers versatile. Cells parallel, combined. Wings of seeds repandly sinuated, nerved.

2670. *Strobilanthes*. Calyx 5-parted. Corolla funnel-shaped. Anthers erect, with parallel cells. Capsule 4-seeded in the middle. Seeds small.

2671. *Golfussia*. Calyx 5-parted. Corolla funnel-shaped. Limb nearly equal. Anthers erect, 2-celled. Stigma subulate, crenulate on one side. Capsule 6-angled, 2-valved. Cells 2-seeded at bottom. Seeds discoid.

2672. *Calophanes*. Calyx 5-parted, equal. Corolla funnel-shaped. Throat ventricose. Limb bilobed, nearly equal. Stamens enclosed. Cells of anthers parallel, spurred at the base. Stigmas simple. Cells of ovarium 2-seeded. Capsules sessile, almost cylindrical.

2673. *Amasonia*. Calyx 5-cleft, bracteate. Bractea coloured. Corolla tubular, 5-cleft, equal. Style bifid. Drupe 2-4-seeded.

2674. *Geissoméria*. Calyx 5-parted. Sepals glumaceous, equal. Corolla tubular, clavate. Limb nearly equal, lower segment bearded. Cells of anthers parallel, hairy at apex. Ovarium 2-celled. Cells 2-seeded. Stigma funnel-shaped.

2675. *Chloanthus*. Calyx 5-cleft. Corolla tubular; upper lip bifid, lower one tripartite. Stamens exerted. Stigma bifid. Drupe containing 3 nuts.

2676. *Lophospermum*. Corolla bilabiate. Tube wide, gibbous at base. Capsule dehiscing irregularly under the apex.

2677. *Seymeria*. Calyx deeply 5-cleft. Corolla with a short tube, and a subrotate spreading limb. Stamens a little longer than the corolla. Cells of anthers nearly equal.

2678. *Diplacus*. Calyx prismatic, 5-cleft. Corolla ringent, 5-cleft. Lobes emarginate. Stigma bilamellate. Capsule 2-celled. Placenta broad. Seeds subulate at both ends.

2679. *Torenia*. Calyx plicate, obliquely 5-toothed. Two lower filaments appendiculate, or gibbous at base.

2680. *Collinsia*. Corolla gibbous above the base. Limb very irregular. Capsule 2-valved. Valves bipartite.

2681. *Fraxicea*. Calyx 5-toothed. Corolla salver-shaped. Stigma 2-lobed. Capsule 2-celled; dissepiment parallel with the valves, separating from the parietes at the base.

GYMNOSPERMIA.

17542 Diffuse without stolones, Branches pilose, Lvs. ovate sinuately-toothed or entire villous, Upper whorls of flowers [spike
 17543 Lvs. narrow-obl. narrowed at base quite ent. or sinuat. rather vill. Lower whorls of flws. remote upper subspic.
 Teeth of cal. short

History, Use, Propagation, Culture,

2649. *Lophanthus*. Plants which prefer a light dry soil, and may be increased by division of the root, or by seed.
 2650. *Aphanochilus*. Plants of easy culture, and will grow in any light rich soil.
 2651. *Dysophylla*. The species grow well in the open air in summer, if planted in a cistern or pond, but require the protection of a green-house or stove during winter. Readily increased by division.
 2652. *Pycnostachys*. Plants of easy culture and propagation, thriving in a light rich soil.
 2653. *Sphacete*. Free growers and flowerers. Any light rich soil will suit them, and cuttings root freely under a hand-glass.
 2654. *Peridomia*. Any light rich soil suits this genus, and cuttings of the young wood root readily under a hand glass.
 2655. *Roylea*. For propagation and culture see *Sphacete*, above

- 17544 Glabrous, Lvs. ov. or ov.-lanceol. acute crenate, Spikes cylindric. Interrupt. at base, Cal. segms. lanceol.-acute, Stamens exerted

17558
and Miscellaneous Particulars.

2656. *Micromeria* is a genus of plants which thrive, during the summer, on rockwork, but require the protection of a frame in winter.

2657. *Gardoquia*. The species are well deserving of cultivation; they thrive in a mixture of sand, loam, and peat, and cuttings root readily in sand, under a hand-glass.

2658. *Physostegia*. Elegant plants of easy culture, well adapted to the flower border. They may be readily increased by division of the root, and will thrive in common garden soil.

2659. *Coleus*. A mixture of peat and loam suits this plant, and cuttings root readily in sand, in a gentle heat

2660. *Chilodia*. For propagation and culture see *Coleus*, above.

1290. *Gesnera*. Very showy plants while in flower. A light rich soil, or a mixture of loam, peat, and sand, suits them. Most of the species increase readily by cuttings, and by tubers of the root. While dormant, they require to be kept dry.

History, Use, Propagation, Culture.

2678. *Diplacus*. See *Mimulus* for propagation and culture.
 2679. *Torënia*. The species require a moist soil. They are readily increased by division.
 2680. *Collinsia*. All the species are very desirable showy annual plants, and have a good appearance if sown in large patches

- 17657 Plant downy, Lvs. sess. obl.-lanceol. acute nrvd. mucron. denticul. Flws. few termin. on very long pedics. Cal. acuminate
- 17658 Villous, Lvs. amplexic. ovate with erosely toothed margins, Pedunc. long th. lvs. Cal. large inflately tubul. hardly plicate with ov.-acute teeth
- 17659 Pubescent, Lvs. amplexic. obl. little-toothed 5-nerved, Pedunc. shorter th. lvs. Cal. large subinflat. tubul. with ov.-acute nrly. eq. teeth
- ♂ Cauliscent many-flowered
 ♀ Flowers yellow spotted with purple
- ♂ Decumbent, deep yellow, Segms. of limb with a large blood-coloured spot on each
 ♀ Stem erect, Corolla pale yellow, each segment stained with a large purple spot
- 17660 Clothed with glandular pubesc. Stems decumb. round, Lvs. ovate toothed upper ones sessile, Peduncles axil.
- 17661 Hybrid, *M. variegatus* and *M. luteus rivularis* [lary 1-flwd. shorter than lvs.]
- 17662 Hybrid between *M. roseus* and *M. cardinalis*
- 17663 Diffuse clthd. with woolly villi, Lvs. petiol. ovate or ov.-lanceol. little-toothed rounded at base rather pilose and [very short acute clammy, Cal. teeth uneq. lanceol.]
- 17664 Diffuse loosely pilose clammy, Lvs. petiol. broad-ovate little-toothed truncate at base or rounded, Cal. teeth
- 17665 Clammy glabrous, Lvs. lanceol. serrul. rather connate at base, Segms. of cal. unequal
- 17666 Lvs. lanceol.-ovate serrated scabrous, Stem erect pubescent, Calyx 5-toothed equal
- 17667 Lvs. ovate-cord. Pedunc. axill. subscleroid or solitary, Cor. about twice length of cal. which is ovate and rounded at base
- 17668 Branches tetragonal erect rushy, Lvs. small ovate, Peduncles filif. generally 2-flwd.
- 17669 Lvs. lanceol. Pedicels axill. solit. much long. th. flws. Cal. downy about equal in length to corolla
- 17670 Lvs. ov.-obl. nrly. ent. downy, Pedic axill. solit. much long th. flws. Segms. of cor. acutish entire, Cal. downy
- 17671 Diffuse, Lvs. all oppos. Flws. solitary, Pedicels little longer than calyx, Capsule globose [about eq. to cor.]
- 17672 Lower lvs. spatulate, upper ones oblong-linear, Pedic. verticill. shorter than flws. Cor. segms. dilated retuse, Cal. glabr. $\frac{1}{4}$ length of cor.
- 17673 Erect downy, Lvs. glabr. ov.-lanceol. subcordate at base, Pedicels verticillate racemose
- 17674 Lower lvs. 3-lobed upper ones ov. Cal. clth. with glandular pubesc. Segms. of cor. crenated at apex
- 17675 Bran. diffuse spreading, Lvs. ellipt. acute, Bract. lanceol. glabrous as are calyxes, Flws. solitary

2683. *Schivereckia*. Silice ovate; valves convex, somewhat depressed lengthwise in the middle. Seeds numerous. Calyx equal at base. Petals entire. Larger stamens toothed.

- 17676 Lvs. elliptic very obtuse dply. 2-lobed at base amplexicaul, Petals obov. on long and at length twisted claws, Filam. short subul. [abortive linear anther]
- 17677 Lvs. oblong-linear acumin. Petals linear with reflex. limb, Filam. combined forked at apex bearing each an
- 17678 Pedicels shorter than the calyx, Lvs. oblong entire or toothed hispid with stellate down

17679 The only species

and Miscellaneous Particulars.

2781. *Franciscea*. For cultivation, &c., see *Brunfelsia*, in p. 534.

2682. *Streptanthus*. This genus requires the usual treatment of other hardy annuals.

2683. *Schivereckia* 17679 *podolica* is a very pretty little rock plant, and thrives well if grown in a small pot in light sandy soil.

Page 560. CLASS XVI. — MONADELPHIA.

Order 1. TRIANDRIA. Stamens 3.

2684. *Orthrosanthes*. Spathe many-flowered, 2-valved. Perianth 6-parted, equal, with a short triangular tube. Stamens 3, combined at the base. Stigmas 3, fringed at top. Capsule oblong, trigonal, many-seeded.

2685. *Cypella*. Spathe 2-leaved. Perianth 6-parted, concave at the base; outer segments large, spreading; inner ones small, convolute, reflexed at apex. Stamens 3, monadelphous. Style slender. Stigma 3-lobed, the lobes 3-fid and appendiculate. Capsule oblong, 3-celled, 3-valved, many-seeded. Seeds angular.

2686. *Herbertia*. Perianth 6-parted, tube very short, 3 outer segments much smaller than the inner ones. Stamens 3, monadelphous. Anthers linear. Stigmas 3, bifid. Capsule oblong, 3-celled, many-seeded. Seeds angular.

2687. *Spatulanthus*. Spathe rigid, 2-valved, 1-flowered. Perianth spreading, with a very short tube, and a 6-parted regular limb. Stamens 3, short, monadelphous. Anthers oblong, sagittate. Ovarium warted at apex. Stigmas 3, bifurcate.

2688. *Honèria*. Perianth 6-parted, alternate segments smaller, tube very short. Stamens 3, monadelphous. Stigmas 3-fid, the segments bifid and fringed.

Order 2. PENTANDRIA. Stamens 5.

2689. *Mahèria*. Cal. naked, campanulate, 5-cleft. Petals 5, with an obovate limb, spirally twisted, and straightish claws. Filaments monadelphous at base, dilated into a cordate tubercle, or a cup-formed process in the middle. Styles 5, sometimes joined into 1. Capsule 5-celled, 5-valved, many-seeded.

2690. *Maleshèrba*. Cal. tubular, membranous, inflated, 5-lobed. Filaments filiform, distinct, or connected with the stipe of the ovarium. Anthers versatile. Ovarium superior, stipitate, 1-celled, with the placentas at the base, from which the ovules arise by the intervention of umbilical cords. Styles 3, filiform. Stigmas clavate. Fruit capsular, 1-celled, 3-valved. Testa crustaceous, brittle, with a fleshy crest and no arillus. Embryo round, in the centre of fleshy albumen, with the radicle next the hilum.

2691. *Cintòdia*. Limb of cal. 5-cleft. Cor. bilabiate, with hardly any tube. Anthers cohering; 2 superior ones bearded. Capsule siliquiformed, triangular, dehiscing by 3 loriform valves, many-seeded. Seeds attached to two parietal placentas.

Order 6. DODECANDRIA. Stamens 12.

2692. *Philothèca*. Cal. 5-parted. Petals 5, unguiculate. Stamens 10, unequal, connate at base, with tube smooth and free, part of the filaments hairy. Fruit of 5 1 seeded carpels. Leaves alternate, linear.

History, Use, Propagation, Culture,

*1451. *Erysimum* 17081 *Perowskianum*. A very splendid annual, of the easiest culture.

- 17680 Pubescent, Lvs. wedge-sh. obtusely dent. Pods corymbosely acutely 2-lbd. margins gnawed crenat. Seeds winged, Stein strictly branched
- 17681 Lvs. lanceol. toothed. Petals obov. Stigmas globoso, Fruit silique 4-sided
- 17682 Velvety-pubescent somewhat clammy, Lflts. 7 with 20 veins on each side of each leaflet
- 17683 Unarmed, Lflts. 5-7 lanceol. acuminate pilose, Brac. ovate, Petals length of pedicels, Pedicel of fruit long

2693. *Omphalobium*. Cal. 5-parted. Petals 5, imbricate in aestivation. Stamens monadelphous, or somewhat polyadelphous at base. Carpels 5, each bearing a style. Capsules 1-5, legume-formed, 2-valved, dehiscent. Seeds twin, or solitary, exalbuminous. Leaves trifoliolate, or impari-pinnate.

2694. *Parkia*. Flowers hermaphrodite. Calyx tubular, bilabiate, imbricate in aestivation. Legume compressed, many-seeded. Seeds covered with farinaceous substance.

2695. *Sarcocaulon*. Sepals 5, equal. Petals 4, equal. Stamens 15, monadelphous at base.

2696. *Montezuma*. Calyx hemispherical, truncate, sinuately toothed. Stamens numerous, twisted around the style, monadelphous, with 5 distinct furrows. Capsules globose, 4-5-celled. Cells many-seeded. Leaves entire.

2697. *Assonia*. Calyx girded by a 3-crenate 1-leaved involucrel. Antheriferous filaments 15; 3 fertile between each sterile one. Styles 5, very short. Carpels 5, 2-seeded, closely connected into a single capsule. Seeds rather triquetrous, not winged.

2698. *Plagianthus*. Calyx 5-cleft. Petals 5, 2 of which are approximate, remote from the rest. Stigma clavate.

2699. *Nuttallia*. Cal. naked, 5-cleft. Anth. numerous. Stig. numerous, filiform. Carp. numerous, disposed into a ring, or whorl; 1-seeded, not opening spontaneously.

2700. *Lebetonia*. Cal. 5-parted, girded by a shorter 5-parted involucrel. Petals 5, exerted in part, twisted in aestivation, with a spreading limb. Styles 10. Carp 5, or only 4 from abortion, 1-seeded, indehiscent.

2701. *Abutilon*. Cal. naked, 5-cleft, usually angular. Styles multifid at apex. Carp. capsular, 5-30, many-seeded, usually bladderly, disposed into a whorl around the axis, so closely connected with each other as to form a many-celled capsule.

2702. *Eriolaena*. Cal. tomentose, girded by a 5-leaved involucrel. Leaflets jagged, 3 inner ones largest, all shorter than the calyx. Petals unguiculate. Stam. disposed in many series, monadelphous, outer ones shortest, all fertile. Style solitary, villous, crowned by numerous aggregate small stigmas.

2703. *Recrecia*. Flowers hermaphrodite. Stamens monadelphous. Anth. 15, sessile on the top of the tube. Caps. stipitate, 5-celled, 5-valved. Cells 2-seeded. Seeds winged at base.

2704. *Stravadium*. Limb of calyx 4-parted. Ovary semilocular. Cells 2-ovulate. Otherwise agreeing with *Barringtonia*, in p. 561.

2705. *Morisonia*. Cal. obovate, bifid. Petals 4. Stamens 20, somewhat monadelphous at base? Berry stipitate, globose.

TRIANDRIA.

17684 The only species

17685 Stem erect-branched many-flwd. Lvs. distich. ensiform obtuse keeled on both sides

17686 Stem short-branched shorter than the lvs. Lvs. linear striated hooked at top, Spathe 2-flwd. Segms. of perianth

17687 Stem branched at top, Lvs. linear acute glaucescent, Spathes many-flwd. [acuminated involuted at apex]

17688 Stem angular. Outer leaflets of the perianth oblong-ovate acutish mutic inner ones short acute concave beneath

and Miscellaneous Particulars.

2684. *Orthrosanthus*. Equal proportions of loam and peat suit this genus, and the species are increased by offsets.

History, Use, Propagation, Culture.

2685. *Cypella*. Soil and propagation as recommended for *Orthrosanthus* above.
 2686. *Herbérta*. Soil and propagation, see *Tigridia*.
 2687. *Spatalanthus*. Thrives in a mixture of turfy loam, peat, and sand, in pots kept in a flame
 2688. *Homéria*. For soil and propagation, see *Gladitulus*.
 2689. *Mahernia* is a genus of pretty little shrubs, which thrive in loam and peat, and cuttings of the young wood root readily under a hand-glass.

- 17689 Lvs. plicate obl-lanceol. acute, Stem flexuose bifurcate branched, Branches 1-flwd. Outer segms. perian. dilat. at top
- 17690 Lvs. linear ensif. acute at both ends plicate, Segms. of perianth bearded at the base
- 17691 The only species
- 17692 Lvs. linear striated glaucous, Scape kneed branched, Segms. of perianth bearded acutish at base

PENTANDRIA.

- 17693 Lvs. disposed in whorls entire or trifid linear ciliated, Stem decumbent, Pedunc. 1-2-flwd. involucreat
- 17694 Glandularly pubes. Lvs. lin. obt. toothed recurved with pair of 3-partite stips. at base, Mouth of cal. dilat. Ovary subglobose
- 17695 Leaves glabrous ovate glandless ciliated, Petioles glandless, Pedicels solitary
- 17696 Lvs. smooth oblong cuspid. ent. Petiol. with 2 glands at the upper end, Stips. lin.-lanceol. Brae. cord.-ovate serrated at base [ab. with about 6 filiform clav. glands, Stip. ov. acumin.]
- 17697 Involuc. of 3 large ovato-acumin. serrat. lfts. little distant from fl. Lvs. glabr. cord. very ent. Petiol. grooved
- 17698 Leaves glabrous ovate toothed and acutish, Petioles bearing 4-6 glands, Bractees ovate subserrated velvety
- 17699 Leaves glabrous glandular beneath rounded at the base 3-nerved truncate at the apex subulate, Pedicels twin, Petioles glandless
- 17700 Lvs. cuneif. 2-lob. acun. divaricate 2-glandular at base, Petioles glandless, Involuc. wanting
- 17701 Clthd. with silky pili, Lvs. cordate 5-lob. hairy or almost silky on both surfs. sharply serrat. Invol. close ben. Cal. of 3-pinnatif. lvs. Segms. tipped with gland [toothed]
- 17702 Lvs. cord. downy beneath deeply 3-lob. toothed, Lobes bigland. in the sinuses, Petioles bigland. Bractees gland.
- 17703 Velvety. Lvs. cordate. 3-lobed, Lobes ovate obtuse or acumin. a little toothed, Ovarium villous
- 17704 Glabr. Lvs. broadly cord. dply. 3-lob. Lbs. spreading obl. or nrlly. ov. or lanceol. glandulose-serrate at base, Pedun. solit. 1-flwd. Brae. 3 ov.-cord. waved
- 17705 Glabr. Lvs. cord. 3 lbd. Segms. obl. obtuse obscurely serrulated, Petioles bearing 4-6 glands, Ovarium tomentose
- 17706 Glabr. Lvs. cord. 3-lob. denticulated wine-cld. beneath, Petioles 2-glandular
- 17707 Lvs. cord. 3-lob. wine-coloured beneath. Flowers purple
- 17708 Lvs. cord. 3-lob. Flowers white and blue

- 17709 Glabrous, Stem procumb. branched rather angular, Lvs. sess. ovate 3-nrvd. Flws. solit. axill. sess. Ovary sess. [long acumin.]
- 17710 Lvs. and sepals obtuse, Upper segms. of cor. ovate acute divaricate mid. segm. of lower lip longest

DECANDRIA.

- 17711 Stem diffuse geniculately bran. elongat. Lvs. oppos. cord. 5-lob. pilose both surfs. Lvs. cuneif. cut bluntly [toothed, Pedun. 3-flwd.]
- 17712 Stem erect almost simple naked below, Lvs 5-7-lob deeply serrated, Peduncles short, Calyx villous, Petals entire, Filaments villose
- 17713 Stem flaccid simple, Lvs. reuif. 7-lob. Lbs. trifid, Lobules 3-toothed, Pedun. elongat. hispid as are cals. Carpels crested

- 17714 Leaves very numerous linear somewhat imbricate convex beneath, Pedicels axillary

2690. *Malscherbia* is a genus of singular and ornamental plants, at present somewhat rare in collections, but nevertheless well deserving cultivation.

2691. *Clintonia* is a genus of tender annuals, and requires the treatment of such. The flowers are elegant; but the plants are very thinly clothed with foliage.

2692. *Phibotheca*. The soil most suitable to this genus is a mixture of sandy loam and peat, and the plants require to be placed in an airy situation, and not crowded amongst other plants. Cuttings root freely in sand, under a bell-glass.

History, Use, Propagation, Culture,

2693. *Omphalobium*. For soil and propagation, see *Philotheca*, above.
 2694. *Parkia*. The species of this genus may be increased by cuttings of the young wood, planted in sand under a bell-glass, in heat. "In Soudan the seeds of *P. africana* are roasted as we roast coffee, then bruised, and allowed to ferment in water; when they begin to become putrid they are well washed and pounded, the powder made into cakes somewhat in the manner of our chocolate. They form an excellent sauce for all kinds of food. The farinaceous matter surrounding the seeds is made into a kind of sweetmeat." (*Don's Mill.*, 2. 396.)
 2695. *Sarcocaulon* is a genus of curious spiny shrubs, which bear beautiful large flowers. They may be increased by cuttings and slips of the roots, in good soil, under a bell-glass.
 2696. *Montezuma* 17718 *speciosissima* is a very showy tree, thriving in a mixture of loam and peat. Full-grown cuttings (not too old) will root freely in sand, under a bell-glass, in a moist heat.
 2697. *Assonia*. A light rich soil, or a mixture of loam and peat, suits this genus; and young cuttings root freely under a hand-glass, in heat.

17715 Lfts. 3 oval acuminate smooth on both surfs. somewh. membran. and feather-nrvd. Flws. panicled, Carpels solit. stipitate

17716 Lvs. with about 20 pairs of pinnæ, Each pinna ab. 30 pairs of obt. pubes. lfts. Flower heads biglobular

DODECANDRIA.

17717 Lvs. oblong cuneate blunt entire some of them almost sessile others on short petioles

17718 Lvs. smooth cord. acute entire stalked, Pedic. 1-flwd. rising from the brans. beneath the lvs. The only species

17719 Lvs. cordate acuminate smooth a little serrated, Peduncle scarcely longer than the petioles

17720 Leaves small in bundles linear, Flws. solitary. The only species

POLYANDRIA.

17721 Pubes. Lower lvs. 5-cleft upper ones 3-fid. Segms. usually 3-fid. Lbs. forked obt. Pedun. axill. solit.

and Miscellaneous Particulars.

2698. *Plagiánthus*. A shrub which, if planted in a warm sheltered situation, will stand our winters; and cuttings of young wood root freely in sand under a hand-glass.

2699. *Nuttália* is a genus of very elegant plants when in blossom, well deserving a place in every collection. Peat with a little sand suits them best. They may be increased by division or by seed.

1477. *Urëna* 17726 *speciosa*. "This is a very elegant plant, with large pink flowers, which are disposed in a kind of terminal racemose panicle. It differs so much in habit from all the other species of this genus, that we doubt its being a genuine species of *Urëna*." (*Don's Mill.*, 1. 47.)

2700. *Lebretónia*. The species of this genus deserve to be cultivated in every collection, on account of their showy scarlet blossoms. A mixture of loam and peat suits them best. Cuttings taken off close to the stem of the plant root readily in sand under a hand-glass. None of the leaves should be taken off, or shortened above the sand.

2701. *Abátillon*. Some of the species of this genus are rather ornamental when in flower. They thrive in any light rich soil, and are readily increased by cuttings, which should be placed in a gentle heat.

Page 598. CLASS XVII. — DIADELPHIA. STAMENS united in two separate parcels.

Order 3. OCTANDRIA. Stamens 8.

2706. *Monnina*. Flws. resupinate. Sepals 5, deciduous, 2 inner ones wing-formed, 3 outer ovate, 2 of these usually united. Petals 3-5, connate at base, middle one concave, 3-toothed. Stamens 8, rather pilose, united into a tube at base, which is cleft on one side. Drupe or capsule 2-celled, 2-seeded, or 1-celled, 1-seeded, girded by a membranous wing, or without. Seed hanging from the top of the cell. Albumen sparing.

Order 4. DECANDRIA. Stamens 16.

2707. *Ambérstia*. Cal. tubular, 5-toothed, with the stamens inserted in it near the apex, bibracteate at base, valvate in æstivation. Petals unequal; upper one large, unguiculate, obovate; lateral ones wedge-shaped; 2 lower ones awl-shaped. Stamens 10, 9 joined and 1 free, adhering to the pedicel of the ovary. Anth. versatile. Legume stalked, flat, oblong, few-seeded.

2708. *Rudóphia*. Cal. tubular, bilabiate; upper segment obtuse, lower one acute, 2 lateral ones very short. Vexillum oblong-linear, very long. Wings shorter than calyx, very narrow. Legume compressed, many-seeded.

2709. *Látage*. Calyx bracteate, bilabiate; upper lip bifid, lower one tripartite. Vexillum flat, round, emarginate. Keel obtuse. Stamens all connected.

17741 Lvs. cuneate-ool. acuminat. obsolete serrulated, Rac. very long pendulous, Drupe acutely 4-angled

17742 The only species

2710. *Vilmorinia*. Cal. cylindrical, 4-toothed, somewhat bilabiate. Wings shorter than the keel. Style acute. Legume stalked, lanceolate, compressed, tapering.

2711. *Barbieria*. Cal. tubular, 5-cleft, bibracteate at base. Wings shorter than keel, and keel shorter than vexillum. Style bearded at apex. Stigma obtuse. Legume linear, villous, many-seeded.

2712. *Dunasia*. Cal. obliquely truncate, toothless, bibracteate at base. Claws of petals length of calyx. Keel obtuse. Legume tapering to the base, compressed, few-seeded.

2713. *Neurocarpum*. Cal. tubular, with 5 acuminated nearly equal teeth, and furnished with 2 bracteas at base. Vexillum large, roundish. Keel obtuse. Legume stipitate, compressed, sub-tetragonal from the middle nerve of the valves being rather prominent; 4-8-seeded.

2714. *Cologania*. Cal. tubular, 5-cleft, bibracteate at base, somewhat bilabiate. Vexillum roundish. Ovary stipitate, linear, very hispid, girded by the disk. Style smooth, obtuse.

2715. *Clianthus*. Calyx campanulate, 5-toothed, 5-cleft. Vexillum ovate-lanceolate, acuminate, rather short, the keel reflexed. Wings lanceolate, spreading. Keel cymbiform. Anthers incumbent. Style filiform. Stigma truncate. Legume oblong, swollen, coriaceous.

2716. *Adesmia*. Cal. 5-cleft; lobes acute. Vexillum complicated above the wings when young. Keel curved and truncate at base. Stams. distinct, but approximate. Legume compressed, many-jointed.

2717. *Hosackia*. Cal. campanulate, 5-cleft. Wings equal in length to vexillum. Keel beaked. Stigma capitate. Legume cylindrical, or rather compressed, straight.

OCTANDRIA.

17743 Stems many erect, Lvs. obl.-lin. crowded, Rac. 8-12-flwd. Capsule somewhat 2-horned at apex

17744 Lvs. narrow tapering to both ends acute and as well as twigs smooth, Rac. elongat. Brac. decid. Pedunc. longer than flws. Wings obtuse

and Miscellaneous Particulars.

2704. *Stravadium*. For culture, &c., see *Barringtonia*, in p. 597.

2705. *Morisonia* 17742 *americana*. A mixture of loam, peat, and sand suits this plant; and cuttings of the young wood should be planted in sand, and placed under a hand-glass in heat. It is called in Martinique *Bois Mahonia*.

History, Use, Propagation, Culture,

2706. *Monnina*. A genus of plants not worth cultivation for ornament. A mixture of loam and peat suits them; and cuttings of the young wood root readily in sand, under a hand-glass, in heat.
 2707. *Amherstia nobilis* is a native of the Burman empire, in the garden of a decayed kiou, a sort of monastery, miles from the right bank of the Salven river, and 27 miles from the town of Martaban, but its native place of growth is still unknown, as the trees found in the garden have undoubtedly been planted there. The flowers are large, of a fine varnished colour, diversified with yellow spots. This tree, when in foliage and blossom, is the most superb object that can possibly be imagined, and not surpassed by any plant in the world. The Burmese name of the tree is *Thoka*.

17745 Lvs. oblong obtuse cuneate at base obsolete veined rather leathery glabrous as are branchlets, Rac. solitary

DECANDRIA.

17746 The only species

17747 Stem suffrutic. bran. Bran. glabr. rather prickly, Lfts. petiol. obl. acumin. Petioles rath. prickly glandul. Cal. truncate unident.

17748 Bran. smooth glabrous, Lvs. ovate-oblong glabrous acuminated, Racemes pedunculate

17759 Flws. altern. without bracteoles, Upper lip of cal. bipart. lower ent. Lfts. 5-7 lin.-ellipt. glabr. ab. hairy ben. [lanceol. silky on both surfs.

17760 Clthd. with silky pili, Lfts. 5-7 lin. spatulate, Flws. few verticill. Upper lip of cal. bifid lower elongat. and ent. Wings longer than vexillum [6-seeded transversely furrowed

17761 Flws. somewh. verticill. bracteol. sess. Upper lip of cal. bifid lower ent. Lfts. 5-7 lin. spatulate ciliat. Leg. [Vexillum sessile

17762 Flws. rath. verticill. without bracteoles pedicell. Lfts. 11-15 lanceol. hairy ben. Both lips of cal. quite entire, Stems pilose [Vexillum sessile

17763 Silky, Leaflets 7 pubes. beneath, Racemes verticillate, Cal. bractless, Lips entire upper one gibbous at the base, [Vexillum sessile

17764 Hairy leaflets 12-15 lanceol. acute, Whorls many-fwd. contiguous, Cal. bractless, Lips entire, lower one lanceol. acute

17765 Pilose, Flws. altern. without bracteol. Upper lip of cal. ent. saccate at base longer longer ov. and acumin. Keel beardless, Lfts. 7-9 lin.-lanceol. [lanceol. silky on both surfs.

17766 Flws. altern. pedicell. without bracteol. Cal. villous upper lip bipart. lower acumin. and elongat. Lfts. 5-7 [lanceol. silky on both surfs.

17767 Flws. verticill. appendicul. Upper lip of cal. bifid, lower ent. elongat. Lfts. 7-12 lin.-lanceol. clthd. with silvery silky down, Leg. 4-5-seeded [slender racemes

17768 Stem and lvs. clthd. with silvery silky down, Lfts. obovato-oblong narrowed at base, Flws. verticill. in long [Stipules subulate

17769 Flws. verticill. pedic. without brac. Lips of cal. ent. Lfts. 5-7 lin. spatulate silky both surfs. Leg. 10-12-seeded transversely furrowed [Stipules subulate

17770 Very hairy, Flws. verticill. pedicell. bracteol. Upper lip of cal. bifid lower ent. Lfts. 5-9 lin.-lanceol. villous, [Stipules subulate

17771 Very villous, Flws. altern. on short pedic. bracteol. Upper lip of cal. bifid lower ent. Lfts. 5-7 lanceol. silky Leg. glabr. 3-5-seeded

and Miscellaneous Particulars.

Handfuls of flowers were presented as offerings in the cave before the images of Buddha. Along with this tree were found some trees of *Mesua ferrea* and *Jonesia Asoca*. It is not a little remarkable, that the priests of these parts should have manifested so good a taste as to select three sorts of trees, as ornaments to their objects of worship, which can hardly be surpassed in beauty. A light loamy soil suits this tree; and large cuttings root in sand, under a hand-glass, in heat.

2709. *Lilage* 17751 *ornata* is a very gay flowering shrub, which requires to be kept in a well-aired green-house, in peat soil, and may be multiplied by cuttings.

History, Use, Propagation, Culture.

2715. *Clíanthus* 17812 *puniceus* is a splendid half-hardy shrub, which well deserves a place in every collection. It is very readily increased by cuttings and by seed, and thrives in peat or any light rich soil. In New Zealand it is called *kowain-gutukaka*, or the parrot's bill; and it is said to grow there to the size of a large tree.
 2716. *Adësμία* is a genus of South American plants, some of which are shrubby; the appearance of several of them resembles that of *Geufsta*, and may be increased in the same manner.

- 17808 Glabr. or pubes. Lvs. with 4-6 pairs of ellipt. rarely ov. or obl. lfts. Stip. small semisagitt. lanceol. with lobe deflexed and about eq. in length to stips. [acute angularly toothed at base, Leg. conve.; narrow
- 17809 Stem flexuous winged, Wings ciliate pubes. Lvs. with 3-4 pairs of ov. obt. glaucous. lfts. Stip. semisagitt. ov.
- 17810 Stem 4-gonal glabr. Lvs. glauc. with 4-5 pairs of ov.-obl. glabr. mucronul. lfts. Stip. semisagitt. about size of lfts. Leg. obl. rather falcate inflated
- 17811 Bran. round hoary as are lvs. Lvs. trifoliolate, Lfts. oval toment. on margin, Flws. tern. alm. bractless, Cal. membran. pubes. Leg. glabr.
- 17812 Minutely pubes. Lfts. altern. obl. retuse coriaceous, Flws. racemose, Calyx 5-toothed smooth
- 17813 Lfts. roundish ellipt. retuse, Rac. droopg. few-flwd. Callosities of vexillum papilliform, Leg. rather coriaceous pubescent [3-jointed covered with long plumose bristles

History, Use, Propagation, Culture,

2719. *Candollea*. Requires the same treatment as that recommended for *Melaleuca*, in p. 652.
 2720. *Blumenbachia* is a genus of ornamental annuals, and requires the usual treatment of such.

Page 660. CLASS XIX. — SYNGENESIA STAMENS 5. ANTHERS united by their edges.

Order 1. ÆQUALIS. Florets of the disk and ray all hermaphrodite.

2722. *Craspedia*. Heads 5-flwd. homogamous, girded by bracteas seated on a cylindrical woolly rachis, receptacle narrow. Paleæ entire. Scales of involucre membranous. Corollas tubular, 5-toothed. Anthers setiferous at the base. Achænia oblong, villous. Pappus in one series, composed of filiform plumose bristles.
 2723. *Erythrolæna*. Involuc. conical; inner lvs. imbricated, outer ones reflexed, spiny-toothed. Receptacle convex, pilose. Flowers hermaphrodite, tubular, with a 5-parted limb and a 5-angled tube. Filaments glandular. Anthers bisetose at the base. Stigma bifid. Pappus sessile, plumose.
 2724. *Alomia*. Heads many-flwd. Involucrum campanulate, imbricate. Scales narrow, acute. Receptacle naked, convex. Tube of corolla slender, glabrous. Anthers terminated by obtuse appendages. Lobes of style elongated. Achænia 5-angled, naked at top.
 2725. *Oothamnus*. Head 3-20-flowered, homogamous. Receptacle alveolate, usually naked. Involucrum imbricate. Scale scariosus, obtuse. Corolla 3-toothed. Anthers bisetose at the base. Achænia obovate. Pappus in one series, composed of filiform scabrous bristles.

Order 2. SUPERFLUA. Florets of the disk hermaphrodite, of the ray female.

2726. *Leptostelma*. Involuc. equal, hemispherical. Receptacle paleaceous. Flowers of the ray ligulate, female; those of the disk hermaphrodite, tubular, 5-toothed. Pappus capillary.
 2727. *Adenotrichia*. Involucrum double, many-lvd.; outer lvs. squarrose, subulate, glandular. Flowers of the ray ligulate, almost entire, female; those of the disk tubular, filiform, hermaphrodite. Receptacle naked. Pappus pilose.
 2728. *Diplopappus*. Ray flowers in 1 series, female; those of the disk hermaphrodite, tubular. Pappus in 2 series. Corollas of the disk regular. Achænia beakless.
 2729. *Brachyglottis*. Heads 9-10-flowered, heterogamous. Ray flowers in 1 series, female, ligulate, shorter than the disk; disk flowers tubular, 5-toothed, hermaphrodite. Receptacle naked. Involucrum oblong, surrounded by 1 row of linear scales. Achænia oblong. Pappus in 1 series, composed of dense scabrous bristles, which are combined at the base.
 2730. *Rhodanthe*. Heads many-flwd. Flowers hermaphrodite. Pappus in 1 series, hair-formed, plumose. Achænia beakless, woolly. Receptacle naked.
 2731. *Diplœona*. Involucrum many-lvd. imbricated. Flowers of the ray female, ligulate; those of the disk hermaphrodite, tubular. Achænia of the rays bald at the top; those of the disk papose. Pappus double, unequal.
 2732. *Neja*. Involucrum many-lvd. imbricated. Receptacle pitted. Flowers of the ray female, ligulate; those of the disk hermaphrodite, tubular, 5-toothed. Achænia uniform. Pappus double; outer paleaceous, inner pilose.
 2733. *Mutisia*. Involucrum many-lvd. imbricated. Receptacle naked. Flowers of the ray ligulate, female; those of the disk hermaphrodite, bilabiate. Filaments papillose. Anthers bisetose at the base. Achænia a little beaked. Pappus in many series, plumose.
 2734. *Chætachlæna*. Heads many-flwd. heterogamous, ray-formed. Involucrum hemispherical, imbricate, with linear flat scales. Receptacle pilose or fringed. Ray flowers bilabiate; outer lip large, 3-toothed; inner one small, bipartite. Corollas of the disk tubular, 5-cleft, glabrous. Anthers bisetose at the base. Achænia beakless, somewhat compressed. Pappus in two series, setaceous, scabrous.
 2735. *Lasthenia*. Head many-flowered, homogamous. Flowers of the ray female, tubular, obliquely truncate. Receptacle conical, papillose. Scales of involuc. in one series, combined into a toothed ciliated cup. Corolla short, with an inflated throat and a 5-toothed limb. Achænia compressed, pubescent. Pappus composed of 5-10-toothed paleæ.

17828 Leaves smooth obovately cuneated blunt at the top entire, Branches cinereous rough

17829 Lvs. altern. bipinnatifid, Lobes bluntish, Pedic. extra-axill. Lbs. of cal. lanceol.-linear acute shorter than petals
[bispid inciso-serrate, Pedun. spread, ab. half length of lvs.]

17830 Clith. with harsh barbed white hairs and a few stinging ones intersp. Lvs. scatter. petiol. spread. ov. acute

17831 Canescent, Lvs. oppos. palmate toothed, Cal. segms. long and linear, Outer appendages hatchet-formed awned
17832 Climbing, Lvs. cord. palmate lobed, Petals sessile keeled, Append. 3-lob. truncate each furnished inside with
2 bristles, Caps. spiral ribbed

17833 Lower lvs. generally 7- but sometimes 5-lobed; upper ones deeply bipinnatifid
17834 Leaves palmate with bipinnatifid lobes, Flowers bifurcated, Petals hispid

17835 Stem dichotomous, Segments of leaves obtuse ciliated

and Miscellaneous Particulars.

2731. *Scyphanthus* is a twining annual, with somewhat curious inflorescence. It is said to have been lost soon after its introduction in 1827

2736. *Baëria*. Head many-flowered, heterogamous, radiate. Scales of involucre about 10, flat, in 2 rows. Receptacle conical, naked. Flowers of the disk hermaphrodite, 5-toothed; those of the ray female, ligulate, fertile, in 1 series. Achænia fusiform, somewhat tetragonal, glabrous.

2737. *Eriophyllum*. Head many-flowered, radiate. Flowers of the ray female, ligulate. Flowers of the disk hermaphrodite, 5-toothed, glandular. Involucre ovate, with 1-2 series of adpressed scales. Receptacle naked, or a little fringed. Achænia turbinate or linear, tetragonal, glabrous. Paleæ of pappus 4-8, oval or oblong, membranous.

2738. *Lagenophora*. Head many-flowered, heterogamous. Flowers of the ray ligulate, female, in 1 series; those of disk tubular, 5-toothed, hermaphrodite, male. Receptacle flat, naked. Scales of involucre in 2 series, acute, adpressed. Achænia of the rays compressed, oblong, beakless; those of the disk abortive.

2739. *Oryzira*. Head many-flowered, radiate. Flowers of the ray 10-12, in 1 series, ligulate, female; those of the disk tubular, 5-toothed, hermaphrodite. Scales of involucre in 1 series, convolute, each drawn out into leafy appendage at top. Receptacle paleaceous. Branches of the styles of the disk flowers drawn out each into a hispid appendage. Achænia compressed, glabrous.

2740. *Cladanthus*. Heads many-flowered, heterogamous. Flowers of the ray ligulate, neuter; those of the disk tubular, hermaphrodite, 5-toothed. Receptacle conical, paleaceous, intermixed with threads. Scales of involucre in 1 series, scarious at top. Achænia compressed, glabrous.

2741. *Eriocoma*. Involucre few-ld. Receptacle paleaceous. Paleæ cucul. mucronate. Flowers of the ray 4-10-ligulate, neuter; those of the disk hermaphrodite, 5-toothed. Achænia cuneated, glabrous at top, enclosed by the persistent paleæ.

2742. *Viguiera*. Heads many-flowered, heterogamous. Flowers of the ray neuter, ligulate; those of the disk hermaphrodite, 5-toothed. Involucre semiglobose, scales nearly equal, each drawn out into leafy appendage at top. Receptacle paleaceous. Achænia compressed, obovate, pubescent, crowned by four lamellæ and two awns from the angles.

2743. *Calliopsis*. Heads many-flowered, heterogamous. Flowers of the ray neuter, in 1 series, ligulate, 3-5-toothed; those of the disk hermaphrodite, tubular, 5-toothed. Involucre in 2-series, outer scales short, squarrose, inner ones large, erect, combined. Receptacle flat, paleaceous. Achænia compressed, glabrous, incurved, truncate, with a minute epibynous disk.

2744. *Plectrocephalus*. Involucre globose, imbricate. Appendages to scales cartilaginous, pectinated. Receptacle clothed with setaceous paleæ. Flowers of the ray neuter, funnel-shaped, radiate; those of the disk hermaphrodite, tubular, quinquefid. Pappus uniform, pilose, scabrous, caducous.

Order 4. NECESSARIA. Florets of the ray female, of the disk male.

2745. *Moscària*. Involucre 5-ld. Receptacle paleaceous. Paleæ of two forms; outer paleæ cucul. gibbous at the base, and truncated at apex. Flowers all hermaphrodite, bilabiate, equal. Pappus paleaceous, very short.

2746. *Centroclinium*. Involucre subglobose or cylindrical, imbricate. Flowers of the disk tubular, 5-toothed, deeply-cleft on one side; those of the ray 7-12 in number; bilabiate, inner lip very minute, bipartite; outer lip very long, 3-fid. Anthers baristate, stigma entire. Pappus unequal, scabrous. Receptacle hispid.

History, Use, Propagation, Culture,

2722. *Craspedia* is a genus of ornamental herbaceous plants, increased by division of the root and by seed, and thrives in good light loam.

2723. *Erythrolæna* 17837 *conspicua* is an ornamental biennial, and delights in a warm sheltered situation, planted in rich garden soil.

2724. *Aldmia*. A mixture of sand and loam suits this genus, and cuttings root readily in sand under a bell-glass.

ÆQUALIS.

17836 Lvs. oblong altern. gradually smaller upwards lower and root lvs. longest and broader upw. so as to be spatul. clthd. with appress. rather silky hairs

17837 The only species

17838 Lvs. opposite rhomb. lanceol. deeply serrat. upper ones sessile, Infloresc. fastigiata

17839 The only species

17840 Bran. downy erect slender virgate leafy, Lvs. lin.-lanceol. lowerm. $1\frac{1}{2}$ to 2 in. long acute passing into small scales clthd. with white toment. ben. Scales of involucre numer.

17841 Lvs. linear obtuse revolute on the margins clth. with cinereous cobwebbed tomentum, Corymb. panicled Involucr. hemispher. woolly

17842 Lvs. linear mucron. with revolute margins cobwebbed and mucrate above and tomentose beneath, Corymb terminal, Involucr. cobwebbed and rusty

SUPERFLUA.

17843 Stolones procumbent, Flower stems simple, Lvs. spatulate, Upper ones lin. tomentose on both surfaces but almost glabrous in an adult state, Corymbs terminal simple

17844 Lvs. lin. lanceol. acumin. obtuse at the base roughly ciliated upper ones subulate, Stem glabrous branch. Bract of involucre acute

17845 Receptacle conical pilose, Flowers of the disk bearded in the llmb, Stems diffuse

17846 Stem erect corymbose many-flwd. glabrous Lvs. ciliat. acute quite entire rad. ones spatulate, Stem ones ovate lanceol. somewhat stem-clasping

17847 The only species

17848 Lvs. obl. obt. semiamplex. at base thick and fleshy entire rad. lvs. spatul. [of many closely placed linear scales
17849 Lvs. cord. stalked angular sharply toothed white and woolly ben. upper ones amplexic. Capitula numerous in corymbose panicle

17850 The only species

17851 Erect pilose, Lvs. ovate acute serrated tapering at the petioles, Infloresc. paniculate corymbose

17852 Lvs. lin. obt. hoary half stem-clasp. Stem corymbose, Bran. 1-flwd. Lfts. of involucre squarrose glandular

17853 Lvs. ovate repandly sinuate, Panicle compound divaricate

17854 Glabrous erect, Lower lvs. petiol. lyrate downy beneath, Terminal lobe reniform toothed, Upper lvs. sessile amplexic. lanceol. and little toothed uppermost ones quite entire, Pedunc. 1-headed

17855 Stem simple rather woolly, Rad. lvs. ellip. repandly toothed, Stem lvs. lanceol. entire, Infloresc. corymbose

17856 Smoothish, Stem simple furrowed, Radical lvs. ellip. toothed cauline one amplexic. [leafless, Achænia glabrous
Panicle elong. crowded

and Miscellaneous Particulars.

2725. *Ozothamnus*. A mixture of peat and loam suits this genus, and the species may be increased by cuttings.
 2726. *Leptostelma*. This genus may be increased by division of the root, and will thrive in good garden soil.
 2727. *Adenotrichia*. Culture, &c., see *Leptostelma*, above.
 2728. *Diplopappus*. This genus may be increased by cuttings, and the plants thrive in a sandy loam.
 2729. *Brachyglottis*. For soil and propagation see *Diplopappus*, above.

History, Use, Propagation, Culture,

2730. *Rhodanthe* is a very elegant little tender annual, and highly deserving a place in every greenhouse, and it requires to be grown in a good light soil.
 1747. *Podolepis* 17860 *gracilis* is a very pretty annual, deserving a place in every flower border.
 2731. *Diplocoma*. A handsome but rather tender herbaceous plant, requiring a light soil, with slight protection in severe weather.
 2732. *Nèja* may be readily increased by cuttings, and will thrive in a good light soil.
 2733. *Mutisia* is an exceedingly interesting genus of shrubby climbers, with leaves terminating in tendrils, by the prehension of which the stems are supported. *M. latifolia* represents a family of climbers so very different from every other hitherto propagated in British gardens, that we cannot but strongly recommend it for trial against every conservative wall. (*Arb. Brit.*)
 2734. *Chætachlèna*. A very pretty herbaceous plant, of easy culture.

- 17857 Glabrous, Stem 1-4-headed, Lvs. spatulate toothed, Lower ones renif. Upper ones somewhat rhomb. Petioles naked woolly at base, Achænia glabrous
- 17858 Lvs. sessile thickish lln. pinnatifidly toothed wrinkled glabrous, Heads solitary, Involucr. clammy, Outer scales spreading
- 17859 The only species
- 17860 Glabrous branch. Scales of involucr. glandular along the spike obtuse, Cauline lvs. adnate by the auricles to the stem.
- 17861 The only species
- 17862 The only species
- 17863 Scandent, Lvs. pinnate, Lfts. 6-7 ov.-lanceol. very acute sess. cobwebbed ben. terminat. by large branching tendril, Stip. ellipt. Flws. solit. Lower scales acute and reflexed [equal truncate
- 17864 Stem winged, Lvs. cord. obl. deutely spinose woolly beneath, Scales of involucr. appendiculate, Rays of pappus
- 17865 Glabrous, Stem terete, Lvs. amplexicaul. cord. oval spinosely toothed reticulated
- 17866 Lvs. sessile obl. lanceol. attenuated at the base, Outer scales of involucr. ending each in a long flexuose bristle
- 17867 Quite glabr. Involucr. 15-toothed, Pappus wanting, Achænia mucron. at apex
- 17868 Branchl. and pedicels pubesc. Involucr. 15-toothed, Pappus of 5 paleæ
- 17869 The only species
- 17870 Decumbent, Stem and under side of lvs. tomentose, Lvs. altern. pinnatif. upper ones lin. entire, Pedunc. elong. 1-headed tomentose
- 17871 Lvs. glabr. obovate orbicular acutely toothed petiolate, Petioles ciliated
- 17872 Stem solid not pruinose, Ligulate flowers of the ray without any style
- 17873 Stem hairy, Lvs. pinnate rather hairy, Lfts. lin. acute channeled some entire and some 3-fid. Peduncles 1-headed
- 17874 Stem erect branch. Lvs. lanceol. sharply serrated the lower serratures awned, Ligulæ usually 3
- 17875 Stem and branches erect angular, Lvs opposite and altern. pinnate, Lfts. 6-8 pairs nar. serrat. dotted, the serrats. of the upper lvs. awned, Peduncles corymbose 1-headed
- 17876 The only species
- 17877 The whole plant canescent

and Miscellaneous Particulars.

2735. *Lasthènia* is a genus of ornamental annuals, which may be sown in the open border; and as the plants, under ordinary circumstances, flower in about 6 weeks after the seeds are sown, it will be found necessary to have several sowings to keep up a good appearance.

2736. *Bæria*. An elegant annual, requiring the same management as *Lasthènia*.

2737. *Eriophyllum* is a desirable and showy herbaceous perennial, is readily increased by division, and thrives in any good garden soil.

2738. *Lagenophora* is a showy perennial, easily increased by division.

2739. *Oxyura chrysanthemoides* is an ornamental annual. It may be sown in the open border, where it is intended to remain.

2740. *Cladanthus*. A genus of very ornamental annuals, may be sown the open border.

and Miscellaneous Particulars.

2744. *Plectocéphalus*. A very curious and striking annual.
2745. *Gastrocárpha*. A handsome strong-growing annual.
2746. *Centroclínum*. A showy plant, requiring rather a moist high temperature.

Page 748. CLASS XX. — GYNANDRIA.

ORCHIDACEÆ. — "The uses to which the plants of this family are applied are few, but in several instances highly romantic. In Demerara, that most deadly of all poisons, the 'Wourali,' is thickened by the juice of the *Catasetums*; and in Amboyia the true 'Elixir of Love' is prepared from the minute farina-like seeds of *Grammatophyllum speciosum*. In Mexico, where the 'language of flowers' is understood by all, the *Orchidaceæ* seem to compose nearly the entire alphabet. Not an infant is baptised, not a marriage is celebrated, not a funeral obsequy is performed, at which the aid of these flowers is not called in by the sentimental natives, to assist the expression of their feelings; they are offered by the devotee at the shrine of his favourite saint, by the lover at the feet of his mistress, and by the sorrowing survivor at the grave of his friend: whether, in short, on fast days or feast days, on occasion of rejoicing or in moments of distress, these flowers are sought for with an avidity which would seem to say that there was 'no sympathy like theirs'; — thus, 'Flor de los Santos,' 'Flor de Corpus,' 'Flor de los Muertos,' 'Flor de Malo,' 'No me olvides' (or 'Forget me not'), are but a few names out of the many that might be cited, to prove the high consideration in which our favourites are held in the New World. Nor are these the only honours that are paid to them; for Hernandez assures us that in Mexico the Indian chiefs set the very highest value on their blossoms, for the sake of their great beauty, strange figure, and delightful perfume; while in the East Indies, if Rumphius is to be credited, the flowers themselves positively refuse to be worn, except by princesses or ladies of high degree. In Honduras, again, the large hollow cylindrical stalks of a fine species of *Epidendrum* [*E. tibicinum*] are made into trumpets by the little boys and girls of the country; and the pseudo-bulbs of several of the more succulent species are used instead of resin for the strings of their guitars. The following are, however, almost the only known instances in which the tribe do any direct service to mankind. The bulbs of *Maxillaria bicolor* contain a large quantity of an insipid watery fluid, which is greedily sucked by the poor natives of Peru in the dry season; a fluid of a similar nature is obtained from what is probably a *Laelia*, in Mexico, and is administered as a cooling draught in fevers; from the roots of some of the orchids, the nutritive substance called 'Salep' is obtained; in New Zealand certain species are of considerable importance as esculents; and in Guiana, the soles of the shoemaker are as much indebted to the viscid matter obtained from the *Catasetums* and *Cyrtopodiums*, as are the poisoned arrows of the Indians." (*Bate. Orch.*, p. 2.)

Mr. Bateman, speaking of the fragrance of many of this order, says: "We question whether 'Araby the blest' can boast of any perfumes that can at all compete in sweetness with those exhaled by such plants as *Angræcum odoratissimum* Lindl. MSS., *Tetrapeltis fragrans*, *Aerides odoratum*, and *Epidendrum aromaticum*. Other species emit odours which remind the recipient of the smell of a druggist's shop, of the milk of the cocoa-nut, of fresh hay, of wallflowers, violets, pomatum, aniseed, and angelica, of noyau, cinnamon, allspice, citron, musk, and honey. Some of these yield no fragrance, except in the daytime; but there are others which, like *Epidendrum nocturnum* and *Brassavola nodosa*, are aromatic only by night; and there are none, we believe, which are positively offensive at any hour, either of the night or day." (*ib.*, p. 4.)

The attention and curiosity are excited no more by the beauty and delicacy of the blossoms of many of this tribe, than by the very close resemblances they bear to objects of the animal kingdom. In our native species we find the bee, fly, spider, lizard, man, &c., surprisingly imitated; and in those of warmer climates, swans, eagles, doves, pelicans, &c. &c.

The cultivation of *Orchidaceæ* may be mentioned under two heads, namely, that of terrestrial and that of epiphytal *Orchidaceæ*.

Terrestrial *Orchidaceæ* should never have a great volume of external air admitted at once, however fine the weather may be. To prevent the house (which should have a southern aspect) from becoming too hot, a thick canvas shading should be drawn over it during summer sunshine. During the growing season, *Orchidaceæ* require a moderately moist heat, varying from 65° to 85°; in the dormant season, from 60° to 75° is quite sufficient; in the season of rest the house should be kept dry. *Orchidaceæ* in pots should be sparingly watered in the growing season; in the dormant state, little or no water should be given. The secret of growing these plants is to take care never to kill the old roots: when too much water is given, while the plants are in a growing state, almost all the old roots invariably perish. (*Paxton* in part.)

Epiphytal *Orchidaceæ* may be grown in the same house with, and receive nearly the same treatment as, terrestrial *Orchidaceæ*, except that they require to be grown on, instead of in, the soil, attached to blocks of wood, or in baskets, or any rustic construction in the basket way, and suspended from the roof, or by any other suitable means. In the outset, before the plants are established on the soil, or wood, where they are intended to be grown, it is very necessary to secure firmly the plant, and such roots as may be already formed, to the wood or soil, by means of bast or pegs, as judgment shall direct. The best kind of soil for growing epiphytal *Orchidaceæ* on is found to be good surface peat, cut into pieces of 1 in. to 2 in. square; this should be placed over a considerable quantity of drainage, in order to carry off superfluous water, and at the same time, if they are plunged in a tan-bed, will allow the heat to rise more freely than if the pots were entirely filled with soil.

"It is of the greatest importance to preserve and encourage the roots; and, as they are generally protruded near the surface of the soil, it should be raised several inches above the level of the pot, in a pyramidal form, in order that they may have full room to push out." (*Bot. Reg.*)

Syringing the plants moderately, when in a growing state, till the flowers are nearly expanded, helps their growth much.

For some other particulars respecting this order, see p. 748. to 767.

Order 1. MONANDRIA. Stamen 1.

1. MALAXIDÆÆ. — Pollen cohering in masses of a fine waxy texture, without any of the cellular substance by which the grains are connected, remaining under the form of a distinct gland lying upon the stigma, or of a transparent caudicula between the pollen masses and the gland.

§ 1. *Pleurothallacæ*. Column erect, drawn out a little at the base.

†1864 *Pleurothallis*, page 749.

†1913 *Oclobria*, page 749.

2747 *Lepanthes*. Sepals spreading, connate at the base. Petals 2, free and short. Labellum 2-lobed at apex, and combined with the column. Column elongated, cylindrical, 2-winged. Pollen masses 2.

2748. *Specklinia*. Sepals conniving, equal, distinct; lateral ones saccate at the base, gibbous outside. Petals conforming to the sepals, but much smaller. Labellum free, saccate at base. Column short, free, membranaceously winged. Anther 1-celled. Pollen masses 2. (No species given.)

†1924 *Sclis*, page 750.

2749. *Oberonia*. Sepals spreading or reflexed, usually equal, free. Petals smaller than the sepals. Labellum ascending, of various forms, usually elongated, always more or less 4-lobed. Column small, free. Stigma elevated. Anther 2-celled. Pollen masses 2, pear-shaped, solid. (No species given.)

†1927. *Micröstylis*, page 750.

†1925. *Malvixis*, page 750.

†1882. *Corallorhiza*, page 749.

2750. *Aplæctrum*. Petals equal, connivent. Labellum unguiculate, not drawn out at the base. Column free. Anther seated below the summit of the column. Pollen masses 4, oblique, lenticular.

2751. *Actinanthus*. Sepals subringent, acuminate, free. Petals smaller, acuminate. Labellum free, entire, bicallos at base, with a naked disk. Column semiterete, clavate. Anther term., recumbent, 2-celled. Stigma ovate, transverse. Pollen masses 8.

†1928 *Liparis*, page 751.

2752. *Cælia*. Sepals distinct, equal, spreading. Petals nearly equal, but a little smaller than sepals. Labellum

quite entire, unguiculate, continuous with the base of the column. Column short, continuous with ovarium, drawn out a little at base. Anther 2-celled. Pollen masses 4, by pairs.

†1904. *Pholidota*, page 749.

†1897. *Cyclogyne*, page 749.

§ 2. *Dendrobilæ*. Column recumbent, drawn out much at the base.

2753 *Megaclinium*. Sepals erect, unequal; lateral ones the smallest, combined with the column. Petals short. Labellum short, quite entire, articulate with the base of the column. Column short, marginate, disk-formed. Anther obsoletely 2-celled. Pollen masses 4, cohering by pairs.

2754. *Bolbophyllum*. Sepals erect, acumin., nearly equal; lateral ones combined, or connate with the base of the column, and oblique at the base. Petals short. Labellum articulated with the foot of the column, unguiculate, usually entire. Column short, bidentate or 2-horned in front. Anther 2-celled. Pollen masses 4, free, very unequal, sometimes combined in one, and sometimes cohering by pairs.

2755. *Cirrhopetalum*. Sepals rigid; lateral ones acumin., drawn out at the base, adnate to the column, much longer than upper one. Petals short, apiculate. Labellum entire, articulated with base of column. Column small, drawn out at base, and furnished with 2 petaloid horns at top. Anther 2-celled. Pollen masses 4, 2 inner ones smaller.

2756. *Trias*. Sepals equal, ovate, spreading, connate at the base. Petals small, erect. Labellum small, undivided. Column short, semiterete, emarginate, free. Anther 2-celled, drawn out into a petaloid, cuneate, emarginated membrane at the apex. Pollen masses 4, 2 inner ones smaller.

2757. *Bryobium*. Flowers villous. Sepals conniving, lateral ones equal at the base. Petals narrower and shorter than the sepals, reflexed between them. Labellum undivided, unappendiculated, constricted at the base. Column short. Pollen as in *E'ria*.

†1912. *E'ria*, page 749.

2758. *Aporum*. Sepals fleshy, erect; lateral ones larger, oblique, connate with the column. Petals smaller than upper sepal. Labellum articulated with foot of the column, undivided, or 3-lobed. Limb crested, callous, or naked. Column semiterete, drawn out at base. Anther sess., 2-celled, sometimes membran. at apex. Pollen masses 4, collateral by pairs.

†1908. *Polystichya*, page 749.

†1900. *Dendrobium*, page 749.

2759. *Pastoria*. Sepals 6, spreading, equal. Labellum conforming to the petals. Column erect, terete, subelavate a little shorter than the petals. Anther termin., opercular, deciduous. Pollen masses 8, narrow, clavate, cohering at tops.

II. *EPHENDREÆ*. — Pollen cohering in masses of a fine waxy texture, with cellular substance. Caudiculae not transparent, and connected with the stigma by means of a gland, as in *Vanda*; but powdery, and very often turned back on the face of the pollen masses. Anther terminal, opercular.

†1907. *Epid. ndrum*, page 749.

2760. *Dinéma*. Sepals and petals nearly equal, spreading. Labellum large, membranous, undivided, unguiculate combined with the base of the column. Column short, bicornute. Anther 2-celled. Pollen masses 4, adnate by pairs to 2 replicate caudiculae.

2761. *Encyelia*. Sepals and petals nearly equal, connivent. Labellum cuculate, involving the columns, 3-lobed at apex, callous at base. Column free, semiterete, clavate, parallel with the labellum. Anther 4-celled, with marginate dissepiments. Pollen masses 4. Collateral caudiculae 4, revolute.

2762. *Chysis*. Sepals a little connate, spreading. Petals conforming to the sepals. Labellum 3-lobed, spreading; Column marginate, channeled, rustic. Anthers roundish, glabrous. Pollen masses 8; the four outer ones thin, and the four inner ones thicker, beak convex.

2763. *Phyninga*. Sepals membranous, equal, connate at the base. Petals small, obliquely adnate to the base of the sepals. Labellum fleshy, tubercular, undivided, connate with the base of the column, and furnished with a bladder-formed sac at the base. Column fleshy, short, 2-lobed, antheriferous at the base. Pollen masses 4, adnate to 2 twin powdery threads.

†1903. *Isochilus*, page 749.

2764. *Hartwegia*. Perianth spreading, coloured. Lateral sepals drawn out at the base, adnate to the labellum. Labellum connate with the column, gibbous at base, ovate. Anther 4-celled. Pollen masses 4. Caudiculae replicate.

†1914. *Brassavola*, page 749.

2765. *Læ'tia*. Sepals flat, lanceol., equal. Petals larger than sepals, fleshy, flat. Labellum 3-parted, lamellate, twisted round the column. Column wingless, fleshy, channeled in front. Pollen masses 8, with 4 elastic caudiculae.

2766. *Schomburgkia*. Sepals and petals similar, spreading, all free and equal at the base. Labellum diformed, membranous, 2-3-lobed, cucullate, connate at the base, with the margin of the column tumid above the base with lamellate veins. Column marginate. Pollen masses 8.

†1906. *Cattleya*, page 749.

†1905. *Broughtonia*, page 749.

2767. *Leptodes*. Sepals and petals linear, nearly equal, spreading. Labellum 3-lobed, parallel with the column. Lateral segms. short, convolute around the column, middle segm. obl. with reflexed margins. Column short, thick, semiterete. Pollen masses 6, incumbent; 2 upper ones pear-shaped, oblique, compressed; 4 lower ones unequal and thinner.

†1911. *Blé'tia*, page 749.

2768. *Crybe*. Sepals and petals similar, lanceol. conniving, lateral ones oblique at the base. Labellum large, membran., cucullate, never expanded, half-connate with the clavate marginate column.

2769. *Pesoméria*. Sepals nearly equal, free, deciduous. Petals conform, adnate to the base of the column, persistent. Labellum connate with the base of the column, gibbous at the base, with an undivided convolute limb. Column clavate, semiterete. Pollen masses 4, cuculate.

2770. *Pö'ius*. Sepals and petals nearly equal, spreading, free. Labellum usually cucul., adnate with the base of the column, spurred, entire, or 3-lobed, usually keeled, laniclose or crested above. Column erect, continuous with the ovarium, semiterete, marginate, elongated. Anther 8-celled. Pollen masses 8, nearly equal.

III. *VANDREÆ*. — Pollen cohering in masses of a fine waxy texture. Caudiculae separating along with the gland of the stigma, and forming a strict adhesion with the pollen masses. Anther terminal, rarely dorsal, opercular.

2771. *Nandés*. Perianth rigid. Upper sepal arched, lateral ones connate to the labellum at the base. Petals conforming to the lateral sepals, free. Labellum fleshy, undivided, connate with the column. Column winged. Anther 2-celled, beaked. Pollen masses 3, collateral, sessile.

2772. *Aspasia*. Perianth spreading, equal; lateral sepals free, the upper one connate with the petals at the base. Labellum oblong, concave, spurless, obsoletely 4-lobed, half-connate with column. Column parallel with the labellum, semiterete, marginate. Pollen masses 2, pear shaped, furrowed behind. Caudiculae flat, conulated.

†1902. *Ornithidium*, page 749.

2773. *Sophonitis*. Perianth spreading. Sepals nearly equal, imbricated, free. Labellum entire, cucul., connate with the base of the column, with a simple transverse crest in the middle. Column free, winged on both sides at the apex. Anther 8-celled. Pollen masses 8.

†1890. *Trizé'xis*, page 749.

†1910. *Ornithocephalus*, page 749.

2774. *Cirrhæ'a*. Perianth spreading. Sepals free, equal. Petals linear, flexuose. Labellum unguiculate, continuous with the column, tripartite. Column erect, clavate, terete, with a nearly square horizontal stigma, and a

- tendrill beak. Anther dorsal, membranous, subunilocular. Pollen masses 2, parallel, oblong, compressed, with a short-horned caudicula, and an incurved gland.
2775. *Sarcochilus*. Perianth spreading. Lateral sepals connate with the claw of the labellum beneath. Petals conform to the sepals. Labellum spurless, continuous with the claw of the labellum, slipper-shaped; middle lobe fleshy, solid. Pollen masses 2, sessile on a deltoid gland.
- †1892. *Maxillaria*, page 749.
- †1891. *Xylobium*, page 749.
2776. *Bifrenaria*. Sepals spreading, free, nearly equal. Lateral one adnate to the produced base at the column. Petals about half the size of the sepals. Labellum articulated to the mucronate base of the column, cucullate, 3-lobed, callous in the middle. Column short, semiterete, mutic. Anther mutic, somewhat crested. Pollen masses 4, incumbent, with two distinct caudiculae.
2777. *Trigonidium*. Sepals equal, cohering into the form of a trigonal cup, spreading at the top. Petals about half the size of the sepals, veiny. Labellum short, 3-lobed, articulated with the column, fleshy in the middle. Column short, free, semiterete. Anther 1-celled. Pollen masses 4, cohering. (No species given.)
2778. *Trichoplia*. Sepals and petals equal, spreading, narrow. Labellum large, petaloid, convolute, parallel with the column, 3-lobed. Column terete, clavate. Anther 1-celled, compressed, convex in front. Pollen masses 2, adhering to a slender cuneate caudicula. Gland small.
2779. *Diergyia*. Sepals free, erect, equal. Petals conform to the sepals, but smaller. Labellum 3-lobed, fleshy, articulated with the column. Column continuous with the ovary, semiterete, clavate in front at the base. Anther obsoletely bilocular. Pollen masses 4, flattened, incumbent, with a short linear caudicula, and a binate gland.
2780. *Govenia*. Perianth bilabiate. Lateral sepals falcate. Petals conniving under the upper sepal. Labellum quite entire, spurless, concave, articulated with the column, sessile. Column terete, margined on both sides at the apex, drawn out a little at the base. Anther hood-formed, 1-celled. Pollen masses 4, solid, incumbent, with a short caudicula, and a small triangular gland.
2781. *Batemania*. Flower ringent. Sepals spreading, lateral ones unguiculate. Petals broader than sepals, oblique at the base, adnate to the produced base of the column. Labellum articulate to the column, 3-lobed, cucullate. Column semiterete. Anthers small, 2-celled, membranous. Pollen masses 2, 2-lobed behind, with a triangular gland and no caudicula.
2782. *Cynodes*. Perianth spreading. Lateral sepals lanceolate, upper one narrow. Petals broader than sepals, falcate. Labellum free, spurless, lanceolate, quite entire, continuous with the column, with an abrupt callous claw. Column elongated, arched, clavate at apex, furnished with two falcate auricles. Anther 2-celled. Pollen masses 2, furrowed, with a linear caudicula and a thick gland.
2783. *Myanthus*. Perianth flattened. Sepals free, equal, similar to the petals, but narrower. Labellum flat, obovate, tridentate, shorter than the sepals. Column erect, terete, bicirrhose at the base. Anther and pollen masses as in *Catasetum*.
- †1889. *Catasetum*, page 749.
2784. *Monachanthus*. Perianth flattened. Sepals and petals equal, turned backwards. Labellum fleshy, undivided, ventricose, much larger than the sepals. Column short, thick, mutic. Anther and pollen masses as in *Catasetum*.
2785. *Mormodes*. Upper sepal a little arched, narrow, lateral ones reflexed. Petals broader than the sepals, erect. Labellum ascending, 3-lobed, cuneated, apiculate, articulated with the column. Column semiterete, mutic. Pollen masses 4, connate by pairs, fixed to thick caudicula, and adhering to thick fleshy gland.
2786. *Stanhopea*. Perianth membranous, spreading, or reflexed. Sepals free, subundulately. Petals narrower than sepals. Labellum free, spurless, fleshy, and horned on both sides. Column very long, marginate. Anther 2-celled. Pollen masses 2, elongated, cleft, caudicula shorter than the 2-lobed gland.
2787. *Gongora*. Perianth flattened. Lateral sepals free, upper one connate to the back of the column. Petals smaller, adnate to the middle of the column. Labellum continuous with the base of the column, free, unguiculate. Column very long, arched, clavate, marginate. Anthers subbilocular. Pollen masses 2, linear, sessile on a cuneated caudicula.
2788. *Coryanthes*. Perianth spreading. Sepals dilated, flexuose, coiduplicate. Petals erect, much smaller than the sepals. Labellum large, unguiculate, galeate, continuous with the base of the column, 3-dentate. Column terete, 2-horned at the base, elongated, recurved at apex, 2-winged. Anther 2-celled. Pollen masses 2, compressed, sulcate behind, with a linear arched caudicula and a lunate gland.
2789. *Angulda*. Perianth globose. Sepals and petals free, concave, nearly equal. Labellum unguiculate, cucullate, 2-lobed, with an intermediate reflexed segment. Column semiterete, clavate, 2-horned at apex. Anther beaked. Pollen masses 2, with a lanceolate caudicula and small ovate gland. (No species given.)
2790. *Persistaria*. Perianth globose. Sepals somewhat connate with the base of the labellum. Petals smaller than the sepals. Labellum erect, articulated in the middle. Column erect, semiterete, dilated at the base. Anther crestless, 2-celled. Pollen masses 2, cleft behind. Gland sessile, naked, involving the beak.
- †1885. *Cymbidium*, page 749.
- †1901. *Camaridium*, page 749.
2791. *Gröbya*. Perianth flattened, bilabiate. Lateral sepals connate at the base. Upper sepal erect, shorter. Petals dilated, erect, connivent, much larger than the sepals. Labellum 3-lobed, naked, articulated with the base of the column, smaller than the sepals. Column erect, semiterete, arched, thickened at the base. Pollen masses 2-lobed behind, adnate to two short caudiculae. Gland oval.
2792. *Acropora*. Sepals spreading, upper one galeate, lateral ones divaricated. Petals short, oblique, truncate at apex. Labellum unguiculate, articulate at the base of the column, 3-lobed; the middle lobe smaller and saecate. Column erect, marginate, saccate at the base. Pollen masses 2, linear, convolute, with a linear subulate caudicula and a minute gland. Beak subulate.
2793. *Grammatophyllum*. Perianth flattened, spreading. Sepals and petals nearly equal. Labellum articulate with the column, short, 3-lobed, cucullate. Column arched, erect, semiterete, callous at the base. Anthers subbilocular. Pollen masses 2, globose, sulcate at the base, sessile upon the extremity of an arched gland.
- †1888. *Goodyrum*, page 749.
2794. *Sobraña*. Perianth large, rather fleshy, flattened, spreading. Sepals and petals nearly equal. Labellum cucullate, involving the column, narrowed at the base, 2-lobed. Column erect, elongated, marginate, clavate, winged on both sides at the apex. Anther 2-celled. Pollen masses 2, with a linear caudicula.
2795. *Acanthophippium*. Perianth ventricose. Sepals agglutinate. Lateral sepals adnate to the claw of the column. Labellum unguiculate, articulate with the base of the column, 3-lobed, complicate, with a lamellate disk. Anther fleshy, 2-celled. Pollen masses 8, unequal, sessile.
- †1929. *Calypso*, page 750.
- †1920. *Eulophia*, page 759.
2796. *Dipodium*. Perianth spreading. Petals and sepals equal. Labellum auricled on both sides beneath the middle, bearded in the disk, saccate at the base, and connate with the column. Column erect, marginate, semiterete. Anther membranous, 2-celled. Pollen masses 2, obliquely 2-lobed, fixed to two caudiculae.
2797. *Galeandra*. Perianth spreading or connivent. Sepals and petals ascending, free. Labellum funnel-shaped, spurred, undivided, sessile, sometimes fringed on the margin. Column erect, winged. Anther helmet-shaped, with a recurved crest. Pollen masses 2, excavated behind, with a short caudicula and elongated gland.
2798. *Zygopetalum*. Perianth flattened. Sepals and petals ascending, nearly equal, connate with the claw of column. Labellum mutic, undivided, spreading, with an ascending claw and large transverse fleshy crest. Column short, arched, semiterete. Anther subbilocular. Pollen masses 2, almost sessile on a transverse gland.
2799. *Huntleya*. Perianth flattened, nearly equal. Lateral sepals involute at the base in front. Labellum flat, unguiculate, spreading, rhomboid, fringed at the base, articulated with the base of the column. Column clavate, cucullate at apex, winged in the margin. Anther 2-celled, mutic. Pollen masses 4.
2800. *Stenia*. Perianth flattened, nearly equal. Lateral sepals oblique at the base. Labellum continuous with

- the base of the column, concave, appendiculated in the disk. Column semiterete, drawn out at the base, rounded at the apex, mutic. Anther 2-celled. Pollen masses 4, linear, twin; dorsal one small. Caudicula nearly square, acute.
- †1896. *Cyrtopodium*, page 749.
2801. *Cyrtopëra*. Perianth flattened. Sepals and petals ascending, nearly equal, connate with the claw of the column. Labellum spurless, concave, 3-lobed, with callous crested or tubercled veins. Column semiterete, marginate. Anther 1-2-celled. Pollen masses 2, 2-lobed behind, with a short subtriangular caudicula.
- †1887. *Lissochilus*, page 749.
- †1893. *Notylia*, page 749.
2802. *Masdevallia*. Perianth closed. Sepals acuminate, or awned, connate into a campanulate tube. Petals short. Labellum short, oblong, concave, entire, articulated with the column. Column erect, linear, channelled. Pollen masses 2, with a short caudicula.
2803. *Cryptochilus*. Perianth tubular, contracted at the throat, gibbous in front at the base. Sepals connate, except at the apex. Petals free, rather smaller than the sepal. Labellum undivided, free, continuous to the base of the column. Column semiterete. Anther 2-celled. Pollen masses 8, adhering by pairs to common glands.
- †1919. *Ionopsis*, page 751.
2804. *Quckëttia*. Perianth cylindrical. Sepals linear, equal, gibbous at the base; lateral ones connate. Petals linear, of equal length. Labellum oblong, entire, mutic, parallel with the column, excavated at the base, bicallous. Column semiterete, erect, auricled on both sides at the apex. Anther 1-celled. Pollen masses 2, excavated behind; with a linear caudicula and a minute gland.
- †1883. *Rodriguezia*, page 749.
- †1884. *Gomezia*, page 749.
2805. *Burlingtonia*. Perianth membranous, convolute, oblique. Sepals unguiculate, shorter than the labellum; lateral ones concave at the base, connate. Petals unguiculate, parallel with the labellum. Labellum 2-lobed, parallel with the column, with a channelled lamellate claw. Column terete, clavate. Stigma horned on both sides. Anther 1-celled. Pollen masses 2, excavated behind, adnate to a subulate elastic caudicula.
2806. *Comparëtra*. Perianth ringent. Middle sepal and petal short, free, somewhat galeate; lateral ones connate, one-spurred. Labellum free, flattened, obovate, unguiculate, furnished with 2 spurs, which are hidden within the spur of the sepals. Column free, erect, mutic. Pollen masses 2, adnate to beaked cuneated caudicula.
- †1898. *Macradënia*, page 749.
- †1909. *Cryptarrhëna*, page 749.
- †1895. *Oncidium*, page 749.
2807. *Fernandëzia*. Perianth spreading. Sepals free. Petals conniving under the upper sepal. Labellum spurless, free, 3-lobed, tubercled on the disk. Column short, eared on both sides. Anther 2-celled. Pollen masses 2, obovate.
2808. *Scaphyglottis*. Sepals connivent. Lateral ones drawn out at the base, a little connate with the foot of the column, upper one linear, convex. Petals a little shorter than the sepals. Labellum oblong, channelled, continuous with the column, with a repleat margin. Column marginate. Pollen masses 4, sessile on a cuneated gland.
2809. *Pachyphyllum*. Perianth connivent. Sepals and petals free, equally acute. Labellum free, undivided, sessile, furnished with one tubercle at the base, and two at the apex. Column petaloid. Pollen masses 2. (No species given.)
2810. *Dichæa*. Perianth connivent. Sepals and petals free, acute, equal. Labellum unguiculate, naked, spurless, deltoid, articulated with the column. Column erect, terete, wingless. Anther 2-celled. Pollen masses 4, by pairs, collateral, with a cuneate caudicula and a minute gland.
2811. *Mitlöhnia*. Perianth flattened. Petals revolute, and lateral sepals connate at the base, sessile. Labellum large, dilated, undivided, sessile, connate with the column, lamellate at the base. Column short, semiterete, eared at the apex. Pollen masses 2, adnate to an oblong caudicula.
2812. *Cyrtocëthum*. Perianth flattened. Sepals free, lateral ones unguiculate. Petals a little smaller than sepals. Labellum free, undivided, continuous to the base of the column, with a tuberculated claw. Column short winged. Anther 2-celled. Pollen masses 2, with a filiform caudicula and a minute gland.
- †1886. *Brassia*, page 749.
2813. *Tetrapëctis*. Perianth somewhat spreading. Sepals free, equal. Petals very narrow, of equal length. Labellum free, sessile, saccate, geniculate, 3-lobed. Column erect, length of petals semiterete, clavate. Rostellum straight. Pollen masses 4, globose, pitted behind, adhering by pairs to two narrow caudiculae connected by a common gland.
2814. *Phalenopsis*. Perianth flattened, spreading. Sepals free. Petals larger than the sepals, dilated. Labellum connate with the column, free, 3-lobed, callous at the base; middle lobe narrower, bicirrhose. Column lying upon the ovarium, semiterete. Rostellum gladiate. Anther 2-celled. Pollen masses 2, nearly globose, with a flat spatulate caudicula and a large caudate gland.
- †1916. *Vanda*, page 750.
2815. *Camarotis*. Perianth flattened. Lateral sepals connate with the back of the labellum, free at apex. Petals a little smaller than the sepals, free. Labellum obovate, channelled, appendiculate at apex. Column erect, terete, free, beaked. Anther dorsal, apiculate, subbilobular. Pollen masses 2, with a very long subulate caudicula and a forked rostellum.
- †1918. *Renanthera*, page 750.
2816. *Mioropëra*. Perianth equal, spreading. Lateral sepals adnate to the base of the labellum. Labellum continuous with the base of the column, slipper-shaped, 3-lobed; middle lobe very small. Column short, with a large inflexed rostellum. Pollen masses 2, with a subulate caudicula.
2817. *Saccolabium*. Perianth flattened, spreading. Sepals equal to the petals, lateral ones usually largest. Labellum undivided, spurred, connate with the base of the column. Column erect, semiterete, with subulate rostellum. Anther semibilobular. Pollen masses 2, nearly globose, with an elongated caudicula and a minute gland.
2818. *Cleisostoma*. Sepals and petals spreading, linear, nearly equal. Labellum spurred, connate with the base of the column, 3-dentate. Column semiterete. Anther semibilobular. Pollen masses 2, 2-lobed, nearly globose, with a filiform caudicula and a hooked minute gland. (No species given.)
- †1915. *Sarcanthus*, page 750.
2819. *Æceoclades*. Perianth spreading, ringent, or connivent, nearly equal, free. Labellum free, sessile, articulate with the column, spurred, naked, or bilamellate at the base. Column elongated, semiterete. Anther 2-celled. Pollen masses 2, furrowed behind, with a narrow caudicula and a minute gland.
- †1917. *Arctes*, page 750.
- †1922. *Aeränthes*, page 750.
- †1921. *Angræcum*, page 750.
2820. *Trichocentrum*. Perianth spreading, free, equal. Labellum sessile, spurred, flat, 2-lobed, lamellose at the base, connate with the base of the column. Column short, semiterete, thick, winged on both sides. Anther 2-celled, mutic. Pollen masses 2, complicate, with a cuneated caudicula and a minute gland.
- †1923. *Calänthe*, page 750.

IV. OPHRYDÆÆ. — Pollen cohering in innumerable waxy masses, collected on a cobwebbed elastic axis, fixed to the glands of the stigma. Anther terminal, erect, or resupinate, persistent, with complete cells.

- †1859. *Orychis*, page 748.
- †1864. *Anacamptis*, page 748.
- †1858. *Gymnadënia*, page 748.
- †1860. *Nigritëlla*, page 748.

- †1868. *Hermidium*, page 748.
- †1867. *Chamorchis*, page 748.
- †1861. *Habenaria*, page 748.

2821. *Bonatea*. Perianth and anther of Habenaria. Upper lip of stigma free, cucullate, or complicated; process of the stigma sometimes long and sometimes short.
2822. *Cynorchis*. Sepals equal, connivent. Petals fixed under the upper sepal. Labellum connate with the column, spurred, usually 4-parted. Sepals larger than the petals, and of a different texture. Column short. Anther horizontal or resupinate, with distinct elongated cells. Rostellum flat, 3-partite. Pollen glands naked. Lobes of stigma 2, fleshy.
- †1862. *Bartholina*, page 748.
- †1856. *Satyrium*, page 748.
- †1855. *Disa*, page 748.
- †1862. *Serapias*, page 748.
2823. *Pterygodium*. Perianth subringent. Lateral sepals exterior, horizontal, concave. Labellum inserted in the middle of the column, between the remote cells of the anther.
2824. *Corvicium*. Perianth ringent. Petals equal at the base, erect; lateral ones connate. Petals free, concave. Labellum unguiculate, connate with the face of the column, appendiculate in front. Anther dorsal, resupinate. Glands naked.
- †1866. *Ophrys*, page 748.
2825. *Dispêris*. Perianth ringent, of 4-5 sepals. Lateral sepals exterior, horizontal, somewhat spurred. Labellum erect from the base of the column, and connected with it. Anther revolute, drawn out in two segments, which are bent in front.

V. GASTRODIE'Æ. — Anther terminal, opercular. Pollen masses cohering in granules, which finally become waxy, and are indefinite in number.

2826. *Gastrodia*. Perianth tubular, 5-lobed. Lobes secund. Labellum closed, free, unguiculate, lying on the column. Column long, hollow at top. Anther deciduous, with approximate cells. Pollen masses large, composed of numerous angular particles.

VI. ARETHUSÆÆ. — Anther terminal, opercular. Pollen masses as in tribe Neottiææ.

- †1881. *Calceana*, page 749.
2827. *Corysanthes*. Perianth ringent. Helmet large. Lower lip 4-parted, short, hidden by the labellum. Labellum large, cucullate, or tubular. Anther 1-celled, 2-valved, persistent. Pollen masses 4, powdery.
2828. *Pterostylis*. Perianth ringent, 4-leaved, inner leaflet bifid. Labellum unguiculate, almost enclosed, appendiculate, or gibbous at the base. Column connate with the base of the galea, winged at apex. Anther persistent, with approximate cells. Pollen masses 2 in each, all compressed, powdery.
- †1877. *Arethusa*, page 749.
- †1879. *Pogonia*, page 749.
- †1878. *Calopogon*, page 749.
2829. *Glossodia*. Perianth of 5 equal spreading sepals. Labellum dissimilar, short, undivided, glandless. Appendage between the column and the labellum. Anther terminating the membranous dilated column, with approximate cells. Pollen masses 2 in each cell, compressed, powdery.
2830. *Chloræa*. Perianth membranous. Outer sepals nearly equal; lateral ones deflexed; upper one, along with the inner ones, conniving into a galea. Labellum sessile, cucullate, entire or 3-lobed, with a crested disk. Column elongated, semiterete, marginate. Anther 2-celled. Stigma lying on the top of the column. Pollen masses 2, bipartite, cohering behind.

- †1880 *Epipactis*, page 749.
 2831. *Caladèmia*. Perianth bilabiate, glandular outside. Upper lip flattish. Labellum unguiculate, cucullate, somewhat 3-lobed, or narrowed at the apex, ornamented with rows of glands in the disk. Column membranaceously dilated. Anther persistent, with approximate cells. Pollen masses 2 in each cell, compressed, half 2-lobed, powdery.
 2832. *Eriochilus*. Perianth bilabiate. Outer lateral sepals unguiculate; inner ones erect, smaller. Labellum unguiculate, inappendiculate, with a pubescent glandless disk. Column semiterete, simple at top. Anther persistent, mutic, with approximate cells. Pollen masses 4 in each cell.
 2833. *Chiloglottis*. Perianth bilabiate. Outer lateral sepals channelled, and terete at the apex. Labellum unguiculate, glandular in the disk, and furnished with a tongue-shaped appendage at the base. Column bifid at apex. Anther persistent, with proximate cells. Pollen masses 2 in each cell, compressed, powdery.
 2834. *Cyrtostylis*. Perianth bilabiate. Sepals mutic, 4 lateral ones nearly equal, spreading. Labellum dissimilar, stretched out, flat, obtuse, undivided, bicallose at the base. Column semiterete, dilated at apex. Anther persistent, with approximate cells. Pollen masses as in *Chiloglottis*.
 2835. *Micròdis*. Perianth ringent. Outer lateral sepals sessile; inner ones almost similar, ascending. Labellum dissimilar, oblong, obtuse, callous at the base. Column funnel-shaped. Anther furnished with a membranous auricle on both sides. Pollen masses 2 in each cell, powdery, fixed by the base.

VII. NEOTTIEÆ. — Anther parallel with the stigma, and erect. Pollen masses simple, or consisting of granules in a loose state of cohesion.

- †1874. *Spiránthes*, page 749.
 †1875. *Stenorhynchus*, page 749.
 †1873. *Neottia*, page 749.
 †1876. *Listera*, page 749.
 2836. *Petèzia*. Sepals conniving into a cylinder. Outer lateral ones dependent, connate with the base of the column. Labellum entire, stretched out, spurred at the base, connate with the ovarium.
 2837. *Sauroglossum*. Perianth connivent. Lateral sepals linear, arcuately spreading, running into the ovarium at the base. Labellum linear, channelled, callous at the base. Column elongated, semiterete, drawn out at the base, and somewhat spatulate at the apex. Rostellum ovate. Pollen masses 2, 2-lobed, with a very short caudicula.
 †1870. *Godgyera*, page 748
 2838. *Anæctochilus*. Perianth ringent. Upper sepal, along with the petals, forming a galea; lateral sepals spreading. Labellum connate with the column at the base spurred, with a channelled inflexed claw, and a 2-lobed spreading limb. Column short, with membranous, dilated, involute margins. Stigma bicallosus at the base. Pollen masses 2, powdery, 2-lobed, with very short caudicula, and an oblong gland.
 †1872. *Ponthèra*, page 748.
 2839. *Cránchis*. Perianth resupinate, subringent. Labellum arched. Anther as in *Neottia*.
 †1926. *Prescottia*, page 750.
 2840. *Calochilus*. Perianth ringent. Inner sepals sessile, smaller than the outer ones, erect. Labellum longer than the sepals, sessile, acuminate, with the margins and disk bearded. Anther parallel with stigma, persistent.
 2841. *Psaphogitum*. Perianth ringent; galea in front; 2 outer sepals usually cohering, inner ones unequal-sided. Labellum ascending, undivided, spurless, unguiculate. Column bipartite. Anther parallel with the stigma, persistent, with approximate cells. Pollen masses 2 in each cell, powdery, fixed to the top of the stigma.
 †1871. *Durris*, page 748.

17934 **Caulescent, Lvs. obl. lanceol. acute glauc. beneath, Sepals and petals obl. lanceol. acute nearly equal Labellum** [obl. cucul. dentieu. with 5 crests in the disk, Spur emarginate

17935 **The only species**

17936 **Pseudo-bulbs obl. 2-edged, Sepals lin. obl. Petals somewhat rhomb. acute, Lateral lobes of labellum recur. Mid. lobe fleshy serrated**

17937 **Pseudo-bulbs obl. cylind. 1-ldv. Petals ellip. round, Sepals obl. lanceol. smaller, Labellum small 3-lobed Mid. lobe flattish acumin.**

17938 **Lvs. obl. lanceol. Petals lin. arched, Mid. lobe of labellum cuneated equal to lateral ones**

17939 **Lvs. obl. lanceol. Petal lin. spatulate, Labellum sagit. Mid. lobe lin. abruptly acute, Lateral ones acumin.**

17940 **The only species**

17941 **Pseudo-bulbs oval obl. compressed smooth bearing a sol. lin. ligul. leaf, Pedunc. 1 flwd. Petals and sepals erect obl. acute, Labellum obscurely 3-lobed**

17942 **Lvs. obl. lanceol. acumin. plicate, Scape radical many-flwd. Sepals ovate concave, Petals smaller, Labellum [obovate obl. undivided**

17943 **Pseudo-bulbs ovate bearing a sol. obl. lanceol. plicate leaf, Scape pendu. 2-flwd. Sepals and petals lanceol. acute equal, Labellum 3-part. Mid. lobe fringed**

17944 **Pseudo-bulbs roundish compressed bearing 2-obl. lanceol lvs. Scape 1-2-flowered, Sepals keeled, Labellum 3-lobed**

17945 **Pseudo-bulb compressed tetragonal bearing a sol. 3-nerv. leaf, Flws. racem. Petals oval 2 lower ones drawn out into a horn at base, Labellum obovate subtrilobed crested,**

17946 **Pseudo-bulb ovate bluntly angular bearing a lanceol. chan. leaf, Raceme droop. Labellum cuneate 3-lobed, Mid. lobe 2-lobed crenulated**

17947 **Pseudo-bulb roundish compressed 2-ldv. Lvs. obl. plicate, Raceme erect, Lateral lobes of labellum semicord. Mid. one transverse subundulated callous at the base**

17948 **The only species**

17949 **The only species**

17950 **Labellum ovate cord. Spike cylind. Bractees acumin. Lvs. obl. acum. narrowed at the base**

17951 **Labellum ovate cucul. at base, Spike obl. Bractees obl. cucul. Lvs. obovate lanceol. Root tuberous**

17952 **The only species**

17953 **Sepals lin. obl. Lateral ones ovate obl. pendulous, Petals obl. lanceol. Labellum spreading obl. entire with a [short winged claw, Column slender arched clavate on both sides**

17954 **Sepals and petals lanceol. acumin. reflexed, Labellum entire ventricose acumin. callous at the base with a short claw, Column arched much shorter than upper sepals**

17955 **Labellum not bearded**

17956 **Labellum bearded with succulent hairs**

17957 **Two inner calycine segments spotted, Labellum ciliated**

17958 **Leaves linear-lanceolate, Perianth spreading obsoletely dotted, Labellum ventricose incurved at apex ciliated.**

17959 **Leaves oblong 5-plicate, Perianth globose scarcely spotted, Labellum ventricose straight at apex**

17960 **Raceme loose many-flwd. Labellum hemispherical with flat margins and fringed in the middle**

17961 **The only species**

17962 **Labellum constricted in the middle, Flws. pendulous**

17963 **Lateral sepals large roundish oblong much broader than the petals**

17964 **Labellum oblong constricted in the middle, Scape erect 2-flwd. shorter than the petals**

17965 **Labellum obl. constricted in the middle. Scape pendulous 2-flowered twice as long as the petals**

History, Use, Propagation, Culture,

2842. *Ceratola* 18036 *ericoides* is a small heath-like evergreen shrub, grown in British gardens in peat soil, and may be propagated by cuttings.

18024 The only species

18025 The only species

18026 Lvs. ovate or oval acute discoloured, Spike generally 4-flwd. Outer sepals pubescent, Labelum multfid towards the base, Sack of labellum subdidymous

18027 Root fasciated fillform tomentose, Radical lvs. spatulate ovate, Cauline ones sheathing, Flowers spreading, Labellum dotted inside

18028 Labellum a litte longer than the perianth furnished with a semilanceol. acum. point, Column 2-gland. at the base, Spike 4-8-flwd.

18029 Ovaria obovate 3 times longer than bractea, Sepals acumin. hind ones cohering at the base

HEXANDRIA.

18030 Lower lvs. renif. 6-angular 3-lobed, Upper lvs. 3-partite, Cal. cylind. ventricose and 6-spurred at the base, 18331 Lvs. renif. emarg. undul. pubesc. beneath, Limb of cal. ventric. at base obl. oblique emarg. on both sides peduncul. 1-flwd. bractless pubesc. [Lip. cord. cuspid. the cusp twisted fillform [one longer inflated with a broad emarg. undul. lamina

18032 Glabrous, Lvs. cord. renif. Flws. solit. Tube obov. Limb cylind. bilabiate, Upper lip. lanceol. acute, Lower 18033 Glabrous, Stems furrow. Lvs. 3-lobed, Cal. cylind. incurv. Lip. cord. cusp. Appendage 6-parted reflexed [more silky ben. th. above, Flws. formiug large pouch, Throat circular vertical

18034 Lvs. 12 to 15 in. long and 4 in. broad scatt. ovato-cord. atten. at apex slightly waved and sinuat. ent. edges 18035 Glabrous, Lvs. cord. renif. Peduncul. 1-flwd, Tube of perianth obliquely ventric. at base stretched out from the mid. to the apex cylindrical, Limb orbicul. ciliated.

Order 7. POLYANDRIA. Stamens more than 6.

2844. *Pterocarya*. Male flws. in spikes. Stams. in a flower many. Female flws. in long pendulous spikes, and distant, sessile, and without bracteas. Cal. connate with the ovary, except in a terminal portion, which is cleft into ? 3-5 unequal lobes. Ovary, and the part of the cal. that is connate with it, taken together, flaggon-sh., bearing 2 wings above the base. Cell 1. Ovule 1, erect. Fruit subdrupaceous, angled, not opening, containing a bony nut. Embryo without albumen.

Order 8. MONADELPHIA. Stamens united into a single body.

2845. *Picea*. Differs from *Pinus* and *Abies* in having the cones erect. The strobile is cylindrical, and has its carpels not thickened at the tip. Both carpels and bracteas separate from the axis of the strobile; and the leaves are obviously 2-ranked in direction.

DIANDRIA.

18036 Flws. in axils of upper lvs. solitary except a small abortive one by the side of the principal flower

TETRANDRIA.

18037 The only species

POLYANDRIA.

18038 Stems several from crown of root, Lvs. subpelt. uneq.-cordate acumin. [both surfs. green ab. blood-red ben. leathery succulent glabr. and shining on

and Miscellaneous Particulars.

2843. *Sarcococca*. The stigmas of this plant are so like those of the common box, that, in the absence of fruit there would be little apparent reason to suspect a difference from *Buxus*, to which genus the narrow-leaved variety bears a great resemblance.

History, Use, Propagation, Culture

2844. *Pterocarya* 18054 *caucásica*. This tree is "sufficiently hardy to be classed among ornamental trees of the third rank. It is readily propagated by layers. For small gardens and diminutive arboretums this tree may serve very rich and moist as to prevent it from ripening its wood. Perhaps something might be gained, in point of hardiness by grafting it upon the common walnut." (*Arb. Brit.*, vol. iii. p. 1452.)

- 18039 Very smooth, Lvs. ov.-rotund. obt. at base rarely little cord. uneq. apicul. Marg. minutely serrat. subclilat. Largest wing of cap. trian. projecting

History Use, Propagation, Culture,

2845. *Picea*. "Some confusion exists in the works of modern authors respecting the silver fir and the spruce; partly, as it would appear, from the circumstance of Linnaeus having made an erroneous application of the names given to these trees by Pliny. The tree which Theophrastus calls *Elate*, Pliny calls *Abies*, and Linnaeus *Pinus Picea*; while the tree that Pliny calls *Picea*, and which is our spruce fir, is named by Linnaeus *Pinus A'bies*. The silver fir was esteemed by the Romans for its use in carpentry, and for the construction of vessels. . . . The wood of the silver fir is elastic, and the colour is whitish. The grain is irregular, as the fibres which compose it are partly white and tender, and partly yellow or fawn-coloured, and hard. The narrower the white lines are, the more beautiful and solid is the grain of the wood. In the Vosges, it is said that the external layers are more compact than the internal ones, which may arise from the practice of barking the trees there before they are cut down. The weight of this wood varies exceedingly, according to the age of the tree, the place where it grew, and even the part of the trunk from which it was taken. According to Hartig, the wood of a tree 80 years old weighs 66 lbs. 14 oz. per cubic foot green, and 41 lbs. 5 oz. when dry; while that of a tree 40 years old weighs only 37 lbs. 9 oz. when dry. It shrinks considerably in drying, like all white woods. It is used for planks, and carpentry of all kinds, for the masts of small vessels, for joists and rafters, and for building the boats for navigating rivers. It is said to endure a long time when used as piles, and to be much employed in Holland for that purpose. In the Vosges it is used in every department of agriculture, carpentry, joinery, and even cabinet-making and sculpture. In England, the wood of the silver fir has been chiefly used for flooring; and, according to Arthur Young, and also to Mitchell, boards sawn out of full-grown trees

- 18071 Lvs. in fives very slender, Sheaths deciduous, Cones ovate stalked, Scales depressed truncate brown scarios white and torn on the margin
- 13523 Lvs. in fives, Sheaths deciduous, Cones ov. erect ab. length of lvs. Scales when young pubes. Wings of seed obliterated, Crest of anth. kidney-sh.
- 13522 Lvs. slender without sheaths, Male cats. small, Cones cylindrical long and pendulous, Cotyledons 6 to 10
- 13516 Lvs. in fives very long and slender loose, Crest of anthers roundish truncate simple lacerated, Cones cylindric. [smooth pendulous long, than lvs.]
- 18072 Lvs. in fives rigid roughish, Sheaths very short, Cones thick very (4 in. to 16 in.) long cylindric, Scales loosely roundish
- 18073 Lvs. in fives short smoothish obtuse, Cones cylindrical and smooth about 7 in. long, Scales loose and pointed
- 18074 Leaves in twos and threes, Cones much longer than the leaves, Sheaths short black

I. Leaves tetragonal, awl-shaped, scattered in insertion.

- 13530 Lvs. scattered quadrangular, Cones cylindric. 5 in to 7 in. long and from 1½ in. to 2 in. broad termin. pendent, Scales naked truncate at summit flat

- 13528 Leaves solitary tetragonal, Cones ovate-cylindrical, Scales rhomboid

II. Leaves flat, generally glaucous beneath, imperfectly 2-ranked.

- 18076 Lvs. flat blunt entire pectinate silvery ben. Cones ovate-obl. Bractees elongated linear 3-pointed, Cones about 4 in. long
- 18077 Lvs. acute flat silvery ben. turned in every direction, Cones cylindric, Scales scarios gnawed on the margin
- 13527 Lvs. solit. flat slightly denticulate obtuse 2-ranked, Cones oval termin. pendent naked scarcely longer than the leaves
- 18078 Lvs. subulate flat dark green above silvery ben. terminat. in sharp spine, Petioles very short dilated lengthwise at point of attachment to brans.

- †13525 Lvs. solit. flat obtuse 2-ranked points turned up, Cones axill. cylindric. erect, Scales with long dorsal bractees, Anth. with short crest with 2-teeth

and Miscellaneous Particulars.

may be laid down at once, without any risk of their shrinking. As fuel, the wood of the silver fir is to that of the beech as 1079 is to 1540, and that of the spruce as 1079 is to 1211. The charcoal is to that of the beech as 1127 is to 1600. Though the charcoal is much inferior to that of the beech, yet it is preferred for heating iron that is to be forged, as producing the heat more slowly, in consequence of which the iron is more pliant to work. The bark may be employed for tanning leather, and is used generally in some parts of Switzerland. A resinous sap flows from the trunk and branches, called *larmes de sapin*. This sap is bitter, acrid, and viscous, and its smell approaches to that of the etron; it is healing, balsamic, and antiseptic. The resinous fluid is found in small tumours or blisters, under the epidermis of the bark, and in the green cones, from the latter of which it is collected about midsummer. From the resin of this tree are manufactured Strasburg turpentine (so called from a large forest of silver firs, the Hockwald, near Strasburg), colophony, and white pitch. The quantity of potash furnished by the bark and wood is in proportion of 2 lbs. of potash to 1000 lbs. of wood and bark, which places the silver fir in the rank of 21 in a series of 73 ligneous plants. In some parts of Europe, the young cones, reduced by boiling to a pulp, and preserved with sugar, are eaten as a sweetmeat. This conserve is put into tea, to which it is said to communicate an agreeable odour. The leaves serve for litter; and, in Switzerland, according to Kasthoffer, are given to sheep and goats: but they are said to give the milk a peculiar taste."

"The silver fir, like all the other *Abietinæ*, will attain a large size on soils of a very opposite description; but a loam, rather rich and deep than otherwise, appears to suit it best." (*Arb. Brit.*, vol. iv.)

History, Use, Propagation, Culture.

2846. *Garrya* 18088 *elliptica* is an evergreen hardy shrub, with thick coriaceous leaves, like some species of evergreen viburnum. "This is probably the greatest botanical curiosity sent home by Douglas ; for it appears to represent a natural order altogether distinct from any previously known, and connecting certain well-known natural orders in an unexpected and satisfactory manner. In its amentaceous inflorescence, imperfect flowers, superior calyx, and mode of germination, *Garrya* is very similar to Cupuliferae, from which it differs most essentially in its wood without concentric circles or dotted vessels, its opposite exstipulate leaves, simple fruit, and minute embryo lying in a great mass of albumen. The latter characters bring it near Piperacæa and their allies, especially Chloranthæ, with which its zoneless wood (for Chloranthus has no annual zones), simple fruit, and opposite leaves, also agree ; but the stipules

of Chloranthæ, together with its achlamydeous bisexual flowers and articulated stems, distinctly separate that order." (*Bot. Reg.*) "Only the male plant of *G. elliptica* is in the country. When in flower (which it is from December till April), the plant has a most striking graceful appearance, from its slender pendulous catkins, many of which are 8 in. to 1 ft. in length. It was at first grown in peat, but appears to prefer a loamy soil. It is readily increased by layers, and by cuttings in sand under a hand-glass." (*Arb. Brit.* iv. 2031.)

2847. *Rhodioia* 18088 *rosea* is a plant with the habit of *Sedum Teléphium*. It is found on wet rocks, on the mountains of the north of England and Ireland, and in the north-west of Scotland, abundant; likewise on cliffs by the sea-shore. It is the badge of the Highland clan *Gunn*.

assured that the negroes on the farm, who are in the habit of drinking large quantities of this vegetable milk, consider it as highly nutritive; an assertion which startled us the more, as almost all lactescens vegetable fluids are acrid, bitter, and more or less poisonous. Experience, however, proved to us, during our residence at Barbula, that the virtues of the Cow Tree, or *Palo de Yaca*, have not been exaggerated. This fine tree bears the general aspect of the Star-apple Tree (*Chrysophyllum Cainito*); its oblong, pointed, coriaceous, and alternate leaves are about 10 in. long, and marked with lateral nerves, that are parallel, and project beneath. The flower we had no opportunity of seeing; the fruit is somewhat fleshy, and contains one or two kernels. Incisions made in the trunk of the tree are followed by a profuse flow of gluey and thickish milk, destitute of acidity, and exhaling a very agreeable balsamic odour. It was offered to us in calabashes; and, though we drank large quantities of it, both at night before going to bed, and again early in

the morning, we experienced no uncomfortable effects. The viscosity of this milk alone renders it rather unpleasant to those who are unaccustomed to it. The negroes and free people, who work in the plantations, use it by soaking bread in it made from Maize, Manioc, Aropa, and Cassava. Slaves become visibly fatter during the season when the *Palo de Vaca* yields most milk. When exposed to the air this fluid displays on its surface, probably by the absorption of the atmospheric oxygen, membranes of highly animal nature, yellowish and thready, like those of cheese; which, when separated from the more watery liquid, are nearly as elastic as those of caoutchouc, but in process of time exhibit the same tendency to putrefaction as gelatine. The people give the name of cheese to the curd which thus separates when brought into contact with the air, and say that a space of 5 or 6 days suffices to turn it so far, as I found to be the case in some small quantities that I brought to New Valencia. The milk itself, kept in a corked bottle, had deposited a small portion of coagulum, and, far from becoming fetid, continued to exhale a balsamic scent. When mingled with cold water, the fresh fluid is coagulated with difficulty; but contact with nitric acid produced the separation of the viscous membranes.

This wonderful tree appears peculiar to the cordillera of the shore, especially from Barbula to the Lake of Maracaybo. Some individual Cow Trees are also said to exist near the village of San Mateo, and likewise in the Valley of Cauagueta, three days' journey to the east of Caracas.

At Cauagueta, the natives call the tree which yields this nutritive fluid, Milk Tree (*Arbol de leche*).
 "The wood forming the body of the trunk is white, very close-grained, and hard, resembling the boxwood of Europe. The soil which these trees inhabit is dark and rich, and must be damp or very wet all the year round."
 (*Bot. Mag.*)

2851. *Semecarpus* 18108 *Anacardium* is a lofty tree with spreading branches. Leaves about 18 in. long, and about 4 or 5 broad. Flowers small, of a greenish yellow colour. Receptacle of the fruit when ripe yellow, about the size of the nut, which is black; the cover or shell is composed of 2 laminae, the inner hard, the outer less so and leathery; between them are cells which contain the black, corrosive, resinous juice, for which this nut has been long known; the juice is of a pale milk-colour till perfectly ripe, when it becomes black. The wood of this tree is reckoned of no use, not only on account of its softness, but also because it contains much acrid juice, which renders it dangerous to cut down and work upon. The fleshy receptacles on which the seeds rest are roasted in the ashes; and eaten by the natives; their taste is very like that of roasted apples: unroasted, they taste astringent and acrid, leaving a painful sensation on the tongue for some time. The kernels are rarely eaten. The green fruit, well pounded into a pulp, makes good birdlime. The pure, black, acrid juice of the shell is employed by the natives externally to remove rheumatic pains, aches, and sprains; in tender constitutions it often produces inflammation and swelling; but where it has not these effects it is an efficacious remedy. It is employed by the Telinga physicians in the cure of almost every kind of venereal complaint. It is in general use for marking cotton cloths; the colour is improved and prevented from running by a little mixture of quicklime and water. This juice is not soluble in water, and is only

18108 Lvs. oblong bluntish glauc. ben. more or less covered on the nerves beneath with scabr. down, Paucile terminal tomentose

18109 Leaves obovate very blunt villous

and Miscellaneous Particulars

diffusible in spirits of wine, for it soon falls to the bottom, unless the menstruum be previously alkalisied. The solution is then pretty complete, and of a deep black colour. It sinks in expressed oils, but unites perfectly with them: alkaline lixivium acts upon it with no better success than plain water. (*Don's Mill.*, ii. 63.) Culture, &c., see *Melanorrhœa* below.

2851. *Melanorrhœa* 18109 *usitata* This tree is a native of Hindostan, in a large valley called Kadbhu, in the kingdom of Manipur, Silhet, and Tipperah, as well as in the Burmese empire, on the banks of the Irrawadi, where it is called *Thect-tsee* or *Zit-si*. This is identical with the majestic *Kheu* or varnish tree of Manipur, on the north-east frontier districts of Silhet and Tipperah. Mr. M. R. Smith, who has resided a long time in Silhet, considers this the same as the varnish tree of the Chinese, in the eastern and north-eastern provinces. It is procurable in great quantities from Manipur, where it is used for painting river craft, and for varnishing vessels destined to contain liquid. The drug is conveyed to Silhet for sale by the merchants. On being handled it occasions extensive erysipelatous swellings, attended with pain and fever, but never of long duration. In the neighbourhood of Prome a considerable quantity of varnish is extracted from the tree, but very little at Martaban, owing, it is supposed, to the poorness of the soil, and partly also to there being none of the people in that part whose business is to perform the process, although it is very simple. Short joints of a thin sort of bamboo, sharpened at one end, and shut up at the other, are inserted in a slanting direction into holes made in the trunk and principal branches, and left there for 24 or 48 hours; after which they are removed, and their contents emptied into a basket previously varnished over. Sometimes a hundred bamboos may be seen sticking into the tree at once during the collecting season, which last as long as the tree is destitute of leaves, namely, from January until April, and they are renewed as long as the juice will flow. In its pure state it is sold at Prome at the rate of 1 tical, or 2s. 6d., the viss; and at Martaban, 2 Madras rupees the viss, although of an inferior quality to that sold at Prome, being usually mixed with oil of sesamum. A tree is reckoned to produce 2 to 3 or 4 viss annually, a viss being equal to 3½ lb. Every article of household furniture destined to contain solid or liquid food is lacquered over with it. The article to be varnished with it must be prepared with calcined bones, after which the varnish is laid on thinly, either in its pure state, or variously coloured. The process of drying is the most difficult part, being effected in a very slow and gradual manner, by the articles thus varnished being placed in subterranean vaults for many months. The drug is also used as a size glue in the process of gilding; nothing more being required than to besmear the surface of the article to be gilded with it, and immediately to apply the gold leaf. If it is considered how very extensively that art is practised by the Burman nation, it being among their most frequent acts of devotion and piety to contribute to the gilding of their numerous religious edifices and idols, it will be evident that a great quantity of the drug must be consumed for that purpose alone. Finally, the beautiful Pali writing of the religious order of the Burmas, on ivory, palm leaves, or metal, is entirely done with this varnish in its native and pure state. (*Don's Mill.*, ii. 67.) A mixture of loam and peat will suit this tree; and ripened cuttings will root in sand, under a hand-glass, in heat.

The following additional Figures are illustrative of Plants described in pages 1300. 1304. and 1332.

SECOND
ADDITIONAL SUPPLEMENT

TO

LOUDON'S ENCYCLOPÆDIA OF PLANTS;

COMPRISING

THE SPECIFIC CHARACTER, DESCRIPTION,
CULTURE, HISTORY, APPLICATION IN THE ARTS,

AND EVERY OTHER DESIRABLE PARTICULAR RESPECTING

ALL THE PLANTS

ORIGINATED IN, OR INTRODUCED INTO,

BRITAIN,

BETWEEN THE PUBLICATION OF THE FIRST ADDITIONAL SUPPLEMENT IN 1840,

AND

MARCH, 1855 :

WITH

A NEW GENERAL INDEX TO THE WHOLE WORK.

PREPARED BY GEORGE DON, F.L.S., UNDER THE DIRECTION OF MRS. J. C. LOUDON,
ASSISTED BY MR. DAVID WOOSTER.

Page 1. CLASS I.—MONANDRIA. 1 STAMEN.

Order 1. MONOGYNIA. 1 Stamen. 1 Style.

2852. 10a. *Gastrochilus*. Calyx tubular, cleft on one side. Tube of corolla elongated, filiform; outer segments of limb equal, spreading; inner ones lateral, broader, joined with the filament; lip large, saccate. Filament linear lengthened beyond the anther. Ovary 3-celled. Ovula numerous.

History, Use, Propagation, Culture,

2. *Maranta*. Until the *M. ornata* has flowered, the genus cannot be ascertained. In the meanwhile, the foliage of these plants forms a most beautiful object among other vegetation; the green is of the rich deep hue of *Calathea zebrina*, while the stems and under side of leaves have the same rich stain of purple; in addition, the leaves are brilliantly banded by well defined oblique streaks of a delicate pink in one variety, and of a yellowish white in the other. They require a well-worked, rich, mixed soil, frequent watering while growing, and a shady place in a

CLASS I. — MONANDRIA.

MONOGYNIA.

Essential Specific Character.

- 18110 Leaves ovate-oblong acuminate glabrous coloured on the margins, Ovarium subglobose papillose, Segments of Calyx obtuse, Lip revolute obtuse emarginate
- 18111 Leaves rich deep green, striped in one variety with white and in another with pink
- 18112 Leaves glaucous beneath pilose, Scape elongated, Bracts cuspidate villous, Petals obovate 2-lobed
- 18113 Caulescent or Scape radical leafless, Leaves oblong acuminate purple beneath, Raceme compound, Bracts ovate lanceolate complicate scarlet
- 18114 Spike imbricated concave below and convex above hairy, Leaves lanceolate unequal-sided, Petioles and Spikes bristly, Outer Bract cordate with an elongated setose apex, Inner Bract winged
- 18115 Leaves oblong acuminate, Outer Spathes obtuse, Inner ones cylin., Mid. seg. of Cor. rounded unguic. bifid
- 18116 Lvs broad ovate-oblong, Spathes cucullate as long as tube, Mid. seg. of Cor. broad 2-lobed unguic. rest linear
- 18117 Leaves oblong taper-pointed, the point long twisted at top, Middle segment of Corolla broad entire unguiculate, the rest lanceolate
- 18118 Raceme spike-formed strict, Flowers scattered, Calyx obliquely truncate bluntly tridentate, Capsule baccate roundish
- 18119 Ligula very short and rounded, Bracts roundish cordate, Spikes obovate 6 inches above ground and 4 inches below, Leaves narrow
- 18120 Leaves lanceolate nearly sessile, Spike terminal secund, Tube of Corolla enclosed
- 18121 Leaves oblong-cordate on long petioles, Spikes radical, Tube of Corolla very long exserted
- 18122 Caulescent glabrous, Leaves oval, Spike oblong sessile rather loose, Lip oblong obtuse toothed, Appendage of anthers petaloid tripartite, Segments undulated torn [at top of spike violaceous]
- 18123 Tubers numer. glob., Lvs ovate-cord. acumin. clothed with silky hairs, Spikes centr., Bracts ovate obtuse, Tuft
- 18124 Spikes terminal, Leaves on long stalks broad-ovate, Bracts scarlet
- 18125 Tubers almost wanting, Leaves oblong ovate on long stalks, Spike central pedunculate imbricated in four rows, Coma white, Lip obovate, Anthers mutic at the base
- 18126 Stem fistular glaucous, Leaves ovate entire or toothed, upper ones sessile more or less deeply cut at base, Panicle corymbose, Tube of Corolla very long
- 18127 Stem and petioles hairy, Lvs ovate crenately serrul. downy lined above, Gland solitary on the base of up. ptils

DIGYNIA.

- 18128 Fruit nearly sessile, Lobes parallel in pairs slightly winged at the back, Styles erect in the flower reflexed closely over the fruit, Bracts falcate.

and Miscellaneous Particulars.

stove. These exquisite plants were exhibited before the Horticultural Society at one of their meetings at Chiswick in 1849.

2852. *Gastrochilus*. The blossoms are very handsome and graceful, and at first sight give the plants the appearance of *Orchidæe*. The genus is nearly allied to *Kamferia*. They thrive well with the same treatment as terrestrial tropical *Orchidæe*.

Page 8. CLASS II.—DIANDRIA. 2 STAMENS.

Order I. MONOGYNIA. 2 Stamens. 1 Style.

2853. 37a. *Forsythia*. Calyx 4-parted. Corolla subcampanulate, 4-cleft. Stamens equal in length to the calyx, with short filaments and oblong anthers. Stigma 2-lobed.
2854. 40a. *Leptandra*. Corolla tubular, subringent, 4-lobed; lower segment the smallest.
2855. 49a. *Parryracoma*. Calyx 5-parted, tribracteate at base. Corolla tubular, bilabiate. Cells of Anthers diverging. Stigma obtuse. Capsule oblong, stipitate, 2-celled. Seeds 2 in each cell, orbicular.
2856. 49b. *Phlogacanthus*. Calyx 5-parted, equal. Corolla obliquely bilabiate; upper lip broader and longer, bifid; lower lip trifid; tube trigonal. Stamens 2, with rudiments of 2 abortive ones. Stigma acute. Capsule compressed, 2-celled; upper cells 4-seeded.
2857. 49c. *Cyrtanthera*. Calyx 5-cleft. Corolla ringent; lobes deeply divided, equal; upper lip complicate; lower one elongate, trifid. Anthers drooping. Stigma unilabiate.
2858. 49d. *Thysacanthus*. Calyx 5-cleft, equal. Corolla tubular, incurved, 5-lobed, bilabiate. Cells of anthers

History, Use, Propagation, Culture.

2853 Forsythia. This forms a compact deep green bush, with opposite oblong leaves, which emit a slight balsamic odour. It sheds its leaves in autumn and remains dormant like any other deciduous shrub, but is remarkable for the number of large prominent buds scattered along the young stems produced the preceding summer. Early in

parallel. Sterile filaments subulate, or wanting. Stigma bidentate. Capsule depressed from the base to the middle, 2-celled, 2-4-seeded. Seeds discoid, furnished with retinacula.

2859. *65a. Rhynchosgloum.* Calyx tubular, 5-cleft. Corolla tubular, personate. Stamens 5, the two lower bearing reniform anthers, the three upper ones small and sterile. Stigma capitate. Capsule enclosed, ovate, 2-valved. Seeds small.

2860. *65b. Pterostigma.* Calyx 5-parted or 5-toothed. Corolla bilabiate; upper lip emarginate; lower one divided into 3 lobes. Anthers 2-lobed. Style simple. Stigma undivided. Sterile filaments subulate.

2861. *65c. Lichgia.* Calyx tubular, 4-5-cleft. Corolla funnel-shaped, widened upwards; limb unequal, 5 lobed, subbilabiate. Stamens 4, 2 only bearing anthers. Anthers 2-celled, cohering. Stigma bilamellate. Capsule silique-formed, falsely 4 celled, 2-valved. Seed pendulous, expanded into a wing at the base.

2862. *67a. Chondrospermum.* Calyx truncate, 4-toothed. Corolla funnel-shaped, 4-parted, rather fleshy; segments linear, clavate. Stamens inserted above the base of the tube, enclosed. Ovary 2-celled; cells 1-seeded. Stigma 2, sessile, acute.

2863. *73a. Labichea.* Calyx 5-cleft, regular. Petal. 5, roundish. Stamens 2. Style subulate. Stigma simple. Ovary biovulate, on a short stipe.

MONOGYNIA.

18129 Leaves oblong-ovate acuminate glabrous, Racemes compound, Peduncles and pedicels spreading
18130 Leaves ovate acuminate rather coriaceous hairy beneath, Thyrses hairy tomentose as well as young branches

18131 Branches warted, Lvs broad-obl. tapering to both ends glabrous whitish beneath, Segms of Cor. hooked at tip

18132 Bran. tetragonal, Lvs obl.-lanceol. serrated at top, Flws rising before the lvs twin on short pedicels drooping
Sepals roundish

18133 Erect, Lvs ternate Leaflets lanceolate, Corymbs terminal [Corolla 5-parted bluntnish

18134 Glabrous, Lvs opposite ternate, Lfts ovate-lanceol. taper-pointed, Panic. cyme-formed, Cal. acutely 5-toothed,

18135 Lvs op. pin. 2-3 pairs term. largest, Flws 3 term. on long ped., Cal. seg. subul., Lobes of Cor. obl. obt. or ac.

18136 Bran. angular, Lvs trifol., Lfts ovate-acum. glabr., Flws sol. scaly at base, Cor. 6-lobed obtuse, Cal. seg. lanc.

18137 Lvs small ovate-acuminate glabrous, Peduncles terminal many-flwd, Calyx segments setaceous

18138 Glabrous, Lvs ov.-lan. acum., Ped. trichot. axillary term. corym., Cal. teeth 6 subul., Cor. seg. 6-7 lan. lin. acute

18139 Lvs altern. ternate glabrous, Lfts oval-acute, Flws panicled, Sepals subulate, Cor. 5-parted, Segments ovate

18140 Lvs ternate nearly opposite downy, Lfts linear acute, Branches terete, Panicles axillary trichotomous

18141 Lvs cordate-oblong obtuse deeply toothed somewhat pinnatifid at base naked, Racemes elong. terminal, Capsule [nearly globose glabrous

18142 Bran. with two rows of hairs, Lvs obl.-lanceol. acute quite entire glabr., Racemes few-flwd subcorymb. Segm. [of Cor. lanceol. acute

18143 Glabr., Lvs on short petioles fleshy obovate entire retuse and mucro. at top, Pedunc. axil. solitary race-

18144 Rac. lateral erect, Lvs pinnatifid glabr., Cor. bearded at the base [mose, Flws dense, Cor. subrotate

18145 Racemes lateral nutant, Lvs lanceol. sessile quite entire or serrated one-nerved

18146 A beautiful hybrid between *V. speciosa* and *V. salicifolia*

18147 Procumbent hairy, Lvs cordate-ovate serrated, Cal. seg. ovate acute, Capsule obcor. lobes turgid not keeled

18148 Glabrous, Lvs scattered nearly linear acute sharply serrated, Raceme terminal dense

18149 Lvs pinnatif. with entire linear segs, Lower lip of Cor. 3-lobed, lateral segs setaceous middle segm. 2-lobed acute

18150 Lvs pinnatif. with rounded entire segms, Lower lip of Cor. 3-lobed middle lobe cucul. 2-lobed lateral lobes [falcate spatulate obtuse

18151 Glabrous, Lvs sessile obov.-obl. rather fiddle-shaped, Racemes terminal erect elong. many-flwd

18152 Erect downy, Bran. simp. decus., Lvs lanc. obscurely cren., Spikes term. elong., Bracts op. by fours, remote, 1-fl.

18153 Slendr downy, Rac. term. loose, Ped. axil. few-fl., Lvs ov. ent. or slightly toothd bltchd with white, Cal. lob. subul.

18154 Branches villous, Leaves obovate acuminate undulated hairy, Spikes short axillary and term., Calyx hairy

and Miscellaneous Particulars.

spring these buds gradually unfold themselves, and present a profusion of bright yellow flowers all over the shrub which is highly ornamental.

History, Use, Propagation, Culture,

2855. *Porphyrocoma* is a beautiful plant, with dense heads or spikes of purple bracts, and purplish-blue flowers. Culture and propagation are the same as those recommended for *Justicia*, p. 18.

2856. *Phlogacanthus*. Pretty shrubs cultivated in the same manner as *Justicia*, p. 18.

2857. *Cyrtanthera*. The species are all splendid plants, when well grown. They succeed best in a warm part of a stove. A mixture of good loam, leaf mould, and turfy peat is the best soil for them. In order to insure large heads of flowers, the plants should be shifted into larger pots when necessary. They are readily propagated from cuttings.

- 18155 Leaves lanceol. nearly sessile entire, Spikes terminal and subterminal aggregate, Bracts large 1-flowered
- 18156 Stems quadrangular downy, Leaves large elliptic acute at both ends toothed glabrous, Corolla elongated
- 18157 Leaves oblong attenuated at both ends subcrenulated, Racemes terminal, Flowers fascicled
- 18158 Leaves on longish petioles broad cordate acuminate entire, Thyrses large compact, Bracts and sepals lin. subul.
- 18159 Leaves broad elliptic-lanceol. tapering into the thick short petioles, Thyrses compact, Bracteoles and sepals lanc.
- 18160 Leaves on longish petioles ovate-acuminate, Bracts and sepals ovate-lanceolate, Thyrses compact
- 18161 Glabrous, Lvs obl. acuminate, Racemes terminal elong. simple, Ped. short 1-flwd fascicled, Cor. nearly regular
- 18162 Downy, Lvs obl.-lanc. rug., Thyrses interrupted naked many-flwd, Cor. inflated funnel-shpd with glandular limb
- 18163 Glabrous, Lvs lanceol. acum. sessile, Pan. terminal short thyrsoid bracteate, Cor. elongated nearly regular
- 18164 Glabr., Lvs nearly sess. obl. lanc. erose denticulated, Rac. axil. many-flwd nodding, Cor. tubularly ventricose
- 18165 Plant pale yellow, stemless, with slender graceful one-sided drooping spikes
- 18166 Stem hairy flexuous, Lvs cordate-ovate wrinkled crenate whitish beneath, Pan. terminal, Cor. hardly longer
[than the leafy calyx]
- 18167 Clam. vil., Pet. wing. dent. perfol., Lvs ov. cord. at base doubly ser. caucsc. beneath, Pan. lar., Lower lip lar. ob.
- 18168 Branches glabr., Lvs approximate cuneiform ovate deeply ser. hoary and tomentose beneath, Corymbs terminal
- 18169 Branches clammy, Lvs lanceolate acuminate denticulated glabrous, Corymbs terminal, Pedicels clammy
- 18170 Viscid, Lvs linear remotely serrated, Panicles terminal leafy, Ped. opposite corymbose, Lower lip large inflated
- 18171 Pilose, Lvs ovate-lanceolate crenately serrated, Panicle corymbose, Lower lip large obovate-orbicular
- 18172 Lvs oblong obtuse entire clammy, Corymbs terminal, Outline of Corolla square
- 18173 Leaves of two forms, outside ones small imbricate, inner or upper ones fewer obovate spatulate obtuse concave, Spur curved, Ovarium villous
- 18174 Downy, Leaves ovate-acuminate coarsely serrated, Spike elongated dense, Bracts orbicular awned, Tube of Corolla curved
[white hairs, the nerves purple, Whorls large]
- 18175 Stem quadrangular, internodes long, Leaves lanceolate subcordate subamplexicaul serrated fringed with
- 18176 Stem fist. tetrag., Lvs. ov.-lanc. cord. at base wavy ser. bullate downy, Floral lvs smaller redsh-vi. Cor. twist.
- 18177 Stem tetragonal, Leaves lanceolate acuminate serrated oblique at base, Floral leaves long acuminate white in the middle, Whorls globose approximate
- 18178 Leaves roundish-cordate sinuately crenated wrinkled above downy beneath, Whorls terminal few-flowered
- 18179 Herb. of *S. fulg.*, but the upper lip of cor. is flatter, the tube longer, the flws far more abundant and conspicuous
- 18180 Stem sin. pil., Lvs ov.-obl. obt. cren. urly glabr., Whorls abt 4-flwd lower remote, Cal. hairy, Up. lip triden.
- 18181 Stem villous, Lvs obl. toment., Scapes naked glabrous, Pan. elong. bran. viscid, Cal. 5-toothed, Cor. glandular
- 18182 Erect villous, Leaves stalked cordate-sagittate, Floral ones ovate, Rac. branched, Whorls 6-flwd, Calyx clammy
- 18183 Procumb. at base, Bran. erect downy, Leaves ov.-ob., Whorls 2-flwd one-sided, Cor. downy, Lips nearly equal
- 18184 Stm pil., Lvs ov.-deltid hastate cren., upper lvs lanc. lin., Whorls few remote, Stam. much exerted, Cor. large
- 18185 Leaves ovate serrate-crenate rounded at base downy beneath, Whorls 6-flowered one-sided, Style bearded

- 18186 Branches smooth, Leaves coriaceous linear-lanceolate entire glaucous, Flowers $2\frac{1}{2}$ inches long
- 18187 Lower lip of Corolla trifid twice as long as the tube, Racemes terminal one-sided simple, Pedicels solitary 4-bracted, Leaves unequal-sided
- 18188 Leaves opposite wrinkled ovate, Flowers racemose large tubular
- 18189 Scabrous, Leaves opposite unequal ovate-elliptic serrated, Peduncles axillary aggregate bifid or dichotomous, Flowers diandrous

and Miscellaneous Particulars.

2858. *Thyrsacanthus*. These are splendid stove plants, and should be treated in the manner recommended for *Cyrtanthëva*.

2859. *Rhyncho glossum zeylanicum* is a curious plant of easy culture. It requires heat and moisture. Being an annual, the seeds may be raised in a frame.

2860. *Pterostigma*. A pretty greenhouse plant, with large purple flowers. It should not be too much exposed to the sunshine. It is propagated by cuttings.

2861. *Lichya* is a lovely plant, and requires the same treatment as others of the order *Cyrtandraëca*.

History, Use, Propagation, Culture,

2862. *Chondrospermum.* This is a rambling evergreen shrub, with ash-coloured separating bark, and large coriaceous 3-nerved leaves, and terminal panicles of small greenish-yellow flowers. The erect position of the ovula seems to indicate its belonging to *Jasminææ*; but the æstivation of the corolla is valvate. It does very well if trained to a trellis, or for covering a pillar in a stove. It is readily increased by cuttings in the ordinary way.

- 18190 Scandent, Branches tetragonal, Leaves opposite petiolate oval acuminate 3-nerved glaucous, Panicles terminal and axillary
- 18191 Leaves sinuate spiny-toothed, Floral leaves Corollas and Rachis villous, Lobes of Calyx cuneate oblong emarginate
- [lanceolate linear, Lower part of Tube hispid upper part silky
- 18192 Involucrum 4-lvd, Lvs ovate glabrous ciliated equal in height to the crowded heads of flowers, Lvs opposite
- 18193 Lvs linear-obl. glaucous glabrous, Heads round many-flwd, Calyx vill., Lvs of Involuc. ovate-acum. coloured
- 18194 Involucrum 4-leaved, Leaves oblong decussate glabrous, Tube of Perianth hairy
- 18195 Lvs lanc. downy beneath, Flws dioecious. Male heads pedunc. naked rather pilose, Lvs spatulate linear
- 18196 Invol. 4-lvd, Lvs ov. glabr. about eq. in length to the head, Peri. artic. above [length of flws, Hds dense
- 18197 Lvs lin. glabr. above cithd. with white villi ben. as well as stem, upper ones nar. numer. subverticil. imbr.
- 18198 Lvs alter. rarely opp. lin. spat. pilose, Hds term. many-flwd. Style and Stam. equal in length to the perianth
- 18199 Lvs oval or oblong obtuse glabrous, Invol. 4-lvd, Flowers villous in heads, Segments of Corolla oblong obtuse
- 18200 Invol. 4-leaved, Leaves broad ovate glabrous, Tube of Perianth hispid, leaves decussate oval coriaceous
- 18201 Invol. 4-lvd, Lvs roundish obl. shorter than the flws, Perianth villous, lvs obl. glabr. tapering to both ends
- 18202 Glabr. glauc., Lvs opp. subsecund broad lanc., Lvs of Invol. 4-5, Heads many-flwd, Segms. of Limb ciliated
- 18203 Invol. 4-lvd, Lvs ov. silky inside half shorter than hds, Tube of Peri. silky, lvs lin. longer than internodes
- 18204 Lvs decus. ov. obl. or lanc. tapering to ends hoary powdery, Floral lvs shorter than hds, Flws. very numerous
- [branches, Racemes axillary few-flowered, Calyx and Corolla tetramerous
- 18205 Leaves pinnate, Leaflets lanceolate spiny-mucronate marginate smooth above downy beneath as well as the
- 18206 Leaves simple narrow oblong some having 2 stiff sharp points others with only one, Racemes short axillary
- 18207 Lvs simple obl. elliptic mucron. dotted downy beneath, Racemes short axil., Anthers obtuse and b-porose

2865. 156a. *Apéra*. Spikelets laterally compressed 1-flowered with a superior rudiment. Glumes 2, the upper larger, 3-nerved, about as long as the outer palea. Paleæ unequal, scariosus, outer ones dorsally awned. Stigmas nearly sessile. Seed free

MONOGYNIA.

- 18208 Scandent glabrous, Stem terete, Lvs cordate-triangular acuminate toothed at base, Flws paniced minute
- 18209 Root large tuberous, Leaves pinnate, Segments linear acute toothed or entire, Flowers capitate or corymbosely paniced, Stamens exserted, Fruit downy
- 18210 Lvs ovate petiolate glabrous, Involucrum cordate ciliated, Stems creeping, Sheaths ciliated
- 18211 Lvs petiolate ovate-elliptic downy, Sheaths pilose ciliated, Cilia long brown, Spathes on short peduncles cucullate turbinate, Peduncles twin in the spathes one bearing two hermaphrodite flowers and the other one male flower
- 18212 Leaves linear sulcate much longer than the scape, Segments of Perianth ovate blue with white bases
- 18213 Lvs linear sulcate much longer than scapes, Segments of Perianth oval white with yel. bases purplish outside
- 18214 Corms edible, Leaves slender 8 inches long. Stems 4 inches, Bracts of involucrum equal
- 18215 Scares much longer than leaves, Leaves ensiform, Flowers secund [recurved with eq. lin. segments
- 18216 Stem simple, Spikes secund, Flws erect, Perianth clav. arched bilab. Upper Lip oblong tridental lower 5-parted
- 18217 Stem branched, Spikes paniced flexuous many-flowered, Segments of Perianth oval, Stamens white length of perianth
- 18218 Corm middle-sized, Leaves erect glabrous $\frac{3}{4}$ inch broad, Stem about 10-flowered, Bracts 3 inches
- 18219 Corm large, Lvs broad rather glauc., Stem strong erect many-flwd, Bran. 2-3-flwd, Limb of Perianth undul.,
- 18220 Stem early 10-flwd, Flws crowded secun.d. Bracts eq. to tube [Flws bifarious or looking two ways

and Miscellaneous Particulars.

2863. *Labichea*. The species of this genus are beautiful shrubs when in blossom. A mixture of peat, loam, and sand suits them, and cuttings will root under a hand-glass. It is rather a remarkable Leguminous genus with diandrous flowers.

History, Use, Propagation, Culture.

2864. *Sonerila*. This is a pretty annual having little of the habit of a Melastomaceous plant; it is more like a *Tremandra*. It grows best in peat earth or vegetable mould, with plenty of heat and moisture, not too much exposed to the sun's rays. It ripens seed, by which it is propagated.

18239. *Paspalum exile* is a Lilliputian grain which is described by Mr. Clarke as being about the size of Mignonne seed, and is stated to be cultivated about some of the villages of Sierra Leone by industrious individuals of the Soosoo, Foulah, Bassa, and Joloff nations, by whom it is called "Hungry Rice." The ground is cleared for its reception by burning down the copse-wood, and hoeing between the roots and stumps. It is sown in the months of May and June, the ground being slightly opened, and again lightly drawn together over the seed with a hoe. In August, when it shoots up, it is carefully weeded; it ripens in September, growing to the height of 1½ foot; and its stems, which are very slender, are then bent to the earth by the mere weight of the grain. They are reaped with hooked knives. Manure is said to be unnecessary or injurious; the plant delighting in light soils and being raised even on rocky situations. When cut down it is tied up in small sheaves and placed in a dry situation within the hut; for, if allowed to remain on the ground or to become wet, the grains become agglutinated to their coverings. The grain is trodden out with the feet, and is then parched or dried in the sun, to allow of the more easy removal of the chaff in the process of pounding, which is performed in wooden mortars. It is afterwards winnowed with a kind of cane fanner on mats. In preparing this delicious grain for food, Mr. Clarke states that it is first thrown into boiling water in which it is assiduously stirred for a few minutes. The water is then poured off, and the natives add to it palm oil, butter, or milk; but the Europeans and negroes connected with the colony stew it with fowl, fish, or mutton, adding a small

- 18221 Corm mid. size, Stem 2 feet slender upds. Fl. about 9 secund bracteate Margin of limb of Per. plie., Caps. 18222 Corm large, Stem strong, Flowers above 12 bracteate secund, Capsule wrinkled [turbinate trisulcate of Perianth broad oblong obtuse, lower 3 narrow emarginate
- 18224 Leaves broad quite entire acute shorter than the many-flowered contracted panicle, Rachis deeply furrowed downy, Branches all simple, Flowers secund white glabrous
- 18225 Limb of Perianth longer than the subventricose tube, Leaves fleshy channeled
- 18226 Segments of Perianth oblong-linear, Scales ligulate, Flowers umbellate, Scape slender, Leaves linear channeled, Bulb small
- 18227 Leaves long linear smooth smelling like garlic when bruised, Peduncles unequal
- 18228 Beardless, Lvs ensif., Segments of Cor. nearly eq., Tube very long beardless [short trunc. cuspid.
- 18229 Beardless, Lvs ensif. shorter than terete-branched stem, Spathes with sear. marg. Outer segs rndsh inner very
- 18230 Beardless, Lvs longer than scape lin. ac., Out. segments of Per. rndsh-spat., on lg elws inner shorter than clws of
- 18231 Bearded, Lvs stiff brd shrtr than scape, Brcts distich foliac. imb., Pet. obov. emarg. [outer trunc., Seta term.
- 18232 Brd., Lvs nar. ens. glauces. lngth of my-flwd stem, Ovar. fusif. lnger than brcts, Sep. rhom. ent., Pet. spat. ent.
- 18233 Beardless. Leaves ensiform about equal to the many-flowered scaly scape, Scales leafy imbricate, Sepals ovate undulated, Petals lanceolate undulated acute
- 18234 Spathe leafy, Valves of spathe elongated, Peduncles slender, Flowers middle-sized.
- 18235 Leaves broad ensiform distich, Scape winged, Outer 3 segments of Perianth larger obovate deflexeo white marked with brown transverse veins at base [back, Spathe many-flwd, Filaments monadelphous, Ovaries glandularly pilose
- 18236 Scape compressed much shorter than the lvs, Lvs condupl. linear sheathing striated scabrous on the edges and
- 18237 Stem simple sulcate 1-lvd, Lf hollow, Spathe very long, Flws numerous stipitate, Pedunc. very long, Filam. connate, Ovaries hairy [beneath, Spikes terminal few-flwd, Rachis and Ovaries beset by glandular hairs
- 18238 Stem erect tetragonal, Lvs opposite, upper ones 4 in a whorl linear-lanceol. downy 1-nerved serrated purple

DIGYNIA.

- 18239 Glabrous filiform, Racemes in threes digitate, Spicules small in two rows pedicellate, Glumes ovate acute equal to the palea, Leaves linear with serrulated edges
- 18240 Panicle elongated close, Anthers oval
- 18241 Panicle whorled spreading, Beard long
- 18242 Panicle coarctate imbricated on all sides by spikelets
- 18243 Panicle erect rather spreading, Spikelets ovate of 3 or 4 ribbed florets, Outer Palea with 5 nerves
- 18244 Panicle erect large rather close, Spikelets ovate of 2 or 3 acute florets, Outer Palea with 5 nerves

- 18245 Spikelets longer than the glume, Flowers elliptic, Roots annual destitute of sterile shoots

and Miscellaneous Particulars.

piece of salt pork for the sake of flavour, and the dish thus prepared is stated to resemble kous-kous. The grain is also made into pudding with the usual condiments, and eaten either hot or cold with milk. The Scotch residents sometimes dress it as milk porridge. Mr. Clarke is of opinion that if the Fundi or Fundungi grain were raised for exportation to Europe it might prove a valuable addition to the list of light farinaceous articles of food in use among the delicate and convalescent. The plant much resembles *Digitaria*, and is called Fundi, Fundungi, or Hungry Rice.

2865. *Apëra* is a genus of rather pretty grasses. Being annual the seeds only require to be sown in the open ground.

18242. *Dactylis cæspitosa* is the famous Tussock grass of the Falkland Islands. It is also abundant in Terra del Fuego, Straits of Magellan, Cape Horn, &c. Commerson discovered it first in the Straits of Magellan in 1767. It will thrive in pure sand near the sea, where it has the benefit of an atmosphere loaded with moisture, of soil enriched by decaying seaweed, and of manure which is in the Falkland Islands composed of guano. It is a gregarious grass, extending in patches sometimes for nearly a mile, but is seldom seen beyond the influence of the sea air in the places of its natural growth. It will, however, thrive far from the sea. When cultivated, Governor Moody of the Falkland Islands says, he knows of no grass likely to yield so great an amount of nourishment as the Tussock grass when thoroughly established. He recommends it not to be grazed, but cut and reaped in bundles, for if cut it quickly shoots again; but it is much injured by grazing, for all animals, especially pigs, tear it up to get at the sweet nutty-flavoured roots. The Tussock has been used abundantly when made into hay, being preferred by cattle even to its green state. Plants of the Tussock grass six feet high were exhibited in the Crystal Palace in 1851, by Peter Lawson and Sons, raised from seed by them in the Orkney Islands.

History, Use, Propagation, Culture.

18246. *Hordeum coeleste* var. *trifurcātum*, the Nepal Barley. The paleae are occasionally different 3-lobed, the lateral lobes descending, the awns often present the rudiment of a second flower. Mr. Janson, F.L.S., grew the plant at Stoke Newington in 1837 and following years. It ripened earlier than our common grains; and produced, from the ripened seeds of the first crop, a second crop which also ripened within the same summer. Mr. Janson was the first who made the discovery that the plant belonged to *Hordeum* instead of *Triticum*, to which till then it was always supposed to belong. The *Hordeum coeleste* is the naked or wheat barley.

18246 Florets hermaphrodite, Seeds deccorticate

Spike straight cylind., Outer Palea trifurcate white and petaloid during florescence, sometimes the 2 lateral points are short and incomplete

2868. 252a. *Anthurium*. Spathe short, deflexed. Spadix nearly sessile, cylindrical, densely beset with flowers Sepals 4. Stamens 4, opposite the sepals. Filaments flattened. Anthers 2-celled. Berry 2-celled, 2-4-seeded. Stigma sessile, oblong.

2869. 280a. *Ophelia*. Corolla rotate, 4-5-parted, each segment furnished with 2 distinct or combined nectariferous naked pores, or glands, at base. Seeds angular, scabrous. Stamens 4-5. Capsule 1-celled, 2-valved, margin of valves placentiferous.

2870. 296a. *Campylobóthrys*. Calyx 5-cleft, segments with 2-3 glands. Corolla 4-parted, segments unequal. Stamens inserted in the throat of corolla, exserted. Ovary tetragonal, fleshy, 2-celled, with an epigynous, fleshy, lid-formed disk, many-seeded.

MONOGYNIA.

spikes, Rachis and bracteas woolly [Perianth downy exceeding the tube

18259 Lvs obovate entire glabrous

18260 Lvs cuneate silky dentately crenate

18261 Lvs filiform trifid, lateral segments bifid, middle one undivided, Flowers terminal

18262 Pilose, Lvs oblong-lanceolate obtuse triple-nerved, Flws axillary solitary pedunculate, Invol. spreading villous,
Perianth pilose bearded at top

18263 Lvs lanceolate villous soft beneath, Perianth bearded, Ovarium 2-seeded glabrous

18264 Lvs lanceolate-spatulate mucronate concave scabrous on both sides with crystalline dots

18265 Lvs elliptic-lanceolate mucronate flat nearly veinless, Branchlets silky, Perianths awned downy

18266 Glabrous, Lvs broad-ovate obtuse veiny narrowed at base, Perianths mutic downy, Style of Ovary not articu-
lated, Stigma dilated [down as well as brachoes

18267 Lvs filiform bisulcate beneath, adult ones glabrous, Peduncles axillary solitary cinereous from short spreading

18268 Bran. tom., Lvs filiform furrowed beneath, floral ones short, Flws solitary axil. Per. tom., Ped. pilose, Ov. glabr

18269 Bran. downy, Lvs falcate linear-lanc. elongated, Ovaries narrow at base glandular, Flws solitary, Ped. and Per.
tomentose, Anth. linear, Stipe of Ovary articulated

18270 Quite smooth, Lvs cuneate tapering into the short pet. flat 3-nerved semi-trifid, Lobes undivided or 2-3-cleft pun-
[the lvs, Rach. and Per. glabrous

18271 Bran. ang. silky, Lvs obl. spin. thid cuneate at base quite ent. silky and retic. ben. flat above, Rac. shorter than

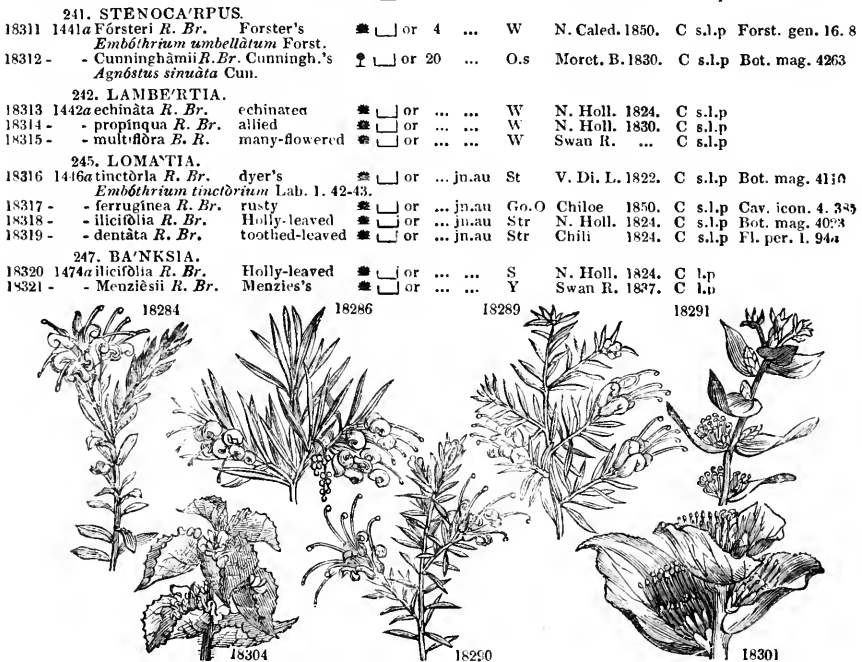

18272 Lvs bipinnatif. glab., Ract. flex. wngd, Lbs decur. trian. elon., Per. glab., Rac. dense-stalked my-flwd, Per. glab.

and Miscellaneous Particulars.

231. *Protéacæ*. In the Botanical Magazine there are some valuable remarks on the culture of *Protéacæ*, by Mr. John Smith, practised for many years at the Royal Botanic Gardens at Kew, which we here extract. "Within the last twenty or thirty years the cultivation of *Protéacæ* has declined, the species have gradually disappeared from most of the private collections around London, and but few nurserymen now take an interest in them. This change may be partly owing to the supposed difficulties of preserving them; for, under certain circumstances, the plants suddenly die, even when in a vigorous state of health. In the Royal Botanic Gardens at Kew, *Protéacæ* have maintained their

History, Use, Propagation, Culture,

place, more especially those that are natives of Australia; and as there are some at this time between forty and fifty years of age, and others of a large size half that age, it may be inferred that *Proteaceæ* are not so short-lived in a state of cultivation as they are generally supposed. Within our recollection it was the common practice to grow them in some kind of light soil, usually peat. The hygrometrical condition of such soil is easily affected by changes of the surrounding atmosphere, becoming quickly dry during hot weather, and apt to become sodden with moisture in winter, and the spongioses or rootlets of *Proteaceæ* are very sensitive to either extremes; the use of light soil, therefore,

and Miscellaneous Particulars.

in our opinion, accounts for the frequent sudden death of plants of this kind. We use good yellow loam, to which, for small plants, we add a little sharp sand. In shifting or repotting a plant we make it a rule to keep the ball of roots a little elevated above the surface of the new mould, to prevent any superabundance of water from lodging round the base of the stem. In the winter, care must be taken to give no more water than is absolutely required to keep the soil moderately moist; but, in summer, water may be freely given in the evening or morning. It is important that the plants should be so placed that the sun's rays do not strike the sides of the pot. The *Protœca* do not readily propa-

History, Use, Propagation, Culture,

gate from cuttings, but may be more readily increased by grafting on any of the more free-growing species. Imported seeds germinate freely." (*Bot. Mag.*, for 1850, no. 4528.)

Before the introduction and high state of cultivation of the splendid flowering plants now annually exhibited in the vicinity of London, it was customary to estimate the value of public and private collections by the number and rarity of the species, without regard to the circumstances of their producing fine flowers. Perhaps no tribe of plants were in higher repute than those belonging to *Protæcæ*, as is amply shown by the early volumes of the *Bot. Mag.*

 18346 Lvs pinnatifid longer than the toment. stem, Lobes lin. acute mucron. with revol. marg. dil. at base, Scales of Lobes manifestly 3-nerved, Stem humble simple, Floriferous Bran. prostrate [Invol. ov. toment.

18347 Erect-bran., Lvs pinnatif, Lbs mucr. pung. veined ben., Lacunæ filled with curled wool terminal solitary

- 18348 Caulescent, Leaves radical on long petioles lanceolate-acute, Peduncles long, Spathe reflexed
 18349 Almost steml., Lvs can.-lan. acum. nar. at base marg., Veins obsol., Petioles slender, Peduncles filif., Spadix slender few-flowered [cylindrical length of spathe
 18350 Stemless, Leaves ovate acute costate, Petioles about the length of the leaves, Thickened at top, Spadix short
 18351 Leaves oblong acuminate rounded at base on long petioles, Spathe ovate-oblong acuminate
 18352 Stemless, Leaves on long petioles lanceolate-acute mucronate glaucescent above green beneath, Spadix on a long peduncle erect cylindrical, Spathe lanceolate-oblong acuminate, Spathe slender
 18353 Nearly steml., Lvs pet. lin. lanc. mucr. rounded at base glab., Pedunc. elong., Spathe lin.-lan. acum. reflexed

18354 Lvs obl. pet. green above dotted beneath, Flowers rising from the short branchlets longer than the petioles

18355 Stem erect, Branches tetragonal downy at joints, Leaves linear-oblong radical ones tapering at base and ciliated, Stipules broad-ovate entire or bi-tridentate, Stamens enclosed

18356 Leaves 6-8 in whorl linear-lanceolate with reflexed marginal prickles, Stems rough from reflexed prickles, Peduncles axillary many-flowered cymose, Fruit bristly

18357 Covered with glandular dots and stellate down, Leaves lanceolate oblong membranous acuminate serrate, Cymes many-flowered, Stamens exserted

18358 Glabrous, Leaves verticillate oblong entire subcordate at base, Flowers terminal corymbose, Calyx 5-toothed, Corolla 5-lobed downy, Berry compressed blue. [term. pedunc. globose

18359 Clothed with white tom., Branches tetragonal, Leaves lanc. connate cren. acute scabrous green above, Heads
 18360 Bran. woolly, Lvs woolly ben. lower cord. obl. upper ov.-lanc. nearly entire, Rac. term., Panic. thyrsoid

and Miscellaneous Particulars.

2867. *Hemiclidia*. This genus is nearly allied to *Dryandra* and is cultivated like other Australian Proteaceous plants.

2868. *Aethurium* is separated from the old genus *Pöthos* by Schotte and Endlicher, and perhaps rightly so. The American species of *Pöthos* mostly belong to this genus. The type of the genus *Pöthos*, according to these botanists, is the *Pöthos scandens* of Linnaeus (Bot. reg. 1837). The species require the same treatment as that recommended for the stove species of *Pöthos* or *Arun.*

History, Use, Propagation, Culture,

2869. *Ophelia*. The species are pretty plants with the habit of *Chiròdia*. The seed should be sown in pots filled with peat soil. The seeds should not be covered by earth, but pressed by the finger. Moisture is requisite, being naturally bog plants.

2870. *Campylobòthrys*. This is a very pretty plant, thrives well in a mixture of peat and leaf-mould, and is readily increased by cuttings in the same kind of soil under a hand-glass.

18390. The leaves of *Ilex paraguensis* (the Paraguay Tea) are used in Paraguay, La Plata, Chili, Peru, and Quito, at all hours of the day, by putting a handful in a kind of teapot called *mate*, and from the spout of this the hot liquor

- 18361 Glabrous, Branches tetragonal, Leaves ovate subserrate, Racemes terminal tomentose verticillately spicate
 18362 Branches subtetragonal downy, Leaves ovate lanceolate petiolate glabrous above wrinkled covered with rusty or white tomentum beneath, Racemes terminal, Peduncles few-flowered [4 ovate acuminate
 18363 Stem tetragonal, Lvs stem-clasping ovate-oblong acuminate 5-nerved, Calyx 4-parted 4-winged, Cor. segments β Leaves nearly ovate, Segments of Corolla white purple at top.
 18364 Stem tetragonal, Leaves sessile elliptic-oblong 3-nerved, Calyx 5-parted with semicordate oval wings, Segments of Corolla 5 obovate, Stamens exserted [flowered, Corolla 4-parted
 18365 Stem tetragonal, Branches fastigiata, Leaves spatulate elliptic 3-nerved, lower ones large, Cymes fastigiata few-
 18366 Stem terete, Leaves lanceolate-acuminate 3-nerved scabrous ciliated, Cor. 5-cleft, Filaments monadelphous

- β All parts of plant more pilose than the species, Corollas larger and deeper scarlet
 γ Leaves very narrow [Calyxine segm. foliaceous
 18367 Glabrous, Bran. subtetragonal, Lvs ovate-acuminate entire, Stipules broad ciliated, Flws corymbose, Ped. leaty,
 18368 Lvs ovate lanc. ciliated, Stipules setac., Racms 3-5-flwd, Pedicels downy shldr, Flws drpg, Segs of Cal. acum.
 18369 Lvs 3 in a whorl or rameal ones opp. ov.-acute scabr., Segs of Cal. lanc.-lin. foliac., Cor. strig. with obov. segs
 18370 Lvs ovate, Stipules tridentate, Segments of Corolla acute spreading, Flower terminal corymbose
 18371 Lvs ternate ovate-acuminate slightly hairy above downy-villous beneath, Corymbs subtrichot., Cor. glabrous

- 18372 Lvs ovate-oblong glabrous, Stipules cuspidate connate at base, Corymb trichotomous, Peduncles long
 18373 Lvs long lanceolate glabrous, Corymbs ample dense, Tube of Corolla long slender, Stamens short
 18374 Lvs ovate-oblong reticulated glabrous, Stipules short broad acuminate, Cymes large dense compound
 18375 Lvs lanceolate acuminate glabrous, Corymbs trichotomous, Segments of Corolla and Calyx linear
 18376 Lvs oblong lanc. tapering at base, Stipules ovate, Panicle corymb. ample loose-flwd, Tube of Cor. very slender
 18377 Lvs oblong tapering to both ends glab., Corymbs almost sessile, Stipules subulate at top, Lobes of Cor. acute
 18378 Lvs large elliptic coriaceous shining, Stipules broad-ovate, Panicle terminal ample trichotomous, Tube of Corolla long

- 18379 Lvs obovate nearly sessile glabrous, Stipules connate, Flowers corymbose. [base with a spreading rather reflexed limb
 18380 Lvs nearly sessile lanceolate slightly glaucous, Calyxine segments 4-8 reflexed, Corolla hairy, tube swollen at
 18381 Branches terete, Lvs ovate, Peduncles 2-leaved 1-flowered, Corolla 4-cleft, Filaments villous, Style smooth [red, Racemes circinate secund
 18382 Humble, Branches terete downy, Leaves opposite a little hairy shining above, Petioles branches and peduncles [Racemes radical many-flwd, Nectaries cucullate
 18383 Hairy, Lvs ternate or biternate, Lifts on long petioles, adult ones glabrous cordate-ovate ciliate serrated,
 18384 Lvs ternate, Petals exceeding the calyx, Style filiform subcentral, Stigma a little lobed

- 18385 Smooth, Leaflets 3 linear-lanceolate revolute acute, Peduncles bi-trichotomous, Corolla reflexed
 18386 Branchlets downy, Leaflets 3 lanceolate, Panicles trichotomous, Petals obovate dotted downy
 18387 Smooth, Leaflets 3 obovate thickish, Peduncles axillary corymbose

DIGYNIA.

- 18388 Lvs serrated purple beneath and beautifully marbled with green and white above silky
 18389 Lvs ovate-elliptic acuminate quite entire covered by hairs which are fixed by their centres, Limb of Calyx truncate entire

TETRAGYNIA.

- 18390 Lvs obov.-oblong bluntish remotely serrated, Pedun. axillary cymose, Flws tetrandrous, Stigma 4-lobed, Fruit [8-furrowed 4-seed-d
 18391 Lvs ellip. mucron. spiny-tthd rounded at base, Spks usually twin-bran. downy, Flws pentand., Stigma entire

and Miscellaneous Particulars.

is imbued. Some mix sugar with it, others add a few drops of lemon juice; and by pouring fresh boiling water the infusion may be renewed. The Creoles are very fond of it, and never travel without a supply. They drink the infusion at every meal, and never eat until they have taken some of it. It must be drunk directly, for if suffered to remain long the liquor would become as black as ink. The pipe of the mate or teapot, called bombilla, is perforated with holes at the top to prevent swallowing the pulverised herb. The whole party is supplied by handing the mate and pipe from one to another, filling up the vessel with hot water as fast as it is drunk out. The repugnance of Europeans to drink after all sorts of people, in a country where diseases are so common, has occasioned the intro-

History, Use, Propagation, Culture,

duction of small glass tubes with which each person is sometimes provided. The leaves when green taste something like mallow leaves; they are roasted and dried, and almost pulverised, before they are packed. There are three kinds of it in its prepared state, although produced by the same plant, which go under the names of *Caa-cuys*, *Caa-mini*, and *Caa-quazu*; the first is the buds of the leaves when hardly expanded, the second is the leaves stripped of the ribs before roasting, and the third is roasted without any preparation. The people boast of the innumerable qualities that this herb possesses. It is certainly aperient and diuretic, but the other qualities attributed to it are rather doubtful. Like opium it produces some singular effects; it gives sleep to the restless and spirit to the torpid. The

Page 108. CLASS V.—PENTANDRIA. 5 STAMENS.

Order I. MONOGYNIA. 5 Stamens. 1 Style.

2871. 324a. *Plumbaginella*. Calyx 5-parted, 5-ribbed, 5-crested, beset with stipitate glands, small, but large in the fruit-bearing state; Segments 1—2-toothed. Corolla tubular, 5-lobed, shorter than the calyx, cuspidate. Style filiform. Stigmas 5, filiform. Utricle oblong, calyptiform at top.
2872. 325a. *Talovardia*. Calyx glumaceous, of 5-linear 3-nerved segments. Corolla salver-shaped, 5-parted. Stamens 5, hypogynous, free. Anthers linear, bifid at base. Style filiform. Stigmas 5. Utricle subcoriaceous, 5-valved below and calyptiform at top. Seeds fusiform, somewhat 5-ribbed.
2873. 330a. *Amsinckia*. Calyx 5-parted; Segments linear gibbous. Corolla funnel-shaped; Segments of limb roundish; Throat naked. Stamens enclosed. Nuts 4, gibbous outside, conniving at top, wrinkled outside.
2874. 340a. *Macrorhria*. Calyx 5-parted. Corolla 5-cleft, funnel-shaped; Lobes acute; Throat naked. Anthers linear-oblong, incumbent. Style a small pruinose dot. Ovaria 4, combined.
2875. 345a. *Arnëbia*. Calyx 5-parted. Corolla funnel-shaped; Tube long; Throat naked; Lobes rounded. Anthers enclosed. Style bifid. Stigmas 2 round. Nuts 4, truncate.
2876. 368a. *Geniostoma*. Calyx small, 5-lobed. Corolla funnel-shaped, 5-parted; Throat bearded. Stigma didymous. Capsule oblong; Valves 2, woody, with inflexed margins. Seeds many, angular, wingless.
2877. 370a. *Cyananthus*. Calyx campanulate, 5-cleft. Corolla funnel-shaped, with an ample tube and a 5-cleft limb. Stamens enclosed. Anthers connivent. Style simple. Stigma 5-cleft. Capsule oblong-conical, 5-celled, 5-valved; Valves carinately horned. Seeds many, oblong-linear.
2878. 371a. *Cântua*. Calyx tubular, 5-toothed, often cleft on both sides. Corolla funnel-shaped; Tube long; Lobes of limb obtuse, convolute in æstivation. Stamens inserted near the base of the tube. Cells of Capsule many-seeded. Seeds compressed, girded with a membranous wing.
2879. 377a. *Desfontainia*. Calyx 4—5-parted, nearly equal. Corolla tubular, 4—5-lobed; Lobes roundish, retuse. Stamens 4—5. Anthers erect, 2-celled. Berry 1-celled, many seeded, with 4—5 parietal placentas. Seeds angular.
2880. 377b. *Juanulloa*. Calyx large, inflated, 5-parted. Corolla tubular gibbous under the throat; Limb small, 5-lobed. Stamens villous at base. Berry ovate, 2-celled, many-seeded, girded by the large calyx. Seeds reniform.
2881. 378a. *Leiánthus*. Calyx pentagonal, 5-winged, 5-parted. Corolla 5-parted, funnel-shaped. Stamens unequal. Stigma capitate or umbrella-shaped; glandular disk none. Capsule 2-celled.
2882. 380a. *Whiteya*. Calyx campanulate, unequal 5-lobed. Corolla campanulate. Stamens straight. Berry 2-celled, enclosed in an inflated calyx, operculate.
2883. 381a. *Physochlaina*. Calyx ventricose. Corolla campanulate, regular. Stamens inclinate. Capsule hidden by the inflated calyx, operculate.
2884. 384a. *Jacquemontia*. Sepals 5. Corolla campanulate. Stigmas 2, ovate, flattened. Ovarium 2-celled. Cells biovulate.
2885. 384b. *Erogenium*. Sepals 5. Corolla tubular. Stamens exerted. Stigma capitate, 2-lobed. Ovarium 2-celled. Cells biovulate.
2886. 384c. *Batatas*. Sepals 5. Corolla campanulate. Stamens enclosed. Stigma capitate, 2-lobed. Ovarium 4-celled. Cells 1-seeded. Capsule 4-celled, seldom 3-celled.
2887. 385a. *Rivea*. Sepals 5. Corolla funnel-shaped. Stigma capitate, 2-lobed. Ovarium 4-celled, 4-ovulate. Capsule baccate.
2888. 385b. *Mna*. Calyx short, naked. Corolla salver-shaped; Tube short, contracted at the base; Limb ventricose. Stigma capitate. Stamens unequal, exerted. Ovarium 4-celled. Cells 1-seeded.
2889. 385c. *Calbôa*. Sepals 5, furnished with a subulate process on the back of each. Corolla with a curved cylindrical tube and a campanulate 5-lobed limb. Stamens declinate.
2890. 395d. *Cyathodes*. Calyx with many bracts. Corolla funnel-shaped, without any hairs or glands; Limb spreading. Stamens enclosed. Ovarium 5—10-celled. Drupe baccate.
2891. 401a. *Cystanthè*. Calyx foliaceous. Corolla closed, hood-formed, dehiscing transversely, with a truncate persistent base. Stamens hypogynous, persistent. Hypogynous scales 5.
2892. 411a. *Atyria*. Corolla salver-shaped; Throat naked. Stamens enclosed. Stigma obtuse, usually pencilled. Drupe 2, solitary by abortion.
2893. 413a. *Aganósma*. Corolla funnel-shaped. Hypogynous scales long, combined. Stigma conical, mucronate.
2894. 413b. *Mandevilla*. Calyx 5-leaved, furnished with a pectinated ring inside. Corolla funnel-shaped; Throat naked. Filaments enclosed. Anthers conniving into a cone around the stigma. Stigma conical, having 5 pits or hollows at the side, with a 5-lobed campanulate base, and a bicuspidate apex. Hypogynous ring 5-lobed, fleshy. Lobes truncate.
2895. 413c. *Roupëllia*. Calyx 5-parted, with a circle of about 12 glands at the base. Corolla funnel-shaped; Throat crowned by 10 combined ligule. Stamens enclosed. Style dilated at top into a 5-furrowed mass, to which the anthers adhere. Nectary wanting.
2896. 413d. *Dipladenia*. Calyx 5-parted; Lobes with 1-2 glands at the base of each. Corolla funnel-shaped, hispid about the origin of the stamens. Anthers sessile. Glands 2, alternating with the ovaria. Stigma globular, with a reflexed membrane at bottom.
2897. 413e. *Rhynchospermum*. Calyx 5-cleft, or 5-parted, with many glands inside the tube; glands truncate. Corolla 5-cleft; Tube cylindrical; Lobes oblique-obovate. Anthers hastate, adhering to the middle of the stigma. Nectary cup-shaped, 5-cleft. Stigma oblong. Follicles elongated, many-seeded.
2898. 414a. *Parsonsia*. Calyx 5-parted. Corolla funnel-shaped, 5-parted; Throat naked. Stamens exerted. Anthers sagittate, cohering by their middle to the dilated stigma. Hypogynous scales 5. Follicles 2, distinct or combined.

- 18392 Lvs ovate bluntnish serr. shining above, Pedicels aggreg. longer than petioles rising above axils of leaves
 18393 Lvs obl. coriac. marginate trun. spinose on adult plants 3-horned entire, Umbels axil. sessile, Berries 4-seeded
 18394 Lvs oval quite entire acute at both ends glabr., Umbels pedunculate shorter than the petioles, Fruit 4-seeded
 18395 Lvs oval-oblong acuminate spinous-toothed
 18396 Lvs elliptic-oblong mucronate remotely spiny-serrated, Flws sessile in axillary fascicles, Fruit 2-seeded
 18397 Lvs ovate acute ciliate serrated, Pedicels axillary solitary 1-flowered drooping
 18398 Lvs oval or ovate coriaceous smooth quite entire, Peduncles numerous cymose axillary

and Miscellaneous Particulars.

leaves are called in Paraguay *Yerva-mate*, and by the French *Herbe du Paraguay*. The *Flex Gongónha*, the leaves of which afford a kind of tea called *Gongonha* in Brazil, and which by some is considered identical with that of Paraguay, grows in the provinces of Minas Geraes and St. Paul; and when the export of tea from Paraguay was prohibited by Dr. Francia the dictator, the inhabitants of the other states, who were formerly supplied from Paraguay, were obliged to use that from Brazil, which was found to be much inferior. Persons ignorant of the specific distinctions between the two trees have attributed the inferiority of the Brazil kind merely to the different mode of preparing the leaves.

2899. 414b. *Lyónsia*. Calyx 5-cleft. Corolla funnel-shaped: Limb 5-parted: Segments equal-sided: Throat naked. Stamens exerted. Anthers sagittate, cohering by their middle to the stigma. Style dilated at apex. Stigma concave. Hypogynous scales connate. Capsule cylindrical, 2-celled; dissepiment free.
 2900. 418a. *Adénium*. Calyx 5-parted: Lobes lanceolate, glandular. Corolla downy with a cylindrical tube, widened upwards, and a 5-parted limb. Stamens short. Anthers linear-sagittate, cohering to the stigma, terminated by a hair-like seta. Hypogynous glands none. Ovaria 2, globose. Stigma capitate, bidentate.
 2901. 434a. *Lacépédia*. Calyx 5-parted. Petals short, unguiculate. Ovarium 3-celled. Cells 8-ovulate. Style trisulcate, at length tripartite. Berry tricuspidate, 6-9-seeded.
 2902. 431b. *Ullúcus*. Flowers membranous. Exterior Calyx open, joined, 2-parted: Inner one of 5-segments or sepals, equal, awned. Stamens enclosed, joined at base into a fleshy urceolus. Ovarium ovate. Style short, thickened towards the apex. Fruit ovoid, hid by the unchanged calyx.
 2903. 435a. *Labisia*. Calyx small, 5-toothed. Corolla coriaceous, 5-parted: Segments induplicate valvate in æstivation, reflexed and apiculated at apex. Style subulate. Drupe pea-formed, 1-seeded.
 2904. 435b. *Coryncépus*. Calyx of 5 concave sepals. Corolla of 5 rounded petals, alternating with as many petal-like scales, which are furnished with a gland inside at base. Stamens rising from the claws of the petals. Stigma obtuse. Drupe club-shaped, containing a single 1-seeded nut.
 2905. 437a. *Fagræa*. Calyx 5-parted. Corolla funnel-shaped: Limb 5-6-parted. Stamens 5-6, inserted in the mouth of the tube. Style filiform. Stigma orbicular. Berry 2-6-celled, many-seeded. Seeds angular.
 2906. 445a. *Habrothánnus*. Calyx campanulate, 5-toothed. Corolla clavately tubular: Limb 5-toothed. Stamens enclosed. Stigma capitate, obsoletely 2-lobed. Berry girded by the calyx, 2-celled. Seeds few, angular.
 2907. 445b. *Isochröma*. Calyx tubular, a little inflated, 5-toothed. Corolla tubular, 5-toothed. Stamens enclosed. Style clavately capitate, bifid. Ovarium 2-celled. Berry enclosed in the calyx. Seeds numerous, compressed, orbicular or reniform.
 2908. 446a. *Hebelädus*. Calyx 5-parted. Corolla funnel-shaped, 5-lobed, usually with teeth between the lobes. Stigma clavately capitate, a little 2-lobed. Berry globose, small. Seeds compressed, reniform.
 2909. 450a. *Chenéstes*. Calyx tubular, unequally 5-toothed, at length cleft laterally. Corolla tubular, 5-lobed, with floccose edges and with small teeth between the lobes. Stamens nearly enclosed. Stigma clavate, 2-lobed. Berry 2-celled, obovate, enclosed in the cleft calyx. Seeds many, wrinkled, reniform.
 2910. 460a. *Rogiëra*. This genus differs principally from *Roudelëtia* by the absence of the prominent ring in the throat of the corolla.
 2911. 460b. *Péntas*. Calyx 5-cleft, sometimes with 1 or 2 teeth in the sinuses. Corolla with an elongated tube, and a campanulate throat, which is bearded inside: Limb spreading, 5-cleft. Stamens short. Epigynous disk thick. Style filiform, 2-lobed. Capsule nearly globose, many-seeded.
 2912. 460c. *Hindsia*. Calyx turbinate: Limb 4-5-cleft: Segments unequal, foliaceous at top. Corolla funnel-shaped, with an elongated tube, and a 5-cleft-limb. Anthers sessile at top of tube. Ovarium 2-celled. Branches of Style linear, papillose. Capsule corticeæ, 2-valved.
 2913. 460d. *Higginsia*. Limb of calyx 4-5-toothed. Corolla salver-shaped, 4-5-parted: Throat naked. Stamens inserted in the middle of the tube, enclosed. Stigmas 2. Berry oblong, subtrigonal, many-seeded.
 2914. 460e. *Lindénia*. Calyx turbinate, 5-ribbed: Limb 5-cleft. Corolla salver-shaped, with a very long slender tube, and a 5-parted spreading limb. Anthers sessile, linear. Style bifid at top. Capsule 2-celled. Seeds numerous, angular.
 2915. 463a. *Adenóphora*. Calyx 5-cleft. Corolla campanulate, 5-lobed. Stamens free. Nectary girding the base of the style. Style pilose. Stigmas 3. Capsule 3-celled.
 2916. 463b. *Platycödon*. Calyx and Corolla 5-lobed. Stamens and Stigmas 5. Capsule 5-celled.
 2917. 463c. *Glossocömia*. Calyx 5-lobed, foliaceous, reflexed. Corolla campanulate, 5-lobed. Stigmas 3, ovate, Capsule 3-celled.
 2918. 464a. *Isódröma*. Calyx 5-parted, nearly equal. Corolla salver-shaped or funnel-shaped, nearly equal: Segments nearly equal. Stamens combined into a tube. Anthers cohering, beardless, two lower ones mucronate. Stigma capitate. Capsule 2-celled, many-seeded.
 2919. 464b. *Centropögon*. Calyx 5-parted, with a globose tube. Corolla with an incurved tube, and a 5-cleft limb: upper segments larger, falcate; lower ones spreading. Two lower Anthers generally ending in an ovate, triangular, cartilaginous, solitary gland. Annulus fleshy, between the limb and the calyx. Berry globose, 2-celled.
 2920. 477a. *Weigëla*. Calyx pentagonal, adnate to the ovarium, 5-lobed: Lobes lanceolate. Corolla funnel-shaped: Throat wide: Lobes ovate, roundish. Stamens adnate to the corolla. Style a little exerted. Stigma pettately capitate. Ovarium 2-celled, many-seeded.
 2921. 485a. *Rhodóstoma*. Calyx tricarreate, 5-cleft: Segments recurved. Corolla funnel-shaped: Tube long: Limb 5-lobed; Segments lanceolate, mucronate by reflexed plicæ. Stamens short, inserted at top of tube. Ovarium 2-celled. Ovula solitary in the cells. Style simple. Stigmas 2, linear.
 2922. 486a. *Scherbörnia*. Lobes of calyx foliaceous, cuneate. Corolla fleshy, funnel-shaped: Tube narrow at base, hairy inside at base. Stamens short, inserted above the middle of the tube. Ovarium crowned by a large disk or hemispherical gland. Stigma clavate.
 2923. 486b. *Hénsia*. Lobes of calyx foliaceous, oblong. Corolla salver-shaped, hairy, with 5 undulated lobes: Throat hairy. Anthers sessile. Style filiform. Stigmas 2, linear. Fruit globose, 2-celled, many-seeded. Seeds wingless, nestling on the superficies of the placentas.
 2924. 507a. *Cátha*. Calyx flat, 5-lobed. Petals 5. Capsule 3-4-sided, 3-4-celled. Cells 1-seeded. Stigma 3-parted.
 2925. 515a. *Söllya*. Calyx small, 5-parted, the hind segment the largest. Petals 5, ovate, nearly equal, campanulately spreading. Stamens erect. Anthers cohering at top. Ovarium terete, 2-celled, many-ovulate. Style short, terete, continuous with the ovarium. Stigma obsoletely 2-lobed. Berry fusiform, dry, many-seeded.

2926. 515b. *Pronāya*. Calyx 5-leaved: Leaves acuminate, equal. Petals 5, obovate, equal, campanulately conniving, subrevolute at apex. Stamens erect. Ovarium terete, 2-celled, many-ovulate. Style short, terete, articulated with the ovarium. Stigma acute. Berry cylindrical, many-seeded.
2927. 515c. *Maridanthus*. Calyx small, 5-parted, equal. Petals 5, equal, spatulate, with conniving claws. Stamens ascending. Ovarium declinate, oblong, compressed, 2-celled. Style filiform, subfalcate, continuous with the ovarium. Stigma capitate.
2928. 520a. *Lemōnia*. Sepals 5. Corolla 5-cleft, unequal: Tube straight. Stamens 5, inserted in the tube; 2 fertile ones sessile; three sterile ones horned, longer than the tube, covered with glands. Disk cup-shaped, notched. Carpels 5, 1-seeded.
2929. 520b. *Pentarhaphia*. Calyx of 5 narrow stiff lobes, not unlike 5 brown needles. Corolla tubular, 5-cleft. Style projecting.
2930. 520c. *Metrodōra*. Calyx 5-cleft. Petals 5. Ovarium buried in the disk and confused with its substance. Fruit tubercled 5-lobed, 5-celled. Cells 1—2-seeded.
2931. 520d. *Almiēda*. Calyx 5-toothed. Petals 5. Ovaries 5, connected at base. Fruit only of 1 or 2 1-seeded carpels.
2932. 520e. *Erythrochiton*. Calyx tubular, 5-cleft, connected into two nearly equal lips. Corolla 5-cleft. Fruit of 5 1-seeded carpels.
2933. 524a. *Corethrostylis*. Calyx petaloid, 5-parted. Corolla none. Style long, hispid from fascicles of bent-back hairs, broom-formed. Capsule 3-celled, 3-valved. Cells 1-seeded.
2934. 524b. *Guichenōtia*. Calyx 5-parted. Petals 5, gland-formed. Ovary 5-celled. Cells containing 5 ovula.
2935. 541a. *Schueiggēria*. Sepals 5, unequal, exterior ones hastately, biangular at base. Lower petal large, cordate, drawn out into a spur at base. Stamens free. Appendages of anterior anthers subulate.
2936. 542a. *Cryptandra*. Calyx campanulate, 5-cleft. Petals small, cucullate, sessile. Stamens enclosed. Anthers 2-celled. Disk wanting. Fruit containing 3 seeds.

Order 2. DIGYNIA. 5 Stamens. 2 Styles.

2937. 579a. *Schubertia* Calyx 5-parted. Corolla funnel-shaped. Corona simple, of 5 retuse lobes. Stigma turbinate. Gynostegium short.
2938. 560a. *Trichosāchme*. Calyx 5-cleft. Corolla with long feathery tails, which are perhaps analogous to the tails of *Strophanthus*.

History, Use, Propagation, Culture,

2871. *Plumbaginella* being an annual, the seeds only require to be sown in the open ground, in a warm sheltered situation, in a mellow soil.

2872. *Valoradia* is a creeping-rooted pretty plant, and answers well to be planted out into beds in summer. It grows on the ruined ramparts of Shanghai in China, also out of the stone-work on the city wall.

2939. 592a. *Dictyanthus*. Calyx of 5 broad-lanceolate lobes. Corolla urceolate below: Limb reflexed, with 5 long horn-like segments, having the margins recurved. Corona simple, of 5 large spreading lobes.
2940. 592b. *Cyrtoceras*. Calyx 5-parted. Corolla rotate, tomentose at base inside: Segments linear, acuminate. Corona smooth. Leaflets acuminate at both ends. Anthers oblong, obtuse, terminated by a bidentate membrane.
2941. 592c. *Raphistemma*. Calyx 5-cleft. Corolla campanulate. Leaflets of simple Corona elongated, compressed. Follicles ventricose. Anthers each terminated by a membrane.
2942. 592d. *Stephandis*. Calyx of 5 sepals. Corona simple, 5-leaved. Anthers terminated by a membrane. Follicles horizontal. Seeds pulpy.
2943. 592e. *Oxyptalum*. Calyx campanulate: Tube ventricose. Gynostegium exerted. Leaflets of simple corona fleshy, obtuse. Anthers each terminated by a membrane.
2944. 601a. *Wigandia*. Calyx of 5 sepals. Corolla funnel-shaped. Stamens exerted. Stigmas capitate. Capsule 2-celled. Placentas 4, at first joined by twos, afterwards free.
2945. 623a. *Xanthodia*. Margin of calyx 5-lobed. Petals stipitate, oval, cuspidate, replicate at apex. Style filiform, rising from the base of the stylopodium. Fruit compressed. Mericarps contracted at the commissure, with 7-9 filiform ribs, the 2 lateral ribs marginating.
2946. 623b. *Astrótricha*. Calyx 5-toothed. Petals 5, oval, clothed with stellate down outside. Styles thickened at base. Mericarps contracted at the commissure, with 3 primary dorsal ribs, and 2 acute nearly obsolete marginal ones, and 4 secondary ones with vittæ in the commissure, which are covered by a spongy pellicle, but none in the furrows.
2947. 668a. *Närthex*. Margin of calyx obsolete. Stylopodium urceolate. Styles filiform, at length reflexed. Fruit compressed from the back, and girded by a dilated margin. Mericarps with 5 primary ribs, the 3 intermediate ones filiform, the 2 lateral ones close to the margin, and nearly obsolete. Vittæ in the dorsal furrow usually solitary.

Order 5. PENTAGYNIA. 5 Stamens. 5 Syles.

2948. 669a. *Grammáthex*. Calyx 5-cleft. Corolla 6-lobed. Stamens 5-6, enclosed. Scales none. Styles and carpels 5.
2949. 706a. *Acantholimon*. Calyx funnel-shaped: Limb scarious, multiplicate, 5-nerved, shortly 5-lobed. Corolla gamopetalous only at base, forming a ring, the rest free with long claws, the edges of the claws so close as to form a kind of tube. Ovarium linear, tapering into the 5 styles. Stigmas capitate. Utricle membranous, acutely 5-sided, opening by a conical lid, and also splitting irregularly into 5 valves at base.

MONOGYNIA.

- 18399 Annual, Stem terete, Leaves rhomboid, Petiole winged stem-clasping and auricled at the base, Spikes few-flowered, Bracts and calyx glandular
- 18400 Stem furrowed erect branched, Lower Leaves oblong a little denticulated with stem-clasping petiole, the rest [sessile cordately auricled, Spikes axillary and terminal
- 18401 Branches flexuous angular rather bristly, Leaves obovate obtuse ciliated, Flowers in dense bracteate 3-7-flowered clusters, Lobes of Corolla orbicardate
- 18402 Flowers beautiful dark purple, Plant more diffuse
- 18403 Leaves obovate rather strigose, Calyx covered with adpressed bristles, Corolla flat, Lobes somewhat emarginate
- 18404 Calyx beset with unclinate bristles, Limb of Corolla concave shorter than the tube
- 18405 Stem decumbent at base bristly, Segments of Calyx linear, Limb of Corolla with emarginate lobes
- 18406 Throat of Corolla glabrous naked, Limb twice shorter than the tube
- 18407 Throat of Corolla bearded, Limb 3 times shorter than the tube
- 18408 Throat of Corolla glabrous naked, Limb rather shorter than the tube
- 18409 Throat of Corolla glabrous half-closed by plicæ, Limb length of tube
- [Flowers racemose panicled
- 18410 Stems branched, Leaves lanceolate, radical ones on long petioles, cauline ones sessile, upper ones bract-forming,
- 18411 Stems much branched hispid, Leaves linear blunty hispid, Racemes few-flowered crowded
- 18412 Stems diffuse, Lvs linear-oblong obtuse hispid, Flws sess. aggregate 4 times shorter than bracts, Nuts spherical

and Miscellaneous Particulars.

2873. *Amsínkia* is a genus of pretty annuals. The seed only requires to be sown in the open ground in April, in a dry, warm, sheltered situation.

History, Use, Propagation, Culture,

2874. *Macromeria* is a fine half-hardy perennial, and grows best in an equal mixture of sandy loam and fibry peat. It ripens seed if kept in a greenhouse, by which it is propagated. Its foliage is too coarse to make it a valuable ornamental plant; and its flowers, which always droop, fall off soon after opening, so that it never looks so well as its showy appearance on paper or in the herbarium would lead us to expect.

- 18413 Stems decumbent, Leaves linear obtuse hispid undulated longer than the stems, Racemes terminal few-flowered
 18414 Strigose, Leaves linear-oblong coarsely toothed, cauline ones undulately curled, Spikes loose, Calyx inflated pendulous, Nuts triquetrous [short in 1 series]
- 18415 Pilose branched, Lvs oblong sessile, Racemes elongated, Flws nearly sessile, Nuts small marginate, Prickles
 18416 Pil., Lvs obl. upper ones cordately stem-clasping, Raes bractless, Nuts marg., Prickles in 1 ser., Tube of Cor. long
 18417 Clothed with whitish down, Rad. Lvs lanc. on long pet., caul. ones lin. lanc. sess., Pan. loose, Nuts mur. in disk
 18418 Downy, Cauline Leaves ovate cuneate at base, radical ones cordate-ovate on long petioles, Racemes bractless, Nuts marginate glouchiate
- 18419 Stems hispid, Leaves lanceolate mucronate scabrous, Style and Stamens much exserted
- 18420 Stems erect much branched, Leaves linear-lanceolate obtuse downy revolute and white beneath
- 18421 Erect pilose, Leaves sessile tomentose bluish, radical ones oblong-obovate, cauline ones spatulate, Spikes terminal, Bracts foliaceous
- 18422 Shrubby, nearly glab., Lvs terete fascicled, Pedun. elong., Cal. hairy, Plicæ of Cor. pilose, Nuts many-celled [lobe emarginate, the other tridentate, Ovary 5-lobed]
- 18423 Clothed with viscid down, Stems filiform, Petioles ciliate, Leaves ovate-obtuse, Calyx campanulate 2-lobed, one
- 18421 Caulescent procumbent hairy, Lvs scattered obovate-lanceolate, Pedun. terminal elon., Umbel many-flowered
- 18425 Robust, Leaves erect. Scape few-flowered, Flowers large, Corolla spreading with bidentate segments [mibifid]
 18426 Lvs on long pet. subcord. obt. repand glabr., Sep. 5-7-flwd, Peds longer than invol., Lbs of Cor. rounded se.
 18427 Lvs obovate oblong obtuse doubly-tthd, Scape elong., Flws umbellate, Lfts of Invol. lanc., Segs of Cor. emarg.
 18428 Lvs broad-lanc. mealy ben. serr., Scape mealy, Invol. many-lyd many-flwd, Calyx mealy, Cor. lvs subcrenated
 18429 Lvs obov.-lanc. downy wrinkled uneq. dentic., Flws densely umb., Cor. Limb flat, Segs 2-lob., Cal. teeth gland. cil.
 18430 Lvs obl.-lanc. dentic. mealy, Scape elon., Flws densely capit., Lbs of invol. lanc., Cal. scurfy, Seg. of Cor. emar.
 18431 Lvs on long petioles ovate-oblong obtuse nearly entire glabrous, Scape tall 2-3-flowered, Leaflets of Invol. oval, Lobes of Corolla orbiculate, Root bulbous
- 18432 Lvs orbicular, Scape 1-flowered, Pedicels clothed with short glandular down, Corolla cleft to the third of its length, Flowers whitish
- 18433 Root small round, Lvs deeply cordate roundish entire spotted, Segments cordate oblong, Calycine segments [subulate]
 18434 Root vry lrg with severl crwns, Lvs cord.-ovl broad subang. uneq. cren. white-veind and zoned, Cor. tube glob.
 18435 Lvs heart-shaped with an open sinus very slightly sinuate-toothed zoned greyish-green purple beneath, Tube of Cor. ventricose, Mouth pentagonal, Segments of Cor. obovate
- 18436 Glabr., Lvs a little tthd entire dotted, radical ones oval, rameal ones lin.-spatul, Flws racem., Bracts subulate
 18437 Ascending, Lvs ovate a little serrated, Raes naked many-flwd, Flws nutant, Cor. campanul., Stamens exserted
 18438 Erect, Lvs ovate-lanceolate, Peduncles axillary solitary 1-flowered, Segments of Calyx subulate
 18439 Erect, Lvs opposite or twin lanceolate a little serrated glabrous, Racemes terminal, Lobes of Corolla spatulate coarsely denticulated
- 18440 Trailing, Lvs alternate ovate. Near to *Anagallis tenella*
- 18441 Glabrous, Lvs ovate-lanceolate acuminate sessile 3-5-nerved, Peduncles 1-flowered longer than the leaves
- 18442 Glabrous much branched, Leaves linear or oblong-ovate acute, Peduncles solitary 1-flowered, Segments of Calyx oblong acute, Segments of Corolla obovate
- 18443 Dark green smooth, Lvs 3-5-nerved ovate-lanceolate, Calyx 5-parted, Corolla large with an expanded 5-parted limb, Stamens exserted
- 18444 Lvs elliptic-lanceolate, Racemes axillary, Pedicels bibracteate, Lobes of Calyx subulate, Lobes of Corolla hairy at top [panicled drooping before expansion]
- 18445 Stem rather flexuous downy spotted, Leaves oblong-lanceolate glabrous above scabrous beneath, Corymbs
 18446 Lvs and petioles fringed with white hairs on the midrib and margins lanceolate acuminate, Tube of Corolla covered with glandular hairs

and Miscellaneous Particulars.

2875. *Arnëbia cchioides* has much the habit of *Lithospermum canescens*, and, like it, is an evergreen herb, well fitted for decorating rockwork. It can only be increased by seed.

2876. *Geniostoma*. This genus is nearly related to *Logania*. It consists of greenhouse shrubs, and they should be treated in the same manner as recommended for the species of *Logania*, p. 130.

History, Use, Propagation, Culture,

2877. *Cyananthus* is a native of the higher ranges of the Himalayas. It proves to be a delicate little herbaceous plant, with the habit of some species of *Campánula*. It requires plenty of moisture during the flowering season, but afterwards should be kept rather dry and allowed to rest.

2878. *Cantua* is a genus of beautiful shrubs. The Peruvian Indians, according to Ruiz and Pavon, adorn their chambers on feast days with the *C. buxifolia*. The ancient Indians called it the magic tree. The species have proved hardy greenhouse plants, and thrive if potted in a mixture of light loam and peat containing a portion of sand. They possibly will grow freely in the open air during summer, if planted in a warm sheltered situation; some of them have succeeded in the open air in Devonshire. They may be treated in the same way as *Fuchsias*. Cuttings root freely.

2879. *Desfontainea*. This is one of the plants in whose external features there is nothing to lead to a knowledge of their affinities. It has been placed in *Gentianeæ*, *Solanaceæ*, and *Theophrastææ* by turns. It is an evergreen and a native of America, with a very bitter taste. The leaves are opposite petiolate spiny-toothed, very similar to those of

- 18447 Stems diffuse, Lvs downy, Leaflets cordate, Calyx hairy with blunt segments, Segments of Corolla obtuse
 18448 Stem pilose erect with many pairs of ovate blunt pilose leaflets, Flowers a little panicle drooping, Segments of Corolla round crenulated
- 18449 Pilose, Lvs rhomboid cinereous beneath lobed at top, Segments of Corolla bearded at top
- 18450 Lvs subscaesced obovate entire or toothed, Calyx tubular downy, Limb spreading, Lobes obcordate, Stamens slightly exserted
 18451 Lvs elliptic or obovate downy entire or toothed, Corymbs branched, Flowers erect, Calyx bilabiate, Stamens much exserted
 18452 Branches downy, Leaves fringed with soft hairs tomentose beneath cuneate-oblong mucronate, Flower large showy
 18453 Pilose, Lvs pinnate or pinnatifid, Leaflets entire, Racemes loose, Corolla fringed
- 18454 Downy, Lvs entire or angular, Calyx cylindrical 5-ribbed cleft lengthwise, Limb of Corolla spreading, the Segments ending in long points
 18455 Smoothish, Leaves quite entire, Calyx cylindrical inflated entire or unequally 4-5-lobed, Limb of Corolla spreading acuminate
- 18456 Calycine segments lingulate and are as well as the leaves glabrous, Leaves opposite spiny-toothed like those of holly, Flower terminal solitary
 18457 Parasitical pendent, Leaves oblong acuminate thickish alternate, Racemes dichotomous pendulous
- [5-inches, Stamens enclosed
- 18458 Leaves petiolate oval-lanceolate glabrous, Flowers solitary pendulous, Calyx pentagonal, Corolla very long
 18459 Lvs petiolate ellip.-lanc., Pan. term. trichot., Flws pendulous, Stamens exserted, Branches bluntly tetragonal
 18460 Lvs connivent at the base, lower ones cordate, upper ones ovate, Peduncles dichotomous panicle, Flowers pendulous, Stem fistular acutely tetragonal
- 18461 Branches terete, Lvs decussate lanceolate acuminate 3-5-nerved, Panicle much branched loose, Flws pendulous
 18462 Downy, branches tetragonal, Leaves lanceolate or oblong-lanceolate, Flowers axillary and terminal pedicellate
 18463 Strong, Leaves obovate-lanceolate acuminate, Petioles connate, Umbels many-flowered involucrate axillary, Calyx wingless, Stamens exserted
 18464 Strong robust downy canescent, Stem dichotomous, Leaves twin ovate-elliptic repandly lobed villous beneath, Flowers solitary drooping
- [to corolla
- 18465 Glandularly pubescent, Lvs ovate, Panicle terminal leafy, Flws nutant, Corolla funnel-shaped, Stamens equal
 18466 Leaves ovate repand or quite entire, Flowers pedicellate terminal capitate, Stamens enclosed, Fruit-bearing Calyx inflated angular glabrous
- [Limb obcordate
- 18467 Glandular and clammy hairy, Leaves oblong-lanceolate undulated, Tube of Corolla cylindrical, Segments of
- 18468 Leaves palmately 5-lobed, middle lobe the longest, 2 lower lobes bipartite, Peduncles axillary 1-flowered
 18469 Downy, Lvs 3-5-lobed, middle lobe acum. lateral ones ang. hairy on the veins beneath, Ped. 1-2-flwd, Sep. uneq.
 18470 Stems filif. branched, Lvs glabr. sess. many-parted, Seg. filif., Ped. 1-flwd axillary, Sep. mucronate on the back
 18471 Scabr., Lvs 3-lobed, lateral lobes rounded middle narrower and longer, Ped. 3-flwd, Cal. covered with blk hairs

ana Miscellaneous Particulars.

holly. The flowers are large, terminal, and solitary; they are scarlet with a yellow limb. The berries are white. It is worth cultivating for the elegance of its foliage and the brilliancy of its flowers. It should be grown in a mixture of peat, loam, and sand. Cuttings will probably root in the ordinary way

2880. *Juanulloa* is an epiphytal plant, and flourishes freely if planted in vegetable earth and kept in a moist warm stove. It recommends itself both by its handsome foliage and its large richly coloured calyx.

2881. *Leianthus* is a genus founded on the *Lisianthus longifolius*. The species are interesting plants, and will grow in a shady part of a greenhouse or stove, where they will flower very profusely.

2882. *Whiteya* is a strong coarse-growing plant, with something of the habit of *Belladonna*, and smelling like tobacco when bruised. It is of the most easy culture, and will grow in any soil, but requires a dry situation. It is increased either by division or seed.

2883. *Physochlatria* is a genus of desirable hardy plants, being early flowerers, and elegant when in blossom. They

History, Use, Propagation, Cul. urc,

will grow in any soil, and are increased by division. These plants are well adapted for decorating flower-borders early in spring.

18486. *Pharbitis cathartica.* It is stated that M. Bauduit, a rich proprietor of St. Domingo (Fl. méd. des Antilles), discovered in this milky plant a resinous juice, which coagulates, and proves to be profoundly purgative. He formed of it a much approved syrup, which in the French colonies bears his name. The culture and propagation are the same as those for *Ipomœa*.

2885. *Erogonium purga.* The root of this plant is the true jalap of commerce. Its cultivation and propagation are the same as for the tuberous-rooted species of *Ipomœa*.

18472 Glabr., Lvs quinate, Lifts petiol. ellip. acum., Pedun. twisted 1-3-flwd, Pedic. clavate, Lbs of Cor. emarg. plicat
 18473 Glabr., Lvs cordate acute entire, Peduncles 1-2-flwd, Sepals ovate acute unequal, Cor. with elongated tube
 18474 Glabrous, Leaves cordate acum. entire and 3-lobed, Peduncles stiff 3-4-flowered, Sepals roundish concave
 18475 Downy, Leaves cordate 3-5-lobed, middle lobe ovate, Peduncles long hairy [lower part of the stem
 18476 Glabrous, Stems suffruticose weak, Leaves linear-lanceolate a little wavy, Peduncles solitary 1-flowered from the
 18477 Pilose, Lvs oblong-lanceolate entire acute, Peduncles 1-flwd bibracteate thickened above, Sepals very unequal
 18478 Stems elon. climb. or trail., Lvs ovate-obl. ent. ciliated, Petioles villous, Pedun. axil. 1-flwd, Sep. narrow ciliated
 18479 Glabrous, Leaves oblong-lanceolate obtuse mucronate thickish, Peduncles 1-flowered bibracteate in the middle,
 Sepals elliptic

18480 Lvs roundish cordate subrepand, the veins elevated and woolly beneath, Flws solitary, Stem usually tuberculate
 18481 Stem and Lvs hairy, Radical Lvs cordate repand toothed, Cauline Lvs palmately pedate cut, Peduncles 2-flwd
 18482 Lvs cord. acum., low. ones ent., up. ones 3-lobed, Ped. 1-flwd warted, Cap. hry 3-celled 3-seeded, Seg. of Cal. obl.
 18483 Procumbent, Branches erect downy, Lvs lin. entire clothed with silky white down, Pedun. solit. 1-flwd bibract.

18484 Climbing, Lvs cordate acum. entire or 3-lobed pilose, Cymes many-flwd capitate, Sepals and Bracts lin. pilose
 18485 Stem fruticose warted, Leaves roundish cordate acuminate villous, Peduncles many-flowered, Calyx villous
 18486 Climbing glabrous, Leaves cordate or cordately 3-lobed, Peduncles 1-3-flowered, Bracts lanceolate
 β Flower rose-coloured

18487 Stem hairy, Lvs cordate entire angular or 3-lobed acuminate pilose, Pedun. solitary 1-flowered, Sep. hispid linear
 18488 Climbing, Lvs hastate tripartite glabrous glaucescent beneath, Peduncles 3-4-flowered, Sepals obtuse glabrous,
 Limb of Corolla obsoletely 10-lobed

18489 Downy scabrous, Lvs oblong cordate on long petioles, Cymes pedunculate dense-flowered, Sepals oblong obtuse

18490 Lvs cordate acum. entire glabr., Pedun. 2-3-flowered, Tube of Cor. long, Limb spreading, Lobes emarginate

18491 Lvs ovate cordate angular or somewhat 5-lobed, Rac. compound contracted, Sepals acum., Root fusiform red

18492 Lvs ovate clothed with fine brown silky hairs underneath, Flowers cymosely paniced
 18493 Tomentose cinereous, Lvs ovate-elliptic obtuse clothed with velvety down especially beneath, Cyme many-flwd
 18494 Lvs ovate-oblong smooth above and clothed with silky down beneath, Peduncles corymbosely many-flowered
 18495 Tomentose, Lvs large cord. glab. above clothed with silky down and nerved beneath, Flws umbellately capitate
 18496 Hairy, Lvs cord. acum. glabr. above and clothed with adpressed strigæ beneath, Ped. corymbosely many-flwd

18497 Lvs cordate roundish, Peduncles 1-flowered rarely 2-4 flowered, Sepals roundish, Corolla inflato-cylindrical
 18498 Lvs orbicularly cordate, Peduncles elongated spicately paniced, Sepals ovate-lanceolate obtuse, Corolla narrow
 tubular

18499 Lvs 3-lobed, Racemes forked, Flowers secund erect

18500 Lvs on long petioles very variable in form some cord. some sagittate others hastate, lower ones deeply angular,
 [Flowers umbellate

18501 Lvs pinnatifid lyrate, Segs short obtuse 2-3-lobed and entire, upper ones 3-lobed, Peduncles 1-flwd, Sinuses of
 [Calyx reflexed, Appendages crenulated convolute

18502 Pubescent, Lvs oblong hastate, Lobes angular, Peduncles angular 1-flwd, Bracts ovate ciliated with reflexed
 [margins

18503 Lifts 3 pair, Upper pair narrow ovate acum. oblique at base, Lower pair stipule-formed reniform acum. down-
 [wards, Stamens not exerted

18504 Lifts obovate ciliated at base, Segments of Calyx lanceolate ciliated, Stamens much exerted

18505 Plant hairy and viscid all over, Lvs spiny dark green cut into sharp segments, Flws among bracts and calyx
 lobes in close spiny heads

and Miscellaneous Particulars.

2885. *Batatas*. Most of the tuberous-rooted species under the genus *Ipomoea* belong to this genus: as, *I. paniculata*,
tuberösa, *Jalapa*, *bonariensis*, &c.

2887. *Rivera*. To this genus belongs the *Ipomoea*'s *ödna-nöz*, No. 2227. The species are showy. They may be trained
 upon rafters or trellis-work in a stove. A light soil suits them best, and cuttings root freely in the ordinary way.

2888. *Mina*. This plant is cultivated by the Mexicans for purposes of decoration. The flowers are racemose, erect,
 and arranged in the scorpioid manner of Borage; at first they are crimson, but change through orange to pale yellow.
 It is a half-hardy annual, and only requires the treatment of purple convolvulus.

2889. *Calbda* comes very close to *Mina*, and requires the treatment of the half-hardy woody species of *Ipomoea*.

History, Use, Propagation, Culture,

2890. *Cyathodes Oxýcedrus* is a small shrub with somewhat of the appearance of Red Cedar, and thrives with the same treatment as *Epacris*.
 2891. *Cystãthe* is a pretty little shrub with habit of *Sprengeia*, and its culture is the same.
 2892. *Alyxia* They are shrubs of easy culture, and are rather pretty when in blossom. They strike root readily in sand under a hand-glass.
 2893. *Aganosma*. The species of this genus are very pretty, and the flowers are very fragrant and in large cymes. The treatment recommended for *Echites* will suit them.

18506 Hairy, Lvs bipinnatifid with linear acute lobes, Flowers in close heads greyish blue
 18507 Lvs soft pinnatifid with terete linear acute lobes, Flowers in close heads white

18508 White from dense wool, Lvs pinnatifid linear pungent, Heads on short peduncles, Bracts short pungent, Calyx [cylindrical, Stamens exerted

18509 Erect, Branches downy, Lvs linear-lanceolate 3-nerved denticulated, Flws axillary nearly sessile disposed in a [leafy spike, Calyx ciliated
 18510 Erect, Branches tomentose, Lvs cordate smooth, Flws solitary pedicellate, Lobes of Calyx and Bracts awned, [convex above
 Corolla cylindrical

18511 Racemes 2-3-flowered recurved, Lvs oblong-linear mucronate whitened and striated beneath
 18512 Flws axillary solitary unbracteate, Lvs oblong mucronate glaucous, Stem downy

18513 Lvs linear spreading with naked edges 3-5-nerved beneath, Nerves all simple

18514 Spikes axillary and terminal 7-10-flwd aggregate, Lvs linear-lanceolate mutic, Branchlets glabrous, Drupes dry [oval depressed at top
 18515 Spikes nearly terminal, Lvs elliptic spreading many-nerved crowded in whorls [convex above
 18516 Spikes erect many-flowered a little shorter than lvs, Drupes ovate 5-celled, Lvs glabrous oblong-lanc. 3-5-nerved,
 18517 Spikes nearly terminal aggregate nodding, Drupes 5-celled, Lvs oblong-lanceolate attenuated at apex disposed
 in interrupted whorls

18518 Branches annulated when naked

♂ Flowers double red

♀ Flowers large deep rose-coloured spotted, Segments of calyx leafy as long as the tube of corolla

18519 Lvs stiff coriaceous ovate-obt. mucronate hairy ciliated, Petioles ciliated, Flws terminal solitary decandrous

18520 Young Lvs covered with rusty hairs old ones naked ovate, Flws 8-10-androus rising before lvs from rusty scales

18521 Lvs pilose oblong-obt. mucronate, Flws solitary pentandrous, Sep. triangular villous, Segm. of Corolla acute

18522 Lvs ovate subcord. emarg. mucr. nitid. Ped. hispid glandular 4-flwd, Flws pentand., Sepals ovate glab., Seg. of
 β Flws white spotted and very beautiful. The species has pink flowers also spotted [Cor. subcordate

18523 Lvs roundish and oblong-obtuse, Umbels few-flwd bractless, Pedicels and Ovaria ramentaceous, Flws subcam-
 panulate pentandrous, Sepals linear-oblong fringed at apex

18524 Branches rather pilose, Lvs 3-4 in a whorl oblong-acum. sess. glabr., Constricted part of Cor. longer than tube

18525 Subscandent glab., Lvs obl.-ov. acum. on short petioles, Pan. many-flwd, Cor. large, tube slender, limb ample

18526 Erect glab., Lvs obl. on short petioles acum., Panicle many-flwd, Tube of Cor. partly constricted dilated at
 base angular, upper part elongated funnel-shaped [less, Branches smooth

18527 Flws axillary and terminal solitary or twin, Lvs 4-5 in a whorl obovate veinless beneath shining, Stigma bearded

18528 Flws axill. and term., Lvs 4 in a whorl obov.-oblong shining vein beneath, Stigma bearded, Branches tomentose

18529 Flowers terminal, Lvs 3-4 in a whorl elliptic acute spiny-mucronate vein, Stigma pencilled

β Leaves narrow lanceolate mucronate

18530 Lvs long lanceolate acute spiny-toothed on short petioles, Racemes drooping, Berry usually 2-seeded

18531 Lvs elliptic-oblong acuminate downy, Corymbs erect, Tube of Cor. a little longer than calyx, Follicles cohering
 [obovate, Follicles hairy

18532 Lvs ovate or oblong auriculate cordate, Racemes lateral elongated many-flwd, Cor villous, Segments of limb

18533 Clothed with velvety down, Lvs ovate mucronate, Rac. simple axill., Lbs of Calyx triang. hairy, Cor. glabrous

β Flowers smaller sulphur-coloured, with a red tube and rose-coloured eye

18534 Bran. downy, Lvs ovate-obl. glab. above downy ben., Racemes axill., a little hispid 10-12-flwd, Pedun. downy

18535 Lvs roundish pointed covered with rusty down, Racemes 6-8-flowered, Segments of Corolla curled

18536 Hairy, Lvs elliptic acuminate, Cymes terminal, Segments of Corolla oblique ensiform, Nectary cup-shaped
 β-toothed

18537 Lvs membranous cordate-oblong glabrous beneath, Stipules pectinate, Racemes secund axillary many-flwd

18524

18530

18534

18528 18533
 and Miscellaneous Particulars.

2894. *Mandevilla*. This plant was first sent to this country under the name Chili jasmine; a name which has been given to it from its snowy white sweet-scented flowers, which from their large size and colour are beautiful to look upon. The plant is well fitted for training up trellis-work or rafters in a conservatory or on a wall. The young shoots should be trained to the utmost length, as it is always near the ends of the shoots where it blooms. The shoots should be cut back in the same manner as vines in winter, or other plants which bear their fruit or flowers upon the wood of the same year. It is readily increased by cuttings.

History, Use, Propagation, Culture,

2895. *RouPELLIA*. This is a handsome fragrant plant noticed by Afzelius (*Report*, 1794, p. 113. No. 7.) as the Cream fruit, so called from the use formerly made of the cream-like juice of the fruit. The flowers are large, white tinged with rose colour, the corona is red. It is a pretty stove plant well suited to train on a trellis, pillar, or rafters; or to be grown in a pot and the plant supported by a wire trellis. Good fresh loam mixed with a little leaf mould suits it well. It is a fast grower and requires water freely during summer, but care must be taken that the soil does not become stagnant. It is readily increased by cuttings.

2896. *Dipladenia*. The species are either scandent or erect shrubs, with opposite entire leaves, and many bristles or glands in form of stipules. The genus differs principally from *Echites* in the number of nectareous glands. The flowers are very showy, usually rose-coloured, pink, or purple. They thrive best in equal parts of light rich loam, heath mould, and very coarse sand. They may be trained to rafters or wire trellis in a stove. They are readily increased by cuttings.

2897. *Rhynchospermum*. This is a pretty climbing shrub, with the habit of a simple-leaved species of Jasmine. It is well fitted for training on rafters or trellis-work. It is of easy culture, and is readily propagated by cuttings.

2898. *Parsonsia*. The species are cultivated like other green-house climbers. A mixture of loam, sand, and peat suits them best.

2899. *Lyonsia*. This is a pretty greenhouse climber, with sweet-scented flowers. It is well adapted for training on rafters. The same soil recommended for *Parsonsia* will suit it.

2900. *Adnium Hóghel* is a curious plant. It forms one or two fleshy stems like those of *Plumieria*, on the top of a club-shaped protuberant root or base of stem; and these stems divide again into dumpy branches, each bearing two or three leaves only. It appears to be of very slow growth. Its flowers are very handsome and rose-coloured. According to Alph. Decandolle this shrub is found in dry places in Wallo and Senegambia, where it is commonly called Hóghel. It requires a dry stove where it can be fully exposed to the sun. Being a plant of slow growth, it does not require much water at any time, and it should be kept almost dry after the leaves have fallen.

420. *Cébera Táughin* is the Ordeal tree of Madagascar. When the late queen of Madagascar, in the beginning of 1830, came to the resolution of clearing her land from sorcerers, an ordeal was commanded in every town and village,

- 18538 Lvs smooth oblong-elliptic acuminate, Cymes terminal sessile 6-8-flowered, Bracts keeled
- 18539 Root tuberous, Stems annual, Leaves obovate rounded downy, Flowers 3-4 together terminal
 18540 Glabrous erect, Leaves oblong-ovate taper-pointed, Racemes loose drooping 4-6-flowered
- 18541 Glabrous, Root round, Leaves ovate-oblong acute, Racemes terminal one-sided, Sepals very narrow
 18542 Leaves elliptic acuminate undulated cordate downy beneath, Racemes axillary
- 18543 Glabrous, Stem and Branches swollen at the joints, Lvs lanceolate acuminate, Racemes axillary usually 6-flwd
- 18544 Glabrous, Leaves ovate acute, Peduncles axillary 2-flowered, Sepals narrow, Lobes of Corolla triangular curled
- 18545 Rooting like ivy, Young Branches downy, Leaves oval deep green glabrous with minute scale-like glands in place of stipules, Flowers corymbose [Corolla urceolate
- 18546 Stem downy, Lvs downy wavy variable in form from linear to obovate, Flws in close one-sided naked panicles,
 18547 Stem downy, Leaves shining from linear to obovate, Panicles short one-sided, Corolla campanulate
- 18548 Leaves opposite, Cymes terminal trichotomous, Limbs of Corolla bearded: differs from *Parsonsia* in the fruit being a capsule
- 18549 Leaves oblong-elliptic abruptly acuminate, Peduncles loosely 3-flowered, Corolla with a very long tube
- 18550 Leaves oblong obtuse coriaceous, Cymes elongated dichotomous, Calyx Segments obtuse, Segments of Corolla oblong falcate
- 18551 Leaves obovate-oblong glabrous obtuse mucronate, Bracts narrow, Pedicels villous, Calyx downy, Lobes of Corolla obovate
- 18552 Leaves elliptic lanceolate approximate coriaceous shining, Corymbs terminal paniced
- 18553 Leaves serrulated, Panicle terminal, Flowers sweet-scented
- 18554 Fleshy, Lvs alternate entire, Flws pedicellate in single or branched spikes, Spikes few-flowered, Bracts remote
- 18555 Glabrous, Leaves obovate acuminate coarsely crenated, Corymbs lateral leafy from large bracts, Segments of Corolla linear, Anthers combined winged and tailed
- 18556 Leaves membranous, Petioles tumid at base and articulated with the stem, Flowers spicate

and Miscellaneous Particulars.

and at Tannanarivoo scarcely any class of inhabitants escaped. On the 9th of May, 1830, in compliance with the sovereign's mandate, a notable administration of the Tanghin took place. The accused persons amounted to about thirty, including some of the highest. All the nobility recovered; while the unknown plebeians, who, according to the common jugglery had been compelled with them, died. The former made the usual triumphant entry into town, on the 17th, borne in open palanquins, amongst the shouting, dancing, and grimaces of the many thousands of people. In the following month, April, about an equal number of Malagassy ladies submitted to the same ordeal, but all survived, and, in due course, made a grand entry into town. The Tanghin is administered in private as well as in public. A subject so deeply rooted in the minds of all the Malagassy people, from the sovereign down to the slave, is the belief in witchcraft; and so blindly are they led by this belief, that the whole nation may be considered as under a spell as powerful as the fascination which they attribute to the unfortunate sorcerers themselves. The fruit of the Tanghin is the part used, and is administered by means of some liquid, as broth.

2901. *Lacépida insignis* is a fine tree with very fragrant blossoms. It grows in any light soil, and is readily propagated by cuttings in the usual way.

2902. *Ullucos*. The tubers of this plant are eaten in Peru. In the time of the potato panic the roots were introduced as a substitute for it, but it proved an entire failure, as the roots are worthless, and not suited to the English palate. It is called Ulluco and Melloco in Peru. The plant is cultivated for its roots throughout the elevated regions of the Andes of Peru and Bolivia under the name of *Oca-quina*. The tubers are chiefly used by the Indians in the preparation of *Chuna*, by alternately freezing and steeping them, by which they are changed into an amylaceous substance. It is a succulent herbaceous plant, growing luxuriantly in the open air during the summer and autumn. Being easily affected by frost, it is necessary to take up the tubers about the end of October, and keep in store till April, when they should be planted in the open air. The plant throws out thread-like branches, which run over the stems, or on the ground, and enter the soil, and there develop new tubers. The largest tubers grown are about the size of a hazel nut, of a rich yellowish colour, and firm waxy texture.

2903. *Labisia*. This curious stove plant requires to be grown in a humid atmosphere, where it may have a gentle bottom heat. In winter little water is required for weeks; if the soil is kept moist it will be all that is required.

History, Use, Propagation, Culture,

2901. *Corynecarpus* is a fine tree, with laurel-like leaves. It only requires the culture of an ordinary greenhouse plant, and readily increases by cuttings.
 2905. *Fagræa*. The species of this genus are beautiful trees. They flourish in a moist stove, and succeed best with bottom heat.
 2906. *Habrothamnus*. The species of this genus are said by Hartweg to be the gayest productions of the Mexican flora. The genus is hardly distinct from *Cestrum*, but, as the plants are common in the gardens under the name of *Habrothamnus*, we have retained the name. The species do well with the treatment of *Pelargonium*.
 2907. *Isochroma tubulosa* is a handsome half-hardy deciduous shrub. It grows freely in rich soil in the open air during summer, but it should have an abundant supply of water; and it should be taken up about the end of

- 18557 Leaves alternate obovate-wedge-shaped submarginate quite entire glabrous, Panicle large terminal sessile
- 18558 Arboreous, Branches bluntly tetragonal, Leaves elliptic or obovate, Panicle cymose 3-6-flowered, Tube of Corolla obovate
- 18559 Leaves obovate-elliptic glabrous, Calyx bilabiate, Tube with 5 angular wings, Corolla with a 5 ribbed tube widening upwards and contracted at the mouth, Lobes curled
- 18560 Clothed with stellate down, Filaments toothless, Leaves ovate-lanceolate nearly naked above, Spikes simple axillary pedunculate, Bracts narrow [cuduous, Limb of Corolla reflexed, Berries white
- 18561 Glabrous, Filaments furnished with a tooth, Leaves oval undulated, Flws sessile spicate panicle, Bracts de-
- 18562 Glabr., Lvs oval pale beneath, Flws disposed in thyrsid fastig. term. corymbs, Bracts persistent [Brcts foliac.
- 18563 Lvs oval-obl.-lanc. scabr. above rather tom. beneath, Lvs of buds emulating seps, Flws sess. in crowded spks,
- 18564 Filaments denticulate, Lvs alternate ovate undulated coriaceous shining, Racemes nearly sessile
- 18565 Downy, Lvs ovate entire, Flws terminal cymosely capitate involucreted, Corolla urceolate with ciliated segs
- 18566 Glabrous, Lvs ovate-lanceolate entire, Corymbs terminal forming as it were a dense leafy panicle, Segments of Corolla lanceolate
- 18567 Branches and under side of lvs downy, Lvs ovate-lanceolate, Cymes terminal, Segments of Corolla ciliated [sessile fascicled, Bracts involucrete
- 18568 Branches flexuous downy, Lvs ovate-lanceolate downy above and tomentose beneath, Flws terminal axillary
- 18569 Young branches villous, Leaves oblong bluntish downy, Peduncles terminal and axillary 3-6-flowered, Flowers sessile capitate involucrete, Calyx tubular
- 18570 Leaves ovate 3 or 4 times shorter than the corolla, Corolla tubular with 5 short teeth
- 18571 Leaves ovate-acute undulated generally sinuated, upper ones twin, Peduncles 2-flowered, Flowers drooping [Flws drooping
- 18572 Branches tomentose, Lvs lanceolate acum. downy above and tomentose beneath, Umbels short many-flowered,
- 18573 Glabrous, Leaves oblong acum. obovate obtuse, Pedicels aggregate axillary and terminal 1-flowered, Flowers drooping
- 18574 Prostrate stoloniferous downy greyish, Lvs subinterrupt-dly pinnate, Leaflets roundish obovate, Calyx 5-cleft, [Corolla circular 10-toothed
- 18575 Erect stolonif. dk grn glabr., Lvs auricul. pin. 2-3 pairs, Lfts rnd. cord. fleshy, Cal. cup-sbpd 5-tthd, Cor. 5-
- 18576 Stems procumbent angular fleshy fragile, Lvs downy pinnatifid 5-7-lobed, Lobes and sinuses obtuse [parted
- 18577 Scadent, Lvs petiolate ovate-acute downy beneath, Racemes panicle loose [equal
- 18578 Lvs oblong-linear obtuse concave glabrous repand, Panicle cymose many-flowered, Calyx 5-toothed, Anths [equal
- 18579 Branches terete glabrous, Lvs subcordate ovate or ovate-lanceolate bluntish glabrous, Corymbs few-flwd glabr.
- 18580 Branches terete green, Lvs lanceolate glabrous tapering to both ends, Racemes short lateral
- 18581 Stem climbing, Lvs narrow oblong-lanceolate glabrous bluntish, Racemes corymbose loose [lvs, Cal. unarm.
- 18582 Very vil. prickly, Lvs obl. cord. sinuaty-anglr hoary bnth, prickly on veins, Racs sess. woolly distich borne under
- 18583 Mny-stmd, Stms twigg smth sarment., Lvs mostly cord. ov. smtms 2-3-4-5-cleft or prtd glabr. Racs pan. dichot.
- 18584 Glabr. varnished, Stms very prickly, Lvs pinnatif. cil., Pets and ribs prickly, Umbels infra-ax. nutant, Anth. equal
- 18585 Unarm., Lvs ent. ov.-lanc. subcord. dwny, Pan. term., Calyx 5-cren., Segs of Cor. uncin. at top, Anths unequal
- 18586 Stm wily prkly, prck. crwd subul. acic., Lvs ov. ang.-lbd lry prkly, Cal. prkly, Racs simp. few-fl., Cor. campan.
- 18587 Prostr. slndr prickly, Lvs twin or tern uneqd dwny obl. sin., upr cord., Flws quadrif. tetrandrous, Anth. equal
- 18588 Arboreous, Stem prickly, Brans woolly, Lvs large broadly-ovate angularly lobed nearly sessile woolly prickly beneath, Racemes much shorter than the leaves, Pedicels and Calyxes prickly
- 18589 Fruit conical acute bright yellow waxy hence the name, Leaves ovate-acuminate, Peduncles recurved

18590 Leaves lanceolate glabrous, Petioles short, Pedicels terminal and axillary, Teeth of Calyx subulate

and Miscellaneous Particulars.

September, and placed where it will be secure from the frost during winter. About the middle of the following March it should be cut back rather freely. It is readily increased by cuttings.

2908. *Hebécledus* is a pretty little shrub of easy culture.

2909. *Chanéstes*. Beautiful half-hardy shrubs, which will grow and flower freely if planted against a wall in summer, but require protection from frost in winter. They are readily increased by cuttings. The flowers are very showy.

451. *Solánium demissum* and *S. cardiophyllum* are Mexican kinds of potatoes. The first grows at an elevation of 10,000 or 11,000 feet above the sea level, the other at 8,000 to 9,000 feet. The tubers of the first are kidney-shaped, white, with transparent flesh; the second has roundish waxy tubers.

History, Use, Propagation, Culture,

2910. *Rogiera* is a genus of pretty shrubs nearly allied to *Rondeletia*; they grow freely in a mixture of loam and leaf mould, and are readily increased by cuttings.
 2911. *Pentas*. *P. carnea* is a very handsome and showy plant; it grows freely in a moist heat in a mixture of leaf mould, sand, and loam, and is readily increased by division and cuttings in the ordinary way.
 2912. *Hindsia*. The species are among the finest things obtained from Brazil. They only require the treatment of other stove plants.
 2913. *Higginsia mexicana*. This plant was raised in the Berlin Garden from seeds that sprang up in the earth in which Mexican plants had been imported. For the summer it does very well in the open air, but it must be placed in a green-house in winter. The flowers are in axillary cymes.

- 18591 Lvs ovate-lanceolate tapering strigose beneath and bearded in the axils of the veins, Panicle terminal leafy [fastigiate, Branches 3-flowered
- 18592 Lvs ovate covered with scurfy down, Stamens inserted near the orifice of the tube, Style short [Corolla roundish with silky disks
- 18593 Branches and younger leaves silky villous, Lvs ovate subcordate smooth above and downy beneath, Lobes of [flexed, Cymes terminal corymbose many-flowered
- 18594 Hairy, Lvs nearly sessile ovate-lanceolate acuminate cordate at base coriaceous, Stipules ovate-lanceolate re-
- 18595 Hairy, Lvs oblong nearly sessile, Stipules large ovate, Cymes short compact terminal, Lobes of Calyx obtuse
- 18596 Lvs ovate or oval-oblong acute rather pilose, Tube of Corolla much longer than the Calyx, Branches of style [elongated
- 18597 Downy, Stipules ovate, Lvs broad-ovate, Calycine Segments very unequal, larger ones foliaceous above the [middle
- 18598 Lvs ovate-lanceolate strigose beneath bearded in the axils of the veins, Panicle leafy, Branches 3-flowered
- 18599 Branches terete purple, Lvs obovate-acute nearly glabrous, Peduncles axillary 3-8-flowered, Limb of Corolla [recurved, Berries scarlet
- 18600 Lvs approximate at tops of the branches oblong-lanceolate entire, Corymbs terminal few-flowered, Flowers [nearly sessile
- 18601 Lvs broad-obovate-elliptic nearly sessile, Flowers axillary, Lobes of Calyx lanceolate, Stamens enclosed, Stigma [bipartite
- ♂ Flowers white. A pretty plant well adapted for bedding out in masses
- 18602 Lvs long-lanceolate serrated, Flowers numerous flatly campanulate, Segments ovate acute
- 18603 Stem and lvs rather pilose, Lvs doubly serrated, lower ones cord. upper ones sessile, Flws racemose, Cal. glabr.
- 18604 Stem branched downy, Lvs scattered ovate-lanc. toothed, Pedunc. elongated terminal and axill., Lobes of Cal. [large foliaceous repandy toothed, Flower subnatum
- ♂ Lvs less toothed
- 18605 Suffruticose leafy at top, Lvs long-lanc. toothed, Flowers racemously panicled drooping on peduncles
- 18606 Pil., Stem brnchd., Lvs coarsely biser., rad. peti. cord.-ov., caul. sess. lanc., Rac. pend., Segs of Cal. cil. append. ov.
- 18607 Stems ascending diffuse, Radical Lvs petiolate rounded cord. crenately lobed, cauline leaves smaller ovate, Flws [panicled, Lobes of Cal. linear-lanceolate
- ♂ Plant hispid, and as if it was covered with wool
- 18608 Plant beset with short stiff hairs, Stem erect few-flowered, Radical Lvs obl.-obov., cauline ones linear, Flow-ers terminal erect, Corolla downy
- 18609 Stem branched many-flowered scabrous on the angles, Lvs crenulated, lower ones ovate reniform, upper ones ovate stem-clasping
- 18610 Lvs serrated, radical ones petiolate rounded, cauline ones sessile ovate-lanceol., Flws racemose, Segments of Calyx triangular toothed, Style length of corolla
- 18611 Radical leaves petiolate ovate-cordate toothed, cauline ones sessile linear-lanceol., Flws few racemose, Seg-ments of Calyx lanceolate entire, Style length of corolla

18612 Glabrous glaucescent, Lvs ovate-lanceolate serrated, Stigmas 5, Capsule 5-celled

♂ Flowers white semidouble

18613 Glabrous glaucescent erect, Lvs ovate finely serrated, Flowers racemose, Stigmas 5, Capsule hemispherical

18614 Plant slender branched, Lvs narrow toothed

18615 Downy, Stems ascending, Lvs cordate-ovate, Calycine Segments oblong obtuse reflexed quite entire

18616 Leaves sessile lanceolate denticulated ciliated rather pilose, Flowers racemose, Bracts ciliated

and Miscellaneous Particulars.

2914. *Lindënia rivãlis* is a plant nearly related to *Augûsta* or *Portlândia* in the nature of the fruit, and *Tocoyîna* in the form of the flower. It forms a beautiful shrub, with flowers like those of *Oxyânthus*.

2915. *Adenôphora*. All the species are elegant border flowers, and are therefore worth cultivating in every garden. They will grow in ordinary soil, and are increased by seeds or dividing at the root.

2916. *Platyôdon*. These plants are neat when in blossom. They thrive best in pots in a mixture of sand, loam, and peat, and placed among alpine plants. They will also thrive in a peat border.

2917. *Glossocômia orôta* is a hardy perennial with spindle-shaped roots, and is inclined to twine. It grows well in common garden earth. It is readily increased from seeds treated like those of *Campânula carpatica*.

History, Use, Propagation, Cul ure,

2918. *Isotoma.* The species are very pretty while in blossom, and are of easy culture. A light soil suits them best, and they answer if planted out during summer in the open border.

- 18617 Lvs obl.-lanc. acum. wrinkled glabr. above clothed with hoary toment. beneath. Flws axillary on long pedunc.
 18618 Stem erect branched at base, Lvs ov.-obl. rather hisp. obtusely and glandly tthd cil. sess., Spk. elong. term. leafy
 18619 Lvs lanc. glandly serrul. rather fleshy glabr., Fl. on short ped. racem., Cal. Segs tthd. Stem erect bran. downy
 18620 Lvs narrow lanc. finely serrated. Flws. axillary almost hid by the green bracts, lateral and dorsal petals smooth
 18621 Lvs deeply lobed cordate lying flat on the ground and erect. Flowers panicled small
 18622 Downy, Stem simple flexuous. Leaves sessile oblong lanc. denticulated pale green, Flws racem., Peds twisted
 18623 Branched dwy, Lvs cordtly ov. dwy abve and ang veins beneath doubly serr., upper lvs lanc., Racem. elon.
 18624 Lvs rndsh repd wrnkld glabr., Pedunces lngtr than lvs, Cal. Segs ent. gland. at base, Stems spotted prostr. rootg
 [ciliate entire, Middle Segment of lower lip of Corolla obovate

- 18625 Glabrous, Stems ang. simple, Racemes secund, Lvs thickish, lower ones dentately pinnatifid, upper ones lanc-
 18626 Lvs sessile scabrous decurrent, Peduncles long hairy, Flowers axillary solitary disposed in a long leafy raceme

- 18627 Rather downy, Lvs sessile pinnatifid toothed, Peduncles axillary naked elongated 1-flowered, Corolla salver-
 shaped, tube entire

- 18628 Stems almost simple, Lvs linear quite entire, Peduncles scape-formed 1-flowered, Corolla funnel-shaped, tube
 cleft

- 18629 Lvs broad heart-shaped acuminate pale green shining glabrous repand toothed, Flowers axillary

- 18630 Lvs oblong-lanceolate remotely denticulated glabrous, Flowers axillary, Corolla glabrous

- 18631 Suffruticose, Stem erect simple thick hoary, Leaves dense only at top of stem reflexed lanceolate hoary beneath
 serrated, Pedicels axillary, Corolla bilabiate

- [acuminated, 2 lower Anthers bearded, Pedicels axillary
 18632 Subscandent smoothish, Leaves acuminated membranous sharply too hed a little cordate, Lobes of Corolla
 18633 Lvs ov. dentic. glabr. above fusc. toment. beneath, Peds corymb., Calyx and Cor. leafy, 2 lower Anths bearded
 18634 Shrubby glabr., Lvs ov. ac. doubly serrd, Peds axill., Cal. Segm. lanc. serr., Cor. contracted a little at mouth
 18635 Lvs ov. ac. gland. serr. glabr., Flws umb. term. leafy, Cor. downy much contrd at mth, 2 lower Anth. bearded
 18636 Pubesc., Stem ang., Lvs on long stalks cord. dbly serr., teeth termd by black gland, Peds ax., Lbs of Cal. gland. ser.
 18637 Erect suffrut., Lvs on short stalks obl. ov. serr. nitid above, Peds axill., Cal. Segs subul. serr., Lmb of Cor. yel.
 18638 Shrubby glabr., Lvs cordtly triang. dily serr., Peds axill. solit., Cal. Segs narrow serrul., Anths bearded in fruit
 18639 Downy, Lvs obl. ov. little heart-shpd with callous teeth, Lobes of Calyx hooked backward, Tube of Cor. slender
 18640 Scandent, Lvs oblong obtuse entire glabrous with revolute edges, Racemes terminal, Flowers reflexed, Calycine
 Segments slightly denticulated

- 18641 Lvs obl. lanc. bright green with glandular serratures downy and silky above, Racemes 1-sided, Branches downy

- [bottom, Segment cuneate spreading 2-lobed

- 18642 Branched, Lvs filiform compressed apiculate, Corymbs 3-5-flowered, Corolla having the tube hairy inside at

- 18643 Branched, Lvs scattered filif., Flws terminal, Cor. large with 3 broad sprng bifid segs and 2 smaller entire ones

- 18644 Branched, Leaves linear obtuse, Corymbs few-flowered, Segments of Corolla cuneated deeply 2-lobed with a
 mucrone between them

- 18645 Stem erect thick branched, Lvs opposite petiolate oblong toothed, Flowers loosely and dichotomously panicled

- [dunculate, Corolla hairy outside

- 18646 Erect downy, Lvs toothed obovate cuneated, upper ones elliptic lanceolate, adult ones smoothish, Spikes pe-

- 18647 Erect downy, Lvs lin. few-toothed, lower ones cuneated adult ones smoothish, Spikes pedun., Cor. hairy outside

- 18648 Erect, Brans compr. tetrag., Lvs cun. tthd a lit., up. lvs crowded, adult ones glab., Ped. in fasc. few-flwd, Cor. hairy

- 18649 Erect, Stm simp. wngd, Lvs obov. ent. nar. at base, Ped. filif. glab. few-flwd, Cor. with black beard, villi plumose

- 18650 Branches terete, Lvs linear or oblong-lanceolate a little toothed hoary beneath with revolute edges, Peduncles
 terminal and axillary woolly, Corolla with a greyish beard, villi plumose

- 18651 Stem procumbent, Leaves lanceolate a little denticulated rather pilose villous at the axils, upper ones linear,
 Calyx 5-leaved pilose, Corolla gibbous at base

- 18652 Erect pilose, Lvs lanceolate toothed, Bracts entire, Cor. hairy inside, margins naked above, Styles very villous

- 18653 Glab., Stem panicled, Lvs ovate acute sharply serrated, Spikes along many-flwd, Bracts narrow ent., Styles vill.

- 18654 Stem erect pan. ang. glab., Lvs lin. dentic. coriac., upper lvs. and bracts squarrose, Spikes capitate, Styles pilose

- 18655 Pilose, Lvs oblong apiculate a little serrulated half stem-clasping, Flowers axillary solitary, Corolla unilabiate,
 tube woolly inside, Style glabrous

β Flowers crimson

- 18656 Quite glabrous, Leaves evergreen oblong acute pale beneath, Peduncles nutant, Bracts linear-lanceolate

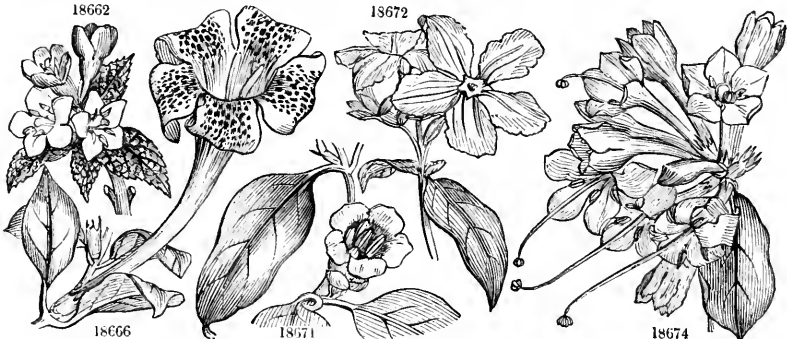

- 18657 Downy erect, Lvs ovate acute, Flws twin sess. axil., Lower Lobe of Cor. linear recurved trident., upper cord.

and Miscellaneous Particulars.

History, Use, Propagation, Culture,

2920. *Weigelia* is one of the most beautiful shrubs which have been introduced into this country for years. It is hardy and an early flowerer; it does well against a wall. It appears to be nothing but the *Calyphyrum floridum* of Bunge. It also forms a pretty plant when grown in pots.

2921. *Rhodostoma* is a small bush with cymes of white flowers, which as they decay change to red. The culture and propagation are the same as those recommended for *Posoqueria* or *Gardénia*.

2922. *Sherboournia* is a beautiful shrub when it flowers. It requires much heat and a moist atmosphere. In its natural habitat it grows in the low lands by the sides of rivulets, where it forms a close compact leafy bush, along with *Smeathmannia pubescens*. Its culture is the same as for *Gardénia*.

2923. *Hevnsia jasmiflora* is a most graceful shrub in its native place. The flowers are numerous, about the size of those of *Pinca rösa*. Its culture is the same as for *Gardénia*. In its native place it grows on the mountains in great quantities along with *Smeathmannia levigata*, and these two flowers form profuse sheets of white.

497. *Cephaelis Ipecacuanha*. Although the root of *Ipecacuanha* has been long employed as a valuable article of

- 18658 Glab., Lvs obl. ac. glauc. ben., Pedun. 2-flwd axil., Cal. 5-thrd cil. with glands, Tube of Cor. convex 2-coloured,
 18659 Lvs narrow lanceolate ciliat'd, Peduncles pendulous 2-flwd shorter than lvs [Berries 2 connate black
 18660 Branches tetragonal, Lvs ovate or oblong downy, Pedun. 2-3-flwd, Bracts 4, 2 inner ones broad obovord., Cor. gib-
 bous at base
 18661 Branches tetragonal. Leaves oval hairy, Peduncles 2-3-flowered, Bracts 4, 2 inner ones broad obovordate, Corollas
 gibbous at base
 18662 Downy, Leaves oblong-acuminate sharply serrated glabrous above, Flowers sessile axillary and terminal, Corolla
 pubescent with roundish segments
 18663 Leaves broad oblong-lanceolate coriaceous, Flowers 3-4 inches long pure white
 18664 Leaves oval-lanceolate, Corolla party-coloured with linear segments

18665 Glabrous, Lvs ovate oblong undulated, Stipules small joined at base, Flowers terminal cymose, Bracts fleshy

- β Flowers double white changing to buff colour; as large as a double camellia [wid throat and ov. obt. segm.
 18666 Glab., Lvs obl. gland. in axils of veins, Flws erect solit. axill. mostly from forks of stems, Cor. with long tube
 18667 Lvs glab. term. obov. cusp., Flws term. solit. downy, Cor. with cylind. tube, funnel-shpd limb and roundish segs
 18668 Lvs wavy obl. downy ben., Flws solit. erect term., Cor. with long tube campan. limb and revolute emarg. segm.
 18669 Lvs obovate oblong glabrous, Flws solitary terminal or in forks, Cor. with elongated tube campanulate throat
 and roundish segments, Stigma large clapper-shaped
 18670 Glab., Lvs opposite or term. oblong-lanceolate undulated, Flws terminal solitary, Calyx 6-parted, Cor. with
 a narrow tube and a 7-parted reflexed limb
 18671 Lvs elliptic acuminate glabrous, Pedicels bracteate axillary solitary 1-flowered, Calyx and Cor. campanulate,
 Stigma capitate

18672 Lvs oval oblong, Flws 3-4 together pedicellate, Tube of Cor. clothed with yellow hairs and the limb hispid

- 18673 Glabrous, Teeth of Calyx bluntish, Racemes very short 3-flowered, Tube of Corolla longer than leaves
 18674 Villous, Lvs obovate or oval villous, Flws subcapitate terminal, Tube of Corolla very long, Stigma clavate

[acuminate reflexed lobes
 18675 Spinescent glabrous, Lvs oval sessile approximate, Flws terminal sessile solitary, Cor. funnel-shaped with
 18676 Unarmed glabrous, Lvs obovate oblong at tops of branches acuminate on short petioles a little downy beneath,
 Flowers terminal sessile, Tube very long, Segments of Calyx foliaceous spatulate, Stigma clavate

18677 Limb of Corolla with 5 didymous tubercles in the throat, Flowers larger and more fragrant than *L. gratissima*

18678 Branches pilose, Leaves ovate downy, Stipules bifid, Corymbs terminal trichotomous, Large Segment of Calyx white

18679 Stem ascending simple, Leaves obovate acute entire smoothish, Head of Flowers terminal solitary, Involucrum 4-leaved

[together from the base of the young shoots, Calyx 4-leaf
 18680 Spinescent downy, Leaves ovate or oblong serrulated nearly glabrous above hairy beneath, Pedicels 2-3
 18681 Thorny branched, Leaves shining when dry of a bright yellowish-brown beneath, Fascicles 2-6-flowered,
 Wood yellow

18682 Erect glabrous, Leaves roundish-ovate crenate coriaceous, Pedicels axillary short

18683 Erect glabrous, Leaves oblong-lanceolate with an emarginate point, Pedicels short axillary aggregate

[tops of branches
 18684 Thorny, Leaves ovate-lanceolate serrated, Scales of Buds ciliated, Stipules small ciliated, Flowers panicked at

and Miscellaneous Particulars.

the *Materia Medica*, yet the botanical character of the plant which produced it remained unknown until Professor Brotero of Coimbra determined the genus to which it ought to be referred, with the assistance of observations made in Brazil on living plants by Bernardo Gomez, a resident medical botanist. The plant is a native of moist woods near Pernambuco, Bahia, Rio Janeiro, and other provinces of Brazil. It is called *Ipecacuanha* by the natives of some parts of Brazil, and *Poaia de Matto* by those of the southern provinces. The root is simple, or a little branched, irregularly bent, externally brown, wrinkled by rings. It appears that as a remedy in dysentery. Piso afterwards describes it, and speaks of two sorts, the white and brown. Besides these, the name *Ipecacuanha*, which, in the language of South America, means Vomit-root, is given to various species of *Cynanchum*, *Asclepias*, *Dorstenia*, *Euphorbia*, *Viola*, &c. The black, or striated, *Ipecacuanha* is *Psychotria emetica*, the white *Ipecacuanha* is *Richardsonia scabra*, and the common brown *Ipecacuanha* is *Cephaelis Ipecacuanha*.

2924. *Catha* is a plant of easy culture, only requiring the treatment of other hothouse shrubs.

History, Use, Propagation, Culture,

2925. *Sollia*. All the species are beautiful and delicate shrubs, of easy culture, with delicate blue flowers.
 2926. *Pronaya elegans* is an evergreen twining shrub from Swan Riv. r, with terminal clusters of pale lilac flowers. It has the habit of *Sollia*, to which it is nearly allied, but is inferior in beauty.
 2927. *Marianthus*. A curious and interesting twining-plant, allied to *Sollia*, of great beauty when in blossom.
 2928. *Lemônia* is allied to the American monopetalous Rutaceæ genera, of which the Angostura-bark tree may be taken as the type. It is a pretty shrub, and will grow well in a rich mixed soil, and cuttings will root readily in the ordinary way.

18685 Leaves elliptic sharply serrated, Branches leafy, Flowers usually solitary

18686 Leaves ovate fringed with long toothed serratures, Flowers tetrandrous subumbellate, Capsule 2—5 winged

18687 Climbing radicante, Leaves ovate-lanceolate serrated, Peduncles filiform several times dichotomous, Petals orbicular crenulate, Capsule prickly

β Leaves spotted with white or yellow

γ Leaves variegated with white or yellow

18688 Lvs oval serrated, glabrous above and downy beneath, Flowers in thyrsoid panicles, Pedicels pilose in capitate

18689 Rather spiny, Leaves glossy deep green, Flowers clustered [Corymbs

18690 Leaves oval-oblong glandularly serrated shining downy beneath, Panicles terminal raceme-formed [Corymbs

18691 Leaves narrow oblong obtuse downy beneath, Flowers in small roundish stalked heads [ends of small spurs

18692 Young branches downy, Lvs small trunc. spiny-tooth, shining pale and pitted beneath, [Fls clustered at

18693 Branches warted at the nodes, Lvs radish-cun. glab. entire or tooth. vil. beneath, [Corymbs axil. rather tubercled

18694 Branches covered with rusty hairs, Lvs obl. rounded coarsely-toothed revolute edges with distinct stalk. glands,

18695 Rather thorny, Leaves cuneate, Umbels small axillary [Flws in term. stalked roundish clusters or umbels

18696 Leaves quite entire. [petals

18697 Leaves oval or elliptic smooth silky white beneath, Corymbs few-flowered terminal, Stems twiggy, Flower with

18698 Leaves small oval-oblong shining above downy beneath, Flowers corymbose, Flower with petals

18699 Leaves oval-lanceolate white from down beneath, Corymbs terminal crowded, Flower with petals

18700 Leaves ovate-lanceolate downy beneath, Panicle few-flowered, Flowers apetalous

18701 Leaves ovate-lanceolate serrated scabrous from starry down above and velvety beneath, Panicles few-flowered,

Flowers apetalous

18702 Leaves lanceolate glabrous above but silky villous beneath, Flowers axillary solitary, Berries silky

18703 Glabrous, Leaves ovate-lanceolate, lower ones serrated, upper ones quite entire, Cymes many-flowered nutant

18704 Young branches villous, Leaves lanceolate entire, Panicle few-flowered, Berry spindle-shaped villous

18705 Glabrous, Leaves linear entire bluntish, Cymes many-flowered nutant, Stigma nearly simple, Fruit oblong

18706 Leaves narrow oblong-lanceolate pilose beneath, Corymbs terminal, Flower pale blue, Stem erect

18707 Downy, Lower leaves spatulate dentate or pinnate, upper ones oblong, Peduncles solitary corymbose, 3 lower Petals paler and spotted with blue

18708 Leaves nearly opposite unequal-sided coriaceous ovate-oblong bicrenate, Panicles axillary simple dichotom., Calyx enclosed in a 2-leaved involucrem

18709 Leaves petiolate trifoliate smooth, Leaflets obovate, Peduncles axillary 2—3-flowered

18710 Leaves obovate crenated netted with green veins on a pale ground beneath, Peduncles axillary solitary 1-flowered, Corolla one inch long, Shrub of compact habit

18711 Leaves simple rarely bifoliate repand with appendages at the base of the petioles, Panicles terminal and lateral

18712 Leaves broad-lanceolate, Racemes compound, Peduncles glabrous, Petals obtuse

[duncles, Flowers in axils of two bract-formed leaves, Calyx red, Corolla white

18713 Leaves lanceolate entire glabrous, Branchlets axillary nearly leaflets bearing one or more long floriferous pe-

[many-seeded, Valves thick woody

18714 Leaves linear-lanceolate mucronate coriaceous glabrous, Peduncles solitary, Capsule ovoid compressed 2-valved

18715 Leaves oval or oblong obtuse cordate coriac. glabrous 3—5 in a terminal whorl, Pedunc. solitary twin or ter-

18716 Leaves very narrow linear [terminal downy, Capsule downy, Petals linear-

18717 Lvs obl. obov. glab., Peds thick nutant, Caps. large bluntly triquet. 3-valved, Valves woody, Seeds brown shiny

and Miscellaneous Particulars.

2929. *Metrodrew*. A pretty shrub. A good mixture of sandy loam and peat will answer it well, and it will be readily increased by cuttings in peat.

2130. *Pentarrhaphis* is a pretty little bush with scarlet flowers. It requires the treatment of ordinary stove shrubs.

2931. *Almeida rubra* is a very handsome shrub with delicate rose-coloured flowers. A mixture of light loam and leaf mould suits it well. It is increased by cuttings in bottom heat.

2932. *Erythrochiton*. This genus is nearly allied to *Galipea* that furnishes the *Angostura* bark. A mixture of light loam and leaf mould will suit it.

History, Use, Propagation, Culture,

2933. *Corethrostylis* is one of the most striking Swan River plants; but, owing to the difficulty of cultivating it, the specimens that have been produced in Europe are very inferior to the wild ones. The foliage is sweet-scented. Rough peat and silver sand is the best soil known for it. It requires a liberal supply of water in summer, and as much air as possible. In winter it should be treated the same as Cape heaths. It is propagated by cuttings in the usual way.

2934. *Guichenotia* is a very pretty shrub, and requires the same treatment as *Corethrostylis*.

18718 Leaves subverticillate obovate shining entire glaucous beneath, Umbels term. sessile few-flwd, Sepals ciliated
 18719 Leaves lanceolate mucronate coriaceous glabrous, Peduncles solitary, Capsule glabrous 2-valved 2-seeded
 Seed purple

18720 Leaves ovate-deltoid 3-nerved, Bracts 3 lanceol.-elliptic, Calycine segments glabrous inside, Ovary 5-celled

[glabrous, Pets none
 18721 Leaves small cordate 3-lobed with whitish hairs beneath, Stipules none, Racemes erect many-flowered, Style
 18722 Hispid from stellate hairs, Leaves cordate subhastate sinuate obtuse, Stipules large petiolate cordate, a little
 3-lobed, Racemes secund. Petals none [tose margins glabrous. Flws very large
 18723 Lvs cordate ovate obtuse entire or 3-lobed at length glabrous, Peds tomentose usually 2-flwd, Calyx toment.
 18724 Lvs cord hast. 3-lobd pil. above stel. tom. ben, Stips none, Racs erect my-flid glut., Pets none, Style pil. at base
 18725 Leaves cordate lanceolate subhastate pil. se stellately hispid beneath, Stipules foliaceous semicordate, Racemes
 flexuose many-flowered hispid, Petals none, Style glabrous

18726 Beset with stellate hairs, Leaves cordate entire, Flowers cymosely racemose opposite the leaves, Bracts
 leafy coloured

18727 Peduncles elongated 2-3-flowered, Bracts 2-3 linear alternate remote from the flower, Capsule glabrous

18728 Branches and Calyx glandularly downy, Leaves obovate elliptic serrate, Panicles terminal
 18729 Glabr. erect, Lvs oblong obtuse serrulated above mid. full of resinous dots, Pan. terminal Pet. spatulate

[Spur short incurved. Dorsal Sepal emarginate
 18730 Erect, Leaves verticillate lanceolate acuminate serrate glandular at base, Peduncles terminal many-flowered,
 18731 Erect, Lvs alternate ovate-lanc. serrate with glandular petioles, Flws terminal umbellate, Spur clavate inflexed
 18732 Erect branched, Lvs whorled lanc. glandularly serrate, Stip. glandular, Ped. axil. 3-flwd, Spur short reflexed
 18733 Erect, Lvs lin.-lanc. serrate, Ped. 1-flwd aggregate axil., Dorsal Sep. mucronate, Spur short ventricose incurved
 18734 Glabrous, Root tuberous, Lvs whorled oblong-lanceolate serrate, Ped. 1-flwd, Spur filiform falcate, Fruit smooth
 18735 Er. simp., Lvs large alt. ov.-acum. mucr. ser. pil. gland. fring., Ped. 1-flwd aggr., Spur short incurv. infl. didym
 18736 Erect radicate at base, Lvs altern. ovate scabr. fimbriolate at base, Ped. axil. aggregate, Spur short obt. curved
 18737 Pilose erect, Lvs alternate lanc., Rac. axillary, Dorsal Sepals subbilobed cuspidate, Spur acuminate incurved
 18738 Erect, Lvs opposite sessile lanceolate setaceously serrated, Ped. axillary solitary or twin, Spur long filiform

18739 Erect, Lvs alternate ovate setaceously serrated glaucous beneath, Peduncles 2-3 axillary 1-flwd, Spur filiform
 18740 Succulent bran. creeping, Lvs altern. reniformly cord. slightly ser., Ped. axil. solit. 1-flwd, Spur short incurved
 18741 Leaves ovate serrate wrinkled, Spur straight, Peduncles 3-6-flowered, Flower small
 18742 Lvs roundish cordate entire, Spur longer than the pedicel, Scapes radical bearing a raceme of long-stalked flws

18743 Pilose, Leaves radical numerous cordate-ovate, Stipules linear lanceolate fringed, Peduncles radical pilose,
 Spur short blunt, Petals bearded with clavate hairs inside

18744 Leaves tapering to the base obovate spatulate obtuse crenately serrate, Peduncles axillary, Lip hairy with two
 elevated glandular lines

18745 Pilose, Leaves obovate, Flowers glabrous axillary on the lateral branches, Tube of Calyx cylindrical

18746 Leaves linear remote smooth, Heads of Flowers terminal, Bracts silky toothed, Style pilose

18747 Hispid, Spines by threes straight, Leaves cordate 5-lobed deeply serrate downy beneath, Peduncles nutant
 1-3-flowered, Sepals reflexed, Fruit hispid

18748 Erect, Branches unarmed, Leaves quite entire oval or oblong-linear fleshy convex beneath powdery, Spikes
 branched

18749 Strigose, Stem branched, Lvs lanceolate, Peduncles elongated, Heads globose smooth, Involucrum many-ld,
 Segments of stameneous tube bicuspidate

18750 Lvs lingulate oblong clothed with powdery down beneath, Rachis flexuous, Spathes 6-7 many-flowered lanceolate,
 [Sepals white

and Miscellaneous Particulars.

2035. *Schweiggéria* is a pretty shrubby vi let with white flowers. It will grow well in a compost of sand, loam, and peat; and cuttings of young wood will strike root in sand. The plant requires plenty of water while growing, and should be placed in an airy situation in the greenhouse.

2036. *Cryptandra* is a genus of neat little greenhouse shrubs, requiring about the same treatment as Cape heaths. They should be potted in a soil composed of sandy peat and a small portion of loam, with plenty of drainage. They are increased by cuttings of the young shoots, like Cape heaths.

History, Use, Propagation, Culture.

18751. *Sarcostemma campanulata* is a pretty little greenhouse climber, well adapted for training over ornamental wirework, like most of the Asclepiadæous plants. It requires a rich loamy soil, and plenty of moisture during the growing season. When it has done flowering, water should be gradually withheld. The plants should then be cut back and repotted.

2937. *Schubertia gravolens*. When *Stephanotis borifunda* made its appearance it was generally considered, and justly, the finest twining plant in cultivation. The present plant is not inferior to it under good culture. The flowers are rather larger and quite as fragrant. It is of easy culture.

2938. *Trichosachme* is a curious woolly climbing shrub, with small flowers having long purple tails, which are analogous to those in *Stephananthus*. Its culture is the same as that of other hothouse climbers.

2939. *Cyrtoceras* is very close to *Hoja* in habit. It is a rather hothouse climber. It requires the treatment of *Hoja*.

DIGYNIA.

- 18751 Downy, Lvs ovate-oblong acuminate cordate tomentose beneath, Peduncles many-flwd, Corollas campanulate
- 18752 Villous, Lvs cordate obovate downy shining above, Umbels 6-7-flowered pilose, Segments of limb ovate
- 18753 Stem simple, Lvs oblong tomentose beneath, Peduncles short tomentose, Umbels many-flwd, Fl. tomentose, [Lift of corona ovate pointed
- 18754 Stem branched, Lvs broad elliptic subcord. coriaceous glabr., Pedunces thick, Pedicels and Flws hairy, Umbels dense many-flwd, Cuculi fleshy truncate
- 18755 Woolly all over, Lvs ovate, Flowers small dark purple, with long fleshy purple tails
- 18756 Lvs oblong-lanceolate acum. smooth above and hoary beneath, Peduncles twice as long as lvs., Cymes crowded, [Corolla subrotate, Throat naked
- 18757 Glabrous, Lvs broad elliptic spotted cordate, Umbels dense nearly sessile, Calyx and Corolla ciliated, Lifts of stam. corona ovate confluent with the anthers
- 18758 Glabrous, Lvs fleshy narrow oval 3-nerved, Lvs of corona acute, Peduncles thick, Flowers umbellate
- 18759 Glab., Lvs coriaceous ovate 5-nerved, Umbels compact many-flwd on short pedunces, Lift of corona ovate acute
- 18760 Glab. radicans. Lvs fleshy ovate 5-nerved, Umbels round compact on short pedunces, Lift of corona ovate acute
- 18761 Suffruticose diffuse, Lvs small ovate 1-nrvd pale beneath, Umbels lat. on short ped., Lift of corona ovate acute
- 18762 Downy, Lvs obovate-lanceolate coriaceous, Peduncles pendulous, Umbels many-flwd, Flws large, Lift of co-
- 18763 Glabrous, Lvs oblong ovate acuminate, Umbel dense [rona white 2-lobed
- 18764 Glabrous, Lvs ovate-lanceolate acuminate fleshy veiny, Umbel hemispheric compact
- 18765 Glabr., Lvs obl. coriaceous, Umbels many-flwd on longish peduncles, Cor. broad campanulate 5-lobed, Lobes short obtuse
- 18766 Downy, Lvs opposite cordate acuminate, Petioles long red, Peduncles axillary 1-flowered large stellate
- 18767 Glab., Lvs coriaceous ellip. rounded at the base, Umbels on long pedunces many-flwd, Lifts of corona concave
- 18768 Glabrous, Lvs large cordate, Flws corymbose, Corona exserted
- 18769 Lvs cordate-ovate acute, Stem petioles and nerves of lvs hispid, Flws umbellate, Corona coriaceous tubercled [inside at base
- 18770 Hairy, Lvs oblong cordate, Umbels many-flowered on long peduncles, Lobes of corona fleshy and rounded
- 18771 Lvs elliptic retuse, Flws numerous umbellate, Corona shorter than the membranes of anthers, Sepals ovate shorter than the tube of corolla
- 18772 Stem simple downy, Lvs oblong cordate tomentose, Peduncles corymbosely panicled many-flowered, Lifts of corona bifid

- 18773 Glabrous, Root tuberous, Lvs ovate-lanceolate fleshy, Segments of limb downy, Lobes of corona united to [apex glabrous
- 18774 Glabr., Root tuberous, Lvs lin. fleshy, Seg. of limb lin., Exterior lobes of corona emarginate, Pedun. umbel. axil.
- 18775 Downy, Lvs ovate, Peduncles 4-6-flwd-red, Segments of limb conniving hairy inside, Lobes of corona emarg.
- 18776 Glabrous, Lvs oblong-lanceolate, Peduncles 1-6-flwd, Segments of limb ligulate ciliated, Lobes of corona ligulate
- 18777 Lvs cord-ov. rather hiry cili. gland. at base, Ped. 4-6-flwd, Seg. of Cor. cili., Out. lbs of corona emarg., in. ones ent.
- 18778 Glab., Lvs ov. subcord., Pedun. axil. my-flwd, Cor. cl-v. s-gs. coher., Out. lvs of corona short bifid, in. lig. clav.
- 18779 Brchs prostrate fleshy nearly leafless, rough from tubercles, Lvs very minute ternate cord., Flws axil. sessile

and Miscellaneous Particulars.

2940. *Dictynthus*. A woody climber of great beauty when in blossom. The corolla is large, urceolate be ow, and green; its limb turned back and prolonged into five long horns with recurved margins: this part is whitish marked with numerous small lines or striæ of purple. The plant will grow in the open air in summer, and in a warm house in winter. It requires the same treatment as other woody tender climbing Asclepiadeous plants.

2941. *Raphistemma pulchillum*, as a climber, is nearly equal to *Stephanotis floribanda*.

2942. *Stephanotis floribanda* is a graceful climbing shrub; and when trained upon a wire globe trellis, with the mass of dark foliage and the countless clusters of large white flowers, is most attractive. It is a plant of easy culture, and is easily propagated by cuttings in the usual way.

2943. *Orypetalum* is a genus of pretty hothouse climbers with showy blue or purple flowers. *O. solanoides* may be treated in the same manner as recommended for *Stephanotis*.

History, Use, Propagation, Culture,

2944. *Wigandia*. The species are straggling plants, with blue flowers, beset with stinging hairs; they are of easy culture, and cuttings will root readily. The genus comes near to *Hydrôlea*.

2945. *Xanthosia rotundifolia* is one of the prettiest greenhouse plants. It grows best in rough peat, sand, and a little loam. It will grow from cuttings or best from seed.

2946. *Astrótriche*. Grows well with the same treatment as *Xanthosia*.

2947. *Narther asafetida*. Dr. Falconer says that he has compared his materials with Kämpfer's description and figures, and with the original specimens of that author in the collection in the British Museum, and found them to agree, as far as comparison could be instituted, in every essential particular. Jubbar Khan, the Dardoh rajah of the country in which Dr. Falconer gathered his specimens, at once recognised it as that which furnishes the *Hceng* or *Asafetida* of commerce, and referred to the medicinal accounts given of it by the Persian and Arabian authors; but the Dardohs are a wild race, and do not collect the gum resin for exportation. Some young shoots were carefully removed and introduced to the Botanic Garden at Saharumpoor, but afterwards transferred to the subsidiary hill garden at Mussooree. Of these some have succeeded well, but had not flowered up to the time of Dr. Falconer leaving India; and one of these furnished the leaves which are represented in the figure in the *Linnean Transactions*, together with a small quantity of *asafetida*, differing in no respect from the ordinary condition of that substance as

- 18780 Stem cylindric simple arenolate, Flowers nearly sessile small aggregate, Outer series of corona 5-cleft, Lobes bifid with teeth between
- 18781 Hairy, Leaves elliptic cordate doubly crenate, Spikes secund revolute, Sepals lanceolate, Stamens ciliated
- 18782 Hispid, Leaves ovate cordate doubly serrate pilose, Spikes unilateral scorpioid, Sepals linear-lanceolate
- 18783 Leaves reniformly orbicular coarsely toothed, Umbels 3—4-rayed, Umbellules many-flowered, Involucra and Involucels 3-leaved
- 18784 Clothed with lanuginous down, Leaves ovate-lanceolate
- 18785 Clothed with short adpressed down, Leaves oblong-linear coriaceous
- 18786 Stems floating creeping at base, Lvs bipinnate, Segments simple or pinnatifid, Leaflets wedge-shaped, Umbels opposite the leaves
- 18787 Downy, Stem simple furnished with leafless dilated petioles, Radical Leaves glaucous with trisected petioles and bipinnate divisions, Segments linear-lanceolate unequal-sided entire

TRIGYNIA.

- 18788 Habit of *F. dentatum*. The flowers are white in round heads, size of those of the Guelder Rose or Snowball
- 18789 Habit of *F. dentatum*. Leaves plicate with a few rough hairs on both sides, Flowers small white
- 18790 Covered with stellate scurfy down, Leaves ovate obtuse denticulated, Cymes compound somewhat pyramidal

PENTAGYNIA.

- 18791 Clothed with adpressed hairs. Branches slender, Leaves small lanceolate, Pedicels 1-flwd terminal and lateral, Corolla silky with crenulated edges [terminal, Pedicels umbelliferous]
- 18792 Unarmed, Lvs petiolate 7-nerved 7-lobed, adult ones glabr., young ones woolly, Lobes ovate serrated, Panicles
- 18793 Leaves trifoliolate
- 18794 Leaves thick smooth, in the young plant elongated reflexed simple toothed lanceolate, in the old tree ternate, Flowers racemously umbellate
- 18795 Smooth, Leaves tripinnate, Leaflets petiolate cordate oblong serrated, sometimes 3-lobed, Umbels compound racemose
- 18796 Leaves oblong, Flowers disposed in cymose corymbs

[on the edges, Flower large crimson

- 18797 Glaucous branching upwards, Lower Leaves narrow obtuse closely packed, Cauline ones ovate acute fringed
- 18798 Lvs oblong-lanceolate faintly nerved. Scape branched, Branches panicled, Flowers unilateral distant, Bracts large
- 18799 Radical lvs obl. or obov., Scape leafless branched at top, Branches downy terete, Fascicles 4-flwd crwid secund
- 18800 Stem shrubby leafy at top, Lvs sessile large obovate-spatulate, Panicles compound, Branches of Panicle winged
- 18801 Lvs glaucouscent oblong 3-nerved at base, Scape stiff panicled, Branches angular, Bracts 4-flwd, Flws secund
- 18802 Erect brnchd, Stem compressed, Lvs spatulate glaucous dotted, Pan. lateral elon., Spikes many-flwd. Cal. hispid
- 18803 Arborescent, Lvs ovate obtuse narrow at the base, Panicle compound terminal, Branches of Panicle 2-edged

- 18804 Branches naked at base beset with old deflexed lvs, Lvs across the lowest flat the rest subulate trigonal, Scares downy, Spike of 7—9 dense spikelets, Bracts crowded longer than the tube of calyx mucronate

and Miscellaneous Particulars.

it occurs in commerce. The species is found, as it would appear, in the greatest abundance in the Persian provinces of Khorassan and Laar, and thence extends on the one hand into the plains of Turkistan upon the Oxus, where it seems to have been met by Sir Alexander Burnes, and on the other stretches across from Beloochistan, through Candahar and other provinces of Afghanistan, to the eastern side of the valley of the Indus in Astore. Dr. Falconer has not met with it in Cashmere. Besides the gum resin, the fruits of *Närther Asafe'tida* are also imported into India for medicinal use, and along with them the fruits of another umbelliferous plant, which Dr. Falconer found to belong to a true *Ferula*, and which are sold under the name of *Doogoo*, a word evidently connected with the Greek *δαυρος*. Dr. Falconer also mentions another umbelliferous fruit in the collection of Dr. Royle, labelled as the seed of the wild asafoetida plant, collected and brought to England by Sir John MacNeill from Persia, which differs widely from the fruit both of *Närther* and *Ferula*, and belongs to another tribe of *Umbelliferae*.

2948. *Grammantes* is a pretty little annual plant. It requires to be grown in a pot placed in a greenhouse. It will, perhaps, succeed on rockwork. A light sandy soil suits it best.

2949. *Acantholimon glumaceum* is a pretty little Alpine plant of easy culture. It should be grown in a pot filled with a light loamy soil well drained. It is propagated by dividing the plant at the root, or by seed.

Page 236. CLASS VI.—HEXANDRIA. 6 STAMENS.

Order I. MONOGYNIA. 6 Stamens. 1 Style.

2550. 712d. *Elsena*. Tube of Perianth short, subcylindrical, decurved; Limb reflexedly spreading. Corona cylindrical, deflexed. Stamens declinate, recurved. Anthers short, incumbent, fixed by the middle. Bulb covered by thick persistent fibres.

2551. 712f. *Hymenocallis*. All as in *Pancrätium*; but the tube is straight, angularly cylindrical. Filaments flaccid, distant on the cup. Anthers long, pendulous. Stigma roundish. Ovarium trigonal, 3-celled. Seeds fleshy, oblong, green.

2552. 713a. *Collipsyche*. Flowers declinate. Sepals and Petals combined into a short tube, regular; Sepals boat-formed. Stamens and Style very long, deflexed. Filaments furnished each with a tuercle at base. Anthers versatile. Ovarium 3-celled, many-ovulate. Stigma capitate.

2553. 715a. *Caliphærea*. Tube of Perianth narrow, funnel-shaped, nearly straight; Limb regular, stellate. Stamens furnished with a bristle on each side. Anthers subsagittate, a little curved. Style straight. Stigma subrecurved, 3-lobed; lower lobe a little longer. Cells of Ovarium 2—3-seeded. Seeds a little quadrate.

2554. 717a. *Sphærotèle*. Perianth tubular; Throat naked; Limb 6-cleft, equal, erect; Segments ovate, obtuse, flat. Stamens inserted in the throat. Filaments erect. Stigma hemispheric. Ovarium trigonal, 3-celled, many-seeded.

2555. 722a. *Phenakospermum*. This genus differs from *Ravenala*, 722., in the seeds in the cells being disposed in many series, obovate, subglobose, on long stiff funicles, and covered with a comose stipose aril. Stamens 6, all perfect.

2556. 725a. *Dasyllirion*. Flowers dioecious. Male Perianth 6-parted to the base. Stamens free. Filaments a little thickened in the middle. Anthers fixed by the back. Glands six, at the base of the stamens, similar to the rudiments of ovaria. Female flower unknown.

2557. 725b. *Beschornèria*. Perianth 6-parted, the bottom nectariferous; Segments conniving into a tube, but spread a little at top. Stamens inserted in the bottom of the perianth, subulate. Ovarium subclavate, bluntly hexagonal, 3-celled, the top free, conical, 3-furrowed. Seeds few, 2-rows in each cell. Style trisulcate, triangular. Stigma same thickness as the style, obtuse, papillose.

2558. 726a. *Acanthostachys*. Perianth 6-parted, inner 3 petaloid. Stamens 6, exterior 3 epigynous, and interior 3 epipetalous. Ovarium 3-celled, flatly trigonal; Cells biovulate. Style filiform. Stigma funnel-shaped, 3-lobed, minutely fringed. Berry triquetrous, 3-celled; Cells 2-seeded.

2559. 78a. *Pöya*. Perianth 6-parted; Segments convolute. Stamens subulate. Style filiform. Stigmas 3, linear, spirally twisted. Capsule cartilaginous, trigonal, 3-celled, 3-valved. Seeds numerous, compressed, margined.

2560. 729a. *Vrièsia*. Perianth 6-parted: outer 3 convolute, equal; inner 3 petaloid, revolute at apex. Scales 2 to each petal. Stamens 6; 3 of which are free, the other 3 connate at the base. Ovarium half-inferior. Stigma 3-lobed; Lobes convolute and sinuated, villous.

2561. 729b. *Echmèa*. Bractea cup-shaped. Perianth 6-parted, spirally convolute: outer 3 like a calyx; inner 3 petaloid. Stamens filiform, adnate to the petals. Berry ovate, globose, 3-celled, many-seeded. Style filiform. Stigmas 2—3, linear, petaloid.

2562. 731a. *Phædranassa*. Perianth tubular, pendulous; Tube 6-furrowed; Segments spatulate, convolute. Stamens exerted. Filaments flattened, upper 3 the shortest. Anthers versatile. Style straight. Stigma clavate, simple. Ovarium trigonal, oblong, constricted at top, 3-celled, many-seeded.

2563. 736a. *Gastronèna*. Filaments inserted in the tube, 3 of which are declinate and twisted, and the 3 lower ones straight, conniving at top. Tube of Corolla curved, cylindrical below, and ventricose above. Ovarium oval.

2564. 739a. *Phycella*. Spathe 2-valved. Corolla tubular, 6-parted, convolutely cined, campanulately subringent. Filaments inserted in the base of the segments, declinate; exterior ones stretched out into two subulate processes. Anthers ovate, versatile. Ovarium trigonal, 3-celled, biserially many-seeded. Style filiform, declinate. Stigma simple. Seeds membranous.

2565. 739b. *Callithauma*. Perianth 6-parted: Tube slender, cylindrical, nearly horizontal. Corona 12-lobed, funnel-shaped: limb spreading a little. Filaments short, conniving, inserted into the side of the corona. Stigma obtuse.

2566. 739c. *Sprekèlia*. Perianth declinate, annular at base, with a very short or scarcely with any tube. Stamens fascicled, declinate, clasped by lower lip.

2567. 739d. *Ixiolirion*. Perianth 6-parted, narrowly funnel-shaped; Segments reflexedly spreading. Stamens straight. Anthers fixed by the base, erect. Style straight. Capsule oblong, chartaceous, scarcely operculate. Seeds black.

2568. 739e. *Lycòris*. All as in *Amaryllis*, but having the tube declinate, widened towards the throat, and the filaments combined into a tube with the segments of the perianth, 3 of which are declinate and twisted, and the 3 lower ones straight, conniving at top.

History, Use, Propagation, Culture,

2560. *Cobúrghia*. The species will grow in a rich alluvial soil with a little rotten manure, and they appear to dislike sunshine and fine weather. They stand out of doors all the summer and autumn, and on the approach of

2969. 739f. *Collania*. Perianth subcylindrical, 6-parted. Sepals and Petals unlike, forming themselves into a tube. Stamens and Style straight. Ovarium turbinate, operculate, glandular at top. Pericarp opercular, pulpy. Pulpis edible.
2970. 748a. *Bomaria*. Perianth 6-parted. Stamens and Petals of a different form. Petaline filaments earliest. Capsule obtusely trigonal dehiscent at top.
2971. 758a. *Ataccia*. Perigone 6-parted: inner segments large, reflexed. Stamens inserted in base of segments. Filaments broad, concave above. Anthers 2-celled: Cells free. Stigma capitate, 3-lobed. Berry 3-celled, many-seeded. Seeds lunate.
2972. 765a. *Cyandis*. Flowers nearly regular. Sepals 6: exterior ones nearly equal, navicular, connate at base, persistent; interior 3 longer, petaloid, connate by the claws, caducous. Stamens nearly equal, adhering to the tube, very long. Capsule trigonal, 3-celled, membranous, 3-valved: Valves septiferous in the middle. Ovula twin in the cells.
2973. 765b. *Theresia*. Perianth bell-shaped, 6-parted. Sepals oblong, coloured, furnished with a nectariferous cavity inside. Stamens hypogynous, enclosed. Style slender. Stigma hardly distinguishable. Ovarium 5-celled, many-seeded, 5-angled, columnar.
2974. 774b. *Cordylone*. Perianth 6-cleft, equal, deciduous. Filaments glabrous, inserted in the throat of perianth. Stigma small, 3-lobed. Berry globose, 3-celled. Seeds many, strophiolate.
2975. 774c. *Spiroëma*. Perianth 6 cleft, the 3 petaloid segments enclosed. Stamens hypogynous. Filaments spiral. Anthers cordate, petaloid, bearing a cell at the base of each lobe. Stigma papillose. Ovarium 3-celled, few-seeded. Ovula horizontal.
2976. 788a. *Luzuriaga*. Corolla 6-petaled. Petals distinct, equal: 3 outer ones narrow. Stamens inserted in the receptacle. Anthers erect, sagittate. Style triquetrous. Stigma triangular. Berry triangular, with a membranous dissepiment. Seeds 2 in each cell from abortion.
2977. 788b. *Callixene*. Corolla deeply 6-parted, equal, alternate segments glandular at base. Stamens dilated at base. Anthers versatile. Stigma trigonal. Berry small, 3-celled. Cells pulpy inside, usually 3-seeded.
2978. 788c. *Philetia*. Perianth campanulate, 6-parted, regular: 3 outer segments acuminate: 3 inner ones twice as long, obtuse. Stamens connate at the base. Anthers long, versatile. Stigma 3-lobed. Berry subtrigonal, 3-celled, many-seeded.
2979. 789a. *Lapagèria*. Perianth 6-leaved, campanulately conniving: outer leaves carinated; inner ones broader, subunguiculate. Stamens subulate. Anthers fixed by their base. Ovarium 1-celled, with 3 parietal placentas. Ovula numerous, mucous. Stigma clavate, oval-oblong. Berry 1-celled, many-seeded. Seeds obovate, truncate, nesting in pulp.
2980. 789b. *Ripigonum*. Perianth 6-parted, equal, spreading, bibracteate, deciduous. Stamens subulate, glabrous. Anthers longer, emarginate, inserted by their base. Ovarium 3-celled: cells 1-seeded. Style short. Stigma 3-lobed, obtuse. Berry 1—2-seeded. Seeds subglabrous.
2981. 808a. *Bidwillia*. This genus differs from *Asphodelus* in the filaments being clavate above.
2982. 809a. *Simethis*. Perianth of 6 spreading 5—7-nerved segments. Filaments woolly at apex. Capsule globose, 3-lobed, 3-celled, 6-seeded.
2983. 809b. *Echandia*. Perianth 6-parted. Sepals all more or less twisted and rolled back. Filaments enlarging outwards. Style filiform. Capsule triangular, roundish, oblong, 3-celled. Cells many-seeded.
2984. 813a. *Chysobietron*. Flowers racemose, sometimes dioecious. Perianth 6-leaved. Anthers versatile. Ovarium 3-furrowed. Female flowers as in the male, but the anthers are incomplete. Capsule ovate, 3-celled, 3-valved. Cells usually 2-seeded. Style strong. Stigma capitate, 3—6-lobed. Anthers closely connected together.
2985. 817a. *Drimmiopsis*. Perianth green, campanulate, nearly equal. Stamens equal, epipetalous. Ovarium tapering into the style. Ovula twin, collateral.
2986. 821a. *Bellevalia*. Perianth campanulate, 6-parted. Stamens exerted or enclosed. Capsule membranous, triangular, 3-celled, 3-valved. Cells 2-seeded. Stigma obtuse entire.
2987. 2590a. *Isomeris*. Sepals united at base. Petals 4, oblong, sessile, nearly regular. Torus fleshy, dilated above. Stamens equal much exerted. Capsule large, obovate-elliptic, inflated, coriaceous, indelhiscent, stipitate. Seeds numerous, large.
2988. 836a. *Anopteris*. Calyx 6-lobed. Petals 6. Stigma bifid. Capsule 1-celled, 2-valved. Seeds compressed, furnished with a wing at top.
2989. 836b. *Elutherine*. Stamens free. Style trifid at apex. Capsule 3-celled, dehiscent at top, chartaceous. Seeds wrinkled, roundish. Perianth fugacious, regular.
2990. 836c. *Prepüsa*. Calyx large, 6-winged, 6-cleft, coloured. Corolla campanulate, 6-cleft, with a swollen tube and a naked throat. Stamens as if they were emerging from the duplicatures of the corolla. Stigma bilamellate. Capsule 1-celled, 2-valved, many-seeded. Margins of valves inflexed, placentiferous. Seeds nearly globose, many-seeded.
2991. 836d. *Trimizia*. Perianth very unequal: Claws of sepaline segments broad, the lamina spreading; of the petaline segments narrower, incurved, the lamina recurved. Stamens filiform, spiral, inserted in the papillæ of the disk. Anthers and Lobes of Style cohering firmly. Style linear, 3-lobed at apex: Lobes lamina-formed cucullate. Stigma soft, 2-lobed: Lobes bifarious. Seeds glabrous, bay-coloured, roundish, with a hard testa.

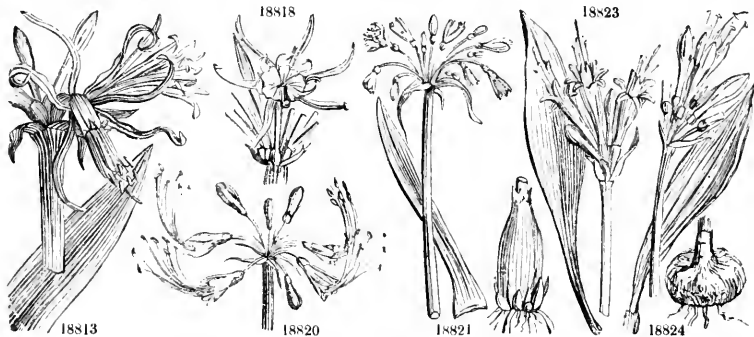

MONOGYNIA.

- 18805 Leaves green erectish acute sheathing at base, Scape 2-edged, Tube of perianth about equal to the segments, Sepals and petals ovate [hardly joined into a corona]
- 18806 Leaves green, Scape compressed, Tube of Perianth clavate 3 times longer than limb, Filaments membranous
- 18807 Bulb ov., Lvs glauc. obt., thick, Spathe green exceeding short pedunc., Tube a little curved, Tth of Cor. 2-lobd
- 18808 Lvs stiff ac. glauc., Umb 3—5-flwd, Flws sess., Tube clav. archd, Tth of Coron. twin, Style defl., Stam straight
- 18809 Bulb bulbif. about 4-flwd, Lvs glauc., Pedunc un-q., Flws pendulous, Limb short, Anthers equal to the limb
- 18810 Bulb small stoloniferous, Leaves green a foot long channelled acute, Sepals so close as to form a narrow tube [limb]
- 18811 Leaves glaucous bluntish, Scape compressed 2-edged, Teeth of Corona 2-lobed green, Stamens shorter than
- 18812 Scape twice the length of the leaves compressed, Spathe about 4-flwered, Segment ovate elliptic, Sinuses of Corona bidentate

and Miscellaneous Particulars.

winter the leaves perish, and the pots in which they grow may then be put in a dry part of a greenhouse till next spring.

History, Use, Propagation, Culture.

2950. *Elisena longipétala* will grow best in white sand with a small admixture of loam. It would probably succeed in a bed of white sand out of doors, if it can be kept from shooting too early in spring.

2951. *Hymenocallis*. The flowers of *H. Borkiána* smell like Vanilla.

2952. *Callipsyche*. This bulb should be potted in sandy loam and leaf mould. In summer, while growing, it requires to be kept in a temperature of 75° or 80° by day and shaded in sunny weather. In autumn, when the leaves die, it should be kept in a warm greenhouse quite dry for a few weeks. As soon as the bulb begins to shoot it should again be watered and placed in more heat. It is a beautiful plant when in blossom.

2953. *Caliphurea*. This genus is very nearly allied to *Erycyles* and requires the same treatment.

2954. *Spherotele*. The species are rather hardy. They require the same treatment as the greenhouse kinds of *Amaryllis*; that is, to be kept dry when in a dormant state, and plenty of water given to them while growing.

- 18813 Scape 2-edged about 6-flowered, Limb of Perianth revolute, Teeth of Corona irregularly trifid
- 18814 Leaves dull green 2½ feet long. Flowers 7 in an umbel, white with a very thin entire transparent corona
- 18815 Leaves petiolate costate 1 foot, Scape 5 inches, Spathe 6-flowered, Corona narrow toothed, Tube slender
- 18816 Scape 2-edged, Spathe 8-flwd, Lvs green, Corona long cylind. which gives it a hose in hose appearance
- 18817 Scape compressed glaucous, Corona with small teeth, Leaves 3 subpetiolate an inch broad linear
- 18818 Scape 2-edged 10—12-flowered longer than leaves, Leaves linear-oblong striated, Segments of Perianth linear-lanceolate, Corona spreading closely toothed
- 18819 Leaves erect acuminate lorate, Scape 2-edged, Umbel many-flowered, Flowers sessile, Tube 6 inches long. Corona obconical free bluntly toothed between the stamens
- 18820 Leaves few green 4 inches wide, Scape 10-flowered glaucous, Stamens very long incurved
- 18821 Leaves stiff ensiform shorter than scape, Tube of Perianth equal to limb, Corona truncate toothless emarginate, Umbels dense, Pedicels articulated, outer ones the longest
- 18822 Bulb ovate, Leaves petiolate depressed ovate subplicate green, Scape nearly terete glaucous, Umbels 7-flowered
- 18823 Scape glaucescent 5-flowered, Peduncles short umbellate, Style and Stamens exerted
- 18824 Lvs obov.-obl. 3-nerved, Umbel 6-flwd, Seg. of Per. obl. erect, Stam. exerted, Teeth of Corona obt. undivided
- 18825 Lvs ligul. with revol. edges, Umbel 2-flwd, Flws pendul., Seg. of Per. ovate, Stams enclosed, Corona toothless,
- 18826 Leaves with rolled-back edges, Flowers pendulous, Corona toothless [Fils 2—3-toothed, Style exerted
- 18827 Corona acutely cut, Filaments wiry setose, Anthers exceeding the limb
- 18828 Leaves oblong, Umbel few-flowered, Lateral teeth of Filaments divided
- 18829 Leaves equitant linear falcate covered with stellate tomentum, Panicles much branched clothed with rufous [bristles, Anthers mutic
- 18830 Stem tall ter. pan. clthd with hoary tom. below, Lvs lin. stiff strght glabr., Pan. clthd with purp. tom., Anth. mut.
- 18831 Stem angul., Lvs equit. lin. subfalc. glabr., Spks sec., Pan. clthd with plum. brownish hairs, Per. tom., Anth. apic.
- 18832 Rhizoma scaly cormoid, Leaves falcate smoothish much shorter than simple woolly scape, Racemes secund elongated, Limb of Perianth erect, Anthers mutic
- 18833 Caudex short divided covered by the vestiges of the old leaves, Leaves narrow keeled glaucous spiny serrated, Scape shorter than leaves, Perianth glabrous, Filaments broad truncate
- 18834 Caudex short, Leaves linear acuminate imbricate with broad stem-clasping bases finely spiny-serrated on margin and keel recurved, Scape and Ovaria tubercled, Filaments broad bifid
- 18835 Leaves large resembling those of *Urânia* or *Musa*, Stems tall, Spathes or Bracts many-flowered
- 18836 Leaves linear-oblong acuminate unarmed glaucescent with the margins callously ciliated scabrous beneath
- 18837 Leaves long narrow spiny-serrate green
- 18838 Leaves narrow glaucous spiny-serrated ending in a tuft of hairs or fibres
- 18839 Leaves radical linear channelled recurved spinosely denticulate, Scapes erect long simple, Flowers nutant fascicled bracteate, Fascicles remote secund
- 18840 Leaves radical thick broad-lanceolate smooth but scabrous to the touch beneath cartilaginously annulated, Scapes tall racemously subpanicled, Bracts large red, Flowers nutant fascicled pedunculate
- 18841 Leaves long scurfy curved spiny-toothed with a long bristle-shaped point, Spike globose nearly sessile, Bracts oblong serrulate mucronate mealy, Sepals narrow [Scape simple long scurfy, Bracts coloured
- 18842 Leaves radical very long incurved narrow thick pungent channelled spinny-toothed covered with white scurf,

and *Miscellaneous Particulars.*

2955. *Phenakospermum*. This is a noble plant growing in moist shady places in Guiana, and north of Brazil, as in Maranham and Para. It is of as easy culture as *Musa* or *Heliconia*. It is propagated by division. It will require plenty of moisture and heat.

2956. *Dasyllirion*. The species of *Dasyllirion* require the same treatment as the more tender species of *Yucca*.

2957. *Beschorneria*. The cultivation of the species of this genus is the same as that for *Fouquieria* or *Agave*. They are tall handsome plants, with green drooping flowers and coloured bracts.

2958. *Acanthostachys* requires the same treatment as *Agave* or *Litsea*. The plant is from the southern part of Brazil, and is covered with a white scurf. The bracts are large and bright red. The flowers are sulphur colour. It requires a heat of from 58° to 60°. A soil composed of equal parts of sand and decayed leaves seems most agreeable to it. The leaves are all radical and keeled.

History, Use, Propagation, Culture,

2959. *Puya* is a genus of pretty plants. They have much of the habit of the pineapple. They are half-epiphytal, and will grow in the poorest situations, as on stones or wood. They succeed well with the same kind of treatment as epiphytal orchideous plants.

2960. *Vriesia*. This genus is nearly allied to *Tillandsia*. The species will grow suspended by a piece of wire from a beam in an orchidaceous house, or they may be suspended in a wire basket. The bracts of all are of a beautiful red colour. In fact they require the same kind of culture as the tropical epiphytal *Orchidea*. When potted

- 18843 Lvs entire smooth reddish underneath, Rac. 6 inches long one-sided, Fl. 2 inches long of a deep vermilion
 18844 Lvs spiny at base mealy beneath, Rac. dense, Bracts large sinth, Pets 2 round, conc. with cren. scale at base
 18845 Lvs lanc. sinth spiny-tthd at base, Scape cvd with fine wool as well as bracts, Spike 3 in. long, Flws 2 in. long
 18846 Slim fly finely tom., Lvs long lanc. quite ent. glab. naked shing, Sths tom., Rac. term. pyr., Pets naked at base
 18847 Lvs lin. long entire dil. at base spiny cil. glab., Scape bracteate simple vill., Bracts villous, Pets naked
 18848 Lvs all rad. long acum. ent. with inflated sheaths cil. above Spike rad. capit. bract., Brcts hairy, Pets with scale
 18849 Lvs ensif. keel. scurfy ben. spiny-ser. above, Scape simple, Ped. and Cal. mealy, Sep. obt., Pet. lin. with ser. scale
 18850 Lvs lanc. ent. cusp. glab. ab. powd. ben., Scape simp. scaly powd., Scales lanc. ent., Rac. elong. simp., Pet. nak.
 18851 Lvs ensiform acuminate downy outside at base, Racem slender paniced, Flowers minute, Petals lanceolate naked at base acute
- 18852 Lvs ensiform membranous unarmed glabrous undulated distich, Peduncle short sheathed by bracts, Bracts convolute purple, Spike simple
 β Stem 5—6 feet, Leaves 3 times longer than the spike
 18853 Lvs broad thin ribbed rather glauc., Spike long cone-shaped, Bracts crimson tipped with green, Cor. 2 in. long
 18854 Ps.-bulb., First Lvs dil. at base nar. upw. spiny ser., secondary lanc. unarmed pruin., Sp. sess. imb., Br. wool.
 18855 Pseudo-bulb. stemless, Lvs of two forms like those of *P. heterophylla*, longer than the spks, Sep. lin. lanc. keeled
 18856 Stem simp. tall scaly powd., Lvs quite ent. dentate at top powd. ben., Sp. term., Br. imbr. rose-cld, Fl. ses. rec
 18857 Lvs linear taper-pointed spiny-toothed smoothish, Scape paniced, Bracts oblong concave, Petals obtuse blue
- 18858 Lvs acum. distantly spinose glab., Scales of tomen. scape acum. ent., Spike elong. dense-flowered, Bracts acute
 [distich usually coloured]
- 18859 Leaves few broad at base and sheathing around the bulb terete convolute, Spikes branched bracteate, Bracts
 18860 Scape shorter than the leaves, Spike simple leafy at base, Bracts greenish purple lepidated
 18861 Scape higher than the leaves, Spike leafless branched, Bracts naked scarlet distich keeled uncinat at top
 18862 Scape shorter than the leaves, Spike branched, Bracts foliaceous scarlet naked, lower ones longer than spike
- 18863 Scape sessile among the lvs. Spike nearly simple leafless, Bracts green coriaceous ventricose loosely lepidated.
 18864 Leaves oblong-lanceolate quite entire, Spike many-flwd a little branched pendulous, Flws sessile, Bracts small
 18865 Lepidated, Leaves ovate-lanceolate channelled, outer ones recurved sheathing the scape, Bracts lanceolate acuminated at base and green at top
- 18866 Leaves strap-shaped obtuse mucronate spinosely dentate tipped with blood-red, Bracts broad-oval imbricate obtuse concave, Spike capitate subse-sile
 18867 Closely allied to *B. nudicaulis*, but the Petals are obt., the Spines green not black and the Lvs narrower green
 18868 Lvs ligul. dp grn acum. spiny-tthd, Pan. many-flwd, Flor. Brcts ov-mucr. rose-cld, as well as calyx, Cor. exsert.
 18869 Leaves channelled spiny-toothed recurved ventricose at base, Spike conical many-ranked mealy Bracts roundish acuminate imbricate [red sep. lvs, Bracts coloured, Rac. secund, Flws fascicled, Petals revolute
 18870 Leaves ligulate channelled banded with white with a few spiny teeth near base, Stem smooth with large loose
 18871 Lvs erect brd lig. obt. conc. spiny serr., Spathe ov.-lanc., Spike thyrs. alms without brcts, Flws dense, Pets obt.
 18872 Leaves lanceolate acuminate spiny-toothed, Scape branched naked below the flowers, Bracts lanceolate quite entire red
- 18873 Leaves broad-oblong mucronate channelled entire glabrous crossed by black bands, Scape scaly, Spike elong
 18874 Leaves long subul. glauc. or mealy, Scape bruchd at top with distich branches and bracts forming spikes, lower
 18875 Leaves oblong acute dilated at the base, Sepals a little shorter than corolla, Stamens exserted [bracts old
- [coloured, Partial Bracts and Calyxes ending in a spine
 18876 Leaves ligulate spiny ciliated convolute at base, Racemes spicate, Flowers sessile glomerate, Bracts leafy
 18877 Lvs clasping each other at base swrd-shpd spiny-serrul., Spks short stout a little bruchd with rich scarlet stlk,
 18878 Lvs ligulate convolute at base spiny-serrate, Racemes spicate, Flowers pale pink [Flws scarlet, blue at top
- 18879 Leaves ligulate striated obscurely banded serrulated of a different colour beneath Bracts lanceolate, Flowers sessile in the panicle
 [filiform, Segments of Perianth linear, Stamens exserted
 18880 Lvs broad undul. sheath red at base obscurely spotted, Umbel many-flowered, Spathe of 3—6 acute valves, Bracts
 18881 Lvs broad undul. glabr., Scape compr. dot. at base as well as peti., Umb. many-flwd hemisph., Segs of Per. lin.

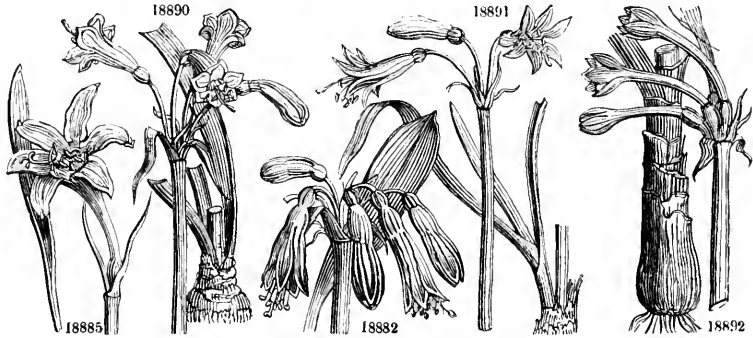

and Miscellaneous Particulars.

it should be in leaf mould, and the pots should be well drained with potsherds. Water should be given plentifully in the summer months, but sparingly in winter.

2061. *Echmæa*. A genus composed of epiphytal pineapple-like plants with long racemes or spikes of scarlet or red flowers, and large scarlet or red bracts which last give splendour to the plants. They succeed well with the same treatment as tropical epiphytal *Orchidææ*. They will grow on blocks of wood, in baskets, or in pots well drained with potsherds, in leaf mould. They require plenty of heat and moisture when in a growing state.

History, Use, Propagation, Culture,

2962. *Phædranássa*. This is a splendid bulb with cylindrical, fleshy, rather fistular scapes, and broad green petiolate leaves. The flowers are about 6 in an umbel, and are pendulous, long and tubular, green at base and apex; the stamens protrude, and the stigma is clavate. *P. chloræca* grows on rocks at the village of Saragura near Loxa in Peru, at the height of 9000 feet above the level of the sea; and *P. obtusa* in the valley of San Antonia in the province of Quito. They are both greenhouse bulbs. They require to be potted in light, rich, sandy loam; kept quite dry during the season of rest, and fully supplied with moisture when in a growing state. The flowers rise before the leaves.

2963. *Gastronéma* requires the same culture and treatment as *Amaryllis*.

2964. *Phycëlla*. Pretty bulbs and require the same treatment as *Amaryllis*, to be kept dry when in a dormant state and given plenty of water while growing.

2965. *Callithauma*. These are bulbs with green flowers which are stated to grow in their native country as tall

- 18882 Umbel about 6-flowered, Flowers drooping tubular, Leaves green acutish petiolate rising with the flower
Stamens longer than style
- 18883 Umbel 6-flowered, Flowers drooping, Leaves oblong petiolate, Scape terete glaucous subspiral, Stamens shorter than style
- 18884 Leaves flat subglaucous one fourth to three fifths of an inch broad, Spathe exceeding the peduncle, Flowers small, Sepals concave, Petals short deeply cut green with two spots reflexed at top
- 18885 Leaves solitary linear spatulate obtuse green longer than the 1-flowered stem, Spathe 2-leaved, Flower sessile erect, Tube terete widened at throat, Segments oblong equal
- ♢ Leaves pale green thick, Flowers nearly sessile red marked with white afterwards deep red, Corolla campanulately funnel-shaped revolute at top
- 18886 Leaves obtuse, Perianth funnel-shaped, Scape 3—4-flowered
♢ Lvs an inch broad blnsh, Scape glauc. usually 2-flwd, Per. compressed laterally brick-col. with deeper veins
- 18887 Lvs strap-shaped green, Scape glaucous, Flowers in pairs erect bell-shaped the divisions separate to the base, Corona short green
- 18888 Lvs erect obtuse glaucescent shorter than the many-flowered scape, Umbel divaricate, Peduncles slender
[tube which is destitute of appendages in the throat
- 18889 Lvs lorate-lanceolate, Scape glaucous 2-flowered, Segments of perianth combined into a curved funnel-shaped
[lorate sheathed, Corolla ringent campanulate drooping
- 18890 Spathe 2-flowered, Upper segments of Perianth broader and recurved, lower ones narrow, Tube very short, Lvs
18891 Spathe 3-flowered, Segms of Perianth arched, Stamens innappendiculate at the base inserted between the fringed ring of the throat, Lvs linear recurved
[than corolla, Stigma obtuse
- 18892 Bulb cylindrical, Lvs flat green, Scape green 2-edged, Limb of Perianth green equal to corona, Style shorter
- 18893 Lvs narrower, Limb of Perianth exceeding the corona, Style exceeding the Perianth, Stigma dilated somewhat 3-lobed
[lower lip clasping the stamens, Stigma 3-lobed
- 18894 Scape 4-flowered, Peduncles 1 inch, Spathe reddish 2 inches, Segments of Perianth striated narrow at base, the
18895 Lvs linear glaucous, Flws solitary drooping, Segms of Perianth marked with white in the middle, Petals
18896 Tube fringed, Corolla nodding with a very ringent limb, Stamens enclosed
[lanceol. recurved
- 18897 Lvs glaucous channelled stem furnished with leaf-formed bracts, Flowers racemously paniced, Peduncles 1 3-flwd, Corolla tubularly closed in the lower part
- 18898 Distinguished from *Is. montanum* by the expanded rotate flowers
- 18899 Ovary subspherical, Perianth with a short tube, and linear-oblong undulated segments shorter than the stamens
18900 Flowers stalked erect funnel-shaped clavate, Segments linear-lanceolate, Stamens straight

- [lucrate at base, Perianth subcylindrical, Sepals oblong, Petals spatulate
- 18901 Glaucous, Stem glabrous leafy, Leaves lanceolate downy beneath, Racemes umbellate terminal pendulous involucre
- 18902 Glaucous, Stem erect filiform flexuous, Lvs oblong obtuse, Flowers 1-4 pendulous cylindrical
[narrow whitish in the lower part, Stamens short declinate
- 18903 Lvs narrow flaccid mottled with pale blotches upon a dark green ground, Flws small pale ultramarine, Segms
[at base, appendages of throat linear acuminate, Stigma nearly simple
- 18904 Lvs linear green convex on back, Umbel 2-3-flwd Perianth campanulate revolute at apex, filaments glandular
[lar erect, Sepals apiculate, Petals oblong acum., Stigma 3-parted
- 18905 Lvs erect glaucescent, Scape 1-flowered, Spathe tubular coloured shorter than peduncle, Perianth nearly regular
- 18906 Lvs bluntish green, Scape a little compressed, Spathe 2-valved, Umbels 6-fld, App. of throat minutely bearded

and Miscellaneous Particulars.

as a man, but they are actually hardly 3 feet high. In this country they scarcely attain 1 foot. This genus is closely akin to *Cobáughia*, of which, according to Herbert, it may perhaps ultimately be found to form only a section.

2966. *Sprekella*. Comprehends the *Jacoba Lilies* well known for their splendid ringent declinate large showy blossoms, with the stamens closely embraced by the lower lip. The species grow very well out of doors, planted close against a south wall.

2967. *Lilium*. The plants are perfectly hardy and flower freely. Whether it will be better to take up the bulbs to be dried in summer and reset in the autumn is not yet ascertained, but it will probably not be necessary.

2968. *Lycoris*. Cultivated like other hardy bulbs. They require to be grown in a sheltered place.

2969. *Collania*. These splendid plants should be reared in a hot-bed and then removed to a cool greenhouse. The open border would in all probability suit them. The genus is nearly allied to *Astraméria*. The roots are edible.

History, Use, Propagation, Culture,

2970. *Bomaria*. All the species will do very well out of doors in a warm sheltered situation in summer, but require protection during winter. A light dry soil suits them best. They may be propagated either by dividing the plant at the root or by seed. Being climbers they require to have something to support the stems.

2971. *Aticcia*. A moist warm part of a stove suits these plants. A mixture of loam and peat with plenty of water is the best soil for them. They are readily increased by offsets. They are very remarkable plants.

- [cuspidate, Petals lanceolate
 18907 Lvs oblong obtuse narrow at base, upper ones verticillate, Peduncles of Corymbs 3-flowered, Sepals obovate
 18908 A beautiful hybrid. The flws are white spotted with red or purple [ate undulated, Pet. narrow acute
 18909 Glab., Lvs of invol. and bracts of peduncles similar to the lvs, Pedunc. 2-3-flwd, Sep. broad rounded crenated cili-
 18910 Sep. obov. apic. pale purp., Lower Pet. same col. lat. petals narrower suff. with deep purp. fulv. mid. purp. br. top
 18911 Peduncles 2-3-flwd, Lvs resup. 2-3-nerved dot. with white, Seps spat., Pets narrower pale rose yel. middle
 18912 Stem flaccid erect, Lvs linear-lanc. denticulated half stem-clasping, Outer Segms of Perianth obovate, inner
 ones longer lanceolate [red, Petals greenish-yellow dotted
 18913 Lvs acutely subcord. toment. beneath, Peduncles about 5-flwd bracteate, Lvs of Invol. small, Ovaries downy Seps
 18914 Stem terete glabr., Lvs ovate-oblong obtuse glabr., Petioles twisted, Umbels many-flwd composed of 2-flwd
 peduncles, Bracts obov. spatulate coloured, Petals of 2 forms with a black mark in centre of each inner petal
 18915 Flowers in branched umbels, Perianth cylindrical
 18916 Lvs oblong-lanceolate many-nerved twisted at base, Nerves pilose above, Umbel many-flwd, Peduncles hispid
 ♂ Umbels many-flowered, Flowers golden yellow
 ♀ Umbel 10- (or more) flowered, Peduncles 1-2 flwd bracteate downy, Sepals ovate apiculate green, Petals spatu-
 late dotted inside
 18917 Lifts of involucre 4 in two series, Threads or sterile peduncles many long, Lvs oblong, Scapes and petioles
 erect elongated smooth
 18918 Lifts of involucre 4 in two series, Threads or sterile peduncles many long, Leaves ovate entire, Scapes and
 petioles rough
 [broadest sharply bifid and toothed, Floriferous branches simple, Fruit obovate
 18919 Frond digitately fan-shaped peltate, Petioles prickly on margins, Lifts long cuneated many-nerved, middle one
 18920 Procumbent branched pilose, Lvs oblong discoloured greenish grey vittate fringed on the top of the sheaths,
 Flowers aggregate within a double spathe [axillary and terminal
 18921 Downy, Root fascicled fleshy, Stem branched, Lvs sessile ovate-lanc. cord. stem-clasping, Umbels many-flwd
 18922 Stemless, Roots fleshy, Lvs oblong acute conc. glab. ciliated pilose beneath, Umb. loose term. sess., Pet. obov.
 18923 Internodes of stem tumid, Lvs hardly sheathing obl. revol. convex pilose ben., Umb. sess. axil., Pet. concave
 18924 Stem ascending, Branches glabrous, Lvs oblong-lanceolate entire glabrous, Nerves and sheaths ciliated, Umb.
 terminal. Filaments vill., Calyx hairy
 18925 Lvs ovate-lanceolate smooth entire acute shining purple beneath stem-clasping, Racemes terminal erect, Sepals
 and petals obtuse
 ♂ Flowers pure white or with a tinge of blue
 ♀ Leaves broader than in the species and the flowers much larger
 18926 Leaves stiff erectish with scabrous margins, Flowers conical in long racemes pendulous, Bracts narrow folia-
 ceous equal to or longer than pedicels [pendulous funnel-shaped
 18927 Leaves channelled acutely keeled scabrous on the margins, Bracts leaf-formed, Racemes 20-flowered, Flowers
 18928 Leaves linear bluntly keeled, Racemes short 6-flowered, Bracts ovate-lanceolate stiff, Perianth inversely
 conical with 6 gibbosities
 18929 Root like that of Crown imperial
 18930 Stem slender leafy few-flowered at top sometimes 1-flowered, Leaves scattered numerous linear acuminate
 sessile approximate, Corolla salver-shaped nutant with a long tube
 ♂ Flowers white
 18931 Leaves alternate linear acuminate soft, Flowers racemose horizontal campanulate, Sepals and petals obovate-
 lanceolate with a darker mark at base, Stamens declinate. Stigma 3-lobed, Capsule turbinate
 18932 Lvs scab. lanc., Flws nodding, Lvs of Perianth smooth or a little papillose inside much longer than the stamens
 18933 Glabrous, Leaves dense subverticillate ovate-lanc. acute, Flower erect solitary, Sepals and Petals unguiculate
 18934 Stem 2-3-flwd, Lvs scatt. obl.-lin. scarcely downy up. ones subverticill., Pedunc. 1-lyd, Seg. of Per. revol. sess.
 18935 Lvs crowded scattered sprdg puberulous beneath, Raes erect few-flwd, Flws drooping on short peds, Per. revol.
 18936 Stem villous above, Leaves ovate-lanceolate, lower ones alternate, upper ones verticillate, Flowers terminal
 erect. Segments of Perianth spreading glabrous inside

and Miscellaneous Particulars.

2972. *Cyanotis*. *Cyanotis vittata* is a pretty blotched and banded-leaved procumbent plant. It requires plenty of moisture and heat. A compost of sand, loam, and peat answers best, and it is readily increased by division or cuttings.

2973. *Therisia*. This plant requires the same culture and treatment as *Fritillaria*.

History, Use, Propagation, Culture,

2974. *Cordylone* comes very near to *Drac'na*, and requires nearly the same treatment: they are fine plants.
 2975. *Spironema* will be despised by the searcher after show plants, but by the lover of fragrant plants it will be cherished, for its smell is delicious. To be treated as any common greenhouse plant; increased by division.
 2976. *Luzuriaga* is a splendid plant when in blossom. It grows best in leaf mould and sand, and requires plenty of water while growing. Being a creeping radicate plant it is readily increased by cuttings.
 2977. *Callixene*, *Lapageria*, and *Luzuriaga* are all climbing plants from the south of Chili; *Lapageria* from Chile. All three are much alike, and are probably only species of the same genus. Their culture is the same.
 2978. *Lapageria rosea* is a twining plant, with a fasciated fleshy root, 6 ft. or more in height. The flowers are large, rose-coloured, and spotted with white. Requires leaf mould and sand, and should be trained to a support.

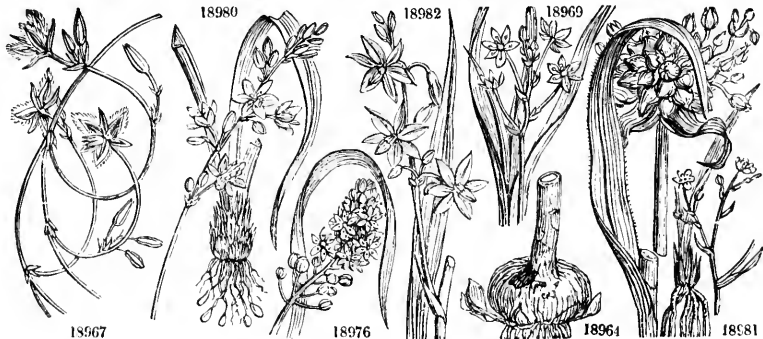

- [and ciliated at base, Leaves oblong-linear green
 18937 Bulb solitary, Stem 1-flowered 2-leaved, Petals acute, inner ones broader, Filaments bearded above the base
 18938 Stem 3—4-leaved, Leaves boat-shaped glaucous lying on the ground, Scape 1½ inch purplish smooth, Petals pale purple pale yellow at base green outside
 18939 Flowers between those of *F. lutea* and *F. Melcâgrís*, Leaves lanceolate green, upper ones glaucous
 18940 Stem 1-flowered, 4—6-leaved green glaucous, Flowers pendulous greenish purple tessellated inside
 18941 Leaf solitary linear-lanceolate acuminate glaucous beneath, Scape 3-flowered, Peduncles longer than the linear acuminate bracts, Sepals acute naked, Petals bearded recurved at top
 18942 Stem arborescent, Leaves ensiform acute quite entire 2 feet long stem-clasping terminal, Racemes latera compound
 18943 Leaves linear channelled acuminate marginate reflexed, Fruit usually 3-seeded but from abortion 1—2-seeded, Panicle simple terminal erect
 18944 Stem slender branched, Leaves oblong deflexed 4—6 inches long dark green, Flowers terminal and axillary panicled
 β Leaves deep green prettily marked with yellowish green blotches [of 3—5 toothed bracts
 18945 Habit of *Sanseviëra*, glabrous stemless, Lvs oblong-lanceolate, Panicle branched, Flws agglomerate in the axils
 18946 Lvs linear obtuse, Corona 3-leaved, Leaflets of corona linear-oblong obtuse emarginate or sinuately 2-lobed, 3 or 4 times shorter than limb of calyx, Segments of calyx linear-oblong obtuse
 18947 Root thick knobby, Stem bearing long narrow dull green ribbed leaves, shining above and glaucous beneath, Panicle compound, Flowers small
 18948 Stem radicans, Branches tetragonal, Leaves lanceolate oblique, Peduncles 2—4-flowered, Flowers variegated drooping
 18949 Branches nodose, Leaves numerous small scale-formed entire, Flowers terminal solitary
 18950 Stem round twining radicans, Leaves alternate ovate-lanceolate cuspidate nerved, Peduncles axillary solitary 1-flowered, Corolla large rose-coloured spotted with white internally
 18951 Branches flexuous, Leaves alternate petiolate ovate-elliptic entire acute, Flowers solitary axillary and terminal, Peduncles imbricated by scales, Corollas large
 18952 Stem prickly, Branches unarmed, Leaves alternate opposite or terminal, Racemes undivided, Perianth a little longer than anthers
 18953 Rhizoma radicans scandent, Lvs recurved quite glabrous ensiform longer than the interrupted spicate racemes, Bracts ovate with membranous edges longer than the flowers
 18954 Lvs triquetrous about equal in length to the scape, Pedicels twice as long as flowers, Sepals and Petals ovate, Cells of Anthers elongated [oblong obtuse, Ovarium 6-winged
 18955 Lvs linear-lanceolate nerved beneath, Spathe 1-valved, Umbel bulbiferous few-flwd, Segments of Perianth ovate-
 18956 Leaves lorate-linear acute twisted a little, Spathe 3—4-lobed, Umbel bulbiferous fastigate, Segment of Perianth crenulated
 18957 Leaves linear shorter than the scape, Umbel many-flowered, Segments of Perianth bluntnish, Ovarium elliptic, Cells 6—8-ovulate
 18958 Scape leafy at base, Lvs linear channelled scabrous on margins, Umbels many-flowered Sepals narrow oblong obtuse [gments of Perianth erect acuminate recurved at top
 18959 Stem leafy at base, Lvs subulate equal to the scapes, Umbels lax, Pedicels much longer than the spathe, Seg-
 18960 Leaves lorate-linear keeled, Spathe 3—4-lobed, Umbel many-flwd compact, Segments of Perianth elliptic obt.
 18961 Leaves narrow semi-terete channelled above, Spathe 1-valved, Umbels about 12-flowered, Stamens enclosed
 18962 Leaves narrow flat one-half shorter than the scape, Umbels few-flowered contracted, Stamens exerted
 18963 Leaves semi-cylindrical sulcate beneath with the margins and ribs ciliated, Umbel effuse, Flowers pendulous, Segments of Perianth oblong truncate concave

and Miscellaneous Particulars.

2979. *Philesia buxifolia* is enumerated by Dr. Joseph Hooker as amongst the handsomest of the antarctic American Flora, occurring along the coast of Magellan to Valdivia. According to Mr. Lobb, who first sent it to this country in a living state, it is a plant of slow growth. In its native country it forms large masses on trunks of trees and on rocks, throwing out long slender stems which creep under the decayed bark, and over rocks that are partially covered with soil. The flowers are produced near the extremities of the branches, have a campanulate form of a deep rose-colour, and are sometimes not less in size than a common tulip. Mr. Lobb says he traced the plant from the level of the sea to the snow line of the mountains, and it flourishes more freely at this great elevation.
 2980. *Rhipogonum*. Only requires the common culture and treatment of ordinary greenhouse climbing shrubs.

History, Use, Propagation, Culture,

2981. *Bidwillia*. This plant was introduced by Mr. Bidwill of Sydney. It is a native of an elevated tract of table land, called New England, on the south mountains of the Australian continent. It is quite hardy and of easy culture.

2982. *Simethis*. Heath mould is the best soil for this plant, and it is increased by division.

2983. *Echeandia* is a tall plant. The flowers are greenish yellow, in clusters of 3-6, and issuing singly from small bracts. They open for 8 or 10 hours and then close and fade. The culture is easy.

2984. *Chrysobactron*. This pretty little plant grows in boggy places. The pot in which it is grown should be placed in water to about the middle.

18964 Umbels bulbif., Lvs broad lin. keeled with carinate sheath rough edg. and keel, Seg. of Per. rough, Stam. exsert.
 18965 Leaves linear trigonous, Scape terete, Umbels globose much longer than the spathe, Segments of Perianth acute equal in length to the stamens

18966 Leaves linear subglaucous smooth longer than the scape channelled, Umbels 2-3-flowered [about 2-flwd
 18967 Stems terete glabrous sulcate, Branches divaricate-ultimate ones forked, Lvs scale-formed, Pedun. stiff 2-edged
 18968 Leaves rusty erect glabrous length of humble branched scape, Umbels terminal about 4-flowered, Bracts mucronate, Stigma papillose [obtus longer than stamens

18969 Leaves acuminate channelled length of corymbose raceme, Filaments lanceolate, Sepals and Petals oblong-
 18970 Lvs glauc. very long chnld, Pan. divaric., Seg. of Per. lin undul. coherg at length spreading, Cells of Ov. 2-sd.
 18971 Lvs ascend. broadish channelled with white margins longer than corymbose scape, Sepals and Petals obt.
 18972 Leaves linear channelled glabrous longer than corymb, Corymbs on short peduncles spreading, Pedicels re-
 fracted after florescence, Bracts oval, Ovarium 3-lobed

18973 Raceme loose many-flowered, Flowers twin Leaves ensiform acute

18974 Very close to *S. peruviana* but much smaller in all its parts, Flowers of the same greyish hue and corymbose arrangement, Bracts curved inwards at top

β Sepals and Petals yellowish brown, Ovarium and Filaments blue [linear almost sterile

18975 Close to *S. itatica*, Racemes loose 3-5-flowered, Bracts as long as pedicels at first but become shorter, Filaments

18976 Lvs numerous ensif. longer than scape, Races elong., Bracts small scarious, Seg. of Per. lin. longer than stamens

18977 Lvs strap-shaped flat recurved, Scape terete few-flwd, Peds longer than bracts, Seg. of Perianth ovate at length

18978 Bulb 1-leaved very like a small Lily of the valley, Racemes 3-5-flowered, Anthers yellow [reflexed

18979 Leaves linear narrow glaucous, Stem simp.e 2-3-forked, Peduncles bracteate

18980 Leaves linear elongated keeled, Sheathing glaucous beneath, Flowers racemose, Pedicels 3 together, Stamens thickened

18981 Leaves flat, Racemes loose paniced

18982 Leaves sheathing erect glaucous linear-lanceolate acute, Stem terete branched with a long lanceolate sheathing pale green bract, Flowers issuing singly from small bracts

18983 Leaves linear ligulate acuminate, Racemes loose-flowered, Ovarium obovate, Capsule on a short stipe

18984 Branches very long climbing with straight prickles, Leaves linear-falcate lucid, Peduncles 1-flowered

18985 Leaves succulent, Scape racemose destitute of a coma

18986 Leaves glaucous a foot long channelled rather scabrous on the margins, Peduncles spreading racemose

18987 Corolla campanulate, Flowers racemose, Pedicels longer than the flowers, Filaments membranous, Anthers blue, Capsule roundish at top

18988 Trailing, Spines tripartite, Leaves linear pungent bright green fascicled, Peduncles axillary 1-flowered solitary [or in pairs

18989 Spines large palmate, Leaves small dark green spiny in fascicles, Peduncles 1-flowered clustered

18990 Straggling, Leaves small ovate or oblong dark green above rather glaucous beneath toothless spiny-pointed, Spines large tripart., Flws single or in clusters [old plants, Spines small slightly tripart., Flws in clusters

18991 Branches downy, Leaves small oblong having 3 or more spiny teeth while young, narrow and mucronate in the

18992 Leaves in clusters 3-4 inches long serrulated ending in a straight point on each side with a spiny point bright green above pale beneath, Spines tripart. slender, Flws in fasc. [on each side near middle, Races erect

18993 Brans ferrug., Lvs small close together deep green with three large spiny teeth at apex and one or two more

18994 Lvs narrow obov. 3-5-lobed spinose glauces. above green beneath, Racemes few-flowered, Flowers small

18995 Lvs obov. obt. bright green with a spiny point and several teeth on each sid., Spines small palm., Race pan. erect

18996 Rigid, Spines 3-5-parted, Lvs fascicled coriac. wavy opaque mucr. sometimes obl.-lanc., Rac. erect nearly sessile

18997 Brn. bearing lvs of two forms, low. cord. ang., up. obov.-ellip. cori. wavy with a few marg. spiny tth, Races droop.

and Miscellaneous Particulars.

2985. *Drimys*opsis. A greenhouse bulb requiring the same treatment as *Drimmia* and *Lachenalia*.

2986. *Belleröalia*. Hardy bulbs of easy culture.

8.9. *Berberis*. The fruit of *B. borifolia* were used by the officers of Sir James Ross's expedition for tarts and found excellent. *B. tinctoria* furnishes a yellow dye. *B. Lycium* has been discovered by Dr. Royle to be the real *Lycium indicum* of the Greek physicians, and to this day its extract is used against Ophthalmia with as great success as in the days of Dioscorides. It is an erect subevergreen. In winter the leaves are nearly green on both sides, and at length become dull purple. The berries of *B. trifoliata* are eaten by children in Mexico.

History, Use, Propagation, Culture,

2987. *Isomeris*. A curious shrub; the blossoms at first sight resemble those of small-flowered species of *Edwardsia*. The whole plant has the odour of *Potanisia*. For culture see *Capparis*, p. 458.
 2988. *Anopteris*. This is a fine-looking greenhouse tree or large shrub. The leaves are large and handsome. It is of easy culture. A compost of sand loam and peat suits it best, and cuttings are easily rooted.
 2989. *Eleutherine*. To be kept moist when growing. A peat soil is best for it; readily increased by division.
 2990. *Prepusa*. All the species are beautiful when in blossom. They grow freely in a mixture of peat-earth and sand with the addition of a little turfy loam. They require moisture when in a growing state, but should be kept rather dry in winter as they are apt to damp off at that season. They may be propagated by cuttings or division.

- 18998 Lvs deep green in fascicles 3 inches long oblong with a spiny point and usually with a few spiny teeth on each side pale beneath, Racemes paniced erect
- 18999 Lvs coriaceous broad obov. distantly spinose and entire reticulated white beneath, Rac. shorter than the lvs
- 19000 Branches angular, Spines tripartite slender, Lvs narrow bluish green glaucous beneath entire or with 1-2-teeth on each side, Racemes drooping slender, Berries purple [erect loose, Berries purple
- 19001 Spines slender tripart., Lvs dull green glauc. beneath oblong obtuse with a spiny point hardly spiny-toothed, Rac. erect loose, Berries purple
- 19002 Brn. angul., Spin. tripart., Lvs glauc. ben. obl.-lanc. spiny-pntd usually with several lat. teeth, Rac. erect pan.
- 19003 Lifts 3 sessile at the ends of the petioles deeply scolloped bluish green variegated glaucous beneath, Racemes small axillary sessile 3-5-flowered
- 19004 Lvs pinnate, Leaflets broad trifurcate, Racemes compound erect [longer than lvs, Petals small
- 19005 Lvs plunate, Leaflets 7-15 nearly sessile ovate obtuse mucronate entire, Racemes compound loose drooping
- 19006 Lvs pinnate slightly prickly, Rac. paniced, Berries round dark purple particularly acid
- 19007 Lvs pinnate a foot long with 5-6 pair of sessile ovate-oblong spiny-toothed leaflets the largest 3 inches long and 1 broad, Racemes simple erect, Berries oblong dark purple
- 19008 Lvs 18 inches long with 11-12 pairs of closely set leaflets [long and deeply cordate with 5 coarse spiny teeth on each side, the terminal one 5 inches [lous many-flowered, Berries red oblong
- 19009 Lvs 15 inches long, Lifts 5 slightly cordate, sessile with 3-4 spiny teeth on each side, the terminal one 5 inches [lous many-flowered, Berries red oblong
- 19010 Spines strong tripartite, Lvs lanceolate or obovate entire or awnedly serrated green on both sides, Rac. pendu-
- 19011 Glabrous dark green, Lvs of 7-9 linear lanceolate spiny serrated very acute leaflets, Rac. paniced the lateral branches spreading dense-flowered
- 19012 A dwarf shrub with fusiform roots, approximate trifoliate leaves, and large yellow flowers disposed in terminal racemes
- 19013 Lvs narrow grass-like, Spike bifid
- 19014 Glabrous, Lvs alternate plicate ovate-oblong tapering to both ends nearly sessile coriaceous callously toothed, Rac. simple terminal, Flws sometimes 7-clelt white tinged with purple
- 19015 Lvs oblong narrowed at base upper ones petiolate longer than the lax pedunculate flowers [late large inflated 6-angled coloured
- 19016 Herbaceous tufted, Radical lvs linear-spatulate rather fleshy 1-nerved, cauline lvs subconnate, Calyx campanu-
- 19017 Perianth yellow with a brown transverse mark and spotted at base downy

Lamina obovate, spreading. Stamens 9, combined with the lamina, torus, and stipe of ovarium: Filaments filiform, exerted, ascending. Ovarium stipitate, 3-celled. Ovula twin in the cells. Styles very short. Stigma simple.

MONOGYNIA.

19018 Leaves alternate imparipinnate, Leaflets 3 pair, Racemes lateral corymbose

19019 Arboreous. Leaves pinnate 3-5 pair of lanceolate smooth undulated acuminate leaflets, [fascicled, Flowers hexandrous Corym's terminal

19012
and Miscellaneous Particulars.

2991. *Trimèzia*. This genus is nearly allied to *Eleutherine*, and requires the same kind of treatment.

2992. *Ugnàdia speciosa* is a fine hardy tree, lately introduced, nearly allied to the *Æsculus*. It may prove to be a handsome tree. It requires the common treatment of the horsechestnuts, and may be propagated by grafting on a common horsechestnut.

19019. *Jonèsia Asoca*. The flowers of this tree are orange, scarlet, pale yellow, and bright orange. The Brahmins, who adore beautiful objects, have consecrated the lovely *Asoca*, which they plant near their temples, and frequently mention a grove of it in which Ravan confined the unfortunate Sita. The eighth day from the new moon of Chaitra is called *Asocastanii*.

Page 300. CLASS VIII.—OCTANDRIA. 8 STAMENS.

Order 1. MONOGYNIA. 8 Stamens. 1 Style.

2993. 878a. *Acronychia*. Calyx short, 4-parted. Petals 4. Stamens inserted under the disk. Style short. Stigma capitate, 4-lobed. Fruit berry-formed, nearly globose, 4-celled. Cells 1-seeded by abortion.

2994. 899a. *Oryjspora*. Calyx oblong, 4-lobed. Petals 4. Stamens equal. Anthers elongated, drawn out into 2 blunt spurs at base, with their connectives hardly perspicuous. Capsule 4-valved, 4-celled. Seeds awned at both ends.

2995. 899b. *Marcétia*. Calyx cylindrical, 4-lobed. Petals 4, acute. Stamens equal. Anthers with 2 tubercles at base, and opening by a pore at apex. Ovarium free, glabrous. Style filiform. Stigma dot-formed. Capsule 4-celled, 4-valved. Seeds cochleate.

2996. 899c. *Centradènia*. Calyx with a subtetragonal tube and a 4-parted limb. Petals 4. Anthers unimprose; the larger 2 having the connectives drawn out into an elongated clavate spur, and those of the smaller ones into a gland-formed appendage. Ovarium 4-celled, many-ovulate, with a single whorl of hairs at top. Style short. Stigma capitate. Seeds echinate.

2997. 903a. *Zauschnèria*. Calyx with a tetragonal tube and a 4-parted limb. Petals 4, inserted in the throat of the calyx, regular. Stamens exserted. Ovarium 4-celled, many-seeded. Style filiform. Stigma 4-lobed.

2998. 909a. *Lagétta*. Flowers hermaphrodite or ócious. Perianth coloured, tubular: Limb 4-cleft: Throat bispid. Stamens inserted in two series in the upper part of the tube, enclosed. Stigma capitate, emarginately 2-lobed. Drupe covered by the baccate villous perigone, 1—3-seeded: Putamen crustaceous.

History, Use, Propagation, Culture,

2993. *Acronychia Cunninghamii* is a tall handsome evergreen shrub, a native of Moreton Bay. The flowers at first sight have a good deal the appearance of those of the orange, as well as in the odour; but it is combined with the aromatic warmth of ginger. The foliage emits a turpentine smell when bruised from the numerous pellucid glands

2999. 910a. *Edgeworthia*. Perianth 4-parted. Hypogynous scale 1 emarginate. Stamens inserted in 2 series. Ovule solitary. Stigma elongated, subulate. Nut fibrous

3000. 916c. *Buginvillea*. Involucrum 3-leaved, with a flower springing from near the base of the midrib of each leaf. Perianth tubular, 5-toothed. Stamens enclosed. Stigma undivided. Achenia angular, hard. Fruit 1-celled.

Order 2. DIGYNIA. 8 Stamens. 2 Styles.

3001. 919a. *Geissois*. Calyx 4-parted, deciduous. Petals wanting. Style 1. Stigmas 2. Capsule compressed, 2-celled, 2-valved. Cells many-seeded. Seeds compressed, winged.

Order 3. TRIGYNIA. 8 Stamens. 3 Styles.

3002. 921a. *Sarcogonum*. Flowers polygamous. Styles 3, or Style 3-parted. Stamens 8. Perianth baccate Berry white, juicy. Nuts angular.

3003. 921b. *Fagopyrum*. Perianth 5-cleft, equal, shorter than the achenia when mature. Hypogynous glands 8, hemispherical, alternating with the stamens. Anthers versatile. Styles 3, long. Stigmas capitate. Achenia large, triquetrous. Seed free.

Order 4. TETRAGYNIA. 8 Stamens. 4 Styles.

3004. 932a. *Loudonia*. Calyx 4-toothed, superior: Tube tetrapterous, verrucose. Petals cucullate, imbricate in aestivation. Stamens 8. Anthers linear. Disk none. Ovarium 1-celled, biovulate. Ovules pendulous. Styles 4. Stigmas roundish, discoloured.

MONOGYNIA.

19020 Root tuberous, Lvs of 5-6 glaucous linear-lanceolate leaflets, Petioles long twisted, Peduncles 1-flwd, Upper 2

Petals obovate, lower 3 smaller spatulate emarginate, Spur large

19021 Lvs peltate 5-lobed, Segments acute, Stipules jagged, Peduncles long twisted, Petals cuneate, 2 upper smaller sessile, 3 lower unguiculate, all jagged and ciliated, Spur subulate straight

19022 Lvs peltate 5-7-lobd, Lbs rndish quite ent. Pet. denticulately ciliated length of cal., Sep. appendiculate at base

19023 Pil., Lvs orb. obsc. lbd pelt. glauc. ben., Lbs muc., Pet. obov. 2 up. ent. 3 low. smllr thd frngd at base on lng clws

19024 Lvs pelt. glab. ben. slght. 5-lobd. mid. lobe muc., Fl. axil. sol. 1 end., Pet. spat. serr., 3 low. on lng clws, 2 up. ses.

19025 Pil., Lvs subpelt., Lifts 6 obl. obov. obt. on short pet. Ped. long, Pet. obov. 2-lobed, upper smaller, Spur long

19026 Root tuberous, Lvs deeply cut peltate roundish, Leaflets 5-6 obovate, Petals obovate twice as long as calyx

19027 Leaves peltate suborbiculate fringed at base, Spur long [subbicrenate, upper two lined with red

19028 Leaves peltate suborbiculate 5-lobed, Lobes obtuse or retuse mucronate, Petals obovate nearly equal truncate

19029 Rad. downy, Lvs pelt. triang. ovate sin., Peti. hairy, Pedunc. axil. twisted, Spur straight, Pet. wedge-shpd thd

19030 Glab., Lvs pelt. obl. triang. deep green, Ped. axil. at top of brnchs. Spur long orange tip, by green, Pet. cun. thd

19031 Root tuber., Lvs subpel. cord. 5-lobd. Flws umbel., Cal. cyli d., Pet. spat. ac., 2 up. scale-frmd, Spur curv. obt.

19032 Root tuber., Stems ascending not climbing, Lvs numerous, 5-10-lbd, Lbs obl. or obov. glauc., Pet. obt. entire

19033 Root tuberous, Leaves peltate deeply 5-parted, Lobes linear-lanceolate obtuse, Petals cuneate nearly equal

spreading 2-lobed, Spur short conical

19034 Branches angular glabrous, Leaves pinnate, Leaflets 5 oblong-lanceolate obtuse, Peduncles umbellate hoary,

Petals hoary, Anthers mucronate

19035 Leaves ternate with revolute edges hoary-tomentose from stellate hairs beneath

β Leaflets oval

19036 Leaves ternate, Leaflets linear revolute downy beneath, Peduncles axillary 1-flowered

19037 Lvs pinnate 4-5 pairs, Leaflets linear obtuse smooth, Branches pilose, Ped. short 1-flowered, Flws tetrandrous

19038 Lvs obovate mucronate crenulated, Pedicels axillary and terminal 1-flowered, Filaments blunt glandular at tips

19039 Branches dichot. slend. flex., Lvs. lin. obt. flat nar. at base, longer than internds, Fls axil. on short peds, Fil. vil.

19040 Lvs linear retuse denticulately mucronate, Peduncles corymbose. Filaments blunt and glandular at tips

19041 Brnchs comp. rough when young, Lvs short rndsh obo., but nar. and spat. on later brnchs, Fls small term. cym

19042 Glabrous, Lvs simple terete obtuse dilated at base sulcate, Cymes many-flowered on long peduncles, Filaments

hispid

19043 Leaves oblong smooth acute at both ends, Cymes axillary, Filaments fringed all nearly combined into a tube

[at base

and Miscellaneous Particulars.

with which they abound. The genus is nearly allied to *Cymnasma*. It grows freely in any common soil, and is readily increased by cuttings in the ordinary way.

19049

History, Use, Propagation, Culture,

879. *Tetradlea* is a genus of delicate greenhouse shrubs, gay with pretty blossoms. They will grow freely in a compost of peat, loam, and sand in equal proportions, and if a few potsherds are mixed with it so much the better. In summer plenty of air should be given, and shade in sunny weather. In winter they should be placed in some airy part of the greenhouse where they will be secure from damp. Fire heat should not be applied except to keep off frost. They are propagated by cuttings in the usual way.

19052. *Amyris toxifera* is a large tree with pinnate leaves. The fruit hangs in bunches; they are pear-shaped, and of a purple colour. The juice distilled from the trunk of the tree is as black as ink, and the inhabitants of Carolina believe it to be poisonous. It is called Janca tree and White Candlewood; and the wood is said to be valuable as timber; it bears a fine polish and has a pleasant smell. The fruit has much the taste of balsam of Copaiba.

- 19044 Branches tomentose sometimes setose, Leaves oblong scattered or opposite tomentose beneath hispid above, Peduncles setose or scabrous, Flowers pentamerous
- 19045 Branches slender downy, Leaves linear in whorls acute hairy, Peduncles axillary hairy, Petals cordate-ovate [axillary corymbose, Anthers scabrous beaked, Flowers pentamerous
- 19046 Branches hispid from red bristles, Leaves oblong-linear revolute scabrous above tomentose beneath, Peduncles 19047 Glab. or a little pil. at base. Lvs ov.-obl. or roundish verticil. or scat. shorter than internodes, Lvs pentamerous
- 19048 Glabrous, Branches rush-like, Leaves linear deciduous many deficient, Peduncles scattered length of corolla, Petals obovate, Flowers pentamerous [Cal. truncate
- 19049 Clothed with stellate down, Lvs cordate-ovate obtuse undulated at length glabrous, Flws solitary pendulous, 19050 Leaves spreading elliptic or oblong glabrous above clothed with rusty tomentum beneath as are the branches, Flowers 1—3 terminal cylindrical, Stamens much exserted
- 19051 Leaves glabrous obovate spatulate obtuse coriaceous entire with revolute edges glaucous beneath, Peduncles axillary by threes or fours, Calyx 8-parted, Corolla biseriata, outer series 10- inner 8-parted all entire
- 19052 Leaves pinnate, Leaflets 5—7 stalked ovate subcordate acuminate, Racemes simple about the length of the petioles
- 19053 Glabrous, Leaves imbricate in 4 ranks obovate acute dotted immarginate on short petioles, Stamens 10, Flowers solitary or twin in the axils of the upper leaves on short pedicels
- 19054 Leaves in fascicles fleshy glabrous channelled above, Flowers diœcious glomerate, female ones solitary much shorter than leaves, Fruit 3-winged [Flowers erect, Petals obovate, Stamens 10 fertile
- 19055 Erect, Lvs cordate-ovate obtuse tubercled hoary beneath, Panicles terminal and axillary, Bracts ovate caducous, 19056 Erect hispid, Lvs ovate-lanceolate 3-nerved, Flwr terminal pedunculate, Segs of Calyx ovate-lanceolate ciliated, β Flowers white [Hairs of Tube branched, Petals obtuse ciliated, Stamens 8
- 19057 Subscandent, Branches pendent, Leaves subcordate-ovate acuminate crenulated ciliated tomentose beneath as well as branches and petioles, Panicle elongated nutant [pedicellate disposed in a leafy raceme
- 19058 Suffruticose much branched, Lvs nearly sessile oblong obtuse mucronate downy 3-nerved, Flowers axillary 19059 Suffruticose branched, Leaves sessile ovate rather cordate entire 3-nerved downy as are the branches and calyxes, Flowers axillary pedicellate, Lobes of Calyx lanceolate subulate
- 19060 Leaves ovate-lanceolate unequal-sided, Racemes subcorymbose terminal [bristles at edges downy on veins beneath, Cymes trichotomous, Petals obovate
- 19061 Stem and branches tetragonal covered with bristly hairs, Leaves triple-nerved petiolate ovate acute with stiff 19062 Branches straggling hoary, Leaves unequal-sided petiolate acuminate bristly at edges pale beneath and downy on the veins, Flowers few terminal, Petals obovate
- 19063 Branches tetragonal beset with glandular hairs, Lvs ovate-cordate acute 5-nerved serrated, Cymes loose terminal few-flwd, Calyx glandular, Spurs of Anthers bifid [or bracts cordate, Capsule cylind. sulcate hairy
- 19064 Erectish branched a little hairy, Lvs semi-amplexicaul toothed a little, lower ones ovate-acuminate, upper ones 19065 Branched downy, Lower Leaves elliptic entire or few-toothed, upper ones sharply toothed and divided at base, uppermost ones pinnatifid, Tube of Flwr long, Petals large crenul. [yellowish, Fruit lin. 4-fur. terete downy
- 19066 Erect, Lvs lanc. a little too hed green smoothish, Tube of Calyx obconical shorter than segs, Lobes of Stigma 19067 Branches short crowded, Leaves glaucous lanceolate entire glabrous, Flowers sessile, Petals obovate, Fruit oblong 8-furrowed terete villous
- 19068 Lvs lanc. stalked irregularly toothed, Stem obsoletely angular, Stigma slightly lobed, Barren shoots none [part, Flowers axillary solitary drooping, Petals obovate
- 19069 Glaucous, Lvs linear sessile slightly toothed opposite on the lower part of the stem and alternate in the upper β Leaves linear-lanceolate γ Leaves ovate-lanceolate

and Miscellaneous Particulars.

294. *Oryzopora*. The species of this genus are small shrubs of considerable beauty when in blossom. A compost of loam, peat, and sand will suit them, and they may be propagated by cuttings in the usual way. They require a moist atmosphere.

295. *Marcetia* is nearly allied to *Oryzopora*, and may be treated in the same manner with regard to both cultivation and propagation.

296. *Centradenia*. Pretty soft-wooded plants, which thrive best in sandy peat with a little loam, and cuttings strike freely.

297. *Zauschneria*. These are pretty glaucous plants with bright scarlet flowers. They may be grown in pots as ornamental plants for the greenhouse or conservatory. They also answer well for flower-beds or borders: the root creeps like French willow in a light dry soil.

History, Use, Propagation, Culture,

2998. *Lagetta linteària* is the famous Jamaica lace-bark tree. Many persons have seen this beautiful substance but few have seen the living tree, for it was not until 1844 that it was introduced permanently to our hothouses, and then only through Mr. Wilson, curator of the Botanic Garden at Bath in Jamaica, to Kew Gardens, where it flowered and fruited in the autumn of 1849. It is well known that the liber or inner bark of this tree consists of layers of reticulated fibre, exactly resembling well prepared lace, and its nature is best exhibited by taking a truncheon from a branch and tearing down the bark and separating it by hand into as many layers as that portion of the tree is years old. The ladies of Jamaica, Lunan observes, "are extremely dexterous in making caps, ruffles, and complete suits of lace with it." In order to bleach it after being drawn out as much as it will bear, they expose it stretched to the sunshine and sprinkle it frequently with water. It bears washing well with common soap, and acquires a degree of whiteness equal to the best artificial lace. The wild negroes have made apparel from it of a very durable nature, but the common use to which it is applied is rope-making. The Spaniards are said to have worked it into cables. It was also made into negro whips in the days of slavery. The tree grows in marly limestone hills where there is not a particle of earth to be seen. In this country, according to Mr. John Smith of Kew Gardens, it is best grown in good yellow loam mixed with a little leaf mould and sand. It is difficult to propagate, and is most likely to succeed according to the same authority by layering. The tree is deciduous in its native country, but in our hothouses it becomes ever green.

- 19070 Stem prostr. radicant, Lvs opp. ternate a little toothed purplish beneath, Stip. fleshy, Ped. solitary axil. 1-flwd, Seg. of Cal. acum. twice the length of petals, Pet. obcord. [lanc.-acum. twice as long as cuneate petals

 19095 Evgr. creeping ascend., Lvs ov. taperg to both ends shining quite entire, Spikes elong. slender, Lwr Fl. remote

and Miscellaneous Particulars.

2999. *Edgeworthia* is a half-hardy shrub, and grows freely in a compost of sandy loam and one of turfy peat with sufficient drainage, for although it requires an ample supply of water while growing during summer it is liable to damp off in winter, and for a few weeks at this time it requires little water. The flowers being sweet-scented and the plant of free growth, it may be expected to prove a useful addition to our greenhouses.

3000. *Buginvillaea* is a fine stove climber, suited for training upon trellis-work or pillars. The purple bracts are the principal feature of the plant. A compost of sand, loam, and turfy peat answers it well, and cuttings strike root freely in the ordinary way.

3001. *Cassiois*. This plant being so recently introduced, very little is known of the manner in which it should be cultivated. The flowers are a bright crimson and grow in long dense racemes.

19096. *Polygonum cuspidatum* is said by De Vriese to be the handsomest of all the species. *P. Brunonis* and *P. nacciniifolium* are well fitted for ornamenting rockwork. *P. complanatum* is a small round-leaved climbing species, well fitted for covering pillars in a conservatory or greenhouse, and is probably a species of *Sarcocodanum*. From *P. chinense*, but more particularly *P. tinctorium*, indigo is prepared in China. Which last is cultivated extensively in Belgium as a substitute for the true indigo, and is said to produce the dye in great abundance and of the finest quality.

History, Use, Propagation, Culture,

3002. *Sarcogonum*. A climbing plant of the most easy culture. It will grow in any light soil, and is readily increased by cuttings or berries.

3003. *Fagopyrum cymosum* is a pretty plant of the most easy culture. It will grow in any common garden soil, and may be increased by dividing the roots or by seeds.

3004. *Loudonia*. This is a pretty shrub, with corymbs of golden yellow flowers. A compost of sand, loam, and peat will probably suit it well, and cuttings will strike root in the ordinary way.

- 19096 Lvs broad-ov. hardly cord., Stem rnd hollow spotted with purple, Stipules obliq. trun. purple, Pan. axill. divar.
 19097 Half-shrubby forming a bush, Lvs lanceolate pale green acuminate hairy, Panicles dense terminal
 19098 Erect, Lvs radical on long petioles cordate-ovate acuminate crenulate and entire, upper leaves stem-clasping,
 Spikes elongated many-flowered, Bracts ovate-acuminate imbricate, Stamens exserted
 19099 Lvs ovate-lanceolate stalked bearded along the midrib, Heads of Flowers small, Flowers small fleshy succeeded
 by black succulent berries
 19100 Stems numerous, Stipules membr., Lvs ovate entire glabr. thick fleshy, Spikes long branched, Style semibifid
- 19101 Glabrous, Stems twining or prostrate terete, Lvs cord.-acuminate crenulated with scabrous edges, Racemes
 axillary or terminal, Bracts and achenia naked
- 19102 Root stoloniferous, Lower Lvs triangular cordate or hastate with bluntish lobes, upper lvs oblong or lanceo-
 late-sagittate, Panicles on long peduncles nearly leafless dichotomous or trifid
- 19103 Glabr., Stem simple, Lvs cordate-ovate acute sessile stem-clasping bullate veined, Ochrea large inflated, Ra-
 cemes dense spicate elongate simple terminal, Flws copious, Perianth 4—6-lobed, Stamens 8—12
 19104 Lvs ovate-lanceolate obtuse tapering into the petioles, Racemes nutant, Flowers decandrous

TETRAGYNIA.

[Panicles terminal corymbose, Upper bracts petaloid obovate

- 19105 Glab., Stem erect terete simple leafy at base sometimes leafless at top, Lvs alternate coriaceous quite entire

4 series, the 9 outer ones fertile, 3 inner ones sterile; these last are furnished with twin sessile subglobose glands at both sides. Anthers ovate, membranous at tips, Style thick. Stigma capitate. Ovarium 1-celled, 1-seeded
 3006. 934a. *Oreodaphne*. Hermaphrodite dioecious or polygamous. Perianth 6-parted. Stamens 9. Anthers oblong narrowed into the filaments, 4-celled; cells placed by pairs one above another: three of the inner anthers reversed. Berry more or less immersed in the tube of the perianth, which becomes a thick cup.

MONOGYNIA.

- 19106 Lvs alternate crowded, Buds stipitate 2-valved, Panicles terminal contracted
- 19107 A large tree growing about Santa Cruz
- 19108 Lvs elliptic or oblong-elliptic reticulated blistered above, Racemes few-flowered axillary and terminal rising
 from beneath the buds

and Miscellaneous Particulars.

305. *Agathophyllum*. This is a tree not much known. It will require to be grown like other stove plants. It will propagate by cuttings. It is called Madagascar Nutmeg.

306. *Oreodaphne*. This tree will only require the treatment usually given to greenhouse plants. *Oreodaphne bullata* is called *stink hout* or *stink-wood*; and the greatest part of the timber used in building, and indeed for every other purpose, in South Africa, consists of the *gel hout* (yellow wood, a species of *Podocarpus*) and the *stink hout*. Our plant is said to produce a handsome wood resembling mahogany both in colour and quality.

Page 338. CLASS X.—DECANDRIA. 10 STAMENS.

Order 1. MONOGYNIA. 10 Stamens. 1 Style.

3007. 948a. *Ammodendron*. Calyx 5-cleft, subbilabiate, at length reflexed. Wings and dipetalous keel equal and connate. Legume flat, membranous, 1-seeded by abortion, samaroid, marginate by a wing. Seed reniform, compressed.

3008. 949a. *Dichosëma*. Calyx campanulate, bilabiate: upper lip bifid, lower lip tripartite. Corolla with a broad bilobed standard, much exceeding the small wings: keel straight, obtuse, a little shorter than wings. Stamens uniform. Ovarium sessile, many-ovulate, somewhat 2-celled from the suture being inflexed. Style uncinately bearded on the under side. Stigma capitate.

3009. 953a. *Jansônia*. Calyx bilabiate: upper lip bifid nearly to the base; lower lip much longer, tripartite. Corolla with an ovate-lanceolate reflexed standard, which is shorter than the elliptic wings: keel compressed, longer than wings. Stamens unequal. Ovarium villous, substipitate, 4—5-ovulate; the stipe surrounded by a little sheath. Style elongated, incurved at top. Stigma small.

3010. 978a. *Coutèria*. Calyx turbinate, 5-cleft; the lower lobe the largest, and pectinately toothed with glands. Petals 5, upper one the largest. Stamens bearded at base, and with a nectariferous gland on the upper side of the ovarium. Style short. Stigma glandularly ciliated. Legume flat, spongy, hardly dehiscent, but usually divided transversely into cells, 4—6-seeded.

3011. 987a. *Cupânia*. Calyx 5-cleft, or 5-parted. Petals 5, each furnished with a small scale above the base inside. Disk regular, occupying the bottom of the calyx, entire or crenulate. Stamens sometimes 9—5, inserted between the edge of the disk and ovarium. Style bifid or undivided. Capsule pear-shaped, 2—3-seeded, 2—3-valved, 2—3-celled. Seeds erect, arillate.

3012. 989a. *Turraëa*. Calyx 5-cleft. Petals 5, long, strap-shaped. Stamens combined into a very long tube, which is 10-cleft at apex, with an anther seated at the base of each lobe or between them. Stigma thickish. Capsule 5-celled. Cells 2-seeded: Valves with a dissepiment in the middle of each.

3013. 989b. *Munrônia*. Calyx 5-cleft: Segments linear. Petals 5, bound together by the claws. Stamens combined into a tube, ending in 10 subulate segments, and bearing an equal number of anthers inside. Ovarium downy, 6-celled. Cells 1—2-seeded. Stigma obscurely 5-lobed.

3014. 999c. *Acradënia*. Calyx 5-parted. Petals 5, velvety. Stamens glabrous, about equal to corolla. Anthers glabrous, inappediculate. Carpels 5, cohering, seated on a fleshy lobed gynobase, villous, each bearing a smooth sessile fleshy gland at its upper angle. Ovula 2 in each cell, collateral, pendulous. Style long, length of stamens. Stigma slightly capitate.

3015. 999d. *Diploëna*. Involucrum double, outer one 5-parted, inner one 10—15-parted, many-flowered. Flowers sessile, furnished with a 5-leaved chaffy calyx and a 5-petalled corolla. Stamens exerted: Filaments fringed. Style 5-furrowed. Stigma 5-lobed. Fruit of 5 distinct, 2-valved, 1-seeded carpels. Seeds oblong.

3016. 999e. *Bieberstënia*. Calyx 5-parted, irregular. Petals 5, twisted in the bud. Stamens subulate; the 5 shortest opposite the petals, the alternate 5 furnished each with a scale on the outside at the base. Anthers axillary Ovaria 5, distinct at the apex, but connected at base. Styles 5. Carpels 1-seeded, arillate inside.

3017. 1012a. *Ammyrsine*. Calyx deeply 5-parted. Petals 5. Stamens exerted. Anthers opening by two terminal pores. Capsule 5-celled, 5-valved, dehiscent at apex.

3018. 1014a. *Bryânthus*. Calyx 5-leaved. Corolla 5-parted. Filaments flattened, glabrous. Cells of Anthers short, mutic, or awned behind, each dehiscent by a terminal pore. Stigma obtuse. Capsule 5-celled, with a septical dehiscent.

3019. 1016b. *Thibaldia*. Calyx urceolate, 5-lobed. Corolla tubular, coarctate at apex, 5-lobed. Stamens inclosed: Filaments short, dilated. Anthers 2-celled, shortly spurred at base, and drawn out into 2 tubes at apex: cells or tubes parallel, dehiscent lengthwise by a linear fissure. Style pentagonal. Stigma large, peltate. Berry 5-celled. Cells many-seeded. Seeds minute, angular, dotted.

3020. 1016c. *Leucôthoe*. Calyx 5-leaved. Corolla tubular, 5-toothed. Stamens inclosed. Filaments flattened, downy. Cells of Anthers short, truncate, mutic. Stigma capitate. Capsule with a loculicidal dehiscent.

3021. 1016d. *Lyônia*. Calyx 5-parted. Corolla ovate or tubular, with a 5-toothed contracted mouth. Stamens inclosed. Filaments dilated, short, downy. Cells of Anthers membranous, dehiscent lengthwise, mutic. Style strong, pentagonal, fusiform. Stigma simple truncate. Capsule pentagonal, 5-celled, with a loculicidal dehiscent. Margins of valves closed by other external valves. Seeds acicular, imbricate.

3022. 1016e. *Agarista*. Calyx fleshy, 5-lobed. Corolla ovate, with a contracted 5-toothed mouth. Stamens inclosed: Filaments dilated, and villous at base. Anthers bipartite, with short membranous cells, which are mutic at base, and diverging at apex, each opening by a terminal pore. Style strong. Stigma capitate. Capsule globose, pentagonal, 5-celled, with a loculicidal dehiscent. Placentas thick, oblong. Seeds angular, curved.

3023. 1016f. *Gaylussacia*. Calyx 5-cleft. Corolla tubular, ventricose, 5-lobed. Stamens inserted in the limb of the corolla, inclosed. Anthers mutic, drawn out at top into two little tubes. Stigma capitate. Drupe nearly globose, 10-celled, covered by the calyx. Cells 1-seeded. Seeds smooth, lenticular.

3024. 1016g. *Macleania*. Calyx truncate, obsolete 5-toothed, 5-winged. Corolla cylindrical: Limb 5-cleft. Stamens combined, their whole length into an urceolus. Anthers mutic behind, and tapering into a single tube at apex, which opens inwardly by a single chink. Ovarium 5-celled, many-ovulate. Fruit a berry.

3025. 1019b. *Arctostaphylos*. Calyx 5-parted. Corolla globularly campanulate: Limb 5-cleft, reflexed. Stamens inclosed: Filaments dilated, pilose. Anthers compressed, dehiscent by two pores at apex, and furnished with 2

History, Use, Propagation, Culture,

19111. *Sophora velutna*. The flowers of this species are pale purple or red, disposed in long racemose spikes; and being very showy it would perhaps become more hardy by grafting it on *Sophora japonica*, which would make it a

reflexed awns. Ovarium seated on a hypogynous disk, or half-immersed in it, usually 5-celled, rarely 6—9-celled. Cells 1-seeded. Stigma obtuse. Drupe nearly globose.

3026. 1019c. *Comarostaphylos*. Calyx 5-parted. Corolla globularly campanulate: Limb 5-cleft, reflexed. Anthers 2-awned at base, and biporate at apex. Ovarium surrounded by a hypogynous disk. Stigma obtuse. Drupe papillose, globose, containing a 5-celled or 6—9 celled putamen. Cells 1-seeded.

3027. 1029a. *Charianthus*. Calyx with an ovate tube, and a rather urceolate 4—5-lobed limb. Petals 4—5. Stamens 8—10. Anthers 2-celled, bursting by 2 longitudinal chinks. Berry fleshy, 4—5-celled, globose, umbilicate.

3028. 1029b. *Merìdia*. Calyx campanulate, 5—6-lobed: Lobes broad at base and subulate at apex. Petals 5—6. Stamens 10—12. Anthers blunt at apex, bursting by 2 pores, and furnished with 2 short processes at base. Capsule free, 5—6-celled, with lunate placentas. Seeds small, cuneate, angular.

3029. 1029c. *Medinilla*. Calyx with an obovate tube, and a cylindrical truncate limb. Petals 4—5. Stamens 8—10. Anthers elongated, bluntly biauriculate at base. Capsule baccate, 4—5-celled.

3030. 1029d. *Heterotrichum*. Calyx ovate, globose, 4—5-cleft: Lobes broad at base and subulate at apex. Petals 5—8, oval. Stamens 10—12—16, equal, glabrous. Anthers oblong, hardly gibbous at base, and opening by a single pore at apex. Capsule baccate, 5—6 celled, crowned by the calyx.

3031. 1029e. *Lasindira*. Calyx 5-cleft. Petals 5, spreading. Stamens nearly equal, the connectives of anthers biauriculate. Anthers uniporate. Filaments usually pilose. Ovarium crowned by bristles. Capsule covered by the calyx, but free from it, 5-celled, many-seeded.

3032. 1029f. *Pteròma*. Calyx ovate, often involved by two deciduous bracts. Petals 5, obovate. Stamens glabrous. Anthers nearly equal, elongated, arched at base, each furnished with a stipe-formed connective, which is biauriculate at base. Ovarium bristly. Capsule baccate, 5-celled, adnate to the calyx. Seeds cochleate.

3033. 1029g. *Bertolònia*. Calyx campanulate, 5-lobed. Petals 5, obovate. Stamens rather unequal. Anthers ovate, obtuse, opening by a single pore, scarcely auriculate at the base. Capsule trigonal, 3-valved, cut transversely, and therefore exhibiting the appearance of a lid. Seeds cuneate, triquetrous, scabrous.

3034. 1029h. *Tetrazýgia*. Calyx with a globose tube and a 4-toothed limb. Petals 4, obovate. Stamens 4—8—10, equal. Anthers linear, obtuse at base, opening by a single pore at apex. Capsule baccate, 4 celled. Seeds cuneate, angular, with a linear hilum.

3035. 1029i. *Olinia*. Calyx bibracteate, adhering to the ovarium at base. 5—rarely 4-toothed. Petals 5 rarely 4, spatulate, obtuse. Stamens 5—10, inserted in the throat of the calyx under scales. Anthers globose, ditymous, dehiscing lengthwise. Ovarium truncate, 4—5-celled: Cells 3-ovulate. Style subulate. Stigma elongated, thickened. Berry drupaceous, containing a 3—4-celled putamen: Cells 1-seeded.

3036. 1029k. *Errocènema*. Calyx 5-parted, with campanulate tube and narrow simple or duplicate segments. Petals 5, oblong-obovate, glabrous. Stamens equal, or nearly so, uniform. Anthers linear, subulate, opening by a single pore at apex, the connective not drawn out. Ovarium free or adhering to calyx at base, roundish or ovate, crowned by bristles. Stigma small. Valves of Capsule septiferous in the middle. Flowers umbellate.

3037. 1034b. *Ferticòrdia*. Flowers girded by two free or concrete bracts before expansion. Calyx 5-lobed: Lobes palmately parted into 4—9 divisions. Stamens 20, of which ten are sterile and ligulate, and the other 10 fertile and equal. Style filiform, exserted. Stigma bearded. Fruit 1-seeded, but the ovarium contains 5—6 ovules. Seed globose.

Order 2. DIGYNIA. 10 Stamens. 2 Styles.

3038. 1038a. *Acrophýllum*. Calyx 5-parted. Petals 5. Hypogynous disk small. Styles setaceous. Berry globose, 2-celled. Cells many-seeded. Seeds minute, smooth.

3039. 1038b. *Codia*. Calyx 4—5 parted. Petals 4—5. Stamens 8—10. Ovarium 2-celled, adhering to the calyx. Styles downy. Capsule closed at apex, usually 1-seeded by abortion. Seeds roundish, smooth, with a bony testa.

3040. 1038c. *Rhodoleia*. Calyx minute, truncate, adnate to the ovarium at base, increasing and persistent. Corolla none. Ovarium with many glands at base. Styles long. Stigma obtuse. Capsule 2-celled, many-seeded. Seeds compressed, obliquely subtriangular.

3041. 1043a. *Hoteia*. Calyx 5-parted. Petals 5, spatulate. Stigma obtuse. Ovarium 2-celled, many-ovulate. Carpels 2, adnate to the calyx. Seeds scrobiculate, 1—2 in each cell.

3042. 1044a. *Tànica*. Calyx turbinate. Corolla salver-shaped or funnel-shaped. Petals unguiculate. Flowers solitary or in fascicles. Fascicles girded by a 4-leaved scariosus in-olucrum: the central fascicle pedunculate; the lateral fascicles sessile, and girded by 2 scariosus bracts at base.

Order 3. TRIGYNIA. 10 Stamens. 3 Styles.

3043. 1050a. *Viviània*. Calyx campanulate, 5-toothed. Petals 5, unguiculate, twisted in aestivation. Stamens inserted on the top of the torus. Style short, crowned by 3 linear stigmas, with reflexed edges. Capsule 3-celled, 3-valved: Valves separating from the axis, even to the placentas, as in *Linum*.

3044. 1055a. *Heterópterus*. All as in *Banistèria*, except the styles, which are less dilated at apex, and the wings of the carpels are thickened on the lower side, as in *Acer*, not on the upper side.

Order 4. PENTAGYNIA. 10 Stamens. 5 Styles.

3045. *Quillàja*. Calyx 5-cleft. Segments ovate, tomentose, with truncate margins. Disk combined with the calyx, 5 lobed, stellate, fleshy, smooth, nectariferous. Lobes emarginate. Petals 5, spatulate. Stamens disposed in two series. Carpels 5, combined. Styles free. Stigmas unilateral.

MONOGYNIA.

[at base shorter than wings, Petals of keel separate longer than wings
19109 Leaflets 20 pairs elliptic obovate smooth above and rather villous beneath, Vexillum large roundish subordinate
19110 Leaves with 13—19 pairs of elliptic-oblong obtuse coriaceous leaflets silky beneath, Racemes short axillary

19111 Leaves with 23 alternate elliptic velvety leaflets, Racemes cylindrical terminal, Petals imbricate, Vexillum bifid

19112 Leaves stalked, Leaflets rhomb-ovate cuneate rather silky pubescent beneath, Stipules obliquely ovate, Lower flowers of raceme twin

and Miscellaneous Particulars.

very desirable addition to our hardy shrubs. There was, in Kensington Gardens, some years ago, a large *Sophrà*, probably the *S. chinensis* Hort., very nearly related to *S. japonica*, and was possibly introduced at the same time.

History, Use, Propagation, Culture;

3007. *Ammodéndron*. A native of the salt steppes in Siberia; comes near to *Halimodéndron*, of which the habit and culture are the same. Sand, loam, and peat would be a good soil for it, watering occasionally with salted water.

3008. *Dichoséma* is a genus nearly related to the narrow-leaved *Chorozémas*. The species are very pretty, and require the same treatment as *Chorozéma*.

3009. *Jansonia formosa*. The nearest affinity of *Jansonia* is with *Brachyséma*, with which genus Mr. Kippist states that it agrees in its unguiculate petals, in the form and unusual length of the keel, in the extreme shortness of the standard, in its elongated filiform style, and in its shortly stalked villous germs, surrounded at the base by a minute fleshy ring; but it is abundantly distinguished by its capitate inflorescence, by the remarkable inequality of the calycine

- 19113 Smooth, Leaflets setaceous acute, Segments of Calyx obtuse, Bracts roundish keeled
- 19114 Silky, Petioles hardening into spines, Leaves bifoliate, Leaflets lanceolate silky white, Flowers purple disposed in racemes
- [1-flowered, Corollas large
- 19115 Branches irregular slightly drooping, Leaves few sessile spatulate retuse, Peduncles very long axillary solitary
- 19116 Leaves nearly sessile roundish cordate undulated spiny-toothed and entire downy, Racemes erect many-flowered a little longer than leaves
- β Flowers larger, orange and scarlet instead of yellow and red
- 19117 Leaves sessile ovate-lanc. mucronulate, Flowers axillary solitary or in pairs on long peduncles, Vexillum large
- 19118 Lvs scattered elliptic-lanc. obov. or cune. entire mucro., Rac. many-flwd axil. and term., Upper lip of Cal. bifid obtuse, Stigma truncate [conspicuous veins, Racemes few-flwd, Pedic. bibracteate above middle
- 19119 Branches downy, Lvs broadly cordate with a stiff mucrone glab. undul. with entire thickened marg. and rather
- 19120 Leaves a little crenate oblong-lanceolate mealy above beset with adpressed hairs beneath, Flowers terminal disposed in verticillate heads
- 19121 Leaves lanceolate-linear entire with revolute edges, Racemes axillary and terminal many-flowered, Calyx attenuated a long way at base, Teeth hardly shorter than tube
- 19122 Branches hairy, Stipules roundish, Leaves linear bluish with a thickened midrib and revolute edges, Flowers axillary pedunculate, Ovarium 6-seeded, Corolla red with a zone of crimson at base of standard
- 19123 This is probably only a variety of *P. trilobatum*. It has much darker smaller and more prickly leaves, Flowers axillary orange-yellow, Keel dull red [capitate, Pedun. bracteate, Bracts decid.
- 19124 Lvs 3—4 in a whorl or alternate bluntish with revolute edges, smooth except the middle nerve, Flws pedicellate
- 19125 Leaves opposite roundish-oblong coriaceous pilose beneath mucronate subrenulate, Racemes umbellate terminal, Bracts subulate at base of pedicel, Segments of calyx reflexed, Legume villous pedicellate
- 19126 Leaves oblong retuse coriaceous reticulated glabrous, Corymbs axillary stalked crowded shorter than the leaves
- 19127 Leaves obovate cuneated mucronulate coriaceous, Racemes axillary short dense many-flowered, Calyx silky villous ferruginous, Ovarium 4-ovulate
- 19128 Lower leaves obovate, upper ones oblong or linear with a recurved mucrone, Racemes dense capitate few-flwd shorter than the leaves, Pods twice as long as calyx [silky, Ovarium 4-ovulate
- 19129 Leaves obl.-linear or cuneate retuse or emarg. mutic, Racemes axillary and terminal elongate loose, Cal. rather
- 19130 Lvs obl. linear obtuse smooth above clothed with silky tomentum beneath revolute, Corymb loose verticillately racemose, Pedicel bracteate, Calyx silky downy, Wings of Corolla reflexed. [lanc. covered with brown hairs
- 19131 Downy, Stipules small, Leaves lanc. mucronate 6 inches long smooth above, Spikes term., Calyx seg. ovate-
- 19132 Leaves linear elongated mucronate reticulated with revolute edges, Racemes loose terminal
- 19133 Leaves obovate retuse, Flowers racemose
- 19134 Leaves opp. rarely alternate ovate or ovate-lanc. muc. entire silky white beneath, Stips minute subulate, Racs. sub-compound, axillary shorter than leaves, Calyx silky, Wings and vexillum one-half shorter than the keel
- 19135 Erect or ascend., Lvs opp. obl.-ov. emarg. mucr. retic. with subundulated minutely dentic. margs, Stips lano. subul., Flws sessile crwd into 4-flwd drpng heads propped by 4 decus. ov.-coriac. brown bracts silky outside
- 19136 Branches angular, Leaves trifoliate, Leaflets broad linear acute, Keel bearded on the edges, Vexillum ample
- 19137 Leaves trifoliate, Leaflets linear glabrous with revolute edges, Racemes few-flowered, Calyx segments oblong-linear cuspidate [axillary at tops of branches, Keel bearded
- 19138 Branches and leaves villous, Lvs pinnate, Lfts linear subulate with revolute edges, Peds solitary terminal and
- 19139 Hairy upright, Lvs pin. glauc., Lfts 6-8 pairs lin. obt. with rev. edges, Flws corymb., Keel brdd, Leg. smooth
- 19140 Stem warted, Leaves trifoliate, Leaflets linear wedge-shaped mucronate, Calyx downy inside, Keel smooth
- 19141 Glabrous, Stems filiform smooth, Leaflets 3 linear-muc. with revolute edges, Flowers solit. pedunculate, Vexil. emarginate twice the length of beardless keel [smooth above, Calyx hairy, Keel ciliated
- 19142 Pilose, Flowers capitate, Leaves impari-pinnate 3—4 pairs sometimes subpalmate, Leaflets linear subulate muc.

and Miscellaneous Particulars.

segments, by the much greater length of the claws of the petals, and by the paucity of its ovules, which do not appear to exceed six in number. Mr. Kippist also compares it with *Leptosema* Benth., which is clearly distinguished by its bibracteate calyx, composed of two nearly equal lips, the uppermost of which is slightly bifid, its scarcely unguiculate vexillum; its wings about equal in length to the keel; the distinct inflexion of the carinal suture, as well as by its inflorescence: that of *Leptosema* being a densely crowded raceme, while in *Jansonia* the flowers are perfectly sessile, and arranged in a verticillate manner round a common axis, which is slightly prolonged beyond the point from whence the flowers spring in the form of a short mucrone. The culture recommended for *Brachysema* (p. 342.) will answer for *Jansonia* also.

History, Use, Propagation, Culture.

19177. *Daviesia physodes*. In Bot. mag. it is said that Mr. A. Cunningham has not mentioned the fruit in the character given. The truth is, that Mr. A. Cunningham had nothing to do with the description given of the species

- 19143 Lvs sess. or on short petioles linear-subul. stiff mucron. with revol. edges, Flws in the axils of upper lvs, Calyxes
 19144 Lvs oblong-linear muc. retic. tapering a long way at base flat, Racs loose term. [long-awned, Keel ciliated
 19145 Leaflets 3 linear-lanceol. veiny mucronate with revolute edges, Stipules longer than petioles, Peduncles subterminal
 solitary bibracteolate, Corolla longer than calyx [lose inside
 19146 Branches puberulous, Leaflets glabrous linear mucronate, Peduncles axillary bibracteate, Margins of calyx pi-
 19147 Villous, Leaflets linear-subulate bluntish mutic scabrous from dots, Peduncs axillary bibracteate, Flowers large
 [teral loosely racemose, Legume stipitate ventricose
 19148 Branches loosely divaricate alternately branched, Branches angular spinescent at top smoothish, Flowers la-
 19149 Phyllodineous branches oblong cuneate at base sinuately toothed quite glabrous veiny, Flowers racemose,
 Calyx silky longer than Corolla, Legume stipitate
 19150 Branches terete, Tube of Calyx much shorter than lips, Keel oblong longer than vexillum subulately mucronate
 at apex, Style strght at base incurv. at apex [1-3 together pil. like calyx, Upper lip of cal. trunc. emarg.
 19151 Branches slender, nearly glab., Lvs scat. or nearly op. lin. obt. or mucron. convex above with revol. edges, Peds ax.
 19152 Leaves narrow deep green pointed, Racemes dense-flowered, Flowers yellow with a few streaks of crimson
 19153 Leaves ternately verticillate cordate-lanceolate mucronate with revolute wavy edges, Flowers verticillate
 19154 Branches pilose stiff spreading, Lvs scattered or somewhat whorled stalked linear acute slightly scabrous
 little hairy, Veins prominent, Peds in twos or threes axil., Calyx pilose, Teeth of lower lip reflexcd
 19155 Lvs numerous sessile linear mucronate, Flws in clusters near ends of branches, Vexillum broad rather reniform
 19156 Lvs linear twisted acute scabrous numerous, Branches scabrous, Corymbs terminal sessile
 19157 Leaves terete obtuse hispid scab. from the tubercles after the hairs have falleu, Corymbs terminal pedunculate
 few- or dense- flowered, Calyx downy
 19158 Leaves scattered or verticillate acicular pungent with revolute edges, Peds few-flwd axillary crowded, Branches
 canescent, Ovarium villous
 19159 Loosely branched, Leaves opposite or tern coriaceous mucronate veiny, Flowers axillary tern, Bracts minute
 [illary few-flowered, Calyx villous, Ovarium sessile villous
 19160 Branches villous, Leaves tern ovate acute mucronately pungent entire adult ones glabrous, Racemes short ax-
 19161 Leaves nearly sessile opposite smooth heart-shaped, with equidistant spiny teeth, Flowers in clusters at end of
 shoots [gins, Racs elongated terminal villous as are the calyx and ovary
 19162 Velvety, Leaves tern nearly sessile cuneate-oblong or subbilobed mucronate with revolute subrenulate mar-
 19163 Branches glab., Leaves opposite or tern lanc. or oblong muc. entire glauc., Racemes axillary and terminal loose
 few-flwd. Calyx large, Upper lip broad bifid, Ovary stipitate villous [minal scaly, Ovary stip. vil.
 19164 Villous while young, Lvs opposite elliptic mucronate at length glab. above, Stips large triangular, Racs ter-
 19165 Lvs 4 in a whrl, rthr silky ben. cun. subemrg. muc., Racs term. lfless, Flws whrl'd, Two upper tth of cal. coher.
 19166 Villous, Lvs opp. ov.-lanc. cord. obt. mucr. undul., Bracts brown lanc., Ovarium stipit. vil., Racs term. axil.
 19167 Tomentose while young, Leaves 3 in a whorl oval or roundish mucronate glabrous above, Racemes axillary
 capitate, Bracts dark brown, Ovaries nearly sessile villous
 19168 Leaves cuneate-oblong retuse rather silky beneath reticulated with a deciduous mucrone, Heads few-flowered
 19169 Lvs op. or scat. above, cun. acute muc. entire, younger ones and branches silky, adult ones glabrous, Racs axil-
 lary dense few-flowered, Calyx silky, Upper lip bifid [ther loose, Calyx downy
 19170 Branches slender, Stips setaceous, Leaves tern lanceolate mucronate retic. glaucous, Racs axil. and term. ra-
 [many-flwd, Floral stips imbric. connate by pairs into trifid bracts ciliated, Calyx bilab. ciliated
 19171 Brnchs downy, Stips persistent erect, Lvs scattered subterete with invol. edges mut. glab., Heads term. dense
 19172 Pedics axil. twin elongated, Stips set., Leaves lin. lanceol. flat clothed with adpressed hairs as are branches,
 Heads at first terminal and then lateral, Bracts 2 longer than calyx [ers crowded in head
 19173 Branches tomentose, Lvs scattered linear involute minutely tubercled ben. hairy mucr., Stips subulate, Flow-
 19174 Brnchs beset with loose silky hairs, Stip. persist., Lvs on short petioles obl.-lin. with rev. pilose edges, Heads
 term. leafy, Floral stips con. by pairs forming brown membr. trifid. brets, Cal. bilab., Keel shorter than winge
 19175 Flowers axillary and racemose, Leaves cuneate linear obtuse glauc. glab., Stipules and bracts small, Caly-
 x like that of *Euchytus* [in the adult state reflexed, Stips lin., Branches villous
 19176 Flowers sessile solitary axillary, Leaves ovate-acute pungent villous beneath when young, but only on the edges
 [mucronate, Keel substrate shorter than wings
 19177 Glaucous erect, Leaves linear terete upper ones verticillate dilated towards the points hatchet-shaped 2-nerved
 [ered shorter than leaves bracteate at base, Branches incurved twiggly
 19178 Leaves spatulate lin. nerved apic. by a soft mucrone with a thickened edge, Racs axillary solitary about 4-flw-
 19179 Glab. Branches erectisib, Lvs terete striated linear-subulate stiff spinescent at top, Brnchs 4-5 times shorter
 than leaves, Keel obtuse [flowered equal to the leaves
 19180 Glabrous, Branches angular, Leaves linear oblong subfalcate spinescent short thick substriated, Racemes many-
 19181 Glab., Branches terete striated or angular leafless, Florif. brnchs mutic min. bracteate, Sterile ones bi-trichot.
 spinescent at top, Racs term., Calyx bilabiate, Upper lip broad truncate, Lower one acutely tripartite
 19182 Glab. glauc., Brnchs terete, Lvs obl. 4-sided flat vertical fixed by the lower angle, inner angle rounded, outer
 angle spinescent, Spine of upper one tending upwds of lower one downwds, Racs many-flwd longer than lvs.

and Miscellaneous Particulars.

The species are all pretty when in blossom. Like all leguminous shrubs, they make better plants when raised from seed than by cuttings.

History, Use, Propagation, Culture,

3010. *Coulteria*. The species are very showy when in flower. Their culture is the same as recommended for *Cesalpinia*, p. 350. No. 979. The wood of *Coulteria tinctoria* is used in dyeing.
 3011. *Turraea*. A mixture of loam, peat, and sand will suit the species; and ripened cuttings will grow in the usual way. Their culture is the same as for any ordinary hothouse plant.
 3012. *Munroonia japonica* is a small bush with pinnate leaves. It thrives with the culture and treatment of any ordinary stove shrub. All of the plants belonging to the same natural order are trees of considerable size.
 3013. *Cupania Cunninghami* is a large timber tree, with ample pinnate leaves. A light loamy soil suits it best, and ripened cuttings will strike root, planted in the usual way.
 3014. *Acradenia* is a genus nearly allied to *Zieria*, both in habit and character. It is a pretty shrub, with snowy white conspicuous flowers and trifoliate leaves. A compost of sand, loam, and peat will suit it, and cuttings will strike root if treated in the ordinary way. In fact, the culture of *Zieria* will answer for *Acradenia*.
 3015. *Diploleena*. A pretty, as well as singular, greenhouse plant, with drooping heads of flowers. A compost of loam, peat, and sand suits it well, and it is propagated by cuttings.

- 19183 Lvs linear-lanc. strongly nerved obtuse and mucronate corlaceous smooth, Peduncles few-flowered axillary
 19184 Leaves cordate stem-clasping reticulated, Peduncles axillary aggregate corymbose many-flowered [verticillate]
- 19185 Branches villous, Leaves linear mucronate with revolute edges, Flowers numerous and appearing as if they were
 19186 Branches small fan-shaped narrowed on the short petioles deeply multifid at top, the segments spiny
- 19187 Leaves opposite spatulate oblong obtuse subcrenate mucronate sessile silky beneath, Racemes capitate 4—5-flwd terminal, Calyx reflexed
- 19188 Leaves calyxes and fruit downy, Leaflets oblong retuse, Petioles unarmed, Legume stipitate obtuse
- 19189 Leaflets glabrous oval emarginate, Petioles armed a little puberulous, Calyxes smoothish, Legume glabrous curved obtuse
- 19190 Leaves alternate with 2—3 pairs of large oblong retuse rather coriaceous opposite leaflets and an odd one, Young leaves and branches covered with rusty down, Panicles terminal
- 19191 Leaves impari-pinnate with 2—3 pairs of stalked cordate-lanceolate acute entire downy leaflets, Calyx downy
 19192 Leaves cuneate at base triangularly 3-lobed at top somewhat 5-lobed, Pedicels solitary axillary 1-flowered [with ligulate segments, Claws of petals connate]
- 19193 Leaves elliptic acuminate stiff shining with revolute edges, Calyxes and petals smoothish
- 19194 Leaves impari-pinnate with two pairs of nearly opposite leaflets, lowest pair nearly cordate, upper pair oblong ovate, term. one much larger on a long petiole and occasionally lobed, Racs axil. few-flwd, Pedicels bibracteate
- 19195 Branches trigonal, Leaves ovate-lanceolate entire full of pellucid dots, Peduncles axillary 1-flowered [Peduncles bibracteate, Filaments hispid, Petals oblong]
- 19196 Leaves spreading ovate obtuse mucronate sessile, Branches round pilose, Flowers axillary on short peduncles,
 19197 Leaves linear acute many-veined dotted, Peduncles 1—2-flowered, Petals oblong
- 19198 Branches downy, Leaves oblong obov. glauc. mucron. dotted beneath, Peduncles solitary 1-flwd, Filaments ciliated
- 19199 Leaves linear-lanceolate entire smooth dotted with glands mucronate, Branches round, Peduncles axillary bifid 3-flowered, Filaments a little fringed on the margin
- 19200 Leaves lanceolate marginate mucronate dotted, Peduncles axillary 3-flowered, Filaments bearded
- 19201 Leaves lanceolate entire covered with yellow rufous or silvery scales beneath, Branches angular, Peduncles axillary trifid 3-flowered, Stamens exserted
- 19202 Much-branched, Leaves opposite trifoliate smooth, Leaflets lanceolate serrated slightly warty paler beneath, Peduncles terminal trichotomous many-flowered, Bracts subulate
- 19203 Leaves oblong-ovate obtuse a little scabrous covered with stellate tomentum beneath, younger ones rather rusty
- 19204 Leaves pinnate, Leaflets roundish deeply toothed, Petals entire
- 19205 Prostrate, Leaves ovate-oblong flat smooth
- 19206 Lvs lanc.-acute clothed with rusty toment. beneath, Limb of Cal. short callous 5-lobed, Ovar. toment. 5-celled
 19207 Not yet described that we know of: it grows in woods at Monterey, and was introduced by Mr. Hartweg

3016. *Biebersteinia*. This singular plant is beset with glandular hairs. It requires to be grown in pots among other alpine. It can only be increased by seed.

3017. *Ammyrine*. The species grow best in a peat border, and they may be propagated by layers or cuttings from young wood.

1014. *Rhododendron*. This genus is the most prominent in the Sikkim Himalayas and Nepal. Seedlings have been reared in quantities from seed sent home by Dr. Hooker; but the plants will all probably require protection in severe weather in winter. Many of the species resemble each other in the foliage, particularly in the young state; but, nevertheless, they are distinct in the flowers and fruit, according to Dr. Hooker. They grow at elevations varying from 8000 to 16,000 feet; but it is especially between 10,000 and 14,000 feet the genus prevails; several species, comprising three quarters of the bulk of the vegetation. The wood supplies the natives with fuel, and from its tough nature and property is easily worked into many domestic utensils, as spoons, bowls, &c. The bark is used like that of the birch in the arctic regions; and the leaves serve as plates and wrappers for butter, cream, cheese, &c. At the elevation of 13,000 feet, the snowy mountains glow with the blood-red blossoms of the *R. fulgens*, whilst the beauty of

History, Use, Propagation, Culture,

the *R. campanulatum*, and the great elegance and delicacy of the *R. campylocarpum*, excite the more admiration from their being found in the region of fog and rain. It has been insisted that many of the so-called species are of hybrid origin; but this is by no means clear, nor can it be ascertained. Some species are parasitical on trees, but these have been found growing even in clayey soil. They will readily grow in vegetable mould. *Rhododendron ciliatum* has passed the winter in the open air, surrounded by a bank of earth 1½ foot high; but it flowered in the cool part of a greenhouse. *R. javanicum* is one of the most beautiful plants yet introduced; but it requires the protection of a greenhouse.

- 19206 Leaves small ovate or obovate-elliptic pointed crenate dark green above and clothed with short shaggy wool beneath, Racemes about 5-fld terminal, Peduncles shaggy
- 19209 Leaves lanceolate acute rusty beneath, Calyx woolly, Segments of Corolla 2-lobed with curled margins
 β A hardy evergreen hybrid, Flowers white, two upper petals spotted
- 19210 Glabrous, Leaves oblong-obovate coriaceous acute lepidotod beneath, Flowers umbellate, Calyx obsolete, Corolla funnel-shaped, Segments of Limb obovate
 β Flowers yellow, but in the species they are reddish orange colour
- 19211 Lvs like those of *Azalea* ovate-lanceolate mucronate ciliated dotted like the petioles whitish beneath and beset with scaly dots above, Flowers large white tinted with pink [Limb spreading, Bracts clammy]
- 19212 Glandular hispid, Leaves lanceolate acuminate reticulate pilose beneath and glabrous above, Corolla reticulated,
- 19213 Hispid, Leaves elliptic-oblong coriaceous acute beset with rusty hairs ciliated lepidotod beneath, Peduncles terminal
 β Flowers larger white tinged with rose colour [minal umbel. 3-6, Cor. camp., Tube narrow, Limb large]
- 19214 Leaves oblong-lanceolate acute yellowish beneath, Segments of Calyx dilated membranous, Ovarium 1-celled glandular hispid, Petioles midribs of leaves and branches bristly, Filaments glabrous, Bracts and buds viscid
- 19215 Lvs obl. wavy rugged convex revolute covered with pale brown wool ben., Flws in heads, Peduncs woolly, Cal. obsolete, Cor. cam. [Cal. 5-cleft, Lbs unequal, Cor. ample, Lbs entire, Stam. 18-20 glab., Cap. 10-cld]
- 19216 Twiggy, Branches ped. and under sides of lvs covered with rusty scales, Lvs ellip.-lanc. acum., Peds 2-3 term.,
- 19217 Lvs ample obl.-oval acute cordate at base pale ben., Flws large 3-5 term., Cal. obscurely lhd, Cor. with a campanulate tube, Limb spreading, Lbs bifid, Stam. 12-18, Ov. 12-cld gland., Stig. disk-formed, Caps. cylind.
- 19218 Lvs amp. obov.-obl. ac. glab. silv. ben., Bracts decid. silky, Peds downy, Cal. short obsc. lhd, Cor. large camp., Seg. 2-lbd, Sta. glab., Stig. dilated [Films woolly at base, Cap. scaly archd cylind. gland. 6-11vd. Sta. glab.]
- 19219 Cvd with rusty scale-like dots, Lvs spat.-lanc. rusty ben., Seg. Cal. rnd., Cor. short camp. lepidod., Seg. rndsh,
- 19220 Slend. twig, gland. pil., Lvs ovate or oblong cord. obt. glab. glaucescent ben., Heads term. loose 6-8 fld, Cal. base 5-lbd gland., Cor. camp. [Lb. of Cal. foliac. obt., Cor. camp. 5-pitted at bot., Films pil. at base]
- 19221 Parasit. slender, Bnchs remote verti., Lvs obov.-ellip. obt. cvd with rufous dots ben., Fls lge umbel. 7 together,
- 19222 Bnchd, Lvs rndsh-ov. blunt cord. at base glab. glauces. ben. with recurv. edges, Corymb many-fld, Cal. lge cupshd uneq.-lbd, Cor. camp., Limb sprdng, Lobes emarg. upper spotted, Ovar. 6-10-celled cylind.
- 19223 Lvs ampl. obov.-ellip. obt. rather curd. at base glab. above clhd with white toment. ben., Heads lge 15-20-fld, Cal. obs., Cor. camp., Limb short, Lbs emarg., Sta. about 18 glab., Ovar. downy visc. 16-cld, Cap. cyl. tomen.
- 19224 Epiph. covered with rusty villous tomentum, Lvs on longish petioles elliptic ovate with revolute edges, Peds 2-3 terminal and lateral, Flws large, Lobes of Cal. obovate unequal ciliated, Ovar. 5-celled, Cap. oblong
- 19225 Lvs ample obov. ellip. cord. at base glab. above rusty ben., Hds glob. dense, Pedicels downy and clammy, Cal. minute slightly lobed, Lobes of Cor. deeply 2-lobed, Stam. 16, Ovar. 18-celled hairy clammy, Stig. dilated
- 19226 Clhd with white or fulvous wool, Bnchs twisted, Lvs ellip. obov. or obl. obt. micro. glab. above, Cory. term. cap. many-fld, Cal. minute 5-lbd, Cor. camp., Lbs of Limb entire, Stam. woolly, Cap. cylind.
- 19227 Lvs large elliptic-lanceolate glabrous above but with rufous wool beneath, Heads many-fld, Bracts viscid, Cor. campanulate straw-coloured large dotted with red, Limb reflexed, Stamens glabrous, Capsule cylindrical
- 19228 Bnchs stend. twisted, Lvs ov.-lanc. acute with rev. edges, and ruf. scaly dots ben., Fls small capl., Lbs of Cal. lin. uneq. beset with gland. scale-like dots, Cor. funnel-shpd. Lbs rnded ac., Sta. pil. at base, Ovar. 5-cld scurfy
- 19229 Leaves oblong-lanceolate acute with revolute edges and rusty tomentum beneath, Racemes terminal capitate, Calyx small 5-lobed, Corolla campanulate, Segments undulated 2-lobed, Ovarium hairy 10-celled
- 19230 Cvd with scales, Lvs ellip.-lanc. micro. naked above glaucous ben., Corymbs terminal 6-8-fld, Cal. 5-parted, Cor. glandularly dotted camp., Lbs emarg., Stam. downy at base, Cap. sub-globose 5-celled glaucous scaly
- 19231 Glabrous, Leaves oblong-obovate acute, Umbel many-flowered, Corolla salver-shaped, Tube long straight, Lobe of Limb obovate undulate
- 19232 Erect-branched, Lvs linear obtuse slightly serrated, Peduncles pilose, Flowers corymbose, Sepals acute glabrous, Corolla campanulate 5-lobed, with scarcely any tube, Style exerted
- 19233 Leaves oblong convex serrated near the top, Racemes pilose axillary mutant, Sepals ovate, Anthers bisetose on the back
- [red yellow at base and apex, Tube bellied with a contracted mouth, Style and Sta. exerted rather long
- 19234 Glab., Bnchs rather pend., Lvs lanc. acum. entire, Peds extra-axil. twin or tern pend., Cor. white lined with
- 19235 Downy, Bnchs ter. rough, Bnchlets ang. downy fuscous, Lvs obl. acum. sub-cord. rough from dots above downy on the nerves beneath, Cor. downy [lateral umbels, Cor. cylind. pentagonal]
- 19236 Glab., Old Bnchs florif., young ones foliif., Lvs broad-lanc. subserrated, Flws numerous in sessile pendent uni-
- 19237 Branches angular furfuraceous hairy as also calyx, Lvs on short petioles oval-obl. rather scarious on both sides,
 β Glab. or furnished with a few brown hairs on the under side of the leaves [Rac. axillary, Cor. glabrous]

- 19238 Glabrous, Branches angular, Leaves elliptic cordate obtuse or retuse mucronate coriaceous marginate, Racemes axillary solitary p. dunculate, Flowers secund, Corolla ovate, Teeth of Limb small erect

and Miscellaneous Particulars.

3018. *Bryanthus erectus* is said to be a hybrid between *Phyllocoea tarifolia* and *Rhododendron Chamæcistus*. It grows best where the sun does not shine. It thrives well in damp, cold, shady pits.

3019. *Thibaudia pulcherrima* will grow well in a conservatory border, or in a Camellia-house or greenhouse, trained against a wall. The flowers appear on the year-old wood, developing at Christmas, and expanding in April, and are beautifully variegated, like those of *Fritillaria Melagraris*. The other species will thrive with the same treatment.

3020. *Leucóthoë*. This is a splendid genus of hardy greenhouse shrubs, with racemes of scarlet flowers. They thrive best in light peat soil, well drained; and they prefer a cool shady place in summer. Propagated by layers

History, Use, Propagation, Culture,

3021. *Lyonia*. The hardy kinds of this genus are best grown in a cold border, along with other American plants. They are increased by layers put down in spring. The tenderer kinds, as the *jamaicensis*, require to be protected from frost in winter. They are all ornamental, and therefore desirable evergreen shrubs.

3022. *Agarista* is a splendid genus of tender shrubs. They grow best in a warm part of a greenhouse, in a mixture of loam, peat, and sand; and cuttings of ripened wood will strike root under a hand-glass in the same kind of mould.

3023. *Gaylussacia Pseudo-Vaccinium* is a very handsome, hardy, greenhouse shrub, with racemes of scarlet flowers. It should be grown in a compost of sand, loam, and leaf mould, and treated in the same way as Cape Heaths. It is propagated by layers as well as by ripened cuttings.

3024. *Macleania*. The species require a warm greenhouse, and are splendid shrubs while in blossom. A mixture of sand, loam, and peat will suit them. Owing to their producing large fleshy roots, a large pot or tub will be required;

- 19239 Glabrous, Branches terete, Leaves cordate-oblong mucronate pungent coriaceous, Racemes axillary and terminal erect, Flowers secund, Corolla urceolate 5-parted
- 19240 Covered with scale-like dots, Branches angular, Lvs oval-lanceolate slightly serrate coriaceous, Flowers axillary numerous fasciculately subracemose, Corolla ovate, Ovarium hairy, Anthers bifid at top
- 19241 Leaves cordate-ovate mucronate downy rusty beneath, Panicle terminal downy composed of racemes, Flowers secund
- 19242 Lvs lanceolate attenuated white beneath, Racemes simple glabrous, Flowers secund, Corolla pale green inclining to purple
- 19243 Glabrous or downy, Lvs elliptic lanceolate, Racemes secund erect bracteate, Corollas ovate cylindrical, Ovarium glabrous or nearly so
- 19244 Leaves sessile cordate obtuse dotted coriaceous, Peduncles glomerate axillary and terminal, Corolla urceo- [late, Limb spreading
- 19245 Leaves ovate obtuse, Axils 3-flowered, Corolla urceolate pentagonal
- 19246 Leaves sessile oval-oblong obtuse reticulated axillately triple-nerved, Axils 3-flowered, Corolla cylindrical angular
- 19247 Prostrate hispid, Leaves cordate-ovate acute ciliate serrated rather hispid beneath, Racemes terminal and axillary beset with glandular hairs, Bracts ovate coloured, Cal. coloured pilose, Cor. ovate, Limb spreading [ate, Bracts coloured
- 19248 Clothed with rusty hairs and glandular pili, Leaves ovate acute mucronate serrated, Racemes terminal bracte- Procumbent filiform bristly, Leaves cordate mucronate nearly sessile naked above hispid beneath, Pedicels axil- ary short solitary, Flowers drooping
- 19250 Downy, Leaves oblong entire or slightly serrated with a hard firm reddish edge, Flws disposed in short pyra- midal panicles, Peduncles glandular and woolly, Calyx smooth, Corolla ovate
- 19251 Leaves resembling the *Camellia* in form but *A'rbutus* in texture, Flowers small pure white
- 19252 Leaves oblong acuminate at both ends acutely serrated glabrous, Racemes axillary secund sessile solitary
- 19253 Arborescent, Leaves broad-oval quite entire glabrous on long petioles, Racemes axillary and terminal panicled dense-flowered [1-nerved, Pedicels axillary solitary 1-flowered naked
- 19254 Erect-branched, Branches pubescent angular, Leaves linear-lanceolate acuminate remotely serrated glabrous
- 19255 Dark green, Branches setose, Leaves ovate-lanceolate acute denticulated and ciliated with bristles, Peduncles glandular, Berries red
- 19256 Erect, Bark deciduous, Lvs lanceolate acute sharply serrated glabrous glaucescent beneath, Racs paniculately branched pilose
- 19257 Erect downy while young, Leaves oval or oblong coriaceous mucronately pungent entire, Racemes short ter- minal, Bracts acuminate
- 19258 Erect tomentose, Leaves linear-oblong entire mucronate green rusty beneath, Racemes panicled, Bracts acu- [minate shorter than the pedicels
- 19259 Erect tomentose, Leaves linear-lanceolate, Flowers racemose
- 19260 Leaves obovate obtuse 4 inches long clothed with white down beneath, Racemes panicled
- 19261 Leaves obovate-lanc. acute denticulated wrinkled above tom. ben., as are the petioles, younger ones rusty, adult ones hoary, Racs loose so crowded as to appear panicled tomentose, Lobes of Corolla toothed ciliated
- 19262 Clothed with rusty hairs, Leaves oblong quite entire acuminate excavated at base, Racemes simple fasciated at tops of branches
- 19263 Leaves linear pinnate bipinnate or entire, Segment filiform undivided, Peduncles long, Petals bearded at base, Fruit corrugated [Petals bearded at base
- 19264 Leaves elongated pinnate, Segments sessile ovate acute entire or 3-lobed, Peduncles very long, Calyx pilose

and Miscellaneous Particulars.

or probably, they will succeed well planted out in a conservatory border. Water should be freely given in summer. To have the plant furnished well with young shoots, it will be necessary to cut it back early in autumn, in order to have the plant clothed with leaves before winter. They are difficult to multiply, but may be managed by cuttings under a hand-glass.

19247. *Gaultheria bracteata* should be grown in a light peat soil, and placed in a cool airy pit or frame, and in summer it should not be exposed too much to the sun.

3025. *Arctostaphylos*. The hardy kinds are trailing evergreens, which grow best in peat soil, and are propagated by layering. The rest may be cultivated and treated like the species of *Comarostaphylos*.

3026. *Comarostaphylos*, like the common kinds of *A'rbutus*, thrives best in a light sandy loam with a portion of leaf-mould. The species may be budded on the common *A'rbutus* in July or August.

History, Use, Propagation, Culture,

3027. *Charianthus coccineus* is a splendid shrub when in blossom. It requires only the treatment of other hothouse Melastomaceous shrubs.

3028. *Meriania*. These two species are the white and red roses of the mountains of Jamaica. They are splendid when in blossom in their native mountains. In this country they will thrive in a compost of loam, sand, and peat; and half-ripened cuttings will strike root in the common way in the same kind of soil.

3029. *Medinilla magnifica* is a most splendid plant, with broad leaves, large coloured bracts, and panicles of pink flowers. It grows and flowers freely in a mixture of loam and peat. The pots should be well-drained, so as to allow water to be liberally given during the season of growth without the risk of the soil becoming soddened. It should also be frequently syringed over head. A climate that suits the pitcher-plant will answer this. The species are all remarkable for the beauty of their foliage, and the delicacy of their blossoms. They all require the same kind of culture.

3030. *Heterotrichum macrodon* requires the treatment of other hothouse Melastomaceous shrubs.

3031. *Lasiandra*. The species are worth cultivating for the sake of their large panicles of showy purplish-blue

- 19265 Leaves oblong on short petioles glabrous as are the petioles and branchlets, Branches deciduous
- 19266 Branches tetragonal bristly, Leaves ovate acute entire scarcely 3-nerved bristly, Cymes terminal pedunculate few-flowered, Calyx hispid
- 19267 Downy while young but becoming glabrous, Branches nearly terete, Leaves oval acuminate entire 5-nerved clothed with flocky down beneath or small dots
[solitary 1-flowered, Bracts 2 ovate-lanceolate entire. Lobes of calyx subulate at apex]
- 19268 Glabrous, Branches subtetragonal, Leaves ovate-oblong acuminate 3-nerved denticulate, Peduncles axillary, 19269 Glabrous, Branches terete, Leaves ovate-lanceolate 3-nerved denticulate, Peduncles axillary solitary 1-flwd Bracts 4 lanceolate denticulate, Lobes of calyx subulate at apex
- 19270 Branches compressed tetrap. bristly at nodes, Lvs opp. coriac. glab. sess. obovate-obl. cordately stem-clasping cusp. at apex 3-nerved, Panicles term. elong. with the bracts vertic. Bracts large coloured decid. Flws dors.
- 19271 Branches tetrapterous, Lvs nearly sessile 3-4 in a whorl rarely opposite oval-oblong 7-9-nerved, Peduncs terminal axil. nutant, Flws 6-10-androus [minute 5-nrvd green above, Panics thyrsoid term. pedunc. nutant]
- 19272 Brchts terete stuposely bearded at the nodes, Lvs opposite on short thick petioles elliptic-ovate coriaceous acu-
- 19273 Leaves opposite on short petioles oblong-lanceolate acuminate 3-nerved, Cymes axil. or on the naked branches below the leaves, Flowers tetramerous, Anthers dark purple
- 19274 Branches acutely tetragonal smooth, Leaves sessile elliptic-ovate 5-nerved subcordate at base, Panicles terminal axillary erect, Bracts obsolete, Anthers dark purple
- 19275 Branches petioles and cymes covered with long fulvous hairs, Leaves opposite unequal cordate-ovate acuminate serrated 7-nerved, Cymes many-flowered, Stamens 16, Petals obovate-cuneated
- 19276 Branches compressed pilose, Leaves opposite oblong-lanceolate subcordate at base, Flowers panicled at top of branches, Calyx setose
- 19277 Branches tetragonal villous, Leaves oblong-lanceolate rounded at base 9-nerved silky beneath, Panicles terminal glandularly pilose as are the calyxes, Style villous
- 19278 Hispid, Leaves ovate-oblong glabrous wrinkled above pilose beneath 3-nerved ciliated, Flowers about 3 together terminal, Pedicels short hispid, Bracts lanceolate ciliate. Calyx bristly
- 19279 Villous. Branches tetragonal, Leaves petiolate ovate-elliptic acute 5-nerved entire setose above and clothed with silky villi beneath, Pedicels hispid axillary terminal, Calyx hispid, Bracts large coloured
- 19280 Stem creeping-branched hairy as are the petioles and peduncles, Leaves broad-ovate cordate 5-nerved spotted hairy nearly entire purple beneath, Peduncles axillary, Flowers in unilateral cymes, Calyx hispid
- 19281 Clothed with adpressed rufescent lepidotod powdery down, Leaves oblong 3-nerved glabrous above, Cymes panicled corymbose trichotomous, Calyx globose, Limb slightly 4-toothed
- 19282 Brchts slender bluntly tetragonal, Leaves subcoriaceous oblong acuminate shining above, Flowers terminal in [dense cymes, Filaments red, Berries red]
- 19283 Branches bluntly tetragonal, Leaves obovate emarginately apiculated green above, Cymes axillary at ends of branches, Bracts rhomboid, Filaments white, Berries reddish
- 19284 Flower spikes scorpioid, Scape almost black, Leaves greenish almost black shining
- 19285 Stem short fleshy, Leaves hairy oval 5-ribbed oblong cordate green above and beautifully marbled with brown and white purple beneath, Scapes terminated by a spike, Flowers size of *Cyclamen*
- 19286 Leaves acinaiform. Style shorter than flower

and Miscellaneous Particulars.

flowers. A compost of loam, sand, and turfy peat will suit them, and they require plenty of water while growing. The pots should be well drained by sherds.

3032. *Pteroma*. The plants of this genus are similar to the *Lasiandra*, and their culture is the same.

3033. *Bertolonia maculata* is a pretty little creeping plant. It grows best in light soil, and is readily increased by cuttings. Abundance of water should be given during summer, or while the plant is growing.

3034. *Tetraggia*. The culture recommended for *Lasiandra* will suit this shrub equally well.

3035. *Olinia*. These are greenhouse shrubs. They grow best in light rich soil, and cuttings root planted in the ordinary way under a bell or hand glass.

3036. *Ericocnema*. These pretty plants are probably only annual. The leaves of *E. marmoratum* are green above, and beautifully marked with brown stains and broken streaks of white, and on the under side rich purple. The blossoms are of a rich rose colour. The leaves of *E. aeneum* are greenish brown, almost black and shining with quite a metallic lustre. These two plants are very delicate. They are grown in peat, but require to be kept continually shaded and damp. The treatment of the tropical *Orchidea*, such as *Anactochilus*, would suit them.

History, Use, Propagation, Culture.

3037. *Verticordia* is a genus of pretty little plants rather difficult to cultivate. A mixture of sand, loam, and peat or vegetable earth, will suit them best. Cuttings will probably root if planted in silver sand with a bell glass over them.

3038. *Acrophyltum* only requires the treatment of an ordinary greenhouse shrub. A compost of sand, loam, and peat suits it best. It is a pretty plant when in blossom.

3039. *Codia* is a remarkable plant, lately introduced, in a living state, to this country. It requires the same culture as *Acrophyltum* or *Callicoma*.

- 19287 Calycine lobes linear ciliated, Bracts concrete on one side and separating lengthwise on the other, Leaves acicular
- 19288 Calycine lobes linear subulate bearded each ending in an awn, Bracts distinct, Leaves obtuse adpressed
- 19289 Calyc. lobes trif., Lobules multif., Segs wool-fmd beardl., Pets and sterile Fil. cil., Style beardl. shorter than pets, Stigma subcap., Bracts distinct mutic, Lvs obov. triquet. submucr. serrul. on back, Peds elong. corym.
- 19290 Branches comp. scab., Leaves acerose acum. glab., Upper or floral ones ovate, Corymbs dense, Bracts mutic decid., Segs multifid plumose, Pets many-parted glab., Sterile Filaments lauc. pectinate, Anthers mutic
- 19291 Lobes of calyx multifid, Lobules linear pennately plumose, Petals deeply toothed, Style plumose, Leaves concave ovate imbricate mucronate hispidly ciliated, Pedicels short racemose subsecund
- 19292 Lvs lin. triq. obtuse, Corymbs capit. many-flwd, Bracts deciduous cucullate under the apex, Tube of Calyx vill., Sepals unguiculate many-parted, Petals roundish downy fringed, Style bearded with forked hairs

DIGYNIA.

- 19293 Erect-branched, Leaves 3 in a whorl nearly sessile oblong cordate acute coarsely serrated glabrous coriaceous glaucous beneath, Stipules paleaceous persistent, Flws small numerous pedicil. verticil., Capsule membranous
- 19294 Leaves elliptic obtuse entire glabrous coriaceous on jointless petioles, Stipules caducous, Flowers small white capitate, Heads of flowers globose pedunculate axillary
- 19295 Lvs alternate ellip.-ov. obtuse petiol., Flws capit. 5 in each head coadunate at base, Invol. double emulating a *Camellia* flwr, outer one of 5 silky brown lvs, inner one of numer. rose-eld lvs, Fruit comp. of 5 radiat. caps.
- 19296 Leaves opposite on short petioles ovate-oblong glabrous sharply serrulated, Branches of flat dense cyme downy radiating, Flowers 4—6 on horizontal peduncles, Sepals usually 4 obovate serrated
β Flowers blue
- 19297 Leaves oblong-lanceolate acutely-toothed entire at base downy on ribs beneath, Panicle pyramidal, Branches cymose, Flowers heptamerous icosandrous
- 19298 Leaves oblong-lanceolate smoothish serrated from the middle upwards, Cymes nearly undivided on short peduncles, disposed in a crowded panicle
[Cymes paniced, Calyx ventricose 5-parted hairy, Segments foliaceous, Petals spatulate unguiculate
- 19299 Leaves obovate coriaceous ciliated subnarriced at base, Petioles large sheathing, Peduncles stiff rather scabrous,
- 19300 Leaves obovate coarsely crenate toothed hairy fringed, Scape glabrous, Racemes crowded, Calyx smooth, Segments obtuse, Petals roundish
β Leaves oblong acutely and deeply serrated
- 19301 Lvs roundish smooth acutely serrate shining, Petioles broad flat above, Panicle racemose, Calyx reflexed, Filaments enlarged upwards
- 19302 Runners filiform proliferous at top, Stem erect simple 1—3-flowered beset with glandular hairs as are the calyxes, Leaves obovate glandularly ciliated, Petals persistent
- 19303 Shoots trailing, Leaves 3—5-parted fringed with jointed hairs, Lobes linear acute, Cauline leaves few, Flowers few 2—4, Calyx segments subulate acute, Petals oblong inflexed at sides 3-nerved

- 19304 Leaves tripinnately cut, Petioles pilose coloured at the nodes, Terminal Leaflet ovate tapering to both ends hispid on the nerves
- 19305 Leaves obtuse, Flowers capitate, Bracts crowded pointed membranous, Petals obtuse quite entire
- 19306 Downy tufted at base fastigiate at top, Leaves linear 3-nerved, Calyx bractless, Petals obovate entire

19307 Near *D. barbatus*
19299

and Miscellaneous Particulars.

3040. *Rhodoleia* is a very pretty small tree or large shrub, resembling *Camellia japonica* both in leaves and heads of flowers. The culture and propagation recommended for *Camellia* will also suit this plant.

3041. *Hotzia* is nearly allied to *Astilbe*, differing principally in the presence of petals. It is an elegant plant, of easy culture.

3042. *Tunica* is a genus of pretty little plants, well suited for decorating rockwork. They may be increased by division but better by seed. The genus is separated from the old genus *Gypsophila*.

History, Use, Propagation, Culture,

1048. *Silene speciosa* and *S. laciniata* being rather tender, will require protection in winter. They are fine plants with scarlet flowers. Turfy peat is the best soil for them. *S. Schäfta* is a fine plant for ornamenting rockwork.

3043. *Viviana* is composed of pretty dry sub-shrubs with opposite exstipulate downy leaves, and rosy flowers

TRIGYNIA.

- [uncles 1-flowered, Calyx cylindrical, Petals cut
 19308 Downy, Stem erect branched, Leaves large lanceolate-acute, Flowers large terminal rather drooping, Peduncles hairy, Leaves sessile lanceolate bluish, Flowers axillary and terminal, Calyx hairy, Petals deeply cut
 19310 Root woody many-stemmed, Stems ascending simple, Peduncles 1—2-flowered, Leaves obovate acute, Flowers erect, Calyx long clavate, Petals cuneate denticulate
 19311 Downy and clammy procumbent, Leaves lanceolate, lower ones on long petioles ciliated at base, Flowers large panicled, Calyx clavate, Petals broad bifid
 19312 Tufted, Leaves awl-shaped smooth 3-nerved, Peduncles 1-flowered elongated downy, Sepals acute 3-nerved, Petals elliptic, Capsule 3—4-valved longer than calyx
 19313 Ascending-branched, Leaves subulate semi-terete obtuse glabrous, Branches naked, Peduncles 1—3-flowered, Lateral pedicels bibracteate, Sepals ovate-lanc. 3-nerved about as long as petals, Caps. 3-valved equal to sepals
 19314 Glabrous, Stems terete procumbent 1—2-flowered, Leaves spatulate, Flowers terminal rather globose, Sepals ovate-obtuse hardly nerved equal to petals, Capsule ovate globose
 19315 Procumbent-branched, Leaves ovate-roundish rather imbricate, Peduncles lateral few-flowered, Sepals ovate-obtuse shorter than petals, Capsule 3-valved length of calyx
 19316 Leaves grey and glandular beneath with prominent veins, Branches pubescent, Peduncles shorter than leaves
 19317 Leaves distant white and glandless beneath, Branches pubescent, Peduncles elongated
 19318 Leaves ovate shortly acuminate glabrous above downy reticulated and glandular beneath, Glands pedicellate, Flowers smelling like Lily of the valley
 19319 Leaves palmately 5—6-lobed or parted acute serrately ciliated cordate glabrous, Petioles biglandular at apex, Petals fringed [late, Lobes of calyx nearly orbicular with small glands, Petals fringed
 19320 Glabrous, Leaves cordate oblique at base smooth ciliated, Petioles furnished with 2 glands, Flowers umbel-
 19321 Rather pilose, Leaves ovate-obtuse mucronate or subcordate 3-lobed, Lobes oblong obtuse, Petioles biglandular, Umbels axillary many-flowered, Styles leafy at top
 19322 Glabrous, Leaves narrow lanceolate entire undulated, Petioles short glandless, Corymbs few-flowered terminal, Calyx glandular, Petals undulated, Styles simple, Carpels villous
 19323 Young branches covered with stellate down older ones glabrous, Leaves ovate-lanceolate serrulated clothed with white tom. ben., Cymes trichot., Cal. tom., Pet. obl. obt., Fil. glab. broad trifid, Anthers pilose, Style glab.
 19324 Branches long flexile and drooping, Leaves small wedge-shaped lanceolate or ovate-lanceolate serrulated covered with starry hairs, Racemes terminal on the lateral branches, Flowers small
 19325 Leaves ovate acuminate serrulated downy as are the branches, Panicles corymbose, Calyx segments triangular acuminate, Filaments tridentate, Anthers glabrous, Styles 4—5

PENTAGYNIA.

- [secund pedunculate
 19326 Tufted, Leaves rosulate ovate pointed concave glaucous when young, Flowers loosely and racemously panicled
 19327 Cauliscent dwarf, Leaves tongue-shaped flat acute white, adult ones green, Stems decumbent, Racemes secund corymbose panicled, Flws pedunculate [subcorymb., Branches few-flwd, Petals keeled gib. at base
 19328 Leaves obovate spatulate, old ones retuse glauc. crenul., cauline ones linear-oblong quite entire, Panicle dense
 19329 Leaves spatulate excavated glaucous crowded at top of branches, Racemes axillary simple or forked, Bracts drawn out into an acute gibbosity at base [Bracts coloured triquetrous, Cal. rose-coloured, Cor. y-flow
 19330 Cauliscent, Lvs oval-acute terminal sometimes rosulate sometimes imbricate, Spike cylindrical dense, Lower
 19331 Lvs rosulate crowded oblong concave glaucous discoloured, Racemes nodding at tops, Flowers pedunculate
 19332 Cauliscent, Lvs subrhomboid acute concave rosulate at tops of branches, Pan. dense cylin. with 3—4-flwd branches
 19333 Cauliscent, Leaves ovate-acute lengthened into the flat petioles, Racemes nutant
 19334 Lvs spatulate excavated glaucous crowded at tops of branches, Bracts axillary simple or forked, Bracts drawn out into an acute gibbosity at base, Flowers secund, Pedicels bibracteate
 19335 Leaves rosulate crowded cuneate mucronate glaucous, Racemes secund recurved, Flowers on long peduncles [sessile compound, Petals acute
 19336 Leaves opposite obsoletely denticulated adnate, lower ones broad elliptic, upper ones sessile cordate, Corymbs
 19337 Glab., Lvs obov. lanc. ser. altern. or subop., Stms ascend. creep. at base, Cym. term. crowd. shorter than floral lvs
 19338 Stems many erect glabrous-branched tripartite at top, Flowers sessile unilateral along the branches, Leaves linear ainate, Sepals foliaceous [Stamens all longer than styles, Cells of Ovar. 1-seeded
 19339 Shrubby branched, Pet. dilated foliaceous lanc. lin. acute at both ends, Pr-dun. axil. short bifid, Pedic. fascicled,
 19340 Glabrous, Leaves trifoliate purple beneath, Leaflets deitoid, Scapes long 6—9-flowered, Sepals acuminate tipped by 4 linear orange glands, Stamens glabrous, Styles downy

disposed in corymbose terminal panicles, and they may be either increased by cuttings or by seed.
 3044. *Heteropteris*. This genus is nearly related to *Banisteria*, and its culture and treatment are the same as for that genus. It is well suited for training up rafters in a conservatory.

History, Use, Propagation, Culture,

3045. *Quillaja Saponaria*. This tree is quite hardy enough to stand our milder winters, and ripened cuttings will probably root if planted in autumn. The bark of the tree is used in Chili for soap.
 1076. *Bejaria*. The treatment given to Indian *Azaleas* will suit the strongest kinds, and that of *Rhododendron*

- 19341 Root tuberous, Leaflets 3 orbicordate bilobed downy beneath, Scape many-flwd, Petals and Sepals pilose the latter bipinnulate at top, Style erect shorter than stamens
 19342 Lvs all radiating, Lfts 7-8-oblong spatulate entire, Scape umbellate many-flwd, Stamens unequal longer ones
 19343 Bulb simple, Leaves ternate, Leaflets fleshy orbicordate violet beneath, Petioles downy, Scape 2-3-flwd, Sepals biglandular at apex, Styles short glabrous
- 19344 Lobes of Calyx constricted, Appendages of Petals short emarginate, Capsule ovate granular
- 19345 Leaves oval usually toothed

dehiscing by a terminal pore. Stigma simple, obtuse. Berry 5-celled, many-seeded. Seeds small, angular.

Order 6. DODECAGYNIA. 12 Stamens. 12 Styles.

3047. 1110a. *Ednium*. Calyx campanulate or turbinate, 6-12-cleft. Petals as many. Stamens same number as petals. Ovaria equal in number to the petals, immersed in the receptacle at base. Styles triquetrous. Stigmas acute, at length papilloso capitate. Fruit follicular, dehiscing at base. Seeds obliquely subpyriform.

MONOGYNIA.

- 19346 Glabrous, Leaves oblong obtuse glaucous beneath, Racemes terminal and axillary, Pedicels somewhat fastigiate
 19347 Branches villous, Lvs oval-acute densely imbricate with revolute margins glaucous beneath villous on midrib, Corymbs dense short, Peduncles covered with rusty tomentum, Calyx smoothish, Style exserted
 19348 Brnchs downy hispid, Lvs slightly downy above, rusty tomentose beneath, Pans close term., Pedun. woolly hispid
 19349 Leaves oblong mucronate glaucous beset with glandular hairs along the middle nerve on both surfaces, Racemes terminal beset with clammy glandular hairs [Corymbs terminal simple beset with rusty glandular hairs
 19350 Lvs elliptic nearly glabrous above, downy glaucous beneath, clothed with rusty toment. while young, ciliated,
 19351 Branches downy tomentose, Leaves oblong glabrous glaucous beneath, Corymbs large terminal, clothed with rusty tomentum
- 19352 Stem erect thready in the axils, Lvs subcylindrical obtuse, floral ones subverticillate, Flowers large terminal sessile, Petals 2-lobed
- 19353 Suffruticose procumbent, Leaves crowded linear acutish pilose, Peduncles elongated bearing a few distant small leaves, Corymbs terminal many-flowered, Bracts ciliated, Stamens 18-20
- 19354 Cauliscent branched, Leaves obovate-oblong acuminate, Flowers panicled, Pedicels 5 times longer than bracts, Stamens 10-15
- 19355 Leaves nearly opposite or alternate lanceolate-acute smaller than those of *H. salicifolia*, Flowers nearly sessile, Capsules globose

19356 This plant is mentioned in the Gard. Chron. as having been lately introduced

- [spurred obliquely 6-toothed, Stamens 11, Two upper Petals large roundish, and 4 lower minute
 19357 Downy suffruticose, Leaves oval opposite sessile entire, Racemes panicled bracteate. Calyx coloured bluntly
 19358 Flowers crimson or deep purple. Distinguished from *Cuphea Llavea* by its panicled flowers
 19359 Ascending clammy hispid from brown hairs, Leaves opposite oblong-lanceolate obtuse hairy, Flowers subspicate secund, Calyx tubular, Petals roundish stipitate, 2 larger than the rest
 19360 Suffruticose, Branches compressed, Leaves petiolate oblong-acuminate rather scabrous, Pedicels winged, Calyx scarlet elongated 6-toothed, Spur dilated, Anthers black, Filaments smooth [obovate large, Stamens 11
 19361 Stems numerous hispid, Brnchs ascending, Lvs nearly sess. ov-lanc. strigose, Pedunc. inter-foliac., Pets few
 19362 Decumbent or erectish downy, Leaves ovate lanceolate, Peduncles generally 2-flowered subracemose, Calyx clammy, Spur blunt, Petals 2, Stamens 11
 19363 Leaves ovate-acuminate covered with white bristles, Flowers solitary axillary on short pedicels, Calyx long ♂ Flowers purplish [tubular, Petals 2 vermilion, Stamens enveloped in a purple woolly substance

and Miscellaneous Particulars.

scidsum the weaker. A damp atmosphere, and a free circulation of air, are necessary, but they are of difficult culture. They are splendid plants in blossom when well grown.

3046. *Ceratostema*. Pretty shrubs, nearly allied to *Brjaria*, and requires the same culture.

DODECAGYNIA.

3047. 1110a. *ÆONIUM* Webb. (A name of Dioscorides's for *Sempervivum arboreum*.) *Crassulidæe.*

 19365 - *Youngænum* Webb Young's n. □ or 3 ju Y Canaries 1842. C s.l.p Bot. reg. 1844.35
Sempervivum Youngænum Hort., and all the species natives of the Canary Islands and Madeira, belong to this genus.

P. 408. CLASS XII. — ICOSANDRIA. STAMENS many, perigynous, or inserted into the Calyx.

Order 1. MONOGYNIA. Many perigynous Stamens. 1 Style.

3048. 1111b. *Echinopsis*. Tube of Perianth much prolonged beyond the ovary. Sepals numerous; lower ones scale-formed; upper ones elongated, spirally imbricate, setiferous in the axils, petaloid, longer, more or less spreading, emulating a funnel-shaped or campanulate corolla. Stamens in two series; one of the series inserted in the bottom of the tube, the other series connate with the tube. Style filiform. Stigma many-rayed: Rays linear. Berry scaly, setose in the axils.
 3049. 1111c. *Leuchtenbergia*. Sepals numerous, adnate to the ovary at the base, and combined into an elongated tube; outer ones calycine; inner ones petaline. Stamens numerous, concrete with the tube. Style thick, columnar. Rays of Stigma about 10, recurved. Ovary 1-celled. Ovula numerous, parietal.
 3050. 1112a. *Lepismium*. Sepals adnate to a pear-shaped ovary, and combined into a short tube; outer ones 4-5, subimbricate; inner ones 5-7 petal-formed. Stamens filiform, in many series. Anthers minute, reniform. Style columnar. Stigma 4-5-rayed. Ovary subglobose, smooth, crowned by the dry calyx.
 3051. 1115a. *Billötia*. Tube of Calyx rather turbinate: Limb 5-cleft: Lobes valvate. Petals 5. Stamens 10-30, free, shorter than petals. Style filiform. Stigma capitate. Capsule 3-celled, many-seeded.
 3052. 1115b. *Babingtonia*. Calyx turbinate: Limb 5-cleft, persistent. Petals 5, sessile, orbicular. Stamens 15; 3 opposite each petal. Anthers roundish, didymous, opening by a pore at apex. Ovary 3-celled, many-seeded. Capsule perforated at apex.
 3053. 1115c. *Lhotskya*. Bracts twin, paleaceous, persistent, connate at base. Calyx with a 10-ribbed tube, and a 5-parted limb: Lobes short, scarious, obtuse. Petals 5, obovate. Stamens numerous, unequal, exserted, inserted with the petals. Style filiform. Stigma dot-formed. Capsule oblong, 10-ribbed, 1-celled, indehiscent, 1-seeded by abortion, the ovula being twin.
 3054. 1115d. *Backhoisia*. Calyx turbinate, villous, covered with imbricate caducous bracts outside: Limb 5-parted, petaloid. Petals 5, small, concave. Stamens numerous. Fruit dry, coriaceous. Ovary adnate to the tube of the calyx at base, hairy, 2-celled.
 3055. 1115e. *Hypocalymma*. Limb of Calyx 5-parted. Petals 5, unguiculate, orbicular. Stamens 20-30. Ovary 2-celled, many-seeded. Style filiform. Stigma capitate.

History, Use, Propagation, Culture.

3047. *Æonium*. Most of the shrubby species of *Sempervivum*, natives of Madeira and the Canaries, belong to this genus; as *Sempervivum tabulariforme*, *Smithii*, *arboreum*, &c. The species are both singular and ornamental;

DODECAGYNIA.

[lines beneath papillose on margins, Panicle cymose, Flowers 6—8-parted

19364 Branches covered with glandular down. Leaves cuneate-spatulate glabrous thick convex and marked with red
 19565 Leaves thick dark green obovate spatulate subtriangular at the base obsoletely mucronate ciliated on the margin

3056. 1177a. *Angéphora*. Tube of Calyx turbinate, marked with 5 prominent ribs: Limb of 5 persistent teeth. Petals 5. Stamens indefinite. Style filiform. Capsule covered by the corticate calyx, obovate, truncate, 3-celled, 3-valved. Seeds solitary or few.

3057. 1177b. *Callistémon*. Tube of Calyx half-spherical: Limb 5-parted: Lobes obtuse. Petals 5. Stamens numerous. Style filiform. Stigma capitate. Capsule 3-celled, many-seeded, covered by and adnate to the thickened tube of the calyx, which is adnate to the branches.

3058. 1129a. *Cérasus*. Drupe globose or umbilicate at the base, fleshy, glabrous, containing a smooth, compressed stone. Leaves conduplicate when young.

Order 2. DI-PENTAGYNIA. Many perigynous Stamens. 2 to 5 Styles.

3059. 1136a. *Lindl'ya*. Calyx with turbinate tube and a 5-parted limb. Petals 5. Stamens 15—20. Styles 5. Stigmas subclavate. Capsule covered by the calyx, ovate, pentagonal, 5-furrowed, 5-celled, 5-valved, woody. Cells 2- or only 1-seeded by abortion. Seeds girded by a membranous edge.

3060. 1126b. *Neillia*. Calyx campanulate, free, 5-cleft. Petals 5, roundish, sessile, inserted in the throat of calyx. Stamens numerous, disposed in a double series, inserted with the petals. Filaments smooth. Anthers roundish, 2-celled. Style smooth. Stigma obtuse. Capsule follicular, 1-celled, opening on the inner side, many-seeded. Seeds spherical, shining, in two rows.

3061. 1136c. *Adnóstoma*. Calyx funnel-shaped: Tube 5-angled: Limb 5-parted: Segments short: Throat furnished with 5 fleshy, transverse, oblong glands inside. Stamens 15, in the throat of the calyx. Petals 5, ovate, roundish, shortly unguiculate. Ovarium solitary, sessile, ovate, compressed obliquely, truncate at apex, 1-celled, 1-ovulate. Style sublateral. Stigma obtuse.

3062. 1139a. *Nagélia*. Petals small, spreading. Stamens 10—15. Carpels 2, adnate to the back of the calyx. Pome round, crowned by the calyx, fleshy, brittle. Seeds 2 in each cell, compressed.

3063. 1141a. *Schizonditis*. All as in *Spiræa*, except the disk, which fills the bottom of the calyx. Ovula many, pendulous. Carpels cohering into a 5-celled capsule, each splitting on the back to release the seeds. Leaves pinnate.

MONOGYNIA.

[Spines setaceous 8—10 one of which is longer and stronger

19366 Globose depressed glaucescent with about 10 ribs, Ribs obtuse sinuately crenated, Areolæ remotish woolly, [Spines strong equal a little arched brownish, Flowers lateral scattered solitary, Calyx scales ciliated

19367 Globose umbilicate glaucous about 12-ribbed, Ribs elevated remotely crenated, Areolæ remote white woolly,

19368 Roundish-oblong 5—6-ribbed, Ribs prominent, Areolæ approximate woolly unarmed, Flowers rising from the umbilicate top of plant [tital series, Areolæ toment, Prickles 5 strong recurved nearly equal, Flws large

19369 Globose rather glaucous tuberculate hardly ribbed, Tubercles large mammaeform disposed in an irregular ver-

19370 Glob. depressed rather glauc., Tub. round large 6-sided mammaeform confluent, Areolæ oval tomen., Prickles about 10 slen. sprng, the cent. one long, Flws large [ones sprng subsect., in. ones smaller, Pets ser.

19371 Rndsh-ob. deprsd about 20-ribbd. Ribs elev. obt., Areolæ approx. white woolly, Prckls num. of two forms, out.

19372 Tufted turb. depressed glauc. 6—8-ribbed, Ribs broad convex tuberc. unarmed, Pulv. formed of dense fascicles of hairs, Flws small nearly solitary [tral one erect long, Flws solitary scattered, Tube of Calyx woolly

19373 Glob. depressed green umbilicate. Tubercles conical, Areolæ small tomentose, Outer Prickles radiating, cen-

19374 Glob. nearly glob. with about 10 deep furrows, Tuberc. conical, Areolæ prom. woolly, Prickles 10—12 acicular

radiant straight, central one stronger, Calyx scaly, Scales imbricate woolly at top, Stigmas radiant green

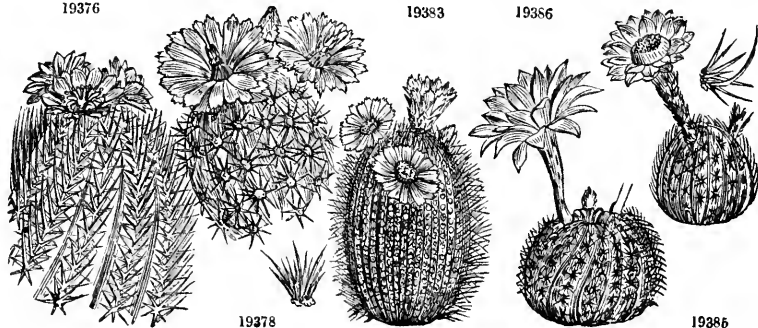

19375 Solitary tall conico-columnar deeply 8—10-furrowed, Ribs obt. tuberculate, Tub. compressed round, Areolæ scarcely woolly, Prickles 9 strong straight purple, cent. one twice the size of the rest, Calyx scaly

and Miscellaneous Particulars.

and require the protection of a greenhouse. They look well on rockwork during summer; but the slightest frost destroys them in this country, although in their native islands some kinds bear several degrees of it.

History, Use, Propagation, Culture,

19381. *Echinocactus Visnaga*. This wonderful plant was found in Mexico, at San Luis Potosi, and is one of the largest and most remarkable of the *Cactus* family. In its native country it bears the name of *Visnaga*, which signifies a toothpick among the Mexican settlers, who use the spines for that purpose. The original plant, sent to the Royal Botanic Garden at Kew, was nine feet high, and nine and a half in circumference, and it weighed a ton. After a year of apparent health it exhibited symptoms of internal decay, the inside became a putrid mass, and the crust, or shell, fell in by its own weight. Other lesser ones are, however, in the collection at Kew. All the plants were procured with great trouble, by Fred. Staines, Esq. The ovary is elongated and densely woolly, and furnished with soft prickles or scales at top, and the petals are serrated.

- 19376 Erect, columnar 12—14-furrowed spiral, Ribs and Furrows acute, Areolæ approximate naked, Prickles 8 fuscous straight, 7 radiating, central one 3 times larger and vertical, Flowers 3—4 terminal, Stigmas 9—12 linear
- 19377 Subglob. green 13 angled, Ribs strong acutish, Areolæ large obl. short-woolled, Out. 9 Prckls straight radiat., inner 4 strong, up. 3 straight, cent. one long flattened hooked [ment., Out. 10 Prickles slend. cent. 4 stronger
- 19378 Subglobose tuberc. hardly umbilicate, Tuberc. in 15 nearly vertical series confluent obl., Areolæ oval white to 19379 Globose depressed 12—14-ribbed rather glaucous, Ribs obtuse, Areolæ white tomentose numerous, Prickles slender 12—18, of these 4—5 are twice the length of the rest, Flowers crowded, Petals serrated
- 19380 Globose depressed obscure green 16-angled, Ribs arched crenate, Areolæ immersed, when young white and very villous, Outer Prickles 9 spreading reddish, central one erect brown all straight
- 19381 Large ellip. Mammæ ang. with nar. sinuses and deep sinuat. tuberc. angles, top very woolly, Areolæ approx. rhomb. immersed glab. pale brown, Prickles 4 strong, cent. one 2 in. long, the other 3 deflexed shorter, Flws copious
- 19382 Globose glaucous flat at top tuberculate, Tubercles hexaedrous disposed in two series vertical and spiral, Areolæ immersed tomentose, Prickles 7 radiating unequal, central one longer stronger
- 19383 Oblong many-ribbed, fascicles of spines approximate woolly at base, Outer Spines 20—40 weak white, central 3—4 purple stiff, Petals in 2 series serrated at top
- 19384 This is nearly the size of *E. Visnago*, and was sent to Kew Gardens along with it, but has not been described
- 19385 Ovate glob. 14—16-ribbed, Ribs vert. obt., Areolæ large approx. ellip. woolly, Prickles acicular yellowish brown at top, outer ones 8—10 radiate 1 inch straight, central one very long 3 inches curved, Cal. rather scaly hairy
- 19386 Globose depressed green 17-ribbed, Ribs compressed, the Pulvinæ crestedly subrepand immersed rather crowded grayish tomentose, Prickles stiff, outer ones spreading, the central one longer, Flowers white
♂ Flowers purple
- [strongest, Wool floccose in the axils of areolæ and about the flowers
- 19387 Roundish cylindrical, Mammæ broadish obscurely 2-lobed at top, Prickles 12 spreading recurved, inner series
- 19388 Glaucous roundish depressed contracted at base, Mammæ obtuse conical tetragonal umbilicate at apex, upper ones furnished with 3—4 erect acicular spines, the rest naked [olæ stiff, lower one longest
- 19389 Simple nearly globose, Axils woolly, Mammæ crowded slender angular, Prickles 4 from the nearly naked areolæ
- 19390 Simple clavately columnar glauc. green, Axils tomen., Mammæ large elongated angular, Areolæ tomen. term., Prickles straight elongated 8—10—12, central one longer and stronger, Flws 2—3 term. large, Pets ser. at apex
- 19391 Shrub fleshy cylindrical, Mammillæ elongated leaf-formed triquetrous truncate, lower ones deciduous, Spines glumaceous, outer ones shorter about 10, central one very long triquetrous at base
- 19392 Erect with long joints glaucescent, Ribs deep 4 sometimes 3—5 compressed obtuse undulately repand, Areolæ remote white tomentose, Prickles stiff straight 4—6—8 unequal, outer ones stellately spreading brown
- 19393 Erect conico-cylindrical acutely 12—14-ribbed, Areolæ approximate tomentose usually 12-spined, Spines and Prickles acic. short, cent. one 1 in. long, Flws brick-red, Scales of Cal. green at top bristly, Pets obov.-acute
- 19394 Erect cylin. many-angled glauc., Ribs obtuse equal, Areolæ copious brown woolly, Spines numer. unequal 4—5 are stronger white all deflex, Flws numer. orange-clrd, Scales of Cal. remote, low. ones cil., Stamens unequal
- 19395 Jointed radic. green triang., Angles repand obt., Areolæ remote nearly nak., Prckls very short straightish 2—3, Bristles short decid., Fls large with cylin. scaly tubes, Scales large clrd gradually changing to sepals and petals
- 19396 Erect bluish 8-angled, Ribs blunt crenate, Areolæ approx., Prickles acicular of two colours rising from black tomentum, about 12 radiating, 3—4 central, the upper ones usually the strongest, Petals undulately toothed
- 19397 Subclavate green attenuated umbilic. at top, Ribs 13 vertical acute, Spines acicular, cent. 4 black at top and bottom, out. 9—10 shorter yellowish radiat. Irregularly [white radiat., cent. ones 2—4 brown hardly larger
- 19398 Erectish-brnchd 8-ang. with broadish sinuses and scarcely prom. ribs, Areol. approx., Out. Prckls 6—8 bristle-fmd
- 19399 Erect large 5-angled with deep furrows, Spines numerous usually an inch long brown
- 19400 Erectish, Joints obovate truncate at both ends very blunt one-toothed having a cluster of hairs in the teeth
♂ Corolla with equal spreading sepals, Ovaries 4—5 winged, Stamens monadelphous at base
- 19401 Branches straight compressed biconvex having the margin exactly crenate green, Flowers large white, Stigma 9-rayed
- 19402 Branches large flat foliaceous green obtuse having the margins repandly toothed and the teeth truncate
- 19403 Prostrate weak, Adult Branches terete younger flat articulated crenate, flowering ones lanceolate terete at base, sterile ones oblong sessile, Sepals 4 narrow, Petals 4 broader, Stigmas 5

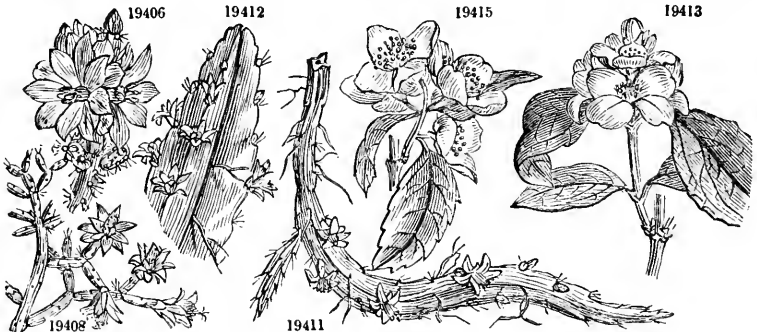

and Miscellaneous Particulars.

3048. *Echinopsis* comes very near to *Echinocactus*, and the treatment and cultivation of the species are similar to that required by those plants.

3049. *Leuchtenbergia* is a singular Cactean plant. Few persons, viewing it destitute of flowers, would imagine it to belong to *Cactæa*: the mammillæ have rather the appearance of leaves of some aloid plant; while the stem, appearing as if formed of the persistent bases of old leaves, resembles that of some *Cycadous* plant. The blossoms differ in no particular from those of *Cereus*. The propagation and cultivation are the same as those for *Cereus*, but it requires more moisture, being a less succulent plant.

History, Use, Propagation, Culture,

3050. *Lepismium* is a genus composed of very singular plants in habit. They require the same treatment as the species of *Cereus*.

3051. *Billettia*. The species are pretty shrubs when in blossom, and are well suited for conservatory plants. A compost of loam, peat, and sand is the best soil for them. Cuttings taken from young wood root readily if planted in sand with a bell-glass over them.

3052. *Babingtonia Camphorosma* is a greenhouse shrub, graceful in its habit, and not difficult to cultivate. It grows best in a rich brown peat and leaf-mould, and flowers freely during the summer months from the ends of pendent branches. Cuttings of young wood will strike root if treated in the usual way.

3053. *Lhotskyia* is a genus of pretty heath-like plants. They are rather difficult to cultivate. A compost of light loam, sand, and peat suits them best; and young cuttings will strike root if planted in sand, placing a bell-glass over them.

- 19404 Branches foliaceous stiff flat thick pinnatifid, Lobes almost rectangular triangles, Flowers brown outside and white inside, Sepals longer than petals, Stigmas 9—10
- 19405 Glaucous articulated oblong compressed crenate, Scales in the crenatures larger than in the allied kinds, Rootlets numerous issuing from the joints, Flowers yellow outside but white inside
- 19406 Erect-branched pale green, Branches cylind. Areolæ crowded white toment., older ones globose furnished below with 3—5 brownish prickles, Flowers glomerate, Petals obovate-lanceolate sulphur-coloured tinted with red
- 19407 Decumbent obovate green, Areolæ crowded laniferous, Prickles of two forms, upper ones setaceous yellow, lower 1 or 2 strong white
- [bearded, Flowers on the lower branches terminal solitary, Style exerted
- 19408 Erect much-branched, Branches scattered terete articulated dotted, Joints of branches short, ultimate ones
- 19409 Trailing, Stem flat, Joints leafy roundish-ov. flat hanging down 3 in. long 2 in. broad with a thick prom. woody midrib, Fls sol. sess. issuing from each crenat. pale brownish yel. their buds tinged with pink, Pts ov. obl. obt.
- 19410 Pendulous branches verticillate naked glabrous, Calyx 4-parted, Petals 4
- 19411 Plant diffusely suberect subarticulated, Joints elongated slender 3—4-sided, Margins acute crenulated purple, Crenæ remote furnished with white hairs and propped by foliaceous bracts
- 19412 Articulated erect subradicant pale green triangular, Ribs much compressed repandly crenated furnished with an ovate acute scale and numerous white hairs at the crenæ
- 19413 Leaves oval-elliptic acuminate denticulate downy beneath, Flowers racemose, Lobes of Calyx acuminate, Style 4-cleft at apex
- 19414 Leaves ovate acuminate sharply serrate downy beneath, Flws solitary or by threes, Lobes of Calyx long acuminate, Style deeply 5-cleft, exceeding the stamens
- 19415 Branches pendulous. Branchlets downy. Leaves ovate acute coarsely toothed pilose beneath, Racemes compact term. 5—9-flwd. Style 4-parted, Calyx spread. [brous above, Flws solit. or by threes term., Petals roundish
- 19416 Branches loose downy, Lvs ovate-acuminate remotely denticulated or entire 3-nerved hairy beneath at length glabrous
- 19417 Leaves ovate-lanceolate acuminate slightly serrated, upper ones long narrow rather hairy beneath, Flowers solitary or in pairs terminal, Calyx smooth, Styles divided almost to the base
- 19418 Leaves lanceolate mucronate tapering to both ends, Calyx villous with coloured teeth, Bracts glumaceous permanent
- 19419 Flowers capitate, Leaves obovate edged with white 3-nerved, lateral nerves obsolete at apex
- 19420 Flowers capitate, Leaves linear-lanceolate 3-nerved glabrous, Branches flexuous glabrous
- 19421 Branches crowded stiffish angular glabrous like the leaves, Heads axillary many-flowered silky villous, Leaves sub-distich ovate-elliptic or roundish 1-nerved veiny inflexed undul. complicate at apex mucr. glabr. on edges
- 19422 Leaves linear opposite nerved, Flowers in little cymes disposed in long terminal racemes
- 19423 Leaves linear triquetrous obtuse villous, Bracts obovate downy on the back with membranous margins equal to villous tube of calyx, Flowers capitate
- 19424 Leaves ovate acuminate with prominent nerves
- 19425 Leaves linear-lanceolate mucronate, Flowers axillary on short pedicels, Heads many-flowered
- 19426 Branches twiggly tetragonal, Leaves remote spreading decussate sessile linear-subulate channelled convex on the back mucronate, Flowers axillary twin sessile interruptedly spicate
- 19427 Leaves filiform plano-convex glandular mucronate, Flowers twain axillary sessile, Stamens exerted
- 19428 Scandent, Branches hoary, Lvs quadrifarious ovate-roundish obtuse coriaceous, shining with rev. edges beset with white scattered hairs on both sides dotted beneath, Flws in upper axils terminal, Peduncs short 3-flowered
- 19429 Lvs oval flat emarg., Flws crimis. in clusters with long crimis. stamns surrounded by a green cup-shaped wavy disk

and Miscellaneous Particulars.

3054. *Backhoúsia myrtifolia* is a large shrub of an elegant habit well fitted for a conservatory plant. Cuttings of young wood will strike root in sand by the ordinary method.

3055. *Hypocalymma* is composed of pretty greenhouse shrubs. The leaves smell of lemon when bruised. The plants should be potted in a compost of loam and peat-mould, with a small portion of silver sand. The pots must invariably be well drained, and water should be freely given during summer. They may be propagated by young cuttings.

1117. *Metrosideros robusta* is said by Mr. Allan Cunningham to be the *Hatu* of the New Zealanders, and is a noble tree, usually attaining the height of 80 or 100 feet. The wood is hard, close-grained, and very durable; and hence admirably adapted for ship timbers, and in the construction of agricultural implements. The leaves have a rich aromatic odour. The plant flowers in our greenhouses at the height of 3 or 4 feet. *Metrosideros tomentosa* grows best in a rich vegetable soil, but is not hardy enough to stand our winters in the open air. *Metrosideros burxifolia* climbs like ivy in its native country.

History, Use, Propagation, Culture,

3056. *Angophora* is a genus of beautiful broad-leaved shrubs or trees with large terminal flowers. They answer well as conservatory plants. A mixture of sand, loam, and peat is the best soil for them. Cuttings of them are difficult to strike. These should be taken from ripened wood, and planted in sand, placing a bell-glass over them.

3357. *Callistemon*. All the species are worth cultivating in every collection of greenhouse plants, for the neatness of their foliage and the beauty of their blossoms. They are well adapted for conservatory plants. Ripened cuttings strike root in the ordinary way, under a hand-glass. They may also be raised from seed, which is frequently produced in this country. Plants reared from cuttings taken from flowering plants come into flower when of a small size; but those raised from seed do not flower till they become large plants.

19439. *Eugenia ternifolia* is a fine stately species. It grows to a large tree. There are two varieties; one with white flowers, and the other with beautiful rose-coloured flowers. The fruit is edible. The leaves are very large; in fact, the largest of all the species.

19440. *Eugenia brasiliensis*, the fruit of which is brought to the markets in Brazil under the name of *Grumichama*, has the young leaves above the flowers purplish-brown. *Eugenia U'gni* is the *Murtilla* of Feuillée, Obs. 3.

- 19430 Leaves oblong-ovate glabrous rather coriaceous, Corymb compound terminal, Calyx turbinate, Petals and Stamens scarlet, Fruit urceolate 5-ribbed
 19431 Leaves elliptic coriaceous bluish, glabrous above but clothed with cinereous tomentum beneath, as are the branches and calcs, Corymb comp. term., Pedics 3-flwd, Cal. turbinate cylind., Petals minute, Caps. smooth
 19432 A charming crimson-flowered bush

19433 Leaves sessile ovate cordate at base glabrous like the branches, Peduncles and Branchlets covered with bristly hairs

19434 Leaves linear-lanceolate stiff pungent beset with scabrous dots rather villous when young as well as branches, Calyx glabrous

19435 Leaves lanceolate tapering to both ends mucronate glabrous in the adult state but villous while young, Flowers distinct spicate nearly terminal, Calyx pilose, Petals downy ciliated

19436 Leaves lanceolate acute mucronate tapering to both ends glabrous in adult state downy when young, Spikes

19437 Branches downy, Leaves linear pungent channelled, Calyx tom., Petals unequal [long slender, Calyx pilose

19438 Leaves linear-spatulate obtuse spreading with white ciliated edges, Calyx downy

19439 Leaves large 3 in a whorl 6—15 inches long and 3—6 broad, Flowers lateral

β Flowers rose-coloured

19440 Leaves oblong-obovate acuminate glabrous shining above full of dots, Peduncles from the axils of the upper scales opposite solitary 1-flowered, Calyx bractless, Lobes ciliated, Petals 4 obovate

19441 Leaves ovate acute coriaceous dotless green above and pale beneath, Young Branches upper Leaves and Petioles downy, Peduncles axillary solitary 1-flowered, Bracts and Calycine segments reflexed

19442 Leaves oval-oblong acuminate 3-nerved, glabrous above downy beneath, Lateral nerves almost marginal, Peduncles trifid or twice trifid 3—7-flowered rather hairy as are bracts and calyxes [fld, Cal. glab., Pets dwy

19443 Leaves linear mucronate with scarlet edges downy beneath 1 inch long and 1 line broad, Pedics axil. solit. 1-

19444 Leaves nearly sessile elliptic-orbicular coriaceous stiff glabrous with subreflexed edges, Umbels terminal 1-flowered axillary fascicled, Calyx bibracteate, Teeth of Calyx short, Petals orbicular concave

19445 Leaves 3—5-nerved very like those of a species of *Melastoma*

19446 A beautiful tree with pendent spikes of large white flowers

[axillary 4—5-flowered pedunculate, Operculum small hemispherical umbonate

19447 Leaves alternate ovate-lanceolate petiolate marginate acuminate or obtuse mucronate, Umbels terminal and

19448 Brnchs tetrag., Lvs vertical elliptic green, Peduncs axil. solit. 3-flwd compressed very broad, Cupula turb. on very short pedicel [culum hemispherical subglobose broader than the calycine cup, Fruit splashiniform

19449 Leaves alternate obliquely ovate-lanc. marginate feather-nerved coriaceous, Umbels terminal compound, Oper-

19450 Glauous, Young Branches angular, Leaves alternate coriaceous dotted marginate uncinately acuminate, Corymbs terminal many-flowered, Pedicels compressed 2-edged, Operculum hemispherical umbonate

19451 Leaves alternate lanceolate almost falcate, Peduncles axillary short 1-flowered, Operculum conical length of cup which is tetragonal, but in the adult state it is depressed and mucronate in the centre

19452 Glauous, Leaves opposite elliptic-cordate coriaceous acum. sess., Peduncs axil. solit. short 1-flwd, Calyx large thick, Operc. conico-hemispher. acuminate, Capsule large depressed hemisph. marginate woody 4—5-valved

19453 Leaves narrow-lanceolate tapering to both ends acuminate-mucronate, Peduncles axillary and lateral nearly terete, Umbels 6—8-flowered, Lid hemispherical almost mutic shorter than cup

♂ Flowers dark crimson semidouble

♀ Flowers single pure white

♂ Flowers pure white and full semidouble

♀ Two or three fruits are often produced by one flower.

and Miscellaneous Particulars.

p. 44. t. 31. It has the habit of our common myrtle, and grows in the Bay of Valdivia. The natives call it *Ugni*, and the Spaniards *Murtilla* or *Myrtilla*. The petals are orbicular, very concave and forming, as it were, a globose corolla white tinged with red.

19444. *Mirtus orbiculata* is called Medlar-wood in Madagascar. It requires considerable heat and a moist atmosphere. A compost of sand, peat, and loam suits it well. The pot in which it is grown should be well drained. Cuttings from ripened wood strike root under a hand-glass in a moist heat.

19447. *Eucalyptus calophylla* has the leaves 4—6 inches long, pale green with a rich red marginal line, within which runs a faint intra-marginal vein. The veins are simple and pinnate; and the whole appearance of the foliage is that of a *Calophyllum*. The flowers are large and white.

19450. *Eucalyptus coccifera* has been cultivated in the gardens for many years, so that it is now more than 20 feet high; and might perhaps be hardy in sheltered situations. The leaves have the smell of myrtle when bruised.

19451. *Eucalyptus globulus* grows in its native place from 100 to 200 feet, and has been seen as tall as 330 feet which must be an enormous tree, and is called Blue Gum Tree.

	<i>corymbōsa</i> Roxb.								

History, Use, Propagation, Culture,

3058. *Cerasus uicifolia* is a small evergreen bush, first found by Nuttall, then by Coulter, and lastly by Hartweg, who reports the fruit to resemble a small cherry. The leaves are like those of the holly, and the flowers like those of the bird-cherry. The species of *Prunus* from 7026. to 7043. belong to the genus *Cerasus*.

19461. *Cratægus Celsiana*. This species is perfectly distinct from *C. tanacetifolia* and *C. orientalis*. The tree is more robust; the leaves are larger and more deeply cut; the habit is also more fastigate. The fruit is larger, and the tree flowers much later in the season. It was first noticed by Dumont de Courset.

3059. *Lindleya mespiloides* is a small tree with the habit of *Mespilus grandiflora*, and with flowers as sweet-scented as the hawthorn, and it may be propagated by grafting on it. It requires protection in severe weather.

- β Lobes of Calyx lanceolate length of tube, Style enclosed hardly tomentose at base
 γ Lobes of Calyx length of tube, Petals narrower longer and white, Style scarcely tomentose at base, Leaves broader
 δ Leaves narrower than in the other varieties

19454 Leaves ovate acuminate glabrous shining, Peduncles solitary, Lobes of Calyx shorter than the tube

β Flowers semidouble white

- 19455 Leaves obovate acuminate setaceously serrulated glabrous, Petioles glandular, Flowers in fascicles
 [dular length of petioles, Petioles glandless
 19456 Flowers usually solit. shorter than leaves, Leaves obov. acuminate glandularly serrate glabrous, Stipules glandular
 [Racemes leafy elongated many-flowered. Fruit ovate roundish
 19457 Leaves oblong-elliptic cordate at base acuminate reticulately veined serrated glabrous, Petioles often glandular,
 19458 Lvs lanc. acuminate bluntly serrated glabrous pilose in axils of veins beneath, Peduncles short rather villous
 19459 Leaves coriaceous shining cordate-ovate on short petioles spiny-toothed, Racemes axillary and terminal dense-flowered, Bracts shorter than pedicels

DI-PENTAGYNIA.

- 19460 Spinescent evergreen, Young Branches tomentose, Leaves narrow oblong shining crenately serrated, Corymbs terminal, Calyx glabrous with rounded segments, Styles 5 glabrous, Pome depressed globose red
 19461 Leaves hairy pinnatifidly cut, Sepals reflexed, Styles 5, Fruit large yellow

19462 Glabrous, Leaves scattered simple crenulate, Stipulas petiolar twin, Flowers axillary solitary pedunculate at the tops of the branches

[Bracteoles toothed, Calyx silky

- 19463 Leaves cordate-ovate and 3-lobed doubly serrated, Stipules leafy serrated, Racemes spicate terminal thyrsoid,
 19464 Leaves cordate 3-lobed acuminate doubly serrated, Stipules entire membranous, Racemes terminal solitary, Bracts entire, Calyx tomentose

19465 Leaves linear pointed sometimes 2—3-lobed rising in fascicles, Flowers small in terminal panicles

19466 Leaves glabrous oblong mucronate narrowed at the base, Racemes many-flowered glabrous, Segments ovate acute petaloid serrated, Carpels naked

19467 Evergreen shining, Branches prostrate intertwined, Leaves linear-obovate obtuse with recurved edges downy beneath, Fruit sessile solitary recurved, Petals minute

19468 Leaves an inch long rounded at top and slightly toothed dark green above and grey from down beneath, Corymbs small terminal

19469 Downy, Leaves ovate-oblong acute coarsely serrated somewhat 3-lobed, Corymbs small hemispherical, [pels 5 pilose

19470 Branches angular, Leaves roundish oblong obtuse crenated above the middle [term. Fls white with red eye

19471 Branches many shining brown tufted, Lvs obov. petiol. serrate above middle, green above glauc. ben., Cory. small

19472 Pilose, Branches angular, Leaves cuneate-obovate deeply serrated glabrous above downy beneath as are the petals, Panicles loose tomentose terminal, Calyx bibracteate

19473 Leaves glabrous oblong serrate, Panicle corymbose terminal

β Flowers white double like those of the double-flowered hawthorn

[Calyx covered with silky hairs

19474 Lvs lanc. tapering to both ends ser. upper sers with little brown callosities glauc. ben., Cymes branched term.

19475 Hairy, Lvs petiol. ellip.-lanc. serr. above mid. wrinkled, above dull yelsh green whitsh ben., Cory. term. pan.

19476 Branches weak terete velvety, Lvs glab. ov. cren. on long stalks glauc. ben., Panicles loose vill., Petals reflexed

19477 Branches and peduncs downy, Lvs ellip. coarsely uneq. ser. towards apex clothed with hoary tom. ben., Spikes

19478 Leaves lanceol. lobed and serrated glabr. paler beneath, Corymbs term. [crowded panicle, Carpels 5 glab.

19479 Leaves oval or obovate-obtuse quite entire villous, Corymbs crowded tomentose as well as branches [late, Sepals villous inside

19480 Leaves lanceolate 3-lobed and pinnatifid glabrous glaucescent beneath, Racemes corymbose terminal peduncu-

and Miscellaneous Particulars.

3060. *Neillia* will, perhaps, prove quite hardy shrubs. They will grow in ordinary soil, and will strike root from cuttings planted in autumn. They will prove a good addition to our shrubberies.

3061. *Adenostoma* is a hardy small evergreen heath-like bush, with small white flowers. The leaves are in fascicles in the axils of the primordial ones, which fall off early, and leave a pair of spine-pointed stipules behind. Their culture is the same as that for *Spiræa*.

Adenostoma fasciculatum is a pretty little shrub with the habit of *Spiræa*, will grow well in common soil, and is increased by cuttings.

3062. *Nageia* is nearly related to *Cotoneaster*, and requires the same culture.

Page 456. CLASS XIII.—POLYANDRIA. STAMENS many, hypogynous, or inserted under the Ovary.

Order 1. MONOGYNIA. Stamens many, hypogynous. Style 1.

3064. 1177a. *Victória*. Sepals 4, deciduous. Petals numerous in several series, passing gradually into stamens, as in *Nymphaea*, and united with them. Stamens numerous, united at the base, bearing the elongated anther-cells; the innermost stamens united into a monadelphous body and sterile. Ovarium 27—30-celled, and 10—12 ovules in each. Fruit a turbinate truncate berry, with a deep hollow disk, and a persistent central column.

3065. 1192a. *Freziera*. Calyx of 5 sepals. Petals 5, broadest at the base. Stamens free. Anthers smooth, sometimes cordate. Style 3—5-cleft at apex. Berry dry, 3—5-celled. Cells many-seeded.

3066. 1192b. *Friésia*. Calyx 4-parted. Petals 4, 3-lobed at apex. Anthers 12, cordate-oblong, acuminate, Jehlscing at apex. Berry dry, somewhat stipitate, indehiscent, 2—4-furrowed, 2—4-celled. Cells 2-seeded.

3067. 1192c. *Saurauja*. Calyx 5-parted. Petals 5, connected together to their middle. Stamens many, monadelphous at the base. Styles 3—5, sometimes connected at the base. Berry furrowed, filled with shining pulp, with as many cells as there are styles. Seeds minute, angular.

3068. 1196a. *Pachystigma*. Calyx subtriphyllous. Sepals unequal, concave. Petals 4, conform, free, concave. Stamens numerous, inserted by two series on a fleshy gynophore. Ovarium globose, 7—8-furrowed, 7—8-celled. Cells biovulate. Stigma large, 7—8-lobed. Capsule at length dividlog into 7—8 parts, stellately disposed. Parts 1-seeded by abortion.

3069. 1198a. *Luxembúrgia*. Calyx of 5 unequal sepals. Petals 5, unequal. Anthers nearly sessile, definite or indefinite, inserted on a short gynophore along with the pistil, bursting by two pores at apex, aggluminated into a

History, Use, Propagation, Culture,

3063. *Schizonotus* is a genus separated from *Spiræ'a*. They are well suited for ornamenting shrubberies. The well-known *Spiræ'a sorbifolia* is the type of the genus. *S. tomentósus*, in severe frost, is usually killed to the ground.

19481 Leaves simply palmate upper ones subhastate or lanceolate, Petioles appendiculate, Flowers corymbose, Sepals reflexed pilose, Carpels hairy parallel, Styles subcapitate
 β Leaves tomentose beneath, Segments usually acuminated

19482 Leaves pinnate 5—8 pairs, Leaflets sessile ovate-lanceolate acuminate coarsely and doubly serrated, Stipules linear, Racemes forming a pyramidal panicle

POLYGYNIA.

[Stipules prickly, Stipules narrow ent. with gland. edges free and subulate at top, Sepals entire. Flws clustered
 19483 Glab. scand., Brnchs setig. gland., Lvs tern. rarely pinnate, Lifts ov.-lanc. acum. sharply ser. glauc. ben., Pe-
 19484 Prickles crowded nearly equal, Peduncles beset with curved prickles. [purple flowers

β Habit of *R. kantschatica*. The variety was sent by Mr. Fortune. It has semidouble sweet-scented rich
 19485 Habit of *R. arvensis*. Leaflets 3 pair bright shining green above, Flowers as large as those of the common
 China rose solitary semidouble dull buff tinged with purple

19486 Shrubby dwarf hairy, Branches weak spreading, Leaves nearly sessile palmate or digitate with oblong revolute
 leaflets varying in number from 5 to 9, Flowers terminal with 5 lanceolate bracts, Petals roundish

19487 Hairy, Stems ascending few-flowered fruticose at base, Leaves ternate, Leaflets obovate tridentate, Stipules
 ovate acute entire or tridentate, Segments of calyx obovate, Petals obovate scarcely exceeding the calyx

19488 Erect, Leaves pinnate with usually 3 pairs of leaflets hoary above and clothed with white down beneath, Leaflets
 oblong pinnatifid, Stipules foliaceous cut, Flowers corymbose, Calyx woolly, Petals emarginate

19489 Erect downy clammy, Leaves pinnate, Leaflets roundish-ovate doubly and deeply toothed, Stipules entire,
 Petals obov. entire [nate oblong-lanc. bifid or entire, Stipulas ser., Petals veined with red

19490 Hairy, Leaves silky white beneath, radical and lower cauline lvs digitate, Lifts obov. coarsely ser., upper ter-
 19491 Stems ascending many-flowered, Leaves ternate often quinate, radical ones on long petioles, Lobes crenately
 serrated green above hoary beneath, Stipulas ovate obtuse entire or multifid, Petals roundish emarginate

19492 Leaves ovate-lanceolate acuminated glaucous and downy beneath

19493 Lvs obl. acum. smooth obt. slightly cord. at the base rather scabrous above on short petioles, Flws solit., Bracts

19494 Lvs ovate-lanc. glaucous and downy beneath [number. subul. revol., Seps and pets lin. lanc. obt.

19495 Leaves deep green pinnate with roundish crenated lobes gradually diminishing to the base occasionally inter-
 19496 Pilose, Stems simple 3-flowered, Radical leaves interruptedly pinnate, Leaflets cuneate and deeply toothed,
 Petals oblong length of calyx, Awns of carpels long and villous

[rupted by small entire lobes, Flowers large handsome, Panicles 3—4-flowered

inass on one side, usually clasping the ovarium. Style declinate. Stigma simple or tripartite. Ovarium sessile,
 oblong, triangular. Capsule 1-celled, 3-valved, many-seeded. Valves bent inwards, and bearing the seeds on the
 edges. Seeds oblong, girded by a membrane, which is broadest at top.

Order 3. TRIGYNIA. Stamens many, hypogynous. Styles 3.

3070. 1198b. *Consolida*. Sepals 5, coloured; upper one inflected, unguiculate, spurred. Petals 2, joined; inner
 spurred, lobed, thrust in between the sepals. Stamens declinate. Carpel solitary.

Order 4. POLYGYNIA. Stamens many, hypogynous. Styles many.

3071. 1212a. *Sneathmännia*. Calyx 5-leaved. Petals 5. Nectarium 1-leaved, urceolate, surrounding the stamens
 at base. Stamens numerous, distinct, seated on a short column. Anthers incumbent. Stigmas 5, peltate. Capsule
 inflated, 4—5-valved, sessile, many-seeded. Seeds dotted.

3072. 1224a. *Laplæca*. Calyx 5-leaved, Corolla 5- or many-petalled. Petals generally unequal. Stamens in-
 definite. Styles 5, or more. Stigmas simple. Capsule woody, 5—10-celled. Seeds biseriate, and many in each cell,
 winged at top.

3073. 1233a. *Cathcartia*. Calyx 2-leaved, caducous. Petals 4, roundish, deciduous. Stamens 25—30. Filaments
 filiform. Anthers 2-celled, terminal. Stigma fleshy, 5—6-rayed. Capsule erect, siliqua-formed, 1-celled, 5—6-valved.
 Seeds numerous, compressed, scrobiculate.

3074. 1233b. *Eucryphia*. Calyx 5-parted. Styles usually 12. Petals 5. Anthers didymous. Capsules ovate,
 with boat-shaped cells hanging by funicles.

and Miscellaneous Particulars.

19487. *Potentilla ambigua* is a small shrubby species, increasing by the rooting stolons or runners.

19493. *Polygonatum occidentale* is a fine species, but rather tender. The flowers are of a brownish red, with a
 subacid unpleasant odour.

History, Use, Propagation, Culture,

19499. *Meconopsis Wallichii* is a pretty blue-flowered poppy from the Sikkim Himalayas. The flowers are large, and droop; they are disposed in long leafy racemes. The plant was grown in pots in a frame, but will, perhaps, succeed well in the open border.

19500. *Sarracenia Drummondii*. The stove is said to be the most suitable place for this plant at a temperature of 80° to 100°, among *Orchidææ* and *Epiphytes*, at least at that time when they are making and maturing their growth, at which time they require much warmth and moisture. The other species would require the same treatment. They are all inhabitants of the swamps of a region which during the summer experiences a tropical heat.

19501. *Nymphæa elegans* will probably grow and flower in the open air. The flowers are very sweet-scented. It comes near to *Nymphæa ampla*.

19503. *N. dentata* is very common in ponds in every part of Guinea, along with *Pistia Stratiotes*. The root of *N. ampla* is composed of round tubers. The leaves of *N. gigantæa* are 2 feet across, and the root is composed of tubers. *N. Devoniensis* appears to be only a strong seedling plant of *N. rubra*, and is not a hybrid.

3064. *Victória regia*. This splendid water-lily has been found in the rivers Amazon, De la Plata, Berhice, and in the river Yacuma, a tributary of the river Marmora, in Bolivia, and probably in many other lakes and rivers in South America. The plant flowered first at Chatsworth, the seat of the Duke of Devonshire, under the care of Sir Joseph Paxton; at Stou House, under the care of Mr. Iveson; and at the Botanical Gardens, Regent's Park, and at Kew; and in the open air at Mr. Weeks's Nursery, King's Road, Chelsea. The whole plant is prickly, except the

MONOGYNIA.

- 19497 Leaves few remote pinnate, Lower segments ovate cut subpetiolate, Upper ones linear entire subconfluent, Capsules smooth [ments ovate cuneate, Upper linear cuneate, Capsules smooth
- 19498 Stem leafy at base, Leaves thickish glaucous pinnate, Segments deeply lobed with revolute edges, Lower seg-
- 19499 Tall glaucescent bristly from long rufescent hairs, Radical leaves petiolate pinnate but pinnatifid towards the apex, Lobes sinuate, Caul. lvs obl. sinuate pinnate sess., Flws nodding large in long leafy racs, Ovar. bristly
- 19500 Pitchers long straight dilated upwards ang. tapering much to base furnished with a sharp projecting rib in front with an undulated inflexed roundish blade which is covered with long hairs inside, Flowers purple
- 19501 Leaves nearly orbicular repandly toothed spotted with black and purple beneath with a narrow recess. Sepals 4, Petals white with a bluish tint, Stamens in 15 bundles, Outer Anthers appendiculate, Stigma 15-rayed
- 19502 Leaves small roundish-cordate entire, Petioles long slender, Lobes divaricate acuminate reddish beneath and dotted with violet generally bearing bulbs between the lobes, Stigmas 15 nearly sessile [pressed at base
- 19503 Leaves peltate sharply toothed glabrous the nerves very prominent beneath, Calyx 4-lvd vittate truncate de-
- 19504 Said to be a hybrid between *N. rubra* and *N. Lotus*. The leaves and flowers are larger than those of the parents, Leaves strongly dentate, Flowers crimson
- 19505 Leaves peltate bluntly and sinuately toothed not dotted glabrous, Lobes incumbent, Anthers appendiculate at top, Stigma 20-rayed
- 19506 Leaves cordate roundish peltate toothed glabrous tubercled above and coloured beneath with a narrow sinus, Sepals dotted, Stigma 20-rayed, Anthers appendiculate, Outer ones long
- 19507 Lvs cordate peltate roundish thick remotely toothed, Flws large, Calyx 4-lvd, Petals numerous obtuse, Outer ones obovate, Inner ones linear-lanceolate, Stamens hiding the stigma, Anthers curved, Outer ones apiculated
- 19508 Plant prickly, Leaves large 5 to 7 feet in diameter and 20 or more in circumference, Flowers large more than a foot in diameter
- 19509 Leaves narrow oblong bluntly acuminate green above and pale beneath smooth, Peduncles solitary 1-flowered hid among the leaves. Flowers dull greenish-purple
- 19510 Leaves elliptic-lanceolate acute serrately toothed tapering into the short petiole, Flowers nutant, Pedicels axillary nearly solitary 1-flowered, Anthers apiculated pencilled on the back, Style hispid at apex
- 19511 Leaves ovate-lanceolate serrated sometimes opposite and sometimes alternate, Flowers drooping on slender pedicels composed of 4-6 sepals and petals, the latter 3-cleft with 3 deep crimson stripes in the middle
- 19512 Branches peduncles and nerves of leaves clothed with adpressed rusty bristles, Lvs obovate-lanceolate petiolate doubly serrated, Panicle ample much branched, Petals obcordate
- 19513 Icosandrous, Leaves terete glabrous petiolate stipulate
- 19514 Icosandrous, Leaves terete petiolate downy stipulate. [villous
- 19515 Icosandrous, Leaves petiolate with two very short stipules scabrous in the adult state as well as brcts, Branches
- 19516 Icosandrous hispid, Leaves linear petiolate keeled, Heads spherical, Floral Leaves villous, Bracts linear-lanceolate acuminate shorter than slender tube, Tails very slender twice as long as petals
- 19517 Icosandrous downy, Leaves imbricate oblong-obtuse ciliated, Brcts with membranous edges mucronate shorter than the tube of calyx, Awns twice as long as petals
- 19518 Icos. glabr., Leaves linear-tetragonal obtuse imbricate papillose, Bracts obovate apiculate length of tube of Calyx, Tails a little longer than petals, Flowers axillary [shorter than petals, Flowers axillary
- 19519 Icosandrous glabrous, Leaves linear semiterete obtuse mucronate, Bracts obovate equal to calyx, Tails a little

19507

19508

and Miscellaneous Particulars.

petals. The leaves are sometimes of a prodigious size, 5 to 7 feet in diameter, and 20 feet or more in circumference, turned up at the rim all round; the under side is purple, with very strong ribs and veins radiating from the petiole till they disappear at the edge. The flowers are of the same gigantic dimensions, and measure more than 1 foot in diameter; they are very fragrant, and expand in the evening about 6 o'clock; they are at first white, but as they decay towards morning they become red or pink. The plant produces seed in this country, and therefore is likely to become plentiful. It requires a strong heat to make it grow freely, and is generally grown by itself in a house called a Victoria house, or aquarium.

3065. *Freziera theoides* much resembles *Thaë Bohica* both in leaves and flowers. Dr. Macfadyen states that the leaves are astringent, like those of green tea. The shrub is cultivated and propagated like an ordinary stove plant.

3066. *Friëtia pedunculata* is an evergreen half-hardy shrub with deep green leathery leaves. It will probably become a pretty conservatory plant. The flowers are something like those of *Andrômeda spectôsa*. The culture is the same as that for the species of *Eleocarpus*. Plenty of water will be required when the plant is in a growing state.

3067. *Saurauja* is a genus of fine plants with laurel-like leaves and rather large white flowers. The species will thrive in a mixture of loam, peat, and sand, and ripened cuttings will strike root under a hand-glass in the usual way.

History, Use, Propagation, Culture,

3068. *Pachystigma* only requires the treatment of an ordinary stove-plant, and ripened cuttings will strike root in the usual way.

3069. *Luxemburgia*. The species are very pretty plants resembling some species of *Rhododendron*, with showy yellow flowers and shining serrated stiff leaves. *L. ciliata* and *corymbosa*, the only species ever cultivated in the

- 19520 Icosandrous glabrous, Branches angular, Lvs linear-obtuse carinate spreading, Bracts obovate-obtuse connate beyond middle shorter than tube of Calyx, Tails rather longer than petals, Flws axillary
- 19521 Icosandrous glabrous, Leaves linear semiterete obtuse imbricate, Bracts lanceolate-acuminate clammy rather shorter than tube of calyx, Tails twice as long as petals, Flowers corymbose
- 19522 Deciduous, Branches tetragonal, Angles winged, Lvs roundish-ovate acute glabrous glaucous green, Peduncles axillary constituting a terminal panicle
- 19523 Much-branched, Leaves alternate on long petioles trifoliolate, Leaflets ovate-entire or obsolete serrated full of pellucid dots, Peduncles subtrichotomously branched, Flowers fragrant
- 19524 Leaves alternate linear without stipules, Flowers small by twos or threes at ends of branches on naked pedicels, Sepals 5, 3 of which are oval and pointed and 2 subulate, Corolla twice as long as calyx
- 19525 Leaves crowded on long petioles oblong-lanceolate glandularly setose setosely mucronate, Stipules deciduous, Corymbs many-flowered, Flowers polyandrous
- 19526 Leaves on short petioles narrow-oblong acutish cuneated at base, Flowers large few disposed in corymbs polyandrous

DIGYNIA.

- ♂ Flowers double of a salmon colour
 - γ Flowers of a dark blood colour
 - δ Flowers semi-double rose-coloured stained and veined with deeper rose colour towards the apex
 - ε Flowers party-coloured
 - ζ Flowers small pale rose colour
 - η Flowers globular white and purple
 - θ Flowers lilac
 - ι Flowers deep crimson
- [tomentose recurved at apex]
- 19527 Leaves triternate, Leaflets entire ovate rugose grey and downy beneath, Petals ovate yellow, Carpels erect
 - 19528 This species is mentioned in the Hort. Soc. Journ., vol. 5.; but without any description

TRIGYNIA.

- 19529 Glabrous glaucescent, Branches nearly terete, Leaves obovate-oblong and oblong stem-clasping and perfoliate denticulated opaque and smooth ben., Peduncs solitary 1-flwd scaly at base, Petals 2-lobed, Ovaries 4—5 glab.
- 19530 Leaves linear bluntish with revolute edges, Flowers on long peduncles digynous, Ovaries hairy
- 19531 Twining a little glabrous, Leaves alternate linear cordate at base and stem-clasping with revolute edges, Outer Stamens sterile, Carpels 5 glabrous 4—5-seeded
- 19532 Rather downy. Leaves tripartite, Lateral segments bifid or undivided, Lobes oblong tridentate or entire, Floral Leaves and Bracts nearly oblong, Spur curved length of sepals, Carpels 3 divaricate
- 19533 Stem branched downy, Leaves pedate multifid, Pedicels long, Spur incurved at end horizontal divided upwards

- 19534 Stem clothed with short deflexed hairs, Leaves glabrous above palmate-parted, Segments 3—5 pinnatifid, [Ovaries 3 downy]
- 19535 Stem glabrous, Leaves 7—9-parted, Segments unequally cleft, Spur spiral, Helmet constricted clavate, Ovaries 3 villous

- 19536 This is a pretty plant with cream-coloured flowers nearly related to *Lycotomum*
- 19537 Stems purple downy, Leaves 3—5-lobed ciliated, Racemes crowded, Brnchs paniced, Helmet cylindrical com-pressed, Ovaries silky villous [pressed, Ovaries silky villous]
- 19538 Downy, Leaves palmatifid, Segments pinnatifid, Spikes simple strict, Helmet compressed roundish acuminate, Cuculli circinate, Filaments winged, Ovaries villous [teral sepals obt., Petals renif. at top, Ovs 5 glab.]
- 19539 Erect pyram. downy, Lvs stem-clspng cord.-ov. obt. deeply cren., Bracts 2 foliac. concave, Helmet rounded, La-teral sepals obt., Petals renif. at top, Ovs 5 glab.
- 19540 Stem robust glabrous, Lower Leaves petiolate ample deeply tripartite, side segments bifid all cut. upper leaves sessile 3—4-cleft segments nearly entire, Rac. sub-comp., Pedicels hairy at top, Nectaries with short spurs
- 19541 Calyx deciduous, Petals supine hooked, Stamens pilose, Helmet arched, Ovaries 3—5—7 smooth, Panicle loose

and Miscellaneous Particulars.

country, require a moderate stove-heat, and flower during the summer months. A compost of vegetable mould, sand, and loam will answer them. They may be propagated by seeds and cuttings.

3070. *Consolida* is a genus separated from *Delphinium*, and requires the same culture and treatment as *Delphinium pictum*. It is a biennial plant.

History, Use, Propagation, Culture,

3071. *Smethmannia*. The species are pretty shrubs with tea-like leaves and pretty white flowers. *S. laevigata* grows on the hills at Sierra Leone, and is one of the most showy plants there; it flowers so profusely. *S. pubescens* grows in the lowlands by the sides of rivulets in thickets, and is not so showy a plant as *S. laevigata*. A mixture of loam, peat, and sand will suit them, and cuttings will strike root in the usual way. They require plenty of heat and moisture when growing.

19552. *Mlicium religiosum* is the celebrated Anise tree. There seem to be two kinds of Anise tree; the *I. anisatum* of Loureiro, the Chinese kind; and *I. religiosum* Siebold, the *I. anisatum* of Thunberg, the Japanese kind. By the Japanese this plant is held sacred. They strew wreaths of it and branches over the tombs of their friends; and their priests burn the bark as a perfume upon the altars of their deities. A singular use is made of the pulverised

PENTAGYNIA.

- 19542 Spurs thick curved much shorter than the lip, Pistils exceeding the stamens a little, Fruit ovoid umbilicate at base
- 19543 Glabrous, Spurs straight and very long at least 5 times longer than the limb, Stamens much exerted exceeding the 3—5 styles
- 19544 Stem many-flowered downy tomentose under the calyx, Lvs pil. beneath, Leaflets cuneated 3-lobed, Segments truncate cut, Flowers pilose, Sepals acuminate twisted round the spurs, Ovaries glabrous
- 19545 Radical Leaves biternate glaucous beneath, Leaflets cuneate lobed, Spurs very long straight slender twice as long as limb, Sepals rhomboid-lanceolate
- 19546 Downy subglabular many-flowered, Segments of lower Leaves divided beyond the middle, Flowers large, Sepals ovate-lanceolate acute, Spurs hooked much shorter than the truncate lamina
- 19547 Glaucons downy many-flowered, Leaves trifid cuneated, Segments 2—3-lobed, upper ones ovate entire, Flowers large pilose, Sepals ovate-lanc., Spurs reddish straight shorter than truncate lamina, Ovaries glandul. villous
- 19548 Stem Petioles and Peduncles beset with glandular down, Spurs deep blue straight equal in length to calyx, Limb of Petals obovate, Stamens and Style shorter than petals, Fruit pilose
- 19549 Branches rather silky, Leaves oblong coarsely serrated acuminate tapering into the petioles glabrous shining, Urceolus cut pilose inside. [Leaves oblong serrately toothed obtuse at base, Urceolus bearded
- 19550 Younger branches and Petioles glandular, Ribs beneath calyxes and peduncles covered with rusty hairs,

POLYGYNIA.

- ♂ Flowers white
- 19551 Leaves orbicular-rayed, Fruit obversely conical, Seeds large embedded
- 19552 Arborecent evergreen glabrous, Leaves elliptic quite entire tapering to both ends, Stamens 18—20, Capsule fleshy
- 19553 Leaves oblong-obovate acute oblique at base, serrated at top, coriaceous glabrous, Flowers in the axils of the upper leaves, Petals 5—8
- ♂ Flowers double yellow [decomposed on short stalks, Peduncs 2 bearing involucl, Seps 5—8 ov. acutish
- 19554 Villous, Radical Leaves ternate with many-parted segments and linear lobes, Leaves of involuclum ternately partite, Lobes lanceolate serrated pinnatifid, Ovaries glabrous, Fruit linear acuminate mucronate
- 19555 Leaves rather villous tripartite, Leaflets ovate trifid, Lobes cut acutely toothed, Leaves of involuclum sessile trifid
- 19556 Leaves of involuclum 3 sessile ovate acuminate deeply serrated, Stem pilose, Sepals 5—6 obovate
- 19557 Pilose, Leaves kidney-shaped 3—5-parted, Lobes trifid and toothed, Leaves of involuclum roundish cuneate sessile trifid and toothed, Sepals 6 spreading, Carpels compressed smooth ending each in a hooked beak
- 19558 Young Leaves villous, adult ones glabrous, Radical Leaves on long petioles reniform 5-lobed, Segments 3-lobed, Lobes serrate, Petioles villous, Leaves of involuclum like the rest but larger and cut, Flowers umbellate
- 19559 Caulis., Radical and Cauline Lvs ternately cut, Segs cord. 3 lobed uneq. serr., Lower involu. Lvs petiolate cum. at base, upper ones sess., Peduncles elong. 1-fwd or dichot.-brncht, Seps about 20 silky outside, Cariopsis vil.
- ♂ A tall branchy plant
- 19560 Villous, Leaves roundish cordate 3-lobed coarsely and deeply crenate, Umbel few-flowered, Sepals obtuse pilose on the back, Leaflets of involuclum foliaceous, upper ones cuneated 3-lobed, Carpels pilose
- 19561 Leaves ternate, Segments cuneate trifid, Lobes long 1 near, Leaves of involuclum parted into linear lobes. Flowers erect, Sepals 5—6 erect connate
- 19562 Radical Leaves triplicately pinnate, Segments linear acute, Involuclum Leaves sessile many-parted, Lobulcs linear 2—3-cleft, Flowers drooping, Sepals at first campanulate but at length stellate

and Miscellaneous Particulars.

bark by the public watchmen. Hollow tubes graduated on the outside are filled with the substance, which is lighted at one extremity and burns gradually and uniformly, so that when the fire has reached a certain mark, the watchman strikes the hour upon a bell, and thus announces it to the public.

3072. *Laplacea semiserrata* recommends itself by its handsome tea-like evergreen foliage and large white flowers. It will thrive in a mixture of loam, peat, and sand; and ripened cuttings will root under a hand-glass in the ordinary way.

19560. *Anemone japonica* is hardy, and cultivated in our gardens for the beauty of its flowers. A moist soil seems most favourable to its success. The hybrid variety of it is a much stronger and taller plant, and at first sight looks like a small red-flowered *Dahlia*.

Page 490. CLASS XIV.—DIDYNAMIA. 4 STAMENS, of which two are shorter than the others.

Order I. GYMNOSPERMIA. Pericarpium divided into four lobes resembling naked seeds.

3075. 1263a. *Audibertia*. Calyx bilabiate: Upper lip concave, entire, or tridentate; lower lip bifid: Throat naked. Corolla bilabiate; Upper lip bifid, lower trifid: middle lobe broad emarginate. Two lower Stamens fertile, usually

History, Use, Propagation, Culture,

19572. *Clematis indivisa* and its variety *lobata* quite festoon the trees in New Zealand with their dense foliage and large panicles of white flowers.19576. *Ranunculus cortu aefolius* is the handsomest of all the buttercups. The roots are grumose. The flowers are large and yellow. The plant requires protection in winter.3073. *Cathcartia*. This is a pretty biennial plant, and will grow in any light rich soil; but in a sheltered situation.

[and alabastra, Peduncles and younger stems woolly, Sepals 6 ovate acuminate spreading

19563 Lvs simple and ternate, Leaflets coriaceous cordate acuminate villous beneath and on the branches petioles
19564 Peduncles 1-flowered stalked within the involucre, Leaves ovate somewhat cordate toothed in fascicles

[obovate tomentose, Tails of Carpels villous
19565 Herbaceous erect, Leaves pinnate, Leaflets ovate-lanceolate entire 2-3-lobed, Corymbs paniced, Sepals 4-5
19566 Leaves ternate, Leaflets ovate-cordate broadly crenate reticulated smooth coriaceous, Flowers paniced dio-
cious of 6 sepals [coarse serratures, Flws small downy, Corymbs axillary and terminal downy paniced

19567 A rambling shrub with habit of *C. virginiana*, Leaves pinnate, Leaflets ovate slightly cordate acum. with a few

19568 Glabrous slender, Stems angular, Leaves pinnately bi-trinervate, Leaflets small tripartite, Segments ovate ent.
or deeply serr., Peduncs 1-flwd solit., Seps 4 obl.-obt. recvd at top dwy inside, Carps dwy with feathery tails

19569 Lvs tern. glab., Lfts ov.-lanc. acum. ent. 3-nerved at base, Peduncs shorter than lvs, Flws panic, dioecious

[linal and axillary, Sepals linear oblong at first tubular but at length revolute downy outside

19570 Erect rather downy, Leaves trifoliolate on long petioles, Leaflets ovate a little lobed mucr. toothed, Corymbs ter-

19571 Lvs ovate cordate slightly peltate entire or slightly crenulate glabrous, Panicles axillary Sepals 4 clothed with

rusty tomentum

19572 Dioecious, Flowers paniced, Sepals 5-7 elliptic silky, Leaves ternate, Leaflets petioiate ovate entire, adult

♢ Leaflets lobed

19573 Glaucous slender, Leaflets ovate reticulated, Flowers scattered in somewhat horizontal racemes

[ones palmately multifid with linear segments, Calyx spreading, Fruit oblong

19574 Downy hairy, Lvs subcoriaceous glaucous green, radical ones roundish cordate coarsely serrate crenate, cauline

19575 Root grumose, Leaves rather hairy, radical ones petioiate orbicular, lower ones 5-lobed toothed, upper ones

tripartite with linear entire lobes, Stem erect few-flowered, Calyx spreading, Spike of Carpels elongated

19576 Tall pil., Rad. Lvs cordately reniform, lobes lobed and toothed, caul. ones nearly sess. 3-5-parted, floral ones

lanc., Stem corymbosely bruchd at top, Seps villous, Head of Carp. obl. glob., Carp. ending in a hooked style

19577 Floating and creeping, Lvs all cordate roundish subpeltate 3-5-lobed, Lobes with 2-3 notches, Carpels trans-

versely wrinkled semi-obovate with a terminal acute point, Receptacle not setose

19578 Floating, Submersed Leaves divided into capillary segments, Floating Leaves subpeltate tripartite, Segments

triangularly obovate 2-4-cleft, Carpels subobovate blunt with a subterminal point, Receptacle setose

19579 Submersed, Stems ascending, Leaves all submersed divided into numerous capillary 2-4-times forked segments,

Carpels ovate compressed tipped by the long acute curved style

19580 Stems floating, Leaves all submersed 2-3-times forked, Segments elongated setaceous parallel, Carpels obovate

inflated with a short straight lateral point

19581 Covered with brown villi, Stem simple. Lower Lvs on long petioles cordate palmately or pedately 5-lobed, lobes

lobuled, upper lvs sessile the uppermost ones pinnatifid, Peduncles terminal and axillary, Flowers drooping

19582 Leaves opposite cordate crenated downy beneath, Flowers white pedunculate

19583 Lvs digitately palmate, Segments tripartite, Peduncles very short 1-flwd, Flowers stellate or spreading, Sepals 9

lanceolate a little cut, Petals linear-cuneate rounded at apex [coloured dark purple changing to green

19584 Radical Lvs glabrous pedate, cauline nearly sessile pinnate, Stem subangular bifidly branched, Sepals roundish

19585 Lvs pedate, floral ones sessile palmate, Segments lanceolate serrated separable to the base and entire, Peduncles

bitid or trifid, Sepals roundish-ovate acute petaloid white suffused with purple

19586 Radical Leaves palmate, Segments oblong-linear serrated entire at base, Stem 2-flowered, Floral Leaves nearly

sessile, Sepals ovate obtuse greenish white [toothed, Sepals 8-10, Stamens and Pistils numerous

19587 Creeping radican, Leaves broadly sheathing the stem at the base on long petioles ovate-sagittate sinuately

[Flowers subumbellate, Sepals 5 oblong-ovate, Stigmas elongated and a little hooked

19588 Stem erect leafy, Leaves large roundish toothed, Auricles large approximate, Floral Leaves deeply serrated,

exserted; the rudiments of the two upper ones small, club-shaped, or wanting. Anthers dimidiata. Style bifid.

Lobes subulate.

3076. 1263b. *Pogogyne*. Calyx campanulate, 13-nerved: Teeth lanceolate; the lower one longest. Corolla

bilabiate: Tube straight, exserted, naked inside: Upper lip entire; lower lip trifid. Stamens ascending, approximate

at top. Cells of Anthers distinct parallel, mutic. Style villous, bifid at apex.

3077 1268a. *Eremostachys*. Calyx tubular or funnel-shaped, with 5 spinose teeth; or the limb is large membra-

and Miscellaneous Particulars.

It would perhaps be safer to grow them in pots the first year, placing them under shelter in winter like ordinary

alpine plants; and in the month of May, in the second year of their growth, planting them out in the open border.

3074. *Eucryphia* is a very pretty tree lately introduced. It will grow in a compost of sand, peat, and loam; and

young cuttings will strike root if planted in sand and covered with a bell-glass.

19585. *Helicbotus orientalis* is said to be the true black Hellebore of the ancients.

neous and mucroniform, Corolla with an enclosed tube, and a bilabiate gaping limb: Upper lip elongated, galeate, pilose outside, bearded inside and on the margins; lower lip spreading, trifid. Two upper Filaments thickened into a blunt or fringed appendage at base. Anthers approximate by pairs. Style bifid. Achenia dry, hairy.

3078. 1268b. *Colquhoulia*. Calyx turbinate campanulate, 10-nerved, 5-toothed, with a naked throat. Corolla with a curved tube, naked inside, a dilated throat, and a bilabiate limb: Upper lip erect, entire; lower lip of three short entire lobes. Stamens ascending under the helmet. Style bifid. Achenia oblong, smooth, drawn out into a membrane at top.

3079. 1271a. *Bœcium*. Calyx bilabiate: Upper lip decurrent, dilated; lower lip truncate, ciliated. Corolla bilabiate: Upper lip 3-lobed, the middle segment cleft; lower lip oblong, concave. Stamens very long. Ovarium immersed in a 4-toothed disk. Stigma 2-lobed.

3080. 1273a. *Cedronella*. Calyx tubular or campanulate, 15-nerved, with a nearly equal or obliquely 5-toothed limb. Corolla with an exerted tube, naked inside, a dilated throat, and a bilabiate limb: Upper lip straight, flattish, emarginately bifid; lower one trifid, with a large middle lobe. Stamens ascending. Style bifid. Achenia dry, smooth.

3081. 1284a. *Hemiandra*. Calyx campanulate striated: Lips flat, closed over the fruit; upper lip entire; lower lip bifid. Corolla with a short wide tube, a campanulate throat, and a bilabiate limb: Upper lip bifid; the lower one 3-lobed, the middle lobe emarginate. Stamens glabrous. Anthers dimidiate: Fertile cell ascending; sterile cell descending. Style bifid at apex.

3082. 1284b. *Monardella*. Calyx ovate, tubular, 10—13-nerved, 5-toothed: Throat naked. Corolla subbilabiate: Upper lip bifid; lower trifid. Stamens nearly equal, diverging, exerted. Cells of Anthers parallel, at length divaricate. Style bifid at apex. Stigmas minute. Achenia dry.

Order II. ANGIOSPERMIA. Seeds several, enclosed in an undivided pericarpium.

3083. 1291a. *Chrysothemis*. Calyx campanulate, 5-toothed, with 5 projecting sides. Corolla almost regular, with 2 projecting folds on the lower lip. Stamens enclosed. Stigmas 2-lobed. Perigynous disk a notched fleshy gland.

3084. 1291b. *Collandra*. Calyx free, 5-parted. Corolla tubular, compressed, angular, rather ventricose, inflated at base, curved: Segments 5, equal, erectly incurved. Flowers sessile, aggregate, bracteate, turned downwards. Bracts and Sepals laucellate, acuminate, jagged.

3085. 1291c. *Alloplectus*. Calyx 5-cleft, coloured: Segments imbricate. Corolla tubular or club-shaped: Limb 5-lobed or 5-toothed. Stamens with small rudiment of a fifth at base of tube. Hypogynous ring swollen into a gland behind. Capsule baccate, ovate, coriaceous, 1-celled, 2-valved, many-seeded. Seeds oblong.

3086. 1291d. *Mucrochlamys*. Calyx regular, surrounded by petaloid bracts; the rest as in *Alloplectus*.

3087. 1291e. *Hypocyrta*. Calyx 5-parted. Corolla tubular, gibbous behind at base: Tube ventricose in front: Limb 5-lobed or 5-toothed, nearly equal. Stamens with the rudiment of a fifth behind. Anthers cohering by pairs. Ovarium with a hypogynous cup-shaped disk. Berry globose, coloured, juicy, 1-celled. Seeds many, fixed to two 2-lobed parietal placents.

3088. 1291f. *Episcia*. Calyx 5-parted or 5-cleft. Corolla funnel-shaped, gibbous behind at base, 5-lobed. Stamens with the rudiment of a fifth behind. Hypogynous disk swelling into a gland behind. Capsule nearly globose, membranous, 2-valved, with two bilamellate parietal placents. Seeds numerous oblong.

3089. 1291g. *Drymida*. Calyx obliquely 5-leaved, 2 interior. Corolla obliquely campanulate, subringent, gibbous at base: Upper lip 2-lobed; lower lip 3-lobed. Hypogynous disk bearing an ovate gland behind. Capsule baccate, ovate, coriaceous, 1-celled, 2-valved, with two parietal bilamellate placents. Seeds numerous fusiform.

3090. 1291h. *Nematanthus*. Calyx 5-parted, oblique. Corolla campanulately funnel-shaped, oblique, gibbous at base behind, with an open throat and equal 5-lobed limb. Hypogynous ring swollen into an oblong gland behind. Capsule pyramidal, coriaceous, 1-celled, 2-valved. Placentas 2, parietal, bilamellate. Seeds numerous, oblong.

3091. 1291i. *Campânia*. Calyx of 5 oval, acuminate, 3-nerved divisions. Corolla large, campanulate, hairy: Limb of 5 rounded lobes. Stamens enclosed, glabrous. Anthers heart-shaped, firmly joined together. Disk formed of 5 yellow, fleshy, obtuse glands, surrounding the hairy ovarium.

3092. 1291j. *Conrădia*. Calyx adnate to the ovarium, 5-cleft or 5-toothed. Corolla tubular or campanulate, 5-cleft. Stamens with the rudiment of a fifth behind. Anthers usually cohering. Glands on disk wanting. Capsule dry, covered by the 5—10-ribbed calyx, flat at top, 2-valved. Placentas 2, parietal. Seed scrobiform.

3093. 1291k. *Mitraria*. Calyx 5-parted, equal, calcylated by a 2-lobed mitre-shaped bract. Corolla tubularly ventricose: Upper lip 2-lobed; lower 3-lobed. Stamens exerted, with the rudiment of a fifth behind. Berry 1-celled, many-seeded.

3094. 1291l. *Arcticalyx*. Calyx tubularly campanulate, shaggy, smooth in its upper part. Corolla with a lacerated or fringed, 5-lobed, nearly equal limb, and a curved tube, broadest upwards.

3095. 1291m. *Cetrarouënia*. Calyx 5-parted: Segments serrated. Corolla tubular, spurred behind at base; the throat widened; and the limb short, 5-lobed, and spreading. Stamens enclosed, with a minute rudiment of a fifth abortive filament. Hypogynous ring obscure; the hind gland large. Ovarium hairy. Style dilated at apex, subcapitate. Fruit capsular.

3096. 1291n. *Heintzia*. Calyx large, 5-parted. Corolla funnel-shaped: Tube curved: Limb of 5 spreading hairy segments.

3097. 1291o. *Moussônia*. Calyx 5-parted. Corolla $\frac{1}{2}$ an inch long, curved, swollen about the middle of tube: Limb of 5 spreading, nearly equal, erosely crenated segments.

3098. 1292a. *Abelia*. Calyx oblong: Limb 2—5-parted: Segments oblong, foliaceous. Corolla tubular, funnel-shaped, 5-lobed, nearly equal. Stigma capitate. Ovarium 3-celled; 2 of the cells contain many ovula, but they all become abortive; but the third cell contains only 1 ovulum, which comes to perfection. Fruit 1-seeded, indehiscent, crowned by the foliaceous limb of the calyx.

3099. 1292b. *Spathodia*. Calyx spathaceous, cleft on one side, and toothed or entire on the other. Corolla funnel-shaped, with a 5-lobed, rather unequal, subbilabiate limb. Stamens with the addition of a fifth or sterile filament. Cells of Anthers divaricate. Stigma bilamellate. Capsule siliqua-formed, falcate, falsely 4-celled. Seeds transverse, with membranous wings.

3100. 1292c. *Adenocalymma*. Calyx campanulate, 3-toothed, rarely truncate, and rarely spathaceously cleft; bearing 10 large, flatfish, brown glands near the top. Corolla tubular, with a nearly equal 4-lobed limb. Stamens 4 fertile, and 1 sterile. Lobes of Anthers divaricate, glabrous. Stigma bilamellate.

3101. 1292d. *Colea*. Calyx campanulate, 5-toothed. Corolla funnel-shaped, with a long tube a little widened at top; and a 5-parted spreading limb, having the lobes equal. Style filiform. Stigma bilamellate. Fruit fleshy, oblong, 2-celled, tipped by the style.

3102. 1292e. *Phyllarthron*. Calyx campanulate, 5-toothed. Corolla funnel-shaped, 5-lobed: Lobes roundish. Stamens enclosed. Cells of Anthers spreading. Ovarium inserted in a fleshy disk. Fruit siliqua-formed, indehiscent. Seeds not winged.

3103. 1292f. *Tetranëma*. Calyx 5-parted. Corolla bilabiate: Upper lip flat, emarginate; lower lip longer, trifid. Stamens declinate, shorter than the corolla. Cells of Anthers divaricate. Stigma subcapitate. Capsule 2-valved: Valves entire, septiferous in the middle. Seeds numerous, angular.

3104. 1301a. *Ditraria*. Calyx 4-parted. Upper and lower segments a little larger, entire, callous at base. Corolla unilabiate: Lip 3-lobed: Palate convex, thickened, the upper edges entire. Anthers 1-celled, with bearded ciliated margins. Filaments straight. Capsule 2-celled, compressed, 4-seeded from base to middle. Seeds cordate-ovate, compressed, tubercled. Retinacula thick, obtuse.

3105. 1302a. *Asteracantha*. Calyx 4-parted to base: lower segment bidentate. Corolla deeply bilabiate: Upper lip bifid; lower trifid, bicallous at the origin of the segments. Stamens connate by pairs at base. Anthers 2-celled, glabrous. Stigma simple, acuminate. Capsule 2-celled, compressed, 8-seeded. Seeds ovate, compressed, truncate at base, smooth, propped by small retinacula.

3106. 1304d. *Stemonacanthus*. Calyx 5-parted, equal. Corolla funnel-shaped. Limb spreading, reflexed.

Stamens prominent. Cells of Anthers with a broad connective and membranous edge. Stigma bilabiate. Capsule contractile and seedless at base, and inflated and ovate or oblong at top, and 4—8-seeded. Seeds flat, hanging by tridentate retinacula.

3107. 1304*e*. *Sericographis*. Calyx 5-parted, equal. Bracts and bracteoles usually subulate. Corolla ringent: Tube short, furnished inside with 3 silky shining bodies, or delicate stamens: Upper lip bilobed, arched; lower lip convex, trifid. Stamens 2, adnate to the tube. Stigma bifid. Capsule depressed at base and seedless, compressed at apex and 4-seeded. Seeds mucronate, propped by retinacula, which are bifid at apex.

3108. 1304*f*. *Salpizanthia*. Calyx small, 5-toothed, bibracteate. Corolla funnel-shaped: Limb regular, spreading, 5-lobed: Lobes retuse. Stamens equal, inserted in the narrow part of the tube. Ovarium 2-celled, seated on a fleshy disk. Cells biovulate. Style slender. Stigma obtuse.

3109. 1304*g*. *Strobilorrhachis*. Calyx short, 5-parted: Segments membranous, equal. Corolla bilabiate, with a long, narrow, recurved tube, and a broad campanulate limb: Segments large: Upper lip 2-lobed; lower lip trifid with ovate, roundish segments. Anthers 1-celled, acute at base. Keel villous on back. Stigma funnel-shaped, 2-lobed. Capsule 4-seeded.

3110. 1304*h*. *Whitfieldia*. Calyx large, bibracteate, 4—6-cleft. Bracts usually coloured, opposite, obovate, 3-nerved. Corolla campanulate, funnel-shaped: Tube with 5 elevated strias: Limb bilabiate, spreading. Fifth or sterile stamen rudimentary. Ovarium compressed. Hypogynous disk large, fleshy, cup-shaped. Style filiform. Stigma small, capitate.

3111. 1304*i*. *Petalidium*. Calyx equal, 5-parted, enclosed by 2 valvate bracts. Corolla funnel-shaped: Limb nearly equal. Stamens enclosed. Anthers oblong, sagittate. Cells parallel, awned at base. Stigma bifid. Capsule 4-seeded in the middle. Seeds compressed, emarginate, suspended by subulate retinacula.

3112. 1304*k*. *Dipteracanthus*. Calyx equal, 5-cleft. Corolla funnel-shaped, with a nearly equal 5-cleft limb. Stamens enclosed. Anthers linear-sagittate: Cells parallel, equal, mutic. Stigma bilamellate, nodulose at base. Capsule compressed at base, seedless, large and 2—8—12—16-seeded at top. Seeds orbicular, compressed, girded by a tumid margin. Retinacula uncinata, præmorse.

3113. 1304*l*. *Asytasia*. Calyx 5-parted. Corolla rather funnel-shaped, 5-cleft, nearly equal; the hind segment rather concave. Cells of Anthers parallel, villous, or appendiculate at base. Capsule stipitate, tetragonal, 2-celled, 4-seeded. Seeds discoid.

3114. 1304*m*. *Hydromestis*. Calyx bibracteate, 5-parted: upper segments equal, acute; the fifth or hind one obtuse. Corolla funnel-shaped, bilabiate: Upper lip bifid, with revolute lobes; lower lip trifid with equal lobes. Stamens equal, bearded. Anthers 1-celled, bearded at base and apex. Stigma bilabiate. Capsule sessile, tetragonal, 2-celled; Cells 2-seeded. Seeds discoid, furnished with hooked retinacula.

3115. 138*a*. *Hexacentris*. Calyx small, saucer-shaped, 5-toothed or repand. Bracts 2, covering the calyx, Corolla campanulately funnel-shaped: Tube short: Limb nearly equal, obliquely 5 cleft. Stamens inserted in the throat into a bearded ring. Anthers 2-celled: Cells parallel, one of the upper stamens furnished with a long spur at base, and the other a short mucrone. Lower stamens with long flexuous spurs. Stigma bifurcate. Capsule 2-celled, 4-seeded, rostrate: Seeds crested.

3116. 1308*b*. *Meyenia*. Calyx small, 5-lobed, enclosed in 2 large bracts. Corolla funnel-shaped: Throat gradually widened: Tube short, closed by a pilose ring: Limb nearly equal. Anthers bearded at top, 2-celled: Cells of upper ones unequal, tomentose; of the lower ones parallel and nearly equal, mutic. Stigma membranaceously dilated, 2-lipped: Lips 2-lobed. Capsule 2-celled at base, conico-attenuated, 4-seeded. Seeds propped by a cup-shaped spongy strophiola.

3117. 1314*a*. *Mastacanthus*. Calyx 5-cleft: Segments equal, conniving in the fruit-bearing state. Corolla ringent, 5-cleft: Segments of the upper lip 4, ovate, erect, nearly equal; lower lip of one large, spreading, incurved segment ending in a fringe. Anthers roundish. Ovarium subglobose, 4-furrowed. Style bifid. Stigmas simple.

3118. 1314*b*. *Sclerodon*. Calyx campanulate, 4-toothed. Corolla funnel-shaped, 4-cleft. Ovarium 4-celled: Cells 1-ovulate. Style short. Stigmas distinct, obtuse. Drupe induriscant, covered by the unchanged calyx. Putamen bony. Cells 4; of these 2 are abortive, 1-seeded. Seeds oblong, fixed at the side.

3119. 1322*a*. *Cassibia*. Calyx tubular, 5-cleft or 5-toothed. Corolla tubular, deciduous, with an irregular 5-lobed limb. Stamens enclosed. Ovarium 2 celled, few-ovulate. Stigma capitate, undivided. Fruit a berry.

3120. 1313*a*. *Pterociscus*. Calyx 5-parted. Corolla funnel-shaped, 5-lobed: Lobes nearly equal. Stamens woolly, with the rudiment of a fifth. Style filiform. Stigma bilabiate: Lower lip recurved. Fruit coriaceous, capsular, indehiscent, a little compressed, having the margins broadly 2-winged, and subtubercular in the disk, 2-celled. Seed solitary, pendulous, pro-nod above.

3121. 1362*a*. *Achimenes*. Calyx adnate: Limb 5-parted: Lobes lanceolate. Corolla tubularly funnel-shaped, usually gibbous at base, with a flat 5-lobed limb: Lobes nearly equal, roundish. Rudiment of fifth stamen present. Nectary glandular, annular. Style ending in a scarcely thickened stigma. Capsule semibilocular, 2-valved. Placentas parallel, sessile.

3122. 1362*b*. *Niphaea*. Calyx 5-parted. Corolla rotate, 5-cleft: 2 upper segments smallest and more combined. Stamens enclosed, nearly equal, with a fifth sterile stamen. Perigynous glands wanting. Ovarium 1-celled, many-seeded. Stigma simple.

3123. 1362*c*. *Drastema*. Calyx 5-parted. Corolla with a declinate tube and a 5-cleft limb. Stamens enclosed, with the rudiment of a fifth. Perigynous glands 5. Style bilamellate: Lobes membranous, stigma rose inside. Valves of Capsule placentiferous. Seeds numerous.

3124. 1362*d*. *Chirita*. Calyx 5-cleft, valvate in æstivation. Corolla tubular, bilabiate. Stamens 2, antheriferous. Cells of anthers diverging. Upper lip of Stigma abortive or very small; lower one bilamellate. Capsule elongated, with striated valves. Seed appendiculate, pendulous.

3125. 1362*e*. *Didymocarpus*. Calyx 5-cleft. Corolla funnel-shaped, with a ventricose throat and a 5-lobed limb: Upper lip the shortest. Stamens 4, enclosed, 2 of which bear anthers; sterile ones very short. Anthers adnate, with transverse cells. Stigma lateral, flattish, obtuse. Capsule siliqua-formed, 2-valved, falsely 4-celled. Seeds naked, pendulous. Lobes of Dissepiment revolute.

3126. 1362*f*. *Külgia*. Calyx tubular, unequal at base, gibbous above, 5-angled, 5-winged, 5-cleft. Corolla with a cylindrical tube, a closed throat, and a bilabiate limb: Upper lip short, 2-lobed; lower lip drawn out, undivided, or a little 3-lobed. Stamens enclosed. Anthers reniform, 2-celled, cohering. Ovarium 1-celled, girded by a complete annular disk, with 2 parietal many-seeded placentas. Seeds elliptic oblong, sulcate, wrinkled transversely.

3127. 1362*g*. *Eschymanthus*. Calyx ventricosely tubular, 5-cleft. Corolla tubular, incurved, with a dilated campanulate throat and an oblique subbilabiate limb. Stamens exerted, usually with the rudiment of a fifth. Anthers at first conniving by pairs, with parallel cells. Stigma somewhat funnel-shaped. Capsule long, siliqua-formed, 2-valved, falsely 4-celled. Seeds small, usually papillose, ending in a bristle at each end.

3128. 1362*h*. *Agalmylis*. Calyx 5-parted, equal. Corolla tubular, incurved, with a dilated throat and a 5-lobed subbilabiate limb. Stamens 5, exerted, of which 2—4 are fertile. Anthers linear, connected, with parallel cells. Stigma bilamellate. Capsule long, siliqua-formed, 2-valved, falsely 4-celled. Seeds minute, ending in a hair at each end.

3129. 1370*a*. *Chenostoma*. Calyx 5-parted. Corolla deciduous funnel-shaped or salver-shaped, 5-parted: Limb spreading. Stamens 7. Anthers uniform, equal to the throat or exerted. Capsule glabrous, septically 2-valved: Valves rather bifid.

3130. 1371*a*. *Paulonia*. Calyx campanulate, 5-cleft. Corolla tubularly campanulate, with a 5-cleft, subbilabiate limb. Stigma subtruncate. Capsule woody, 2-celled, 2-valved: Valves septical. Seeds numerous, each surrounded by a wing.

3131. 1372*a*. *Indanbergia*. Calyx campanulate, 5-cleft: Segments foliaceous. Corolla ringent: Upper lip emarginate; lower one 3-lobed. Stamens enclosed. Anthers approximate by pairs: Cells separate, stipitate. Stigma entire, dilated. Capsule oblong, bisulcate, 2-valved. Dissepiment duplicate. Seeds small, striated.

History, Use, Propagation, Culture,

3075. *Audibertia*. The species of this genus have the habit of sage, with rather a disagreeable odour. Their culture is easy, and they are readily propagated by cuttings.
 3076. *Pogogyne multiflora*. The seed of this plant may be sown in a pot, and the plants afterwards planted out in the open ground.
 3077. *Eremostachys laciniata* is an inhabitant of the Eastern part of the Caucasus on dry hills. It is difficult to

GYMNOSPERMIA.

- 19589 Suffruticose, Lvs oblong obtuse entire or 3-lobed downy, Limb of Corolla 5-lobed secund, Flowers solitary axillary yellow variegated with red
- 19590 Lvs linear 3 in a whorl with revolute edges cinereous beneath, Calyx downy silky having the teeth longer than tube
- 19591 Lvs 3 in a whorl linear with revolute edges green on both surfaces, Teeth of Calyx length of tube
- 19592 Lvs 3 in a whorl linear-lanceolate divaricate mucronate pungent with revolute edges cinereous on both surfaces as is the calyx, Teeth of Calyx very short
- 19593 Erect glabrous, Lvs ovate-roundish subcordate at base crenated green, Racemes loose few-flowered, Corolla with a very slender much exerted tube
- 19594 Downy, Lvs 4 in a whorl elliptic-linear entire or serrated, Floral leaves linear shorter than whorls, Spikes elongated
- 19595 Downy at top, Stem creeping, Branches erect, Leaves 6-8 in a whorl narrow linear entire, Floral leaves subulate, Flowers spicate, Calyx villous
- 19596 Lvs orbicular, cauline ones petiolate, floral ones stem-clasping, all deeply crenate, Teeth of Calyx subulate longer than tube, Galea oblong entire [Calyx hispid with spinescent teeth, Lower lip of Corolla large
- 19597 Procumbent pilose, Lvs ovate obtuse crenated rounded or subcordate at base, Whorls 2-4-flowered remote
β Flowers white
- 19598 Plant snow-white, Lvs oblong blunt crenated, Racemes one-sided, Stamens exerted
- 19599 Suffruticose branched canescent, Lvs obovate obtuse entire, floral ones broad ovate, Racemes simple, Stamens exerted
- 19600 Floral leaves and bracts shorter than corollas, Stamens exerted
- 19601 Clothed with floccose wool, Radical leaves cordate oblong obtuse crenated, cauline leaves lanceolate, Whorls [6-flowered, Bracts subulate
- 19602 Stm simp. or bruchd a little hisp., Lvs downy, lower ones hastately cord., up. flor. lvs shorter than cal., Bracts subul. downy cil. like cal., Whorls about 10-fwd [Brcts lin. cil., Cal. cil., Galea of Cor. pil.
- 19603 Stem nrly simp. oboversely pil. Low. lvs broad ov. obt. cren. cord. at base wrinkled green vil., floral lvs obl.,
- 19604 Erect tomentose, Lvs ovate-lanceolate obtuse crenated downy above tomentose beneath, Bracts subulate ciliated, Calyx floccose with stiff subulate teeth
- 19605 Lvs pinnate, Segments oblong-lanceolate or linear deeply pinnatifid, Calyx large tubularly campanulate scarcely dilated at apex
- 19606 Scandent, Leaves glabrous, the younger ones and calyxes canescent, Teeth of Calyx ovate obtuse, Flowers [red in whorls [lary solitary 1-flowered, Corolla 2 inches long
- 19607 Hairy woody at base, beset with viscid glands, Leaves petiolate ovate acute coarsely serrated, Peduncles axil-
- 19608 Root partly creeping, Stems loose, Branches elongated, Leaves ovate, upper ones acute serrate, Cymes many-flowered stalked
- 19609 Suffruticose diffuse nearly glabrous, Leaves roundish or ovate petiolate entire, Whorls 4-6-flowered, Flowers almost sessile, Corolla twice as long as calyx
- 19610 Leaves broad-ovate acute serrated, Branches downy tetragonal, Vertices approximate racemose, Filaments a little exerted entire naked, Corolla scarcely longer than calyx
- 19611 Downy, Leaves ovate-lanceolate serrated, Whorls of Flowers spicate, Bracts cordate, Corolla white veined with lilac

and Miscellaneous Particulars.

cultivate on account of the large fleshy roots suffering in winter from excess of moisture. It therefore should be planted in a dry situation. It is only to be propagated by seed.

3078. *Coluhouña coccinea* has succeeded in the open air against the south wall for two or three winters. It is a plant of easy culture and readily increased by cuttings.

3079. *Bécium* should be cultivated and treated like the greenhouse species of *Técium*.

History, Use, Propagation, Culture,

3080. *Cedronella cana*. The leaves of this plant, and of *C. mexicana* and *C. pallida*, abound in fragrant oil-dots. They are handsome border plants, and will grow in any common garden soil; and are increased by division or by cuttings taken from the lower part of the stems.

3081. *Hemiandra* is composed of shrubs nearly related to *Westringia*; and the culture and propagation are the same. Turfy peat and leaf-mould with loam is said to be the best for them.

19628. *Scutellaria japonica* is a small evergreen trailing shrubby plant, well fitted for decorating rockwork. It is a pretty little plant with blue spotted flowers

- 19612 Stononiferous downy, Leaves cordate-ovate crenated, Whorls few-flowered secund approximating into spikes or racemes
- 19613 Erect, Leaves ovate-cordate acuminate coarsely crenated almost glabrous purplish beneath, Cymes pedunculate in terminal racemes, Flowers crowded
- 19614 Erect, Leaves all cordate-ovate obtuse crenated downy beneath, Whorls naked spicate, Calyx tubular
- 19615 Erect, Lvs cord., lower ones hast.-ov. ent. or toothed hoary, Spikes long many-flwd, Whorls approx., Cal. tub.
- 19616 Shrubby, Leaves ternate, Leaflets oblong-lanceolate, Whorls collected into terete oblong spikes
- 19617 Downy, Leaves ovate acuminate on long petioles, floral ones deciduous, Racemes paniced, Whorls cymose, Fruit-bearing Calyx nutant
- 19618 Glabr. or nearly so, Lvs ovate-oblong narrowed at base glandular on both sides toothed or cut, Racs few-flwd
- 19619 Branchlets downy, Leaves linear glabrous glandular beneath denticulated above, Calyx pilose ciliated
- 19620 Glabrous, Leaves linear entire, Racemes terminal, Calyx ciliated
- 19621 Leaves roundish crenated downy, Racemes dense few-flowered, Calyx downy with entire lips
- 19622 Leaves orbicular crenated glabrous glandular on both surfaces, Flowers axillary, Lower lip of Calyx retuse
- 19623 Leaves rhomb-orbicular entire glandular beneath shining above, Branches and Calyxes downy, Flowers axillary
[lip of Calyx acuminate prickly, lower one shorter inflexed often recurved]
- 19624 Glabrous or with a few spreading hairs, Leaves linear spreading, Peduncles much shorter than calyx, Upper
- 19625 Erect downy, Leaves linear-oblong complicate pungent 3-nerved, Calyxes nearly sessile villous with pungent segments, Upper lip of Corolla rounded emarginate
- 19626 Procumbent at base ascending at top, Leaves oblong-linear obtuse undulated glabrous, Outer Bracts broad-ovate, Calyx villous tubular
- 19627 Ascending smoothish, Lvs sessile lanceolate obtuse entire ciliated, Floral Leaves longer than calyx, Racemes simple, Flowers oppo-site secund, Calyx pilose, Corolla downy outside [rolla elongated]
- 19628 Small evergreen trailing, Stems quadrangul., Lvs petiol. somewhat spoon-shaped serrated obt., Racs term., Co-
- 19629 Erect, Lvs ov. coarsely serr. acum. downy ben., Racs term., Cor. elong. dilated above, upper lip hardly cleft
- 19630 Erect downy glandular, Leaves cordate-ovate bluntish coarsely serrated on long petioles, Racemes terminal subsecund, Corolla elongated, upper lip bifid
- 19631 Erect hairy glandular, Leaves roundish-cordate wrinkled acute on long petioles coarsely toothed, Flowers subverticillate glandularly hairy, Corolla elongated
- 19632 This differs but little from *P. vulgaris*, and is only, probably, a variety of

ANGIOSPERMIA.

- 19633 Leaves whorled cordate-oblong toothed downy, Panicle subverticillate, Pedicels long umbellate hairy, Corolla [with a long tube, upper lip straight 2-lobed
- 19634 Leaves opposite on long petioles cordate-ovate concave tomentose rugose, Racemes simple, Pedicels elongated, Tube of Corolla long inflated beneath, limb 5-lobed, Hypogynous glands 2
- 19635 Leaves large opposite petiolate cordate-ovate crenat-d downy, Panicle branched glabrous, Pedicels elongated, slender aggregate, Flowers pendulous, Corolla glabrous clavately cylindrical, Hypogynous glands 2
- 19636 Stem a horizontal rhizoma, Lvs broad-ov. toothed cord. at base downy, Peduncs from base of rhizoma [lobes long wavy, limb nearly equal, Root a round tuber 1 to 1½ inch in diameter
- 19637 Tubers scaly, Leaves opposite bluntly serrated, Peduncles elongated drooping, Corolla large tubular erect, lower
- 19638 Tubers scaly, Lvs opp. cordate serrated petiolate, Racemes ample terminal, Flowers on long peduncs drooping, Cor. scarlet above yellow below [Cor. villous cylind. gland., limb 5-lobed, Hypog. glands 4-5
- 19639 Hairy, Lvs opposite or 3 in a whorl pet. ovate or obov. acute serr., Racs term., Peduncs 1-fwd fascicled whorled,
- 19640 Downy, Leaves opposite petiolate lanceolate serrated, Racemes terminal, Pedicels whorled fascicled, Corolla villous cylindrical ventricose, limb of 5 linear lobes
- 19641 Villous, Leaves 3 in a whorl oblong narrowed at base canescent, Peduncles short axillary 3-flowered, Pedicels elongated, Lobes of Calyx subulate, Corolla cylindrical contracted at base, lobes rounded equal
- 19642 Downy, Leaves 3 in a whorl, lower ones opposite elliptic-ovate obtuse crenated sessile, Panicle loose, Corolla elongated curved hairy, upper lip long bifid, Hypogynous glands 5 combined
- ♂ Leaves opposite lanceolate-ovate unequal at base on long petioles serrated downy, Peduncles 4-flowered umbellate, Corolla villous tubular rather constricted at throat

and Miscellaneous Particulars.

1290. *Gesneria*. M. Decaisne has proposed to divide this genus into several, applying the name *Corytholoma* to *G. striata*, *scepterum*, *ignea*, *Natchii*, &c.; *Isoldina* to *G. vestita*, *spicata*, *millis*, *longifolia*, *breviflora*, &c.; *Dircæa* to *G. bulbosa*, *faucialis*, *lateralis*, &c.; *Hottelia* to *G. pardina* and *Gardneri*; *Tydaea* to *G. picta*; *Rechtsteuera* to *G. allophylla*, &c.; and the true *Gesneria*, he limits to *G. tuberosa*, *cochlearis*, *macrostachya*, *discolor*, *polyantha*, *purpurea*, and the like. Perhaps these alterations may be the means of restoring order among the confused mass of plants referred to the genus *Gesneria*.

3082. *Monardella* will grow well in the open peat border, and is increased by division.

History, Use, Propagation, Culture,

19648. *Gesnera breviflora*, if treated like *Achimenes*, may be had in flower nearly all the year.

3083. *Chrysothemis* is a genus separated from *Besleria* by Decaisne. It consists of two known species, both of which have an orange-yellow corolla streaked with carmine, enclosed in a calyx of 5 wing-like sinuses. The culture of the species is the same as that for *Besleria* or *Gloxinia*. They grow best in loose peat soil or decayed vegetable mould. *C. aurantiaca* is a showy fleshy plant, having a cinnabar-coloured calyx and purplish pedicels. The corolla is yellow, with lines and dots of carmine on the face; velvety outside, and smooth inside.

- 19643 Downy, suffruticose, Leaves 3—4 in a whorl on short petioles oblong-lanc. wrinkled crenated tomentose ben., Peduncs axil. aggregate 1—3-fwd, Cor. villous camp. fun.-shaped, ventric. below, limb short, Hypog. glands 5
- 19644 Brnchs tetragonal, Lvs opposite ovate serrated wrinkled on short petis hairy, Peduncs solitary twin or tern, 1-fwd, Corolla hairy tubular ventricose, limb equal spreading, Hypogynous glands 5
- 19645 Downy, Lvs opp. ellip. wrinkled ser. lower ones petiol. upper ones ses., Peduncs terminal racemose and axillary solitary, Tube of Cor. with 5 gibbosities at base, Limb obliquely bilabiate, Hypogynous glands 4
- β Corollas yellow [ben., Peduncs axil. 3-fd, Cal. woolly, Tube of Cor. ventric. hairy, limb contracted
- 19646 Stem erect nearly simple bluntly tetrag. cithd with rusty tom., Lvs opp. large ov. acum. ser. wrinkled woolly
- 19647 Humble simple shrubby, Lvs rosulate approx. obov.-lanc. glab. wrinkled scab. obtuse coarsely ser., Petios hairy, Peduncs axil. 1-fwd hairy, Cal. turbinate pilose 5-lobed, lobes foliaceous, Corolla pilose, Epigynous glands 5
- 19648 Villous, Leaves opposite oval petiolate crenated convex, Peduncles 1-flowered axillary 4 together shorter than petioles, Corolla villous, limb 5-cleft equal [late, Corolla hairy, limb 5-lobed reflexed spotted
- 19649 Leaves opposite ovate serrated downy as are the branches, Pedicels elongated umbellate, Lobes of Calyx sub-
- 19650 Dwny, Lvs on short petios ellip. thickish ser. glab. above tom. ben., Peduncs axil. solit. 1-fd, Cor. with curved tube and spreading spotted limb, Stamens exerted, Calyx segments large spreading [Cor. drooping
- 19651 Stem terete downy, Lvs opp. on long petis mdsh-cord., Rac. term. erect, Bracts subn. involute, Pedic. long erect.
- 19652 Hairy erect, Lvs opp. or tern ov. acum. serr. lower on long petis, Rac. ellip. leafy, Pedicels whorled, Cor. cylind. contracted at the mouth, Hypog. glands 5 [top, limb 5-lobed, 1hypog. glands 5, 2 upper ones joined
- 19653 Downy, Lvs 3 in a whorl peti. ov. creu., Whorls of Fls num., Pedicels longer than cor., Cor. droop. cylind. gib. at
- 19654 Glab., Lvs opp. on short petis ellip. fleshy ser., Peduncs solit. 1-fd axil., Cal. segs acum., Cor. downy tubular, Perigynous ring 5-lobed [lanc. acum. 5-nerved, Cor. downy outside green spotted with purple
- 19655 Suffrut. erect-brnchd vil., Lvs obliquely-obl. ser. acum., Corymbs axil. on long peduncs 2—3-fd, Cal. segs ov.
- 19656 Epiph. subshr., Lvs obliq.-oblong, Fl greenish hairy spotted with purp. 1½ inch long, with curved swollen tube
- 19657 Suffruticose climbing hairy, Leaves obliquely elliptical unequal in size petiolate coarsely serrated, Corymbs axillary on long peduncles 4—5-fwd, Cal. segments ovate acute 3-nerved, Cor. large greenish spotted with purple
- 19658 Root a tuber, Stem branchy, Lvs oblong-ovate crenate, Flowers numerous axillary solitary covered with glandular down, pale outside and spotted inside [near reflexed, Lobes of Corolla concave
- 19659 Stem erect simple spotless, Lvs broad subobliquely ovate obscurely serrated, rather pilose above, Cal. segs li-
- 19660 Root tuberous, Stems short vil. as are the lvs petios and peduncs, Lvs ov. wrinkld crenated acutish glauc., Flws large nutant deep rich violet [tracted purplish crimson, segments of limb regular roundish
- 19661 Root tuberous, Lvs broad-ov. obt. rigid slightly hairy, Flws axil. chiefly at tops of stems, Cor. long and con-
- 19662 Caulicent downy, Lvs oblong subcrenate, Panicle terminal, Pedic. elongated, Cor. salver-shaped, tube elongated, limb spreading, lobes unequal, Hypogynous glands 4
- 19663 Stem erect simple subtetragonal, Leaves ovate acute serrated glabrous, Peduncles axillary solitary 1-flowered, Segments of Calyx foliaceous, Corolla funnel-shaped, Lobes nearly equal with wavy finely fringed edges
- 19664 Erect velvety at top, Lvs ovate acum. coarsely crenated, Cymes axillary about 3-fwd, Sepals about equal to tube of corolla lanceolate acuminate subserrated, Lobes of Corolla quite entire, Fruit capsular
- 19665 Leaves ovate-elliptic acuminate crenulate bullate hairy, Peduncles axillary 3-flowered, Pedicels purplish, Calyx with unequally toothed segments
- 19666 Clothed with yellow silky hairs or down, Leaves opposite nearly sessile unequal-sized, one obovate oblong denticulate, the other much smaller ovate, Flowers sessile aggregate, Bracts jagged, Corolla tubular
- 19667 Shrubby scandent, Leaves obovate obtuse acuminate toothed with a few adpressed hairs spotted with purple beneath, Peduncles axillary sessile, Sepals serrately jagged woolly, Corolla villous gibbous subbilabiate [denticulated glabrous, Corolla clavate hairy yellow
- 19668 Erect, Leaves ovate-oblong entire, Flowers axillary nearly sessile aggregate, Sepals triangular bluish-coloured [tricose above the mouth oblique
- 19669 Erect, Leaves oblong-elliptic entire glabrous, Flowers axillary nearly sessile, Corolla hairy, clavate, tube ven-
- 19670 Robust, Stem bluntly tetrag. red, Lvs large ov. ser. downy reddish beneath, Peduncs axil., Flws capit., Seps red foliac. cucul. toothed, Cor. silky, ventric. above the middle [tube and 4 lobed limb, upper lobe bifid
- 19671 Downy, Lvs ov. rather fleshy ser. on short petios, Peduncs axil. solit., Seps ov. acute spotted, Cor. with curved
- 19672 Erect glabrous, Leaves elliptic obtuse shining, Peduncles axillary aggregate 2—3 together 1-flowered bibracteate, Calyx lobes serrated, Corolla ventricose in front, with a contracted 5-toothed limb
- 19673 Leaves oval on long petioles smoothish entire, Flowers solitary, Segments of purple Calyx imbricate discoloured, Corolla villous, limb small erect, Gland large without a ring
- 19674 Erect rather woody, Branches tetragonal, Leaves ovate oblong acuminate denticulated pilose above downy beneath, Pedicels axillary 1-flowered, Lobes of Calyx ovate acuminate, denticulated, Corolla pilose

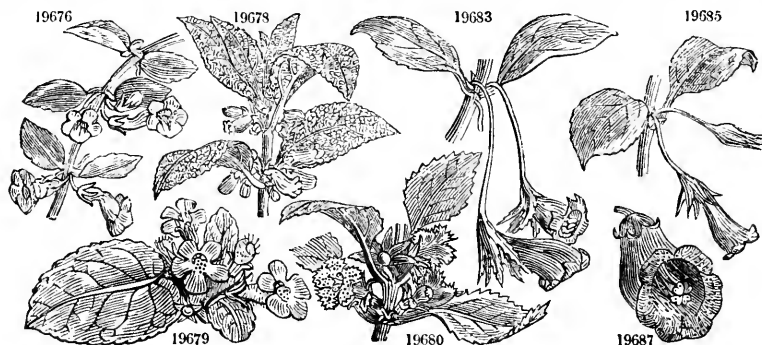

and Miscellaneous Particulars.

3084. *Collandra* is a genus separated from *Gesnera* by Lemaire, and consists at present of several known species, which are all readily distinguished by the inequality of each pair of leaves, one of which is always much smaller than the other, like those of *Gulfassia anisophylla*. Most of the species have also, at the points of the leaves, a large blood-coloured spot, for which reason they are called *Yerba de la Doncella*. Their culture is the same as that recommended for *Gesnera*.

3085. *Attoplectus*. The species grow best on loose peat soil or decayed vegetable mould.

History, Use, Propagation, Culture,

3086. *Macrochlamys* includes the species of *Alloplectus* with coriaceous glabrous leaves, and the calyx surrounded by petaloid bracts, hence the name. Their culture is the same as that for *Alloplectus*.

3087. *Hypocyrtia gracilis* has the leaves spotted with red beneath, and its culture is the same as that for epiphytal *Orchidæ*. It may be allowed to grow over an elevated substance, covered with sods, kept moist or in baskets.

3088. *Episcia*. The culture and treatment recommended for *Drymonia* will answer for this plant.

3'89. *Drymonia punctata* has the limb of its corolla dotted with purple. The plant does well cultivated in a wire basket, filled with pieces of wood and turf, suspended from a beam in a moist stove. The other species may be treated in the same manner.

3090. *Nematanthus ionema* has red drooping flowers. It may be either grown in a pot of turfy peat soil, or in a basket suspended from the rafters, as many epiphytal tropical *Orchidæ* are.

3091. *Campania grandiflora*. A beautiful herbaceous plant, requiring to be grown in a temperate stove. The stem is scandent, woody at the base. The leaves are opposite, oval, stalked, hairy, unequal at base, taper-pointed, and crenate-toothed. The flowers are axillary, on long peduncles at sides of shoots, terminal few on long peduncles, large, showy, nodding, irregularly campanulate; the tube curved and ventricose beneath; the border or limb oblique, with 5 broad, nearly equal, emarginate, spreading lobes, white, downy outside, elegantly marked with close dotted lines of rosy purple.

- 19675 Scandent fleshy, Leaves petiolate ovate-oblong acuminate nearly entire, Peduncles axillary few-flowered, bearing ample roundish obovate subciliated coloured bracts, Corolla downy outside [tubular, lobes spreading
- 19676 Ascending radicans, Leaves ovate acute denticulated, Peduncles axillary solitary or twin, Corolla campanulate
- 19677 Stem erect villous above, Lvs obl.-acum. mucron. strigillose, Flws axil. solitary, Cor. much swollen in front, limb contracted 5-toothed [gate, Cor. tubular villous contracted at the mouth
- 19678 Erect downy, Stem bluntly tetragonal, Lvs opposite oblong-lanceolate wrinkled serrated, Pedicels axil. aggregated [slender, Seps lin.-lanc. recur., Cor. purp. with oblique white mouth a nearly equal 5-lobed limb and rounded lobes
- 19679 Dwarf hairy decumbent, Lvs cordate-ovate acute serrated with impressed veins, Peduncles axil. short simple bifid
- [late serrated, Limb of Corolla dotted with purple spreading fringed
- 19680 Leaves oval on long petioles serrated downy, Flowers axillary nearly sessile, Sepals unequal lanceolate spatulate
- 19681 Radicans downy, Leaves oval-lanceolate acute at both ends denticulated of a different colour beneath, Flowers axillary solitary, Sepals cordate foliaceous serrated, Corolla glabrous, Segments serrated
- 19682 Radicans downy, Leaves broad coarsely toothed green, Flowers solitary axillary, Calyx foliaceous, Corolla lacinated pale-green
- 19683 Pedicels longer than the leaves, Calyx quinquefid divided beyond the middle
- 19684 Leaves ovate-lanceolate, Calyx violet hairy, Peduncles very long 6—12 inches hairy
- 19685 Peduncles hardly exceeding the leaves, Segments of Calyx about 3 times shorter than corolla
- 19686 Climbing or trailing, Leaves ovate-oblong acuminate fleshy, Flowers axillary mostly solitary, Pedicels long slender hairy, Segments of Calyx lanceolate hairy, Corolla large downy outside spotted inside
- 19687 Hairy, Leaves opposite oval acuminate oblique soft crenate stalked, Flowers in tufts at ends of long axillary and terminal peduncles, Corolla white lined and dotted with crimson
- 19688 Leaves oblong, Flowers axillary numerous
- 19689 Leaves large obovate-oblong, Flowers axillary almost hidden among the leaves

- 19690 Climbing radicans, Leaves small ovate acute serrated, Peduncles long slender axillary solitary 1-flowered [veins beneath, Flws springing from all parts of the stem sessile, Cor. yellow, with lines and dots of crimson
- 19691 Stem shaggy blackish brown, Leaves fleshy oval unequal at base doubly serrated shaggy with long hairs on the [crenate, Filaments pilose at top
- 19692 Leaves nearly equal oval or obovate velvety painted serrated on long petioles, Corolla hairy, lobes obscurely
- 19693 Leaves opposite of unequal size, the large one oblique oboval-oblong serrated pilose on the ribs beneath, small leaf lanceolate, Corolla downy, lower lobes fringed
- 19694 Tall, Stem succulent, Lvs nearly equal large ovate acuminate coarsely and unequally serrated perfoliate at base, Peduncles short axillary many-flwd, Flws aggregate bracteate, 2 outer bracts large concave orbicular acuminate, Lobes of Corolla entire
- 19695 Leaves lanceolate serrate, Cymes axillary with rose-coloured bracts [on short petioles, Peduncles umbellate 3—4-flowered axillary
- 19696 Suffruticose soft-stemmed, Plant more or less tinged with red, Leaves ovate-oblong acuminate crenate-toothed

and Miscellaneous Particulars.

3092. *Conydia* requires the culture and treatment of *Gesnera*.
3093. *Mitraria coccinea* will perhaps succeed in the open air. A compost of leaf mould, loam, and peat is the best soil for it.
3094. *Arctocalyx Endlicheriana* is a remarkable-looking epiphytal shrubby plant, shaggy all over. Stems radicans, usually simple; corolla 2 inches beyond the calyx, yellow. It requires a cool humid stove or orchideous house, and is readily propagated by cuttings of the stem.
3095. *Centrosolenia picta* has the leaves blotched and mottled. The corollas are large and white. It is a creeping plant, and grows well in places suitable for tropical epiphytal *Orchidææ*. Light peat soil or leaf mould suits the species best. The other species require the same treatment.
3096. *Hicinia tigrina* is a robust soft-stemmed soft-leaved subshrub, 3—4 feet high. The leaves are a foot long, green, with a bluish tinge. The calyx is large and rose-coloured, also the bracts. The corolla is white, an inch long; the segments studded on the face with soft hairs, which produce a silky and spotted with purple gloss. It is a coarse-looking plant, the flowers hid by the leaves. It flowered for the first time in this country at Messrs. Henderson's nursery, near London, in 1849.
3097. *Moussonia elegans* is a pretty shrub, and requires a temperate stove. The stem and leaves are soft and hairy, and more or less tinged with red. The corolla is scarlet, about half an inch long; the segments yellowish inside, with lines of purple spots; the throat yellow. The plant is of the most easy culture and propagation.

History, Use, Propagation, Culture,

3098. *Abelia*. These shrubs are generally treated as rather tender, and are either kept in a frame or a cold part of a greenhouse, but are probably hardy enough to stand our milder winters. Rough sandy loam, with the addition of a little peat, is the soil that appears to suit them best. They are free growers, and therefore require plenty of water during their growth. Cuttings from young wood strike root readily. The flowers are sweet-scented.

3099. *Spathodea lævis* is a pretty plant, and grows best in a mixture of light loam and sand, and cuttings strike root if planted in white sand. The corollas are white, spotted and streaked with red. *S. speciosa* is a splendid plant, with terminal panicles of pink flowers, stained with purple. It has been cultivated in a mixture of decayed leaves and rotten dung, mixed with one third of peat and one third of loam. Cuttings are said to be difficult to strike.

3100. *Adenocalymma comòsum* is a splendid climber; trained to the rafters in a stove it makes a fine appearance with its copious flower buds, which look like large clusters of hops; and as soon as the bracts fall the conspicuous yellow blossoms burst forth in all their beauty. It requires the same treatment and culture as the climbing hothouse

- [volucrum none, Sepals 5 obovate ciliated, Corolla downy 5 cleft, Stamens exserted
 19697 Branches downy, Leaves ovate distantly serrated glabrous except the midrib beneath, Peduncles 2-flowered, 10-
 19698 Leaves ovate obtuse reticulated glabrous ciliated, Peduncles nearly terminal axillary 1—3-flowered bibracteate,
 volucrum small 1—3-toothed, Corolla tubular nutant, Stamens and style exserted
 19699 Lvs ovate-lanc. nearly sessile ciliated, Flws by threes, lateral ones tribracteate, Calyx villous 5-parted, segs li-
 near acum. length of tube of cor. [tomentose, Stamens a little exserted
 19700 Lvs ov. coriaceous opposite or tern entire and serrated glabrous, Peduncles 1—3-flwd, Sepals 2 obtuse glab., Cor.
 19701 Leaves conjugate, Leaflets lanceolate acuminate, Petioles downy, Peduncles 1-flowered, Calyx bilabiate 5-lobed,
 Corolla glabrous, limb deeply 5-parted ciliated, segments emarginate
 19702 Lvs conjugate, Lifts obl. entire acum. rather cordate at base glab., Tendrils 3 hooked Cal. cup-shaped entire
 19703 Leaves conjugate, Leaflets obovate-oblong shining, Peduncles terminal 2-flowered, Stamens enclosed
 19704 Lvs conjugate, Lifts cordate acum. rather downy, Pans term., few-flwd, Cal. camp. truncate downy obsoletely 5-
 toothed, Cor. arched downy with curled spreading segments [Cor. spreading way
 19705 Lvs simple and conjugate, Lifts obl. or obov.-nbl. acute, Peduns 2-flwd, Cal. camp., Teeth subulate, Lobes of
 19706 Lvs tripin., Lifts 3—9 lanc. entire glab., Panicle terminal trichot., Calyx bluntly 2-lobed, Cor. downy outside
 19707 Leaves impari-pinnate downy beneath, Leaflets obovate-oblong mucronate sessile, lower pair close to the stem,
 Panicle terminal clothed with rusty down, Corollas large tomentose outside
 19708 Leaves impari-pinnate glabrous shining, Leaflets 5 oblong-lanceolate entire acuminate paler beneath, Panicle
 terminal trichotomous
 19709 Lvs impari-pinnate very variable, lower ones smallest with 11 pairs of unequal-sided deeply crenate leaflets the
 term. lift always largest, Petioles winged articulated, Lifts as they ascend become larger fewer and more entire
 19710 Arboreous glabrous, Leaves pinnate, Leaflets 2—3 pairs on short stalks, the terminal one on the longer stalk ob-
 ovate entire at base and serrate at top. Capsule silique-formed compressed very long
 19711 Glab., Lvs pin. tern. vertil., Lifts obl.-lanc. acum. shining ser., Pans term., Calyx spatheaceous split on one side
 19712 Glabrous, Leaves alternate pinnate 4—5 pairs, upper ones ternately verticillate, Leaflets ovate acuminate un-
 equal-sided serrated, Racemes terminal corymbose, Corolla glandular with unequal rounded curled lobes
 19713 Arboreous glabrous, Leaves pinnate, Leaflets many pairs broad-ovate acuminate undulated serrate, Panicles ter-
 minal thyrsoid, Limb of Corolla bilabiate often 6-lobed pentandrous with the rudiment of sterile stamens
 [velvety, Bracts narrow glandular, Calyx 5-toothed velvety glandular, Corolla velvety
 19714 Glabrous, Leaves trifoliolate or conjugate tendrilled, Leaflets elliptic oblong, Racemes axillary nearly terminal
 19715 Glabrous, Leaves trifoliolate and conjugate tendrilled, Leaflets ovate coriaceous glandular, Racemes spike-formed
 axillary and terminal, Bracts comose under vernation, Calyx 5-toothed glandular
 19716 Leaves pinnate verticillate 8 pairs, Leaflets oblong-lanceolate pointed, Flowers in fascicles nearly sessile rising
 from the old wood
 19717 Leaves bipinnate with 3—5 pairs of pinnæ, Leaflets ovate-elliptic acute tomentose in the young state and be-
 neath in the adult state, Branches downy, Corollas silky
 19718 Branches and Peduncles trigonal or 2-edged, Petioles articulated, young ones viscous, Joints 2 broadly margi-
 nate, lower joint obovate, upper one elliptic, Racemes terminal trichotomous corymbose
 [flowered, Peduncles 2-flowered, Cal. glandular, Corolla glandular with ciliated segments, Anthers glabrous
 19719 Suffruticose glaucous downy Leaves ovate, radical ones narrowed into the petioles, Racemes loose secund few-
 19720 Glaucous, Leaves entire, lower ones linear-lanceolate upper ones linear, Racemes twiggy, Sepals ovate acumi-
 nate, Corolla ventricose beardless, Sterile filament glabrous, Anthers fringed at top
 19721 Smooth glaucous, Leaves linear-lanceolate entire, Racemes terminal 1 foot long, Peduncles axillary 1—2-flwd
 19722 Shrubby trailing, Lvs shining cord. ser. downy, Fls in nar. 1-sided leafy hairy pans, Cor. covd with gland. hairs
 19723 Glauc. green, Lvs entire, radical ones obl.-spatu. cauline ones ses. cord. acum., Peduncles axil. subverticil. form-
 ing a leafy raceme, Sterile filament hairy [elongated, Calyx segments ovate
 19724 Glandular downy, Lvs glabrous spinosely ser., lower ones spatu. middle ones obl. upper ones roundish, Panicle
 19725 Tall, Leaves lanceolate, upper ones stem-clashing acum. smooth, Panicle long leafy at base, Peduncles short
 more than 1-flowered, Tube of Corolla bell-shaped, Sterile filament smooth

and Miscellaneous Particulars.

species of *Bigoniæ*, from which it has been separated. *A. nitidum* is said to be a shy flowerer, and has been found to grow best in a larg. tub, in a mixture half light loam, a quarter peat, and a quarter leaf mould.

3101. *Colea floribunda* is a noble plant, with a perfectly simple stem, furnished with large pinnate leaves at the top only, and bearing flowers of a bright yellow ochre on the old wood, from just above the place whence the leaves had fallen the previous year. The culture and treatment are the same as for the upright hothouse species of *Bigoniæ*.

3102. *Phyllarthron Bojerianum* is a beautiful and singular plant. The leaves or broad petioles are curious, being composed of two joints. The plants require the same treatment as the upright hothouse kinds of *Bigoniæ*.

19722. *Penstemon cordifolius* has little the appearance of the genus in habit, but being a trailing shrubby plant it is well-fitted for decorating rockwork. The flowers are of a rich dull red or scarlet.

19725. The *Penstemon gentianoides* figured in Bot. reg. and Bot. mag. with long narrow scarlet flowers should be called *S. Hartwegii*, according to Paxt. Fl. gard.; but why, we are not told.

History, Use, Propagation, Culture,

3103. *Tetranema mexicana* is a pretty little plant, blossoming profusely. It is easy of cultivation, and is propagated readily by division and seed. A light rich soil suits it best.

19730. *Martynia fragrans* is a half-hardy annual. The flowers are large, of a beautiful purple, and very fragrant. The culture and treatment are the same as for Balsam.

3104. *Dilivaria ilicifolia* is a pretty holly-leaved plant. It can only be propagated by seed.

3105. *Asteracantha* requires the same culture and treatment as recommended for *Barlèria*.

3106. *Stemonacanthus*. The same treatment and culture as recommended for the species of *Ruellia* will suit this plant.

3107. *Sericographis* is a very handsome winter-flowering plant. The flowers are tubular, of a bright purplish red. The cultivation and propagation of the plant are the same as for *Ruellia*.

3108. *Salpixintha coccinea* is a splendid shrub, with its pretty graceful scarlet pendent blossoms. Its culture and propagation are the same as for *Ruellia*.

- 19726 Stem downy, Leaves ovate-lanceolate entire glabrous, Segments of Calyx ovate, Corolla downy beardless, Sterile stamen glabrous, Peduncles 2-flowered downy
 β Flowers pale below semidiaphanous, Stems green, Calyx and Corolla glandularly villous [Cor. vent.]
- 19727 Glab. glauc., Lvs remote, lower ones obl.-ov. cord. ses., Racs elong. bract., Peds oppo. 2-flwd.
 19728 Tall green, Leaves oblong-spatulate, cauline ones lanceolate sessile stem-clasping entire, Peduncles many-flowered axillary forming a spicate leafy panicle
- 19729 Almost stemless, Peduncles long numerous, Flowers corymbose
- 19730 Leaves cordate angular coarsely toothed nearly opposite on long petioles, Raceme few-flowered, Calyx campanulate oblique plicate, Bracts plano-convex, Flowers tetrandrous, Plant villos
- 19731 Spiny or nearly unarmed glabrous, Leaves elliptic sinuately toothed spiny wavy, Spike many-flowered, Flowers bracteate showy
- 19732 Rather hairy, Stem quadrangular, Leaves lanceolate tapering to the base narrow sessile serrately ciliated
 [Lyx pilose with subulate segments, Corolla long slender curved, lobes nearly equal, Seeds orbicular ciliated]
- 19733 Glabrous, Leaves ovate bluntly acuminate entire, Spikes downy paniced at base, Flowers solitary sessile, Calyx [Corolla long slender curved, lobes nearly equal wavy]
- 19734 Glabrous, Leaves ovate pointed wavy entire, Flowers twin terminal, Segments of Calyx foliaceous subulate,
 19735 Hairy pubesc. nt, Leaves ovate acuminate coarsely serrated on long stalks, Flowers terminal usually solitary on tops of branches bracteate, Calyxes ciliated
- 19736 Leaves ovate acuminate entire glabrous blotched with white on short petioles, Peduncles solitary axillary and terminal bibracteate usually 2-flowered, Bracts leafy
- 19737 Leaves stem-clasping elliptic-oblong narrowed to base and auricled hairy, Spikes axillary imbricate leafy
 19738 Hispid, Leaves obovate-elliptic dentately crenated lined above, Spikes terminal by threes glandular
 19739 Hairy, Leaves sessile ovate acuminate crenated, Spikes axillary opposite and terminal, Bracts ovate cuspidate
- 19740 Leaves lanceolate equal remotely serrated 7-nerved
 19741 Leaves ovate roundish cuspidate unequal coarsely crenated, Spikes axillary opposite solitary globose on short peduncles hairy, Bracts lanceolate entire
- 19742 Leaves ovate-lanceolate entire downy, Peduncles axillary dichotomous paniced, Bracts linear, Stamens exerted
- 19743 Glabrous, Leaves oblong-lanceolate, Flowers in loose 1-sided downy panicles, Lips of Corolla nearly equal
- 19744 Glabrous branched, Leaves ovate coriaceous entire, Peduncles axillary solitary pendulous or terminal by threes, Flowers sessile decussate in loose spikes
- 19745 Glabrous, Leaves oblong-lanceolate acuminate, Flowers arranged in quadrangular close spikes formed of keeled large bracts
- 19746 Leaves oblong-ovate entire undulated, Racemes terminal secund deflexed
- 19747 Flowers pedunculate axillary solitary, Bracts large

- 19748 Downy erect-branched, Leaves ovate acuminate ciliated, Flowers twin axillary sessile bractless, Segments of Calyx subulate, Tube of Corolla curved, lobes equal crenated, Capsule downy 10—12-seeded
- 19749 Branches diffuse, Leaves cordate-ovate, Racemes axillary elongated secund strict, Segments of Calyx acuminate

and Miscellaneous Particulars.

3109. *Strobilórachis glabra* is very nearly related to *Aphelandra*, and should be cultivated and treated like it.
3110. *Whitfieldia lateritia* is a beautiful shrub, having the branches terminated by racemes of flowers, of rather a large size. The calyx and corolla, and often the large bracts, are of one uniform brick-red colour. The plant requires plenty of heat and moisture while growing; and cuttings strike root readily.
3111. *Petalidium barlerioides* is a very pretty shrub, with much the habit of *Barleria*, from which it has been separated. It is of the most easy culture, and a free flowerer. Loam and peat, with a little rotten dung mixed with it, is found to be the best soil for it. Cuttings from young wood strike freely in the same kind of soil.
3112. *Dipteracanthus* should be cultivated and propagated like *Petalidium*.
3113. *Asystasia* is a genus of very pretty plants, of easy culture. They require a hot moist atmosphere. A compost of peat and loam, with the addition of a little leaf mould, suits them best, and cuttings strike root readily. *A. scandens* bears clusters of large cream-coloured flowers, tinged with bluish, and is well-fitted for training on trellis-work.

History, Use, Propagation, Culture,

3114. *Hydromestis maculatus*. The same culture and prop. as *Aphelandra*. Readily increased by cuttings or seed.
 3115. *Hexacentris mysorensis*. Among all the plants exhibited in 1852, none excited such universal interest as this plant. It formed a small umbrella-like creeper, trained over trellis, the whole circumference of which was loaded with pendulous racemes of the most beautiful large yellow and crimson flowers. The culture and propagation of the species are the same as for *Thunbèrgia*.
 3116. *Meyenia Hawtayneana* is a splendid climber. It should be treated like *Thunbèrgia*.
 3117. *Mastacanthus sinënsis* is an autumn-flowering plant, and furnishes rich violet blossoms at a late time of year. It grows freely in sandy loam and peat, and requires plenty of room for its roots, and plenty of water when

- 19750 Leaves obovate or ovate acute glabrous, Racemes terminal compact thyrsiform, Segments of Calyx linear-lanceolate, Tube of Corolla widened and recurved above, lobes of limb crenately curved, Stamens glandular [ing water
- 19751 Leaves ovate-lanceolate entire petiolate, Spikes terminal solitary with imbricate cucullate bracts or scales hold-
[ovate acuminate keeled serrated, Upper lip of Corolla lanceolate erect, lower one large
- 19752 Leaves ovate glabrous tapering into the thick-winged petiole, Spike simple thickened rather tetragonal, Bracts
- 19753 Lvs cordate angular on naked petioles, Peduncs short 1-flowered, Calyx trunc., Bracts ovate ciliated, Anthera
sagittate glandular at base, Glands pedicellate, Style bearded at top, Stigma foliaceous 2-lobed
- 19754 Leaves cordate entire, Flowers scarlet
- 19755 Leaves oblong acuminate 3-nerved a little toothed obtuse at base or hastate, Bracts of Calyx small, Lips of
Corolla 2-lobed, upper lip galeate, tube shaggy at base inside
- 19756 Leaves cordate entire coriaceous, Flowers purple
- 19757 Arboreous downy, Lvs rhomb-cordate sometimes 3-lobed tomentose beneath, Thyrses many-flowered, Corolla
downy bilabiate [above silky beneath, Heads of flowers oblong or globular
- 19758 Shrubby, Branches bluntly tetragonal, Leaves opposite or in threes oblong acuminate sharply serrated scabrous
- 19759 Rhizoma creeping, Stems erect 4-angled, Lvs obl.-lanc. coarsely toothed, Heads of Flws nearly globose yellow
- 19760 Spreading suffruticose with rooting branches, Leaves obovate-cuneate sharply serrate, Heads of Flowers sub-
ovate at length cylindrical
- 19761 Leaves ovate oblong petiolate obtuse coarsely serrated downy, Peduncles axillary fastigiate
- 19762 Leaves entire, Inflorescence axillary cymose few-flowered [Segments acuminate longer than tube of corolla
- 19763 Branches downy, Leaves fascicled semiterete obtuse when young viscid, Spikes terminal solitary, Calyx viscid,
- 19764 Stems terete almost simple downy, Leaves scattered linear-oblong glabrous, Flowers umbellately capitate, Calyx
tripartite downy
- 19765 Leaves of many leaflets, upper or floral lvs with narrow much acuminate serrated leaflets, Flowers panicled,
Habit of the horsechestnut
- 19766 Leaves ovate-lanceolate entire wavy petiolate smooth, Racemes axillary 4—5-flowered at tops of branches
[nal, Segments of Calyx white 3-nerved, Corolla with a slender tube and obovate segments
- 19767 Downy, Stem tetragonal scandent, Leaves cordate-ovate acuminate entire, Corymbs many axillary and termi-
19768 Hairy rusty, Leaves large obovate-oblong sinuately undulate, Peduncles terminal 2-leaved, Flowers crowded,
Calyx foliaceous ciliated, Corolla with a long pilosely glandular tube jointed beneath apex, Stamens exserted
- 19769 Leaves oblong wavy acuminate rather cordate at base, Panicles terminal corymbose, Calyx 5-toothed, Segs of
Cor. obl. nearly equal [Segments of Calyx foliac. elliptic mucr., Tube of Corolla exceeding calyx a little
- 19770 Branches tetragonal hairy, Leaves cordate acute dentately serrated woolly petiolate, Panicle terminal bracteate,
- 19771 Lvs roundish cord. acute and acutely toothed, Lobes at base rounded and incumb., Pan. term. bract. col.
[lute edges shining above, Cymes axil. 3-flwd, Lvs oblanc. campan. 5-toothed, Tube of Cor. long filiform
- 19772 Downy when young, glabr. in adult state, Lvs coriac. opp. or 3 in a whorl lanc. or obl. acum. with ent. rev-
[late, Calyx bibracteate, Segments subulate, Corolla salver-shaped, Tube slender
- 19773 Downy, Leaves elliptic acuminate sinuate or angular rather cordate at base, Cymes many-flowered capi-
19774 Brnchs 4-furrowed, Lvs large cord.-acum. glabr. slightly serr. lepidotend. ben., Panics large term. thyrs. bract.,
Bracts narr. spat. coloured, Cal. large 5-angled, Tube of Cor. hardly exceeding Calyx, Stams much exserted
- 19775 Glabr., Lvs large elliptic coriac. like those of *Magnolia*, Panicles axillary and term. bracteate, Bracts spatulate

and Miscellaneous Particulars.

growing. Cuttings of young wood strike freely. Strong-scented when bruised, with much the appearance of *Nepeta*.
3118. *Sclerodon oleinum*. A small bush with habit of the olive and flower of *Verbena*. The genus is said to come
near *Egiphila*. It is of easy culture and propagation.

19765. *Vitex Doniana*. The wood of this tree is the African Oak or African Teak, so much used for many pur-
poses. It may be cultivated in the same manner as any other hothouse tree.

3119. *Casselia* is a pretty stove shrub when in blo-som. It requires the treatment of ordinary stove plants.

19774. *Cerodendron Bithuneanum* and *splendens* are two most showy species. The whole panicle of the first is of
a deep crimson. The lobes of the corolla are oblong and reflexed, the upper lobe has a white base.

History, Use, Propagation, Culture,

3120. *Pterodiscus speciosus* is a splendid plant belonging to the *Pedaliaceae*. The root is tuberous, large, and solitary, quite globose, the upper part elevated above the earth, and produces from its summit a stem which soon divides into several erect succulent branches bearing opposite leaves and large handsome reddish purple flowers.

2679. *Torenia*. All the species here mentioned are very similar in habit, and are very pretty plants; now very generally cultivated in our hothouses and orchideous houses. They are trailing plants, grow in baskets like *Æschynanthus*, and may be trained in any way. They grow readily in any loose soil, and are readily increased by cuttings or division. Moist atmosphere is necessary. *T. asiatica* is a most elegant plant, and is spread all over India. The flowers are splendid, of a bluish purple velvety colour, with three darker purple blotches on a pale ground.

19797. *Browallia Jamesoni* is a showy shrubby plant four to six feet high, bearing corymbose cymes of yellow flowers. It thrives best in a warm part of a greenhouse. Light loam, sand, and peat, has been found to suit it well. In summer it will do in the open air, planted against a wall, or in a sheltered situation. Cuttings strike freely.

- 19776 Leaves opposite oblong sinuately toothed, Petioles short with one gland on each side, Flowers axillary solitary
- 19777 Leaves lanceolate acute serrated smooth, as are the branches
- 19778 Leaves obovate serrated, Flowers numerous white spotted with violet
- 19779 Leaves ovate-lanceolate serrated entire behind shining and clammy as are the branches, Flowers axillary
- 19780 Sepals 1—3-nerved entire or toothed in front below gradually narrowed into 1—2 subulate points, Corolla tubularly bell-shaped slightly curved at base, Lips denticulate, upper lip not notched, Stamens hairy
- 19781 Slender-branched glabrous, Leaves alternate subulate, Flowers racemose, Spur arched very long, Peduncles and Calyx pilose, Upper Lobes of Corolla obtuse, lower ones emarginate, Calyx reflexed
- 19782 Clammy and villous from glandul. hairs weak, Lvs opp. ovate roundish, lower ones peti. toothed obt., upper one sess. ent., Flws nearly sess., Cor. small, upper lip dark purple, lower one and palate yel., Spur incurv white
- 19783 Ascending, Leaves linear channelled rather fleshy glaucous, Flowers loosely racemose brownish yellow, Sepals linear obtuse, Spur shorter than corolla, Palate adpressed downy
- 19784 Villous, Radical Leaves subsapulate deeply toothed, rameal leaves deeply tripartite having the middle lobe large and more or less denticulate

β Flowers with numerous large distinct spots of white

- 19785 Tall, nearly simple pilose, Leaves pinnatifid, Segments serrate-crenate or sub-bipinnatifid, Spike dense, Calyx [hairy, Beak linear twisted twice as long as helmet
[der lip, which is hooded and 3-lobed, Segments emarginate
- 19786 Leaves pinnatifid, Segments doubly toothed, Spikes long, Beak of Corolla narrow spirally twisted below the un-
19787 Tall branched hairy, Leaves bipinnatifid, segments deeply toothed, Spikes slender interrupted, Teeth of Calyx
crested, Helmet narrow-oblong exceeding the lip
- 19788 Racemes pendulous dense many-flowered, Leaves oblong-lanceolate a little toothed, Flowers nearly sessile,
Calyx narrow plicate, teeth unequal, Tube of Corolla slender
- 19789 Clammy erect downy, Leaves oblong or lanceolate glabrous above toothed or entire, Peduncles shorter than
leaves, Calyx elongated plicate with lanceolate lobes
- 19790 Diffuse glab. or a little hairy, Lvs ovate or ovate-lanc. acum. serrately crenated, Calyx with 5 nearly equal ribs
or 3 narrow winged ones, Teeth of front Filaments subulate [gregate, Filaments all toothless
- 19791 Downy, Leaves broad-ovate subcordate coarsely serrated, Peduncles axillary solitary or terminal and rather ag-
19792 Diffuse downy, Leaves ovate roundish and cordate serrated, Calyx elongated with 5 equal acutely keeled ribs,
Teeth of front Filaments short obtuse
- 19793 Leaves lanceolate-acuminate jagged glabrous, Racemes subsecund, Corolla downy, Segments ovate bearded,
Bracts all shorter than pedicels
- 19794 Leaves ovate lanceolate acute subcordate at base glabrous, Stem and Petioles winged, Cymes lax few-flowered
4—8, Sepals roundish with membranous edges, Staminoodium bifid with diverging lobes
- 19795 Lvs ovate acute tapering to base, Peduncs 1-flwd axil. racemose at tops of brnchs, Brnchs and adult calyces glab.
19796 Lvs opposite or altern. ovate acum., Pedun. axil. sol. 1-flwd, Calycine segs subulate, Segs of Cor. ovate acum.
19797 Shrubby downy, Leaves ovate rugose, Flowers subcorymbosely cymose, Pedicels short, Calyx ovate tubular
oblique, Corolla with an incurved wide tube and shorter segments
- 19798 Hispid, Leaves equal ovate oblique at base sparingly serrated, Limb of Corolla wide [Spur conical
19799 Pilose, Lvs ovate acum. hispid above serrate, Cal. downy, Tube of Cor. shorter than limb, which is spreading,

and Miscellaneous Particulars.

3121. *Achimènes*. The species are increased by the scaly caterpillar-like tubers, which are produced in quantities. A compost of loam, peat, and sand, in equal proportions, is found to suit them best. In the autumn, when the plants have done flowering, and the stems become dead, the tubers may be kept in the soil till spring, giving no water, in the same way as recommended for bulbs. But in spring, when they begin to grow, they should be repotted in fresh mould. When growing they require plenty of water. Four to six tubers in a pot will be sufficient. The plants are very elegant, and have become great favourites. They are best grown in a close frame or pit, and when they are in flower may be removed and placed where they will be seen to the best advantage, in a stove, or conservatory, or greenhouse. Heat and moisture seem to be requisite to their growth. By planting in January, February, and March, plants may be had in blossom most of the year.

Trevirana pulchella, No. 8893. in the body of the work, is the original species of *Achimènes*, and is as beautiful a plant as any of the more recently introducal species.

History, Use, Propagation, Culture,

3122. *Niphæa*. The species form bulbs or tubers like *Achimènes*, by which they are propagated. Their culture and treatment should be the same as recommended for the species of that genus, to which it is very nearly related.

3123. *Diastema ochroleuca* is a pretty plant nearly related to *Achimènes*, and is propagated by the tubers in the same way. Its cultivation is in every respect the same as that recommended for the species of that genus.

3124. *Chirita sinensis* has the habit of a stemless *Glorinia* or *Streptocarpus*. The plant succeeds best in a moist stove, shaded while the sun is hot. By having plants in different temperatures flowers may be kept up for many months. All the species are cultivated in the same way as *Glorinia*. *Chirita Moónii* is a splendid suffruticose plant with large bluish-purple flowers like those of *Glorinia*. They strike readily from cuttings, and are of the most easy culture.

3125. *Didymocarpus crinita* is a pretty plant, bearing white flowers with a yellow lip. A mixture of light loam

- 19800 Leaves unequal oblique at base serrated pilose, Peduncles axillary pilose 3-flowered, Tube of Corolla gibbous at base, Limb oblique, the front segment largest
- 19801 Lvs sometimes 3 in a whorl pil., Pedun. filif. many-flwd pil., Limb of Cor. equal to tube [Limb small spreading
- 19802 Lvs pilose-oblong succor. serrated unequal. Pedunc. 1-flwd, Tube of Cor. 1½ in. long cylin. saccate at base pilose,
- 19803 Hairy, Leaves on longish petioles ovate acuminate serrated wrinkled coloured beneath, Peduncles 1-flowered, Flowers nutant, Lobes nearly equal spotted, Epigynous glands 5 united
- 19804 Hairy, Stems bulbiferous, Lvs cordate serrated, Peduncs 1-flwd, Limb of Cor. flat with rounded serrated segs
- 19805 Creeping stoloniferous downy, Lvs elliptic serrated wrinkled coloured, Peduncles 1-flwd, Calyx spotted inside with a fringed mouth, Segments of Corolla ciliate-toothed, Ovaria uniglandular
- 19806 Stem purple rather hairy, Lvs oblong-lanceolate wrinkled serrate nettle-like, Peduncles hairy, Calyx smooth Tube of Cor. deflexed gibbous at base, Limb nearly equal, Epigynous disk 5-lobed [low in the throat
- 19807 Pil., Lvs ovate acum. serrated, Peduncs. 1-flwd, Calyx downy, Cor. lilac dark near the mouth and a dash of yellow
- 19808 Clothed with viscid hairs, Leaves ovate or oblong crenated, Cymes pedunculate axillary, Corolla gibbous above the base, Segments of Limb roundish nearly equal, Ovaria hairy
- 19809 Downy, Lvs oblong coarsely serrated, Peduncs solitary axil., Cor. campanulate dingy white speckled with purple and 3-crested inside, lobes erect roundish, Segments of Calyx lanceolate, Filaments spiral
- 19810 Hairy, Leaves 3-4 in a whorl ovate or oblong coarsely serrated, Pedicels 1-flowered, Segments of Calyx lanceolate erect, Corolla with a long tube and an ample spreading limb
- 19811 Hairy, Lvs opposite or 3 in a whorl ovate deeply and doubly serrated. Peduncs axillary 3-5-flowered, Segments of Calyx linear, Corolla funnel-shaped, tube curved, lobes roundish lower lobe fringed
- β Lobes of Corolla all coarsely fringed
- 19812 Stem simple downy, Leaves rather unequal obliquely cordate ovate serrated, Peduncles in the axils of upper leaves, Corolla nutant gibbous at base
- 19813 Hairy, Leaves opposite or 3 in a whorl cordate-ovate coarsely serrated velvety and elegantly painted, Peduncles solitary or twin axillary 1-flwd, Tube of Calyx turbinate, Lobes of Corolla roundish, 3 lower ones smallest
- 19814 Hairy, Stem panicle bulbif., Lvs cord. ser., Pedun. sol. axil., Limb of Cor. flat with rounded serrated lobes
- 19815 Downy pilose, Stem short, Leaves elliptic crenated spotted with white, Racemes nearly terminal elongated many-flowered covered with glandular hairs, Upper Lip of Corolla short 2-lobed, lower lip concave fringed
- 19816 Stems slender flexuous, Leaves serrated from middle to top, Flowers large axillary, Tube of Corolla 2 inches long, Limb broad spreading, Lobes finely serrated dotted with purple inside
- 19817 Hairy, Lvs oblong-cordate toothed, Flws axillary and terminal aggregate, Calyx hispid with roundish segments
- 19818 Hairy simple, Leaves oblong-cordate toothed rugose, Flowers axillary and terminal drooping
- 19819 Leaves ovate oblong rather cordate at base bluntly toothed, Stem and Petioles red, Flowers aggregated axillary, Peduncles 3-4 inches long, Segments of Corolla irregular concave
- 19820 Hairy, Leaves on longish petioles ovate acute coarsely serrated wrinkled, Panicles terminal trichotomous sub-foliaceous, Corolla glabrous, Glands clavate longer than ovarium [Ovarium covered with glandular hairs
- 19821 Stemless, Leaves opposite elliptic-ovate crenated, Petioles trigonal, Corymbs many-flowered bibracteate at base,
- 19822 Suffruticose, Branches villous, Lvs 3 in a whorl ovate-lanceolate acuminate downy minutely and glandularly toothed, Peduncles axillary solitary 3-4-flowered, Calyx tomentose, Corolla downy
- 19823 Lvs opp. on long peti. brownish silky from adpr. hairs ser. oblique at base, Peduncs axil. trichotomous, Bracts and Lobes of Cal. ov., Cor. bilamellate inside, and with 2 hairy elevated lines ben., Stig. transversely triang.
- 19824 Suffruticose villous, Brnchs bluntly 2-trag., Lvs on short petioles 3-4-in a whorl ovate-lanc. acutish obsolete and glandularly serrated, Peduncles axillary solitary or twin, Sepals narrow keeled, Corolla large downy
- 19825 Suffruticose erect simple pilose, Stem short very villous, Leaves sessile cuneate-lanceolate velvety purplish red beneath, Pedicels 3-5 axillary, Segments of Calyx broad subulate

19826 Stem fleshy marked by a dense villous line, Leaves repandy toothed half-cordate that is with an unequal base, Racemes secund, Calyx 5-angled, upper angle crested near the base

- 19827 Leaves oblong-lanceolate acuminate serrated obscurely nerved, Umbels many-flowered. Calyx 5-parted, segments linear, Corolla clavate, segments obtuse with a dark mark at top equal, Anthers purple
- 19828 Lvs lanceolate acuminate slightly denticulated, Umbels nearly sessile terminal many-flwd, Calyx 5-parted pilose
- 19829 Much-branched radican, Leaves oblong acuminate, Umbels term. many-flwd, Corolla sub-clav. clothed with glandular hairs

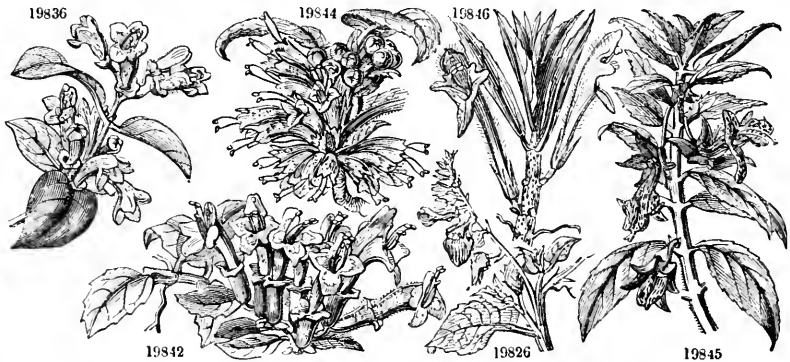

and Miscellaneous Particulars.

and leaf mould, or turfy peat, is said to be the best soil for it, and care should be taken not to over-water it in winter. It is cultivated like *Orchideæ*, in a warm moist atmosphere, during the season of its growth, and strikes root readily from cuttings.

3126 *Klugea Notoniâna* is a soft-stemmed decumbent plant, flowering freely in a warm stove. A mixture of loam and peat is found to be the best soil for it, and it appears to like moisture. The flowers are blue, disposed in one-sided racemes.

3127 *Æchynanthus grandiflorus* succeeds well if planted in pcts, although in its native country it is an epiphyte. In fact, all the species should be cultivated the same as tropical epiphytal *Orchideæ*, in baskets or on blocks of wood. Heat and a moist atmosphere are necessary. All the species are splendid plants when in blossom, and worth cultivating in every hothouse or orchidaceous house.

History, Use, Propagation, Culture,

3128. *Agalmýla staminea* is a splendid plant when in blossom, and is nearly related to *Æschynánthus*. The flowers are of a bright scarlet colour. The stems are creeping and throw out roots at the joints. It requires the same treatment as the species of *Æschynánthus*, and should be potted in turfy peat mixed with a portion of loam and sand. Good drainage is necessary: for this purpose the pots should be half-filled with potsherds, and a few stones should be mixed among the soil.

19848. *Collinsia multicolor* is a very pretty tall annual plant. It comes near to *C. bicolor*. The floral leaves are purple. The middle lobe of lower lip is crimson, but the rest of the lower lip is lilac; and so is the upper lip, except that there is a broad white spot in its middle relieved by numerous blood-coloured dots. The plant has a good effect when grown in large patches or beds.

3129. *Chenóstoma* consists of a great number of known species, and is separated from the old genus *Maniëta*. They require the treatment of *Verbena*, and are like them well-suited for bedding out in the same way. In order to

- 19830 Lvs oblong-lanceolate acuminate convex dotted beneath. Bracts membranous oblong concave, Sepals 5 oblong [obtus. Limb of Corolla flat, upper lip emarginate, lateral ones truncate
 19831 Lvs oblong-lanceolate acuminate serrately-toothed, Flowers fascicled axillary, Bracts minute subulate, Calyx 5-parted, segments subulate, Cor. fringed, Stamens exerted [late black from tomentum, Corolla downy
 19832 Subscandent, Leaves elliptic entire or slightly serrated glaucous, Corymbs term. bract., Calyx large campanu-19933 Scand., Lvs ov. obscurely thhd, Corymbs term. bract., Calyx ov. cylind. glab., Corol. 3 times longer than cal.
 19834 Upper Lvs always verticil. ovate-lanceolate acum. slightly ser., Flws term. numerous downy, Segs of Calyx subul., Stams exerted, Corolla with long clavate curved tube and obliquely 4-lobed limb, upper lobe bifid
 19835 Pendulous, Leaves broad-lanc. acuminate entire, Flowers erect fascicled, Calyx 5-parted, segs subul., Corolla with long clav. curved tube and oblique contracted bilobed mouth, upper lobe bifid, Stamens exerted
 19836 Leaves oval-acute entire, Peduncles axillary 3-flwd, Calyx cup-shpd. obovately-lobed, Corolla tomentose, Upper lip bilobed, lower one tripartite, Lobes obtuse [ub. with wide throat 4-cleft, upper seg. 2-lobed
 19837 Lvs ovate obtuse entire, Flowers axillary clustered, Calyx tubular smooth purplish-brown, lobes blunt, Cor. 19838 Glab., Lvs ovate-lanc. sub-acum., Calyx 5-parted, segs linear-lanceolate, Seeds ending in one hair at each end
 19839 Leaves elliptic acuminate glabrous sinuately toothed, Flowers axillary solitary or twin, Peduncles pentagonal, Calyx glab. 5-cleft, segs subul., Cor. glabrous, limb ciliated, Style enclosed, Stamens exerted
 19840 Leaves oblong-lanceolate or obovate-lanceolate acuminate hardly toothed, slightly veined, Flowers axillary downy, Calyx 5-cleft, segs subul., Corolla glab., limb cil. blotched with chocolate, Stamens exerted villous
 19841 Erect, Leaves elliptic-lanceolate acuminate entire rather undulated, Flowers in terminal fascicles, Segments of Calyx lanceolate ciliated, Corolla clavate 3 inches long, Stamens exerted
 19842 Scandent, Lvs small ovate slightly toothed with sunk veins, Corymbs terminal bracteate, Calyx downy cylindri-19843 Leaves said to be striped like the zebra [cal, segs ovate, Corolla downy tubular, Stamens exerted

19844 Stems radiant hairy, Petioles hairy, Lvs alternate oblong acuminate denticulated downy beneath and on edges, Flowers diandrous in axillary fascicles

19845 Clothed with silky villi, Stems simple, Leaves oblong-lanceolate entire or a little serrated, Lobes of Calyx deltoïd-lanceolate spreading entire or serrated, Corolla villous spotted

19846 Stem suffruticose fleshy radiant clothed with small scales, Lvs lin.-lanc. acuminate almost entire glab. above but covered with rufescent hairs beneath, Flowers solitary axillary, Calyx glabrous, Corolla long hairy

19847 Climbing, Flws large orange-coloured, Calyx pale yellow, Peduncles clothed with purple hairs. It will grow best on rotten wood

19848 Downy, Floral Leaves smooth beneath, the lowest cordate stem-clasping ovate-lanceolate bluntly serrated, the middle ones linear blunt entire, the uppermost ones abortive, Pedicels hardly glandular, Sepals 3-ribbed

19849 Branches hairy at top, Leaves oblong-lanceolate or linear entire, Flowers racemose, Calyx segments linear exceeding the capsule but 3 times shorter than tube of corolla

19850 Much branched, Branches downy panicled, Leaves ovate toothed, upper ones oblong glabrous or canescent beneath, Racemes loose, Calyx hispid

19851 Rather hairy, Leaves lanceolate ciliated entire, upper ones smaller bract-formed, Peduncles solitary slender, Middle segment of lower lip of Corolla furnished with a long horn which is bidentate at top

19852 Cvd with gland. down, Lvs lanc. acum. serrated, floral ones broader at base bract-formed exceeding the pedicels

19853 Suffruticose glabrous, Leaves narrow distantly toothed, Racemes terminal erect many-flowered

19854 Leaves ovate cordate at base acute undivided or 3-lobed hairy beneath, Panicle terminal covered with rusty tomentum

19855 Erect or ascending villous, Leaves ovate, upper floral leaves shorter than calyxes, Flowers axillary solitary, Corolla 3 times the length of calyx

19856 Leaves obovate-oblong or elliptic hardly acuminate glabrous or hairy beneath on the midrib, Cymes 2-4-flwd, Calyx large tubular inflated glabrous, Tube of Corolla scarcely exceeding the calyx

19857 Lvs broad-elliptic acutish, Bracts lanceolate acuminate glab. as are the calyxes, Flws few subracemose terminal

19858 Lvs obl. acuminate glab. ciliated, Bracts lanc. acuminate glab., Calyx glab., Flws few subracemose terminal

19859 Lvs oblong-lanceolate not shining, Flowers terminal about 2 together, Limb of Corolla 2½ inches across

and Miscellaneous Particulars.

have a sufficient number of plants for that purpose cuttings should be struck in autumn, kept in any part of a frame or greenhouse during winter, and turned out in the summer.

3130. *Pleurotheca imperialis* is very similar in habit to *Catalpa syringifolia*, but is not so hardy, for the young shoots are generally killed by the frost in winter, and consequently it does not often flower in the open ground in this country. It has, however, flowered at Paris frequently. The flower has the different shades from blue to purplish lilac. It may be propagated by pieces of the root. It is altogether a splendid tree both in flowers and foliage.

3131. *Lindenbergia wrightifolia* is a plant of easy culture; and it readily produces seeds, by which it is propagated.

19856. *Franciscea calycina* is a fine shrub when in flower. The flowers are at first blue, but decay to white. Loam and peat, and a portion of sand, is found to be the best soil for it. The production of fine heads of flowers depends upon its vigorous growth, therefore the plants must be placed in bottom heat, and shifted from size to size of pots as they become filled with roots. The other species require the same treatment.

Order I. TRIANDRIA. Stamens 3.

3134. 1452*a*. *Rigidella*. Sepals with boat-formed imbricating claws and reflexed lamina. Petals very small, straight, with short linear laminae. Anthers sessile on the column, with lateral cells. Stigmas 3 bipartite, appendiculate at back. Flowers pendulous. Capsule papryaceous, many-seeded, 3-valved at top. Seeds dotted, subglobose.

History, Use, Propagation, Culture,

3132. *Ionopsidium acaule* is a pretty little annual, will grow in any rich damp soil, or on the shady side of rock-work. It makes a neat edging to borders in shady places. The flowers are at first white, but turning to lilac. It may be propagated either by seeds or by runners, which it throws out in damp soil.

3133. *Grevllsia saxifragifolia* has much of the habit of *Saxifraga granulata*, and the flowers are much like those of *A'rabis alpina*. It does well with the treatment of ordinary alpine plants. It is a pretty little alpine plant smelling

- 19860 Leaves large obovate-oblong, Bracts deciduous lanceolate pilose ciliated, Racemes compound terminal large
 β Calyx broader and as well as bracts smooth [hemispherical
- 19861 Glabrous, Leaves obovate-oblong acute, Flowers solitary, Calyx campanulate deeply 5-cleft, Corolla with a
 β Flowers larger than in the species [long tube and flattish limb, Valves of Capsule coriaceous
- 19862 Leaves opposite linear-lanceolate sharply-toothed tapering to both ends, Racemes terminal
 [of Corolla exceeding the tube, Capsule oblong longer than calyx
- 19863 Tall, Branches twiggy, Leaves obovate spinosely toothed, Racemes elongated terminal sub-compound, Segments
 19864 Leaves oblong obtuse tomentose as are the branches, Segments of Corolla longer than the tube, Corolla white
 streaked with bluish purple

3133. 1407b. *Grællisia*. Calyx equal at base. Petals on short claws with entire limbs. Stamens toothless. Silicle elliptic flat, 1-celled from the septum being absent, apiculated by the Stigma. Funicles free, a little thickened at base. Cotyledons flat. Radicle accumbent.

- 19865 Lower Leaves like *Cynoglössum*, upper ones narrower wavy, Flowers large in close racemes, Corolla bright violet
- 19866 Cauline Leaves oblong half stem-clasping subcordate sinuately toothed scabrous from branched down, Racemes terminal, Pedicels longer than Calyx, Siliques linear elongated erect
- 19867 Suffruticose at base panicled, Leaves lanceolate repandly toothed wavy downy, Pods nearly orbicular 4-seeded Seeds margined
- 19868 Leaves ovate-roundish entire on long petioles, Pedicels radical, Pods roundish emarginate
- 19869 Glabrous, Stems many, Radical Lvs stalked reniform palmately and deeply toothed, cauline ones ovate 3-lobed, uppermost ones linear, Racemes corymbosely umbellate
- 19870 Pods 2-celled 2-seeded obcordate crowded, Valves winged on the back entire, Leaves linear distant adpressed
- 19871 Suffruticose, Radical Leaves glaucous oval-lanceolate slightly-toothed, cauline ones linear, Silicles linear glabrous crowned by the sessile stigma a little constricted in middle and narrowed at base
- 19872 Glabrous green, Siliques moniliferous spreading and pendulous, Lower Leaves trifid rarely pinnately 5-cleft with filiform lobes, upper leaves entire, Lateral Stamens furnished each with a tooth
- 19873 Leaves 3—4-foliolate, Leaflets oblong-lanceolate acute at both ends entire, Sepals connate at base, Petals oblong-elliptic nearly sessile, Stamens equal, Fruit linear longer than stipe

3135. 1452b. *Hydrotaenia*. Perianth campanulate, nearly equal. Petals unguiculate, marked by a triangular zone above the claw. Anthers sessile. Ovary many-seeded. Style filiform, trifid at apex: Segments tripartite, linear, convolute.

3136. 1452c. *Beatonia*. This genus differs from *Tigridia* in the anthers being broad at base, becoming gradually smaller to the top, decurved; and in the forked lobes of the style having a minute crest placed within the fork and terminated by a minute stigma.

3137. 145a. *Phalocallis*. Perianth crateriform. Larger Sepals spreading. Petals revolute. Filaments connate

and Miscellaneous Particulars.

strongly of garlic. The plant is well-fitted for ornamenting rockwork.

19871. *Isatis indigotica* is called *Tsin-ching* by the Chinese; and is considered by them as a plant of great importance; as, according to Fortune, it covers a large tract of country. It is grown in rows, and in June the plants are from 6 inches to 1 foot in height, and are then considered in perfection for the manufacture of Chinese indigo or woad

at base, reflexed at top. Cells of anthers agglutinate above the style, which is trigonal and 3-lobed at top. Stigmas short, transverse, 2-lobed, obtuse, emarginate. Crests of lobes 2, petaloid, reflexed. Capsule triquetrous, oblong, membranous. Operculum obsolete, indelhiscent. Seeds flattish, angular, marginate.

Order 2. PENTANDRIA. Stamens 5.

3138. 1459a. *Disémna*. Calyx 10-lobed: Tube short, sulcate below. Crown of throat double: outer one of distinct threads; inner one combined into an entire or toothed membrane. The rest as in *Passiflora*.

3139. 1459b. *Tacsonia*. Tube of calyx long. Limb 10-lobed. Throat furnished with a scaly membrane. The rest as in *Passiflora*.

Order 3. HEXANDRIA. Stamens 6.

3140. 1460a. *Gelasine*. Perianth regular, annulated at base. Stamens 6, monadelphous, but partible. Anthers forming a cylinder. Style filiform. Stigma 3-lobed. Capsule obovate, 3-valved, opening at the sutures at top. Seeds angular, truncate at top.

Order 4. OCTANDRIA. Stamens 8.

3141. 1462a. *Luvúnga*. Calyx truncate, obscurely 4-lobed. Petals 4, oblong, fleshy. Stamens 8, united into a tube. Anthers linear. Style cylindrical. Stigma subglobose, entire. Berry oblong, somewhat 3-lobed, 3-celled, pulpy. Pulp resinous, odoriferous. Seeds solitary. Albumen none.

Order 5. DECANDRIA. Stamens 10.

3142. 1464a. *Wallstra*. Calyx 5-toothed. Corolla of 5 petals. Nectary double: outer one cylindrical, bearing the anthers in its mouth; inner one a fleshy ring round the ovarium. Ovarium 2-celled. Cells 2-seeded. Berry 1-seeded.

3143. 1464b. *Cheirostemon*. Calyx 5-parted, trilobate. Sepals deciduous, coloured inside, foveolate at the base, 5 inches long in the bud. Petals wanting. Filaments connate into a tube which is cleft at top, with the lobes leaning to one side, exerted, and bearing on the back of each lobe 2 anthers. Stigma acute. Capsule 5-angled, 5-celled, 5-valved, with a villous dissepiment in the middle of each valve. Seeds egg-shaped, carunculate; 15 or 18 in each cell.

3144. 1464c. *Napoleóna*. Calyx coriaceous, 5-cleft. Corolla of 3 monopetalous verticels: outer one large, multi-plicate, many-toothed; middle one like the corona in *Passiflora*, that is, cleft into filiform segments to the base; inner

History, Use, Propagation, Culture,

3134. *Rigidella* are pretty bulbs with scarlet flowers, requiring the treatment of *Tigridia*.
 3135. *Hydrortenia*. The genus are very pretty plants when in blossom. They are greenhouse bulbs of easy culture. They should have no water after the leaves begin to fade, until they begin to grow again in spring, when they should have plenty. A dry shelf in a greenhouse is a good place to keep them during winter. Equal parts of

one erect cup-shaped, having its margin inflexed and multifid. Stamens 10, in a single series, monadelphous. Filaments membranous, inflexed. Anthers adnate, 2-celled. Disk annular, somewhat cup-shaped. Ovary adherent, fleshy, 5-celled, 20-ovulate. Style pentagonal, the angles winged. Stigma disk-formed, 5-rayed.

Order 6. DODECANDRIA. Stamens 12.

3145. 1467a. *Astiria*. Involute 3-leaved, deciduous. Calyx 5-cleft. Petals 5, twisted. Stamens 20, unequal, combined into an urceolus without any sterile stamens. Ovary 5-celled. Styles 5, spatulate. Ovula 2 in each cell, ascending.

3146. 1470b. *Asterotrichion*. Calyx campanulate, 5-cleft, with 5 nectariferous pits in the bottom. Petals 5, unguiculate joined together a little at base. Stamens 10—15, fertile; outer ones shortest. Anthers reniform, 1-celled, opening by a transverse chink. Ovary 2-celled. Cells 1-ovulate. Ovula pendulous. Styles 2, clavate, enclosed. Stigma thickened truncate. Perhaps diceious.

Order 7. POLYANDRIA. Stamens indefinite in number.

3147. 1471a. *Calliandra*. Calyx campanulate, bidentate, rarely 5-cleft. Corolla funnel-shaped. Stamens indefinite, much longer than corolla, joined into a tube at base. Legumen linear, compressed, pulpless.

3148. 1479a. *Lopimia*. Involute longer than calyx. Calyx of 20 bristle-like connivent leaflets. Corolla flat. Column of stamens deflexed. Stigmas 10. Anthers 30—40. Capsule of 5 carpels. Carpels indehiscent, covered with mucilaginous glue.

3149. 1482a. *Fugdsia*. Calyx 5 cleft, girded by a 6—12-leaved involucl. The leaflets bristle-formed very short, Anthers numerous, from the sides and lower part of the staminiferous column. Stigmas 3—4, adglutinate or free, clavate. Capsule 3—4-celled, 3—4-valved, 3—4 seeded. Seeds naked or covered with short wool.

3150. 1490a. *Gocthia*. Calyx campanulate, 5-cleft, surrounded by a large bladderly involucl. Petals 5, somewhat joined together at the base, twisted in the bud. Stamens numerous. Style elongated, cleft at apex into 8—10 stigmas. Carpels 5, coriaceous, 1-seeded.

3151. 1490b. *Trachëtia*. Calyx 5-parted, spreading, naked. Petals 5. Stamens 20—25, of which 5—7 are sterile. Ovary solitary, roundish, scaly. Style filiform. Stigma 5-lobed. Capsule 5-celled, 5-valved. Seeds small, roundish wingless.

3152. 1495a. *Polyspora*. Calyx girded by accessory bracts. Sepals and Petals 5. Stamens numerous. Style crowned by a 4—5-lobed stigma. Capsule conical, 5-celled, 5-valved, many-seeded. Seeds imbricate, ending in a wing.

TRIANDRIA.

19874 Leaves linear green glabrous as are the scapes, young leaves finely ciliated, Scape length of leaves, Spathe many-flowered, Inner Keel tomentose, Anthers triangular

19875 Sepals obtuse flame-coloured marked at base with deep purple stripes [the slender stigmas, Pollen yellow

19876 Seps acute $\frac{1}{4}$ inch long scarlet with paler claws, Pts. yel. cordate acum., Anthers acute broad at base equalling

19877 Leaves lanceolate, Bracts joined sheath-like, Flowers terminal fasciated nodding, Sepals scarlet with a black spot at the base of each

19878 Flowers marked like those of *Fritillaria mclrâgris*

19879 Flowers yellow speckled with purple, Claws of Petals faced with hyaline globules

19880 Stem forked, Leaves ensiform, Spathe margined with white, Flowers small campanulately rotate

19881 Stem 2 feet, Leaves plicate 1 to $1\frac{1}{2}$ foot. Spathe 2-valved $2\frac{1}{2}$ inches, Sepals with pale green spotted claws and dark

19882 Stem slender, Lvs plicate 8 inches, Spathe 1-valved, Peduncs curved, Perianth yellowish, spotted with purple

[claws, Petals small recurved, Lobes of Stigma fringed at top with a crested membrane between

19883 Leaves broad plicate 6 inches, Stem 4 inches, Spathe 2-flowered, Ovary obovate, Sepals spotted with white on

and Miscellaneous Particulars.

foam, leaf-mould, and sand will suit them best. Perhaps they may succeed in the open air with the same treatment as *Tigridia*.

3136. *Bea'donia*. Plants with much the appearance of species of *Tigridia*, and the bulbs require the same management and treatment.

3137. 1453c. PHALOCA'LLIS Herb. (*Phalos*, a cone; *kallós*, beauty; cone formed by crest.) *Irideæ*.

History, Use, Propagation, Culture,

3137. *Phalocallis plúmbea* has much the habit of *Márica Northiana*, and the colouring of the flowers is almost the same. The plant will grow in rich light soil. It requires a good deal of moisture when growing: in fact, it may be cultivated exactly like *Márica*.
 3138. *Dise'mma*. The species of this genus require the same treatment as those of *Passiflora*.
 3139. *Tacsonia*. The species are truly handsome climbing plants, deserving a place in every greenhouse and conservatory. They are readily increased by cuttings, require the same treatment as *Passiflora*, and might prove hardy in warm sheltered situations. Loam, peat, with decayed leaves, and a little sharp sand, is said to suit them best.

19884 Habit of *Márica*, Leaves glaucous plicate, Stem 2—4 feet, Flowers solitary terminal spotted, Spathe 3 inches

PENTANDRIA.

- [lary, Involucrum 3-leaved, leaves ovate cordate entire, Sepals and petals oblong equalling the corona
 19885 Leaves entire ovate obtuse emarginate glaucous beneath, Petioles with many glands, Peduncles solitary axill-
 19886 Leaves membranous ovate acute entire, Stipules entire, Petioles glandular, Peduncles solitary 1-flowered
 19887 Lvs semiorbic. cuneate transv. trunc. obsc. 3-lobd 3-nvd 3-bristled gland. ben., Peduncles sol. or twin pend., Tube
 of Calyx with 10 gibbositates, Corona simple [dular, Peduncles 1—3-flwd, Flws small bractless
 19888 Lvs peltate 2—3-lobed the middle lobe very small the lateral ones divaricate ovate acuminate, Petioles biglan-
 19889 Lvs cuneate trifid slightly serrated gland. in the sinuses glauc. ben., Stips large, Petioles bigland., Peds 1-flwd
 involuc. by large ser. brcts, Corona triple [glands on margins, Seps lanc., Petals narrow, Corona double
 19890 Leaves 3-lobed ser., Petioles and vems beset with glandular hairs, Bracts leaf-like cut with several large green
 19891 Lvs smth 3-lobd cord. 5-nvd at base, Lvs ov. with gland. sers at base, Petioles biglan. Stips cord. half stm-clsngng
 19892 Leaves bifid bat-winged, Stems slender, Flowers starry orange the first day and lilac the second
 19893 Lvs 3-lobed serrated, Petioles biglandular at top longer than peduncles, Bracts serrated, Sepals beset with gland-
 like warts on the margins, Corona shorter than petals [lar in middle, Pedicels twin 2—3-bracteate
 19894 Leaves membranous hispid 3-lobed elliptate cordate at base a little toothed apiculated, Petioles hispid biglandu-
 19895 Slender hairy, Leaves 3-lobed, Flowers sweet-scented white, the corona variegated with red

19896 Lvs glabrous 3-lobed, Lobes obtuse, lateral ones furnished with an appendage, Bracts bristle-formed glandular
 at apex remote from the flower, Petioles biglandular

19897 Leaves downy cordate at base broadly 3-lobed, Lobes ovate acute, Petioles biglandular, Pedicels twin 1-flwd,
 Bracts bristle-formed

19898 Leaves white from down beneath trifid beyond the middle, Lobes serrated, Stipules pinnate, Petioles with
 4—8 glands [ovate acuminate, Peduncles 1-flowered, Flowers glabrous

19899 Leaves tripartite cordate at base, Segments ovate-lanceolate serrated, Petioles with many glands, Stipules semi-

19900 Leaves downy beneath 3-lobd, Lobes serrated, Petioles with several glands, Bracts united at base downy, Stipules
 roundish toothed in a crested manner

19901 Leaves tomentose beneath reticulately veined deeply 3-lobed, Lobes acute serrated, Petioles glandless, Bracts
 glandularly toothed

HEXANDRIA.

[peduncles, Petals dotted with white and black at base
 19902 Leaves plicate 1½ to 2 feet long, Peduncles clasped closely by 3—4 bracts, Spathe many-flowered shorter than

OCTANDRIA.

19903 Spiny tall subsucculent, Leaves trifoliolate, Leaflets lanceolate acuminate, Flowers axillary fasciated

DECANDRIA.

[distinct, Peduncles terminal 2-flowered, Petals emarginate, Stamens free
 19904 Erect pilose, Stem terete, Leaves cordate opposite 3-lobed, Segments ovate coarsely lobed, Stipules triangular
 19905 Annual prostrate hairy, Leaves on long p. tioles rather fleshy 5-lobed, the lower lobes much the smallest, the
 others 3-lobed and slightly serrated, Peduncles 2-flowered, Petals obovate entire [capitate

19906 Lifts usually 12 pairs lanc. -obl. cuspidately acum., Stams length of Cor., Brchts and Petis downy, Flws densely

19907 Leaflets 6—8 pairs oblong-lanceolate cuspidately acuminate, Bracts connate downy 3 times as long as tube of
 calyx, Flowers densely capitate, Stamens 11 free shorter than corolla

19908 Leaflets 4 pairs unequal-sided oblong or oblong-obovate cuspidately acuminate glanduliferous at base, Flowers
 racemose, Involucrum and Calyx tomentose

19905

and Miscellaneous Particulars.

3140. *Gelasine azurea*. This is a very pretty plant, with the habit of *Moræ'a*, and will thrive in a mixture of loam,
 peat, and sand, and is increased by offsets.

3141. *Lurúnga scádens*. This is a climbing hothouse plant. It will grow in any light rich soil, and can be easily
 increased by cuttings in the usual way. The plant may be trained to a rafter or trellis.

1464. *Biótonea grándiceps* and *Aríza* require to be grown in a moist stove. A free soil is the best for them—
 Planted out in a border, or in a large tub, they form splendid objects. The best way of propagating the species is by
 seeds, when they can be procured, which germinate readily in a hotbed.

History, Use, Propagation, Culture,

3142. *Wallsura*. The *W. robusta* is a large timber tree; and the bark of *W. pisicidia* thrown into fishponds soon causes the fish to float upon the surface of the water, as is the case with Indian berries (*Cocculus indicus*), rendering the fish easily caught; and the fish so caught is said to be not the less wholesome. The trees are cultivated and propagated in the same manner as ordinary stove plants.

3143. *Cheirostemon platanoides* is a noble tree, growing 15 feet in diameter, and 100 feet and more in height. It succeeds well in turfy loam and peat, or any light rich soil. Half-ripened cuttings will strike root under a hand-glass, but the leaves should not be shortened. It is generally called the hand-plant.

3144. *Napoleona imperialis*. This shrub has excited more than ordinary interest, arising partly from the circumstance under which it was first discovered, and partly from its name, given in honour of one of the most remarkable men that ever lived, and still more from the singular structure of the flowers as exhibited by Baron Palisot de Beauvais, so remarkable, indeed, that doubts have been expressed of the very existence of such a plant. It was discovered by him in the year 1786, in the kingdom of Warea, in Benin, on the west coast of Africa; and the author justly prides himself upon the discovery of the *Napoleona*, as likely to constitute a new order of plants between

- [nectary is not present]
 19909 Lvs pinnate, Leaflets 5 lanceolate, Panicles terminal and axillary, Filaments distinct consequently the exterior
 19910 Leaves subternate, Leaflets oblong obtuse
 19911 Leaves 5-6-lobed palmate-nerved, Flowers bibracteate hairy tomentose opposite the leaves, Stamens 5 joined at base and recurved at top giving the appearance of a hoary
 19912 Leaves rather coriaceous broad oblong acuminate, Flowers axillary apricot-coloured

DODECANDRIA.

- 19913 Arboreous, Branches tomentose, Leaves large downy cordate serrated 3-lobed, Lobes acuminate, Stipules ovate acuminate, Peduncles elongated tomentose dichotomously umbellate, Petals lanceolate falcately flexuous
 19914 Arboreous, Brnchs and Petioles hairy, Lvs cordate usually serrulated downy above tomentose beneath, Stipules ovate acuminate, Peduncles elongated, Corymbs compound, Sepals reflexed, Petals obliquely spatulate
 19915 Covered with stellate tomentum, Leaves roundish-cordate serrulated, Peduncles axillary, Cymes 10-12-flwd, Leaflets of Involucel roundish a little shorter than calyx reflexed and deciduous
 19916 Arbor. Brnchs clammy, Lvs rndsh cord. 3-5-lobd ser., Lbs acum., Stips cord. acute, Peduncs axil. nearly term. sol. bibract., Bracts cord. concave keeled, Pedic and Cals hairy, Pets spreading, Ster. Fils elong., Anthers 15
 19917 Lvs lanceolate acuminate serrated exstipulate pale green above but covered with scurfy stellate down beneath as are the branches, Flowers racemose at top of branches

POLYANDRIA.

- 19918 Branches puberulous, Stipules small falcate, Pinnæ 1 pair, Leaflets obovate falcate downy, Peduncles axillary fascicled glandularly downy
 19919 Branches and Petioles pilose, Stipules ovate acuminate, Pinnæ 3-4 pairs, Leaflets many pairs oblong-linear acutish ciliated pilose beneath, Peduncles longer than petioles, Bracts linear deciduous, Legumne villous
 19920 Lower lvs 5-lobed, upper ones palmately 5-cleft, Lobes toothed, Stems and Calyxes rough from stellate hairs
 19921 Prostrate hairy, Lvs on long petioles 3-5-lobed, Lobes oblong-cuneate deeply toothed, Stipules broad-ovate, Peduncles axillary solitary 1-flowered, Ovaria hairy about 13
 19922 Hairy subshrubby deciduous partly decumbent, Leaves sessile embracing the stem thrice pinnate or pinnatifid, Stipules ovate dry, Bracts often bifurcate, Corolla campanulate, Petals orbiclate
 19923 Downy, Leaves lobed or pedate 5-6-parted, cauline leaves divided into long linear lobes, Segments of Calyx ovate acute hairy, Leaves of Involucrum subulate, Flowers in terminal racemes
 19924 Stems elongated procumbent, Lvs deeply 3-parted, Lobes trifid or multifid lin.-lanc. acute, Stipules large broad, Peduncles axillary solitary 1-flwd, Leaflets of Involucrum 3 lin.-lanc., Petals purple cream-coloured at base
 19925 Lvs roundish-cordate 5-angled or 3-lobed crenate pilose, Stem Petioles and Peduncles hispid, Racemes bractless, Flowers twin, Petals emarginate, Involucrum 6-7-cleft
 19926 Covered with starry down, Leaves orbicular cordate hardly toothed, Flowers axillary solitary or crowded at tops of branches
 [Calyx large inflated 5-lobed 10-ribbed, Petals obliquely cuneate truncate, Stam. column exceeding petals
 19927 Lvs cord. 5-lobed coarsely serrated, Lobes acute constricted at base, Lvs of Involucel minute subulate about 9,
 β This is a fine hybrid between *H. Cameroni* and *H. Kosa sinensis*
 19928 Prickly, Lvs large shining cordate 5-7-lobed villous beneath, Stipules cordate acuminate, Peduncles axillary twin 1-flowered, Leaves of Involucrum 10 lanceolate, Calyx pentagonal hispid inflated in front
 19929 Lvs digitate, Lbs lanc. acum. toothed smooth, Flws axil. sol. on long peduncs, Lvs of Involucrum 12-19 narrow

and Miscellaneous Particulars.

Cucurbitaceæ and *Passifloræ*. In 1843, Mr. Whitfield, a celebrated collector of objects of natural history, returned from one of his many voyages to Sierra Leone, and brought with him living and dried specimens of the plant. In 1848 one of the living plants brought home by Mr. Whitfield flowered in one of the hothouses at Sion House, the seat of the Duke of Northumberland.

3145. *Astiria* is rather a handsome tree, with pink flowers. It is nearly related to *Ruizia*, and requires the same culture and treatment.

3146. *Asterotrichion*. The ordinary culture given to greenhouse shrubs will answer this plant.

3147. *Calliandra*. Pretty shrubs, with the habit of *Funga*, requiring the same culture and treatment.

19922. *Málva campanulata* should be kept in a cold frame in winter, and planted out into beds in summer, where it will make a fine show.

3148. *Lopimia malacophylla*. This is a pretty plant when in blossom, at which time it has much the appearance of *Chirõnia frutescens*. A mixture of loam, peat, and sand is a good soil for it; and half-ripened cuttings will root freely, planted in sand under a hand-glass in bottom heat. The best way of increasing it is by seed, if procurable.

Page 598. CLASS XVII.—DIADELPHIA. STAMENS united in two separate parcels.

Order 2. HEXANDRIA. Stamens 6.

3153. 1503a. *Dactylocâpnos*. Stamens 4, cruciate, deciduous; the 2 outer ones sessile, equally gibbous at base, the 2 inner ones on long claws. Petals 4—6, collected into 2 bodies. Berry cylindrical-oblong, many-seeded.

Order 4. DECANDRIA. Stamens 10.

3154. 1545a. *Brongniartia*. Calyx bibracteate, with a short tube: 3 lower segments elongated, linear-lanceolate;

History, Use, Propagation, Culture,

3149. *Fugôsia* is a genus of pretty plants, which will grow best in a mixture of loam, peat, and sand, and may be readily increased by cuttings or seeds. They should be treated like greenhouse species of *Hibiscus*.

19943. *Abutilon esculentum* is called *Bencao de Dios* in the province of Rio Janeiro in Brazil, where the inhabitants dress and eat the flowers with their viands.

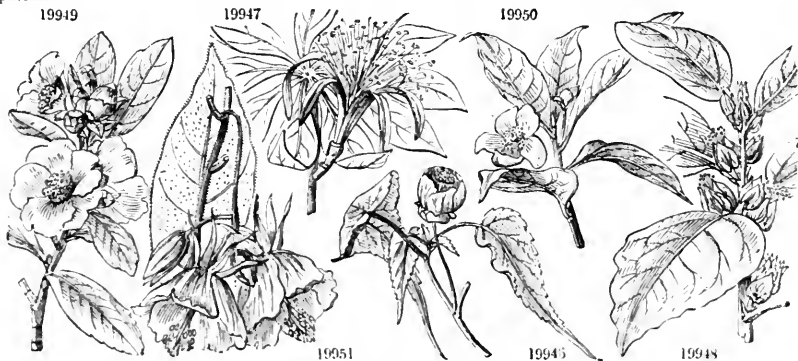

3150. *Goethia strictiflora* is a handsome small shrub, with scarlet peduncles and calyxes, and whitish corollas. Any rich light mould would suit it, and cuttings strike root readily. The plant thrives best in a moist warm heat.

- 19930 Branched, Lvs glab. divided to base into many linear segments which are again divided. Segments of Calyx lanceolate, Corolla blue with a crimson base (solitary 1-flwd bracteate, Invol. 1-leaved 10-12-parted)
- 19931 Covered with stellate hairs, Lvs cordate 3-5-lobed, Lobes obovate obtuse sinuately lobed, Peduncles axillary
- 19932 Tomentose, Leaves palmate cordate 3-5-lobed, Lobes obovate pinnatifid, Segments roundish rather crenate, Peduncles axillary 2-flowered, Involucel 15-toothed, Stigmas reflexed
- 19933 Branched, Lvs on long petioles ovate bluntish glabrous crenate or toothed, Petioles downy, Stipules subulate, Peduncles shorter than leaves
- 19934 Erect, Leaves bipinnate trifid or entire, Segments linear acuminate entire channelled rather fleshy, Peduncles axillary solitary 1-flowered bracteate, Corolla lilac with a dark base
- 19935 Glabrous, Leaves entire or tripartite filiform or trifid, Segments linear-lanceolate acuminate pinnatifid in the lower ones coarsely toothed, Involucel obsolete or 6-parted with subulate segments, Segments of Calyx acuminate 3-ribbed, Stigma clavate
- 19936 Glab. Lvs cord. deeply 7-lobed, Lobes lanc. acum. deeply ser., Stips subul. lanc., Peduncs axillary solitary 1-flwd jointed at top, Calyx large camp., Tube glob. with 16 lamellae, Petals broad spatul. conc. connivent veiny
- 19937 Leaves cordate 3-5-7-lobed, Lobes acuminate serrated, Peduncles terminal racemously umbellate, Carpels biseriate at top
- 19938 Hairy and downy, Leaves cordate obsoletely lobed and toothed, Peduncles axillary solitary 1-flowered, Petals imbricate yellow dark red at base, Carpels numerous downy incurved
- 19939 Leaves orbicularly cordate acuminate glabrous above but clothed with stellate tomentum beneath 5-7-nerved entire, Peduncles axillary solitary 1-flwd, Flws large, Petals rotuse yellow with an orange spot at base
- 19940 Glabrous, Leaves cordate acuminate 7-nerved, Peduncles axillary solitary or twin jointed at top, Calyx covered with powdery down, Petals concave roundish pointed, Fruit downy
- 19941 Branches hairy, Lvs downy 3-nerved at base, Stips subul., Peduncs axil. twin or tern 1-flwd hairy, Cal. ventric. 5-cleft with reflexed segments, Petals concave roundish veiny [globose villous mutic 13-16-celled
- 19942 Cord with rusty tom., Lvs ov.-lanc.-obl. obt. acum. toothed at top tom. bed., Flws corymb. capit., Caps. sub-
- 19943 Cloth-d with grey down, Leaves cordate acuminate, Flowers axillary solitary, Cells of Capsule 3-seeded
- 19944 Glabrous, Leaves cordate 3-5-lobed coarsely toothed acuminate, Peduncles axillary slender, Calyx campanulate, Petals erect ornamented with dark branched veins
- 19945 Lvs large cordate crenate, Flws pendulous with broad rich crimson veins almost covering the white ground
- 19946 Glabrous, Leaves cordate serrated tapering much to the apex entire, Peduncles solitary, Calyx truncate at base, Corolla large subglobose, Anthers collected into a globe exerted, Stigmas 10 capitate, Carpels 10
- 19947 Leaflets 7-11 oblong obovate cuneate at base acuminate at top glabrous, Flowers large, Tube of Calyx short truncate glandular at base, Petals very long white silky outside, Style slender, Stigma 5-lobed, Stamens yellowish red equal to petals, Anthers curved
- 19948 Leaves ovate acuminate coarsely and sinuately serrated at apex, Flowers axillary aggregate on short red peduncles, Involucrum red 4-leaved, Leaflets cordate, Corolla white
- 19949 Leaves ovate acute a little toothed, Peduncles 3-4-flowered pendulous, Petals longer than calyx
- 19950 Lvs obl.-lanc. acum. glab. entire on short petioles, Peduncs solit. axil. 1-flwd having 3-4 spatul. bracts under the flwr, Seps ov.-ellipt. concave rather hairy, Ovary hairy 5-cld, Lobes of Stigma rndsh foliac., Caps. pea-formed
- 19951 Leaves obovate-oblong serrulated, upper ones entire, Flowers sessile solitary usually axillary cream-coloured, Styles 4 hardly unconnected

the 2 upper segments joined into a lip, which is bidentate at apex. Bracts longer than calyx. Style filiform, simple at apex. Legume oblong-compressed, stipitate; the seminiferous suture wingless.

3155. 1551a. *Cajanus*. Calyx campanulate, 5-cleft: Segments subulate, incurved at apex; the 2 upper ones joined together higher up than the rest. Corolla with an ample vexillum, which is bilobed at base, and an obtuse straight keel. Legume oblong-compressed, oblique, tomentose, 2-valved. Seeds many, nearly round, separated by membranous partitions.

3156. 1636a. *Plagiolobium*. Calyx bilabiate: Upper lip broad and retuse; lower lip tripartite. Keel obtuse. Ovarium sessile. Style persistent, unilateral. Legume inflated coriaceous, obliquely transverse, 2-seeded. Seeds strophiolate.

and Miscellaneous Particulars.

3151. *Trochæta grandiflora* is a pretty shrub, with pendulous red peduncles and white flowers. It will grow best in a compost of sand, loam, and peat, or leaf mould; and young cuttings will strike root readily. It requires a moist heat.

3152. *Polyspora axillaris* is a beautiful shrub when in blossom. A mixture of loam, peat, and sand will suit it, and cuttings not too much ripened will strike root if planted in sand, placed under a hand glass in heat, or it may be grafted on the single red *Camellia japonica*.

3157. 1552a. *Wistaria*. Calyx campanulate rather bilabiate: Upper lip with 2 short teeth; lower lip with 3 subulate teeth. Vexillum bicallos. Wings conforming to the keel, which is 2-edged. Legume on a short stipe, coriaceous, 2-valved, 1-celled, rather torulose at the seeds.
3158. 1553a. *Physalidium*. Calyx campanulate, bilabiate: Upper lip bidentate; lower one tripartite. Corolla: Vexillum shortly unguiculate, broad, orbicular, subreflexed, longer than wings, exappendiculate at base; Wings adhering beyond the middle to the keel, which is incurved and obtuse. Ovarium many-ovulate. Style short, ascending glabrous. Stigma capitate. Legume oblong, turgid, coriaceous, many-celled. Seeds strophiolate.
3159. 1553b. *Hardenbergia*. Calyx campanulate, 5-toothed, subbilabiate. Vexillum orbicular, exappendiculate, hardly unguiculate, longer than wings, which are obliquely obovate-oblong. Keel adhering beyond the middle to the wings, incurved, obtuse. Style short, subulate. Stigma capitate, a little pencilled. Legume linear-compressed, somewhat many-celled, and many-seeded. Seeds strophiolate.
3160. 1553c. *Zichya*. Calyx campanulate, 4-cleft: Upper segment bidentate; the 3 lower ones approximating into a lower lip. Corolla: Vexillum, unguiculate, very broad, rather reflexed. Legume coriaceous, oblong-linear, compressed, thickened at seminiferous suture, many-celled, biappendiculate at base. Wings oblong, shorter than vexillum, adhering to the keel beyond the middle. Ovarium many-ovulate. Style short, subulate, dilated into a capitate stigma.
3161. 1553d. *Comptosia*. Calyx bracteate, 4-cleft. Petals of Corolla equal, obtuse, on long claws: Vexillum and Keel bicallos at base: Wings unicallos. Legume linear-oblong, many seeded. Vexillum ovate oblong: Keel of 2 nearly separate petals.

History, Use, Propagation, Culture,

3153. *Dactyloctenium thalictrifolia* grows freely in any light rich earth, and grows well against a south wall, training to a support. It is increased by seed.

3162. 1557a. *Platystylis*. Calyx campanulate, 5-cleft; the 2 upper lobes shortest. Style broad, spatulate, and villous at apex. Legume many-seeded. Seeds nearly globose.
3163. 1566a. *Calycotome*. Calyx bilabiate: Lips minutely toothed, short, deciduous, leaving a circumcised tube. Petals 4, free. Keel oblong, bluntly beaked. Glands of Stigma capitate. Legume oblong-linear, many-seeded, at length spongy. Endocarp coriaceous, separating from the epicarp.
3164. 1588a. *Onobrychis*. Calyx 5-cleft, nearly equal. Corolla with short wings and truncate keel. Legume of one compressed, indehiscent, echinated, crested or winged, 1-seeded joint, which is thickest on the upper suture.
3165. 1588b. *Oxyramphs*. Calyx bilabiate: Upper lip bidentate; lower tripartite. Petals of equal length. Vexillum acuminate, plicate. Keel beaked. Ovarium stipitate, compressed, elliptic-subrhomboid. Legume ovate, compressed, villous, 1-seeded.
3166. 1588c. *Amicia*. Calyx campanulate, 5-cleft: 2 upper lobes roundish, large; 2 lateral ones minute; the lowest one oblong, keeled, and concave. Corolla with an orbicular vexillum, and with the wings applied to the keel. Stamens monadelphous, with tube cleft in front. Legume linear, compressed, many-jointed: Joints truncate at both ends.
3167. 1591a. *Cyclôgync*. Calyx campanulate, with unequal segments. Vexillum emarginate. Wings short. Keel larger than wings, of 2 petals, which are connate at base. Ovarium villous, many-ovulate. Legume inflated, oblong, 1-celled.
3168. 1601a. *Lénnea*. Calyx campanulate, subbilabiate: Upper lip bidentate; lower one tridentate. Corolla: Vexillum obcordate, length of wings. Stamens monadelphous. Style filiform, with a pilose line. Stigma capitate.

HEXANDRIA.

- [lobes. Bracts oblong entire, Racemes elongated, Spur longer than pedicels
- 19952 Stem simple furnished with leafy scales under the leaves. Leaves biternate with tripartite segments and oblong
- 19953 Stem a little branched, Leaves bipinnate glaucous, Lobes oblong-linear, Bracts ovate-pointed, Capsule linear torulose twice as long as pedicels
- 19954 Glab. glauc., Stems and brnchs twisted, Petioles ending in branched tendrils, Lvs tritern., Racs axil. or opp. the lvs on long peduncs, Fls abt 20 lge obl. flsh yellow with rubesc. mouth, Berris obl. indehis. fleshy pale vi.
- 19955 Spurs 2 blunt ventricose short, Stems leafy, Segments of leaves obovate cuneated cut

- [Leaves supradecomposed with linear lobes
- 19956 Pods globose hardly mucronate, Floriferous Pedicels erect longer than bracts, Racemes short, Stems erectish,

OCTANDRIA.

- 19957 Shrubby, Leaves elliptic-acuminate at both ends, lower ones ovate, Branches downy, Racemes elongated

DECANDRIA.

- [rather deltoid, Calyx campanulate spathaceous, Vexillum linear cuneated straight long
- 19958 Arboreous prickly, Leaflets ovate acuminate 3-nerved glabrous rounded and truncate at base, the middle one
- 19959 A beautiful hybrid from *E. herbacea* impregnated by *E. Crista-galli*. It was reared at Sidney by Mr. Bidwill.

- 19960 Leaves pinnate, Leaflets obovate downy, Stipe of Legume scarcely longer than calyx, Wings continuous

- [Bracts ovate lanceolate
- 19961 Branches weak downy, Leaves oblong-lanceolate mucronate rather cordate at base, Stipules ovate acuminate,

- [Calyx straight, Legume glabrous
- 19962 Glabrous, Branches elongated twiggy 2-edged winged leafy, Leaves petiolate elliptic obovately linear, Teeth of

- [lose on the nerves beneath with revolute edges, Peduncles bibracteate equal to leaves
- 19963 Branches terete crowded with leaves villous, Leaves nearly sessile cordate acute mucronate scabrous above pi-

- 19964 Young brnchs terete, Lvs distich ov. obt. mut., Stips longer than petis, Peduncs solit. axil. 1-fl'd longer than lvs

- 19965 Brnchs ter. prost. downy, Lvs ellipt. muc. Peduncs elong. solit. 1-fl'd, Bracts downy, Cor. twice as long as calyx

- 19966 Procumbent, Branches terete diffuse filiform, Leaves ovate acutish rigid mucronate downy as are the branches,

- Flowers solitary axillary forming racemes at tops of branches [sistent hooked longer than petioles

- 19967 Branches terete villous, Leaves small orbicular retuse scabrous with revolute edges silky beneath, Stipules per-

and Miscellaneous Particulars.

19958. *Erythrina unbrda*. This tree is planted in Caraccas and Trinidad for shade to the plantations of *Theobroma Cacao*; for two rows of *Theobroma* there is one of *Erythrina*.

History, Use, Propagation, Culture.

3154. *Plagiobdium.* The species are worth cultivating in every collection of greenhouse plants, for the sake of the beauty of their flowers and for their holly-like leaves. They may be propagated by cuttings planted in a pot of sand, having a bell-glass placed over them: but better plants may be produced by seeds, which often ripen in our greenhouses.

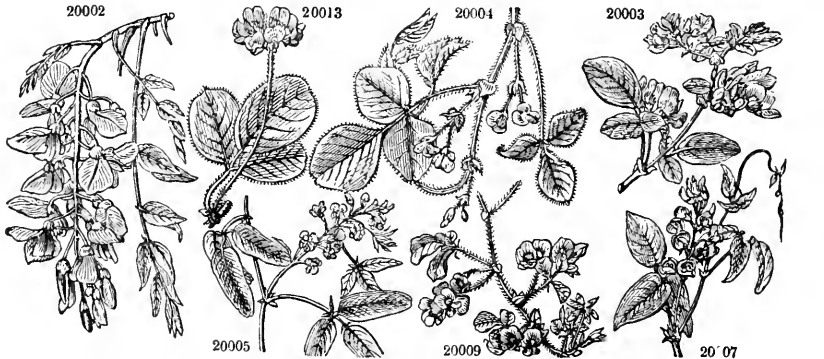

19987. *Ulex strictus*, the Irish furze, is an upright plant with soft spines. It is an excellent plant for hedges.

- 19968 Lvs elliptic-oblong acute glabrous as are the branches. Peduncles axillary solitary hardly longer than petioles
 19969 Lvs linear with rev. edges glab. or a little pilose stiff mucronately pungent, Stips bristle-formed, Pedicels a little longer than calyx, Ovarium stipitate glabrous [most sessile]
- 19970 Lvs slightly cordate at base mucronate. Calyx clothed with dark brown tomentum, Peduncs usually in pairs al-
 19971 Lvs lanc. glab. above and finely reticulated tom. ben., Raes axillary loose many-flwd, Upper Lip of Calyx large
 19972 Lvs lanc. obt. terminat. in a tuft of hairs glab. above clothed with long dense tom. ben., Branchs villous as are the legumes and calyxes, Peduncles almost sessile 1—2—3-flwd [nerve ending in a mucrone]
- 19973 Lvs lanc. with rev. edges tom. beneath and smooth above coriaceous tapering to the apex with strong middle
 19974 Lvs ov.-lanc. tap. to the apex muc. tom. ben. and smooth ab., Branchs vill., Peduncs very short few-fld, Fl. small
 19975 Lvs obl.-lin. or lanc. lower ones ellipt. retic. ab. dwy ben., Pedicels shorter than cal., Leg. stipi. glab. 3-seeded
 19976 Lvs lanc. tapering to both ends mucron. clothed with rusty tom. ben. as are the brnchs glab. ab., Peduncs 2—3-flwd, Pedicels longer than peduncles [Peduncles twin axillary]
- 19977 Lvs obl.-lin. mucron. smooth above tom. and retic. veined ben. with rev. edges, Branchs clothed with rusty tom.,
 19978 Leaves linear reticulate with revolute edges clothed with rusty tomentum beneath as well as legumes
 19979 Branchlets tomentose. Leaves oval spiny-toothed mucronate pungent reticulated beneath, Stipules spinescent, Peduncles 2—3-flowered, Calyx tomentose bracteate pungent glabrous, Legume roundish glabrous
- 19980 Leaves oblong-lanceolate spiny-toothed mucronate coriaceous glabrous, Pedicels axillary 3—4 together, Legume transverse glabrous
 19981 Leaves ovate or elliptic coriaceous spiny-toothed mucronate glabrous, Pedicels axillary twin legume kidney-shaped downy [neath, Stipules lanceolate short, Spikes terminal, Lower lip tridentate, Legume hairy]
- 19982 Branches nodulose, sterile ones mucronate, floral ones pendulous, Leaves trifoliolate, Leaflets elliptic silky be-
 19983 Hoary downy, Leaves trifoliolate, Leaflets obovate very blunt narrowed at base, Racemes terminal elongated [cate, Calyx and Corolla a little silky]
- 19984 Leaves few sessile trifoliolate and simple, Leaflets linear smoothish, Branches spinescent, Flowers alternate spi-
 19985 Leaves sessile trifoliolate and simple glabrous, Leaflets linear-lanceolate. Branches spiny, Spines branched, Racemes term., Calyx Corolla and Legume glabrous
 19986 Glabrous diffuse, Branches angular, Leaves ovate-elliptic veiny, Flowers racemose, Corolla three times longer than calyx, Legume 8—10-seeded.
- 19987 Erect, Leaves linear ciliated, Spines branched pubescent as are the branches
- 19988 Diffuse covered with glandular down, Leaves obovate toothed simple, Stipules entire, Peduncles long 1-flowered
 19989 Erect hairy unarmed, Leaves trifoliolate, Leaflets obovate serrated, Flowers solitary, Calyx inspid equal in length to corolla but twice the length of legume [sile distant alternate]
- 19990 Procumbent, Lvs pinnate villous as are the branches, Leaflets 22—35 oval-oblong equal, Heads numerous ses-
 19991 Erect white from silky down, Leaves pinnate, Leaflets 7—11 oval-acute, terminal one largest, Heads of Flowers subcompound bracteate, Bracts cuneate roundish hardly multifold, Calyx subcylindrical
- 19992 Hairy, Leaflets 7 lanceolate-linear, Flowers racemose verticillate, Whorls 5—6-flowered
 19993 Decumbent hardly caescent, Leaflets 7—5 oblong-lanceolate bluntish mucronate downy beneath, Flws densely racemose, Bracts pilose, Calyx bractl. downy, Legume elongated downy [Wings purple, Standard white]
- 19994 Downy pilose, Lfts 5—7 obl.-lanc. mucron., Raes elongated, Flws verticil., Leg. hairy tom. 8-seeded, Keel and
 19995 Caescent hairy, Stipules small subulate, Leaflets 7—9 oblong-lanceolate acute shorter than petioles, Flowers in loose whorls, Bracts short calucous, Corolla glabrous
- 19996 Decumbent downy, Leaflets 5—9 lanceolate, Stipules setaceous free, Racemes subverticillate, Bracts subulate, Corolla glabrous, Wings obtuse, Legume hairy slender about 4-seeded, Seeds cimerous clouded
 19997 Stem hairy a little branched, Leaflets 5—7 narrow obovate rather fleshy blunt silky beneath, Racemes whorled, Legume narrow tumid, Standard having a white spot in the middle
- 19998 Leaflets oval mucronate 9 pairs downy on midrib and beneath smooth above, Flowers axillary solitary dirty purple
 19999 Leaflets harsately 3-lobed, middle lobe on a long petiole, lateral lobes lobed, middle lobe elongated, Peduncles equaling the lvs many-flwd, Petals yellow twisted a little, Keel long acum. densely and spirally convol as style
- 20000 Vexillum purplish outside, Legume 4—5-seeded spotted, Stipules of lateral leaflets about equal in length to the petiolule [Vexillum 2-lobed]
- 20001 Twining pilose, Leaflets oval mucronate pubescent, Racemes erect axillary many-flowered shorter than leaves,

3155. *Brongniartia sericea* is a pretty shrub, and will thrive in any rich light soil; and young cuttings will root if planted in sand under a bell-glass.
 3156. *Cajanus* is generally propagated by seed received from the tropics, where they are used in the same manner as we do common peas, and esteemed a wholesome pulse, which some prefer to common peas. In Jamaica they are chiefly used for feeding pigeons.

History, Use, Propagation, Culture,

3157. *Wistaria* is a genus of splendid, early-flowering, climbing woody plants. They like a light soil best, but will grow in any soil. They are quite hardy. If planted and trained against a south wall, or to the front of a house, it flowers in great profusion. They are increased by cuttings.

3158. *Physalobium*. Splendid climbers, requiring the same treatment as *Hardenbergia*. Like the species of all the genera separated from *Kennedyia*, it is well fitted for training up rafters or trellis-work in a conservatory.

3159. *Hardenbergia* is a genus separated from the old genus *Kennedyia*. Loam, peat, and sand are found to be the

20002 Wings of Corolla with one auricle each, Ovarium villous

β Flowers pure white

20003 Halcy, Leaves trifoliate, Leaflets ovate-oblong, Racemes axillary, Peduncles pilose, Calyx villous, Flws scarlet, Standard with a yellow blotch at base

20004 Leaflets ovate or orbicular retuse mucronate silky pilose as are the branches, Stipules and bracts ovate-cordate, Peduncles 2-flowered axillary shorter than leaves, Keel shorter than wings

20005 Leaves trifoliate, Leaflets ovate-oblong retuse mucronate, Racemes many-flowered half-erect or partially drooping [ny-flowered, Vexillum acute

20006 Lvs digitate, Lfts 5 ovate-oblong obtuse, terminal one on a longer petiole, Stips triang. Raes pedunculate ma-

20007 Lvs trifoliate, Leaflets oblong-obtuse mucronate, Stipules ovate-acuminate, Raes many-flwd longer than leaves pedunculate

20008 Leaflet solitary simple cordate-ovate apiculate equal to petiole in length, Superior stipules ovate, Racemes many-flowered longer than leaves

20009 Leaflets 3 cuneate glabrous, Petioles and stems pilose, Stipules broad-ovate acute, Bracts deciduous, Peduncle 6-flowered length of leaves [Corymbs dense capitate many-flowered on long peduncles

20010 Villous, Leaflets 3 ovate obtuse, Segments of Calyx shorter than tube, Keel equal to wings, Style simple at apex

20011 Leaflets 3 obovate obtuse subrepand, lower ones ovate-lanceolate acute downy beneath, Keel nearly equal-

20012 Vexillum scarlet with a yellow base, Keel and wings purplish [ing wings, Style hardly dilated at apex

20013 Leaves trifoliate, Leaflets cuneate mucronate a little hairy above and silky beneath, Stipules ovate-acute, Peduncles many-flowered, Flowers umbellate. Calyxes covered with silky hairs

20014 Leaves trifoliate, Leaflets obovate emarginate clothed with silky hairs especially in the young state, Calyxes villous

20015 Glabrous, Leaves trifoliate, Leaflets elliptic retuse, middle one on a long petiole, Racemes compound axillary, Pedicels hardly equalling the calyx in length

20016 Stems many hairy, Leaflets 3 ovate pilose with fringed edges, Racemes pedunculate, Vexillum hardly [expanded

20017 Roots tuberous fascicled, Leaflets 3-4 pairs oblong-lanceolate cuspidate, Stipules semi-sagittate subulate, Pe- [duncles 4-6-flowered, Style jointed

20018 Villous, Root creeping. Leaves ternate and with 2 pairs of leaflets, uppermost ones simple, Leaflets long filiform, Stipules ovate-lanceolate acuminate, Racemes pedunculate filiform, Two upper teeth of Calyx shorter

20019 Leaflets 2-3 pairs approximate linear-lanceolate acute, Stipules equal in length to petiole, Peduncles few-flowered longer than leaves, Legume oblong

20020 Leaflets 1 pair linear-subulate, Stipules semi-sagittate subulate longer than petiole, Peduncles few-flowered longer than leaves, Style jointed spatulate, Legume narrow

20021 Suffruticose branched glaucous, Lvs 1 pair, Leaflets ovate sessile mucr. veiny, Stipules arrow-shaped, Flws very [dunc. racemose blue, Tendrils branched

20022 Glabrous, Stem angled, Leaflets 1 pair elliptic-ovate acute mucronate nerved, Tendrils twice trifid, Petioles very short, Stipules semi-sagittate, Peduncles many-flowered

20023 Downy, Stem 4-angled winged, Leaflets 1 pair oblong-lanceolate nerved mucronate tendrilled, Stipules semi-sagit., Tendrils trifid, Peduncles many-flwd, Calyx and ovarium silky [cles longer than lvs usually 4-flwd

20024 Suffrutic. tom., Stem angul. branched, Stips semi-sagit. twice as long as petis, Lfts obl.-linear mucr., Pedun-

20025 Suffruticose, Stems angular, Leaves on long petioles, Leaflets 1 pair lanceolate rather downy mucronate, Stipules minute, Peduncles 6-8-flowered longer than leaves

20026 Pilose, Stems angular, Leaflets 6 pairs elliptic retuse veined white beneath full of pellicud dots, Stipules small semi-sagittate entire, Peduncles many-flowered. Style pilose, Upper segments of Calyx long subulate

20027 Peduncles 1-7-flowered, Leaflets 3-4 pairs linear-acute, Tendrils simple, Legume sublinear-oblong mostly 6-seeded, Seed mottled [flowered, Legume lanceolate 14-20-seeded

20028 Leaves tendrilled, Leaflets ovate-oblong obtuse entire mucronate glabrous, Stipules toothed, Peduncles 8-10-

and Miscellaneous Particulars

best soil for the species. They require the same treatment as other twining greenhouse plants, by being trained up a rafter or on any convenient trellis-work.

3160. *Zichya*. Splendid greenhouse climbers, requiring the same culture and treatment as *Hardenbergia*.

3161. *Camposema* requires the same treatment as *Hardenbergia*.

3162. *Platystylis* is a genus of elegant early-flowering plants, well adapted for the front of flower-borders. A light sandy soil suits them best, and they are readily increased by seed, or by dividing the plants at the root.

History, Use, Propagation, Culture,

20030. *Cytisus Weldenii* is now a common shrub in our gardens and pleasure-grounds. It has leaves as large as those of *Laburnum*, but the racemes of flowers are erect.

3163. *Calycotome spinosa* is a pretty shrub, and will be hardy in mild winters. It grows in any light rich soil, in an airy situation. It may be propagated by layers, but best by seed.

3164. *Onobrychis* requires the same treatment as the species of *Hedýsarum*.

3165. *Oxyrámpnis macrostyla* is a pretty greenhouse shrub, and is said to grow freely in a mixture of sandy loam and peat. It loses its leaves in winter. The flowers are half crimson and half rose-coloured, disposed in

- [ed edges, Segments of calyx lanceolate elliptic bearded
 20029 Slender bruchd, Leaves ovate-elliptic acuminate 3-nerved, Flowers capitate, Bracts orbicular acum. with beard-
 β Leaves narrower
- 20030 Erect, Leaves ternate, Leaflets broad-elliptic entire obtuse glabrous, Racemes terminal pedunculate erect, Pe-
 dicels villous, Calyx 3-lobed ciliated, Keel villous, Legume glabrous
- 20031 Branches angular, Leaflets obovate-oblong, Legume glabrous
- [on the ordinary Locust Tree
 20032 Unarmed, Leaflets ovate roundish, Branches and Peduncles glabrous, the three lower teeth of Calyx acumi-
 nated, Flower large rose-coloured racemose
- [bracteate at base
 20033 Petioles spinescent, Leaflets 4—5 pairs oval obtuse apiculated silky, Peduncles 3-flowered, Calyx glabrous bi-
 20034 Leaflets 2 pairs ovate acute glabrous, Stipules spinose
- [gume inflated stipitate
 20035 Hoary tomentose, Leaflets 5—8 pairs oblong or retuse, Racemes many-flowered, Calyx woolly hibracteate, Le-
 20036 Suffruticose smooth, Leaflets 9—15 pairs linear-oblong retuse, Racemes few-flowered, Pedicels bractless, Calyx
 ciliated toothed, Standard yellow at base
- 20037 Herbaceous villous decumbent, Leaves opposite seldom alternate obovate-oblong. Stipules toothed, Peduncles
 few-flowered umbellate shorter than leaves, Segments of Calyx acuminate. Ovarium shaggy
- 20038 Leaflets 2—3 pairs ovate shining glabrous, Racemes erect few-flowered, Vexillum straight bluntish
- 20039 Erect glabrous, Leaflets oblong apiculated ciliated, Stipules adnate, Racemes terminal and lateral, Peduncles se-
 tose, Calyxes ciliated
- 20040 Stem erect hispid, Leaflets ovate obtuse mucronate hairy beneath, Spike long many-flowered, Wings of Corolla
 sagittate much shorter than calyx, Calyx and Legume villous
- 20041 Leaves trifoliolate, Leaflets obovate retuse coriaceous mucronate silky villous beneath as are the branches, Ra-
 cemes axillary, Legumes ovate compressed 1-seeded villous

- 20042 Leaflets 2 pairs cuneate obovate truncate retuse, Legumes biarticulate
- [dense, Calyx 5-toothed. Vexillum oblong, upper edge of Keel villous
 20043 Glabrous glaucescent, Leaflets 2—6 pairs ovate obtuse mucronate with a few peltate hairs beneath, Racemes
 20044 Cltdh with rufes. down, Lifts 10—16 prs oval ret. muc., Spks axil., Brts and Stips lin. hisp., Teeth of Cal. ov. ac.
 20045 Downy, Leaflets 18—22 pairs linear acute, Racemes axillary sessile, Calyx cup-shaped, Ovarium 7-ovulate
- [downy. Style glabrous, Stigma capitate
 20046 Leaflets 9—10 pairs oblong obtuse downy, Racemes axillary horizontal many-flowered, Calyx bibracteolate
- [ecolate sagittate, Bracts linear subulate
 20047 Stem angular flexuous, Leaflets usually 5 pairs ovate-oblong rather retuse mucronate glaucescent, Stipules lan-
 20048 Stem striated flexuous, Leaflets usually 5—8 pairs oblong downy mucronate 2-lobed, Stipules ovate-lanceolate
 acute serrated sagittate, Flowers crowded, Bracts subulate
- 20049 Clothed with white down, Stems numerous villous, Leaves pinnate, Leaflets 13—15 obovate-oblong smooth above
 and white from down beneath, Peduncles erect many-flowered, Flowers almost sessile
- [of Cor. equal
 20050 Flws in capi. heads ov. ses., Brts limbri. tom., Cal. plumose 5-cleft, Lvs woolly, Lifts 3 pairs oval awncd, Segs
 20051 Flws axil. ses. somewhat capit., Cal. 5-cleft rather longer than cor. with woolly lobes, Lifts 6—7 pairs lanc. vil.
 20052 Tomntose prostrate branched, Stipules concrete, Leaflets 11—14 pairs elliptic retuse, Peduncles racemose,
 Legume hairy

and Miscellaneous Particulars.

a short close raceme. The leaves are much like those of a species of *Tephrosia*.

3165. *Amicia* requires the culture and treatment of other hothouse climbing shrubs.

3167. *Cyclopne canescens* is a pretty greenhouse plant. The flowers are numerous, purple, with a blotch of green in the centre. A rich loam and airy place in the greenhouse is said to suit it best.

3168. *Lennæa*. This is a shrub with small impari-pinnate leaves, and clusters of pretty drooping flowers. It loses its leaves in winter, and grows well in the open air in summer; but, as it flowers in May or earlier, it can only be treated as a greenhouse plant.

History, Use, Propagation, Culture,

3169. *Astartea fascicularis* is a very pretty greenhouse shrub, and differs principally from *Melaleuca* in the bundles of stamens being alternate with the petals, not opposite to them as in that genus; and in the flowers being pedicellate

- 20053 Erect silky, Leaflets 3—5 obovate-oblong mucronate glandular beneath, Spikes ovate, Calyx downy with lanceolate pointed teeth
- 20054 Lfts obcord. or obl. ser. upper ones lanc., Stips subu., Racs loose, Pedicels half as long as calyx, Wings and Stand. equal longer than keel, Pods ov. obt. muc. ruded and slightly keeled on back, transvly. plic. rug. glab. [Teeth elong., Wings shorter than obov. vexillum and longer than apiculated keel, Legume obl. 3—4-seeded
- 20055 Ascending, Leaflets rhomb-oval denticulate, Heads globose terminal, Flowers reflexed, Tube of Calyx short,
- 20056 Leaflets roundish spinosely denticulate, Stipules large membranous entire cuspidate, Heads round involucreted, Leaflets of Involucrum connate at base ovate-lanceolate acuminate with membranous edges
- 20057 Leaflets 7 pairs ovate or oblong mucronate, Stipules ovate, Umbels many-flowered capitate, Peduncles furnished with a simple or trifoliate bract just under the umbel, Teeth of Calyx very short
- 20058 Glabrous, Leaflets 4—5 pairs elliptic yellowish green membranous retusely emarginate at top, Racemes solitary, Teeth of Calyx puberulous on the margin
- 20059 Leaflets rhomb-obovate apiculate denticulate towards the top, Stipules pinnatifid, Peduncles usually 3-fldw, Legume depressed biconvex of 5 circles veinly with smooth edges

3171. 1619c. *Catiphora*. Calyx 5-parted, with jagged segments. Petals 5, unguiculate. Scales 5, emarginate or 4-toothed at apex, each furnished with 4 sterile filaments inside. Stamens numerous, disposed in 5 bundles. Style trigonal. Stigmas 3, connivent. Capsule ovate-oblong, with elevated spiral ribs, and covered by the reflexed calyx, 1-celled, many-seeded, opening at 3 of the sutures. Seeds angular, echinate.

3172. 1619d. *Microsperma*. Calyx with an ovate tube and a 5-parted spreading limb. Petals 5, spreading, obovate. Stamens numerous, in 5 bundles, joined with the bases of the petals. Ovarium free at top. Style filiform. Stigma 5-furrowed, not divided. Capsule 1-celled, many-seeded. Receptacles 5, filiform, parallel. Seeds numerous, very minute, oval-oblong, angular.

POLYANDRIA.

- [Flowers spicate, Calyx glabrous
- 20060 Leaves alternate approximate subimbricate ovate-lanceolate acuminate broad at base sessile spreading at top,
- 20061 Leaves alternate terete stiff mucronate glabrous in adult state, Heads of Flowers small globose hairy the rachis villous, Bundles of Stamens 4—6-anthered with the claws equal in length to petals
- 20062 Leaves alternate coriaceous linear-oblong narrow at base veinless, Flowers axillary dense quite glabrous, Bundles of Stamens 8—12-anthered a little longer than petals
- 20063 Branches twiggy glabrous, Leaves alternate linear acute glabrous distant recurved at top, Bundles of Stamens few-anthered, having the claws length of petals
- 20064 Leaves opposite linear fleshy downy disposed in axillary fascicles when young, Flowers pedicellate axillary solitary
- 20065 Leaves elliptic ciliated rather hairy on the nerves

- 20066 Bundles of Stamens equal polyandrous, Leaves clavate downy
- 20067 Glabrous, Leaves opposite or subverticillate tern or quatern strict very long terete filiform mucronate, Flowers numerous unilateral tetramerous, Bundles of Stamens nearly equal 5—7-androus declinate pinnatifid
- 20068 Brnchs strag. rthr slen., Lvs oval ses. obt. ent. smth pale green small, Clusters of Fls short, Style very long
- 20069 Rameal Leaves imbricate linear-lanceolate keeled obtuse 3-nerved at base, Floral Leaves cordate-ovate 3-nerved marginate, Bundles of Stamens hexandrous downy at base, Heads globose
- 20070 Leaves linear obtuse flat or lanceolate 3-nerved marginate spreading pilose as are the branches, Bundles of Stamens 3—4-androus villous at base

and Miscellaneous Particulars.

not aduate to the branches. The plant grows and flowers freely in equal parts of loam, peat, and sand; and ripened cuttings, not too old, strike root freely in sand under a bell-glass.

Page 660. CLASS XIX.—SYNGENESIA. STAMENS 5. ANTHERS united by their edges.

Order 1. ÆQUALIS. Florets of the disk and ray all hermaphrodite.

3173. 1627a. *Mulgédium*. Heads many-flowered. Involucrum calyculately imbricate: outer scales much the shortest, imbricate. Receptacle naked foveolate. Achenia glabrous, compressed, often nerved, tapering above into a beak expanded into a cup-shaped ciliated disk. Pappus in one or few series. Bristles stiff, scabrous.

3174. 1650a. *Achyrophorus*. All as in *Hypochaeris*, except that the pappus is in one series and plumose.

3175. 1668a. *Rhaponticum*. Heads many-flowered equal. Scales of involucre in many series adpressed, ending each in an entire or toothed acuminate or roundish appendage with scabrous margins. Receptacle beset with linear fibrillæ. Corollas all 5-cleft, nearly regular. Filaments papillose. Anthers terminated by an appendage. Achenia oblong, compressed, glabrous, with an oblique basilar areola. Pappus rufoescent, in many series. Bristles stiff, scabrous.

3176. 1702a. *Cerádia*. Heads few-flowered, rayless. Receptacle flat, alveolate. Involucrum 5-leaved, naked at base. Florets of the ray female, with oblong terete downy achenia. Pappus in many series, setose, scabrous. Corollas filiform, truncate, shorter than styles; and branches of style linear obtuse. Florets of the disk male with short linear achenia, and smaller subdeciduous pappus. Corollas ventricose, 5-toothed. Style filiform, truncate. Anthers mutic at base.

3177. 1706a. *Barnadézia*. Heads many-flowered. Involucrum turbinate, of many series of imbricate scales: outer scales radiating. Palææ of receptacle dense, hair-formed, twisted. Flowers all bilabiate. Anthers tailless. Achenia turbinate, villous. Pappus in one series, plumose.

3178. 1706b. *Stiffia*. Heads discous, many- and equal-flowered. Involucrum closely imbricate. Scales coriaceous, dry, many-nerved, ovate-rounded; inner ones linear. Receptacle alveolate, naked. Corollas subcoriaceous, glabrous, regular, 5-cleft, 10-nerved. Lobes cinnately revolute. Filaments smooth. Anthers exerted, long-tailed. Style gla-

*History, Use, Propagation, Culture,*

20073. *Symplocos japonica* is much used by the Japanese for decorating the shrines of their idols. It is known in Japan by the name of *Kuroggi*. When Thunberg first discovered the tree he took it for a myrtle, and Fortune for a holly.

20075. *Citrus japonica* is called *Kumquat* by the Chinese; and the *Kumquat* groves of the Island of Chusan are formed on the sides of hills in those situations where the tea plant (*Thea viridis*) flourishes, and attain the height of 6 feet. The fruit ripens late in autumn, being then about the size of a gooseberry, of an oval form, having a sweet rind and a sharp acid pulp. It is largely used by the Chinese as a preserve, and very frequently finds its way to England as presents to those who have friends in China. Preserved in sugar according to the Chinese method, it is said

- 20071 Leaves oblong-cuneate toothed, Flowers solitary, Bundles of Stamens tetrandrous, Branches pilose, Petals [emarginate
 20072 Lvs lin. quite ent. vil. when young but glab. in adult state, Floral ones naked at top, Flws at tops of branches
 among the lvs on short pedicels, Petals obl. obov. emarg., Sepals acum. hoary downy outside longer than petals
 20073 Leaves obovate cuspidate green and shining bay-like, Flowers in axillary clusters
- [very sapid, Hind brownish orange
 20074 Shrub spiny, Leaves lanceolate tapering to both ends a little toothed, Petioles linear, Fruit compressed, Pulp
 20075 Petioles winged, Stem angular, Flowers axillary solitary or twin, Fruit 9-celled
- 20076 Shrub spiny, Leaves emarginate oval-oblong nearly sessile quite entire obtuse with parallel veins, Flowers
 axillary fascicled or solitary
- 20077 Herbaceous, Leaves 4 in a whorl
 20078 Stems erect or ascending terete, Leaves linear obtuse with revolute margins, Flowers cymose, Sepals rather un-
 equal lanc. ac. with gland. serratures and num. black dots ben., Stams about 30, Styles half as long as capsule
 20079 Erect downy dichotomous beset with pungent bristles, Leaves rhomb-ovate or lanceolate acuminate lobed
 serrated, lower ones petiolate, upper ones ses., Racemes term. leafy, Petals bidentate and Cal. reflexed
 20080 Hispid robust erect, Leaves impari-pinnate, Pinnae 3 pairs oval ultimate ones confluent, Segments serrated, Cal-
 yx campan. hispid, Petals white downy ending in 2 bristles at apex scaly boat-shaped white striped with red
 20081 Bristly, Leaves opposite elongated pinnatifid, Lobes of Calyx pinnatifid, Appendages 2 clavate filiform at top
 of smaller petals, Styles 3 winged, Epigynous disk lobed, Fruit straight turbinate
 20082 A beautiful garden hybrid with scarlet flower
- 20083 Leaves ovate acute lobed serrated, Peduncles elongated 1-flowered, Flowers large, Petals acute, Stamens
 exceeding the petals

trous, bifid. Achenia glabrous, elongated, short-beaked. Pappus paleaceous, in many series, long, unequal. Paleæ
 linear, serrated.

3179. 1708a. *Hebeclinium*. Heads many-flowered. Involucrum campanulate: Scales in many series, subimbricate,
 often ending in a coloured appendage. Receptacle elevated, hairy. Achenia angular. Pappus in one series, scar-
 brous.

3180. 1713a. *Chabraea*. Involucrum campanulate: Scales in two series, oblong. Receptacle chaffless. Corollas
 all bilabiate, glabrous: Outer lobe of disk florets tridentate; inner lobe bipartite, with the lobes usually concrete:
 Outer lobe of ray florets strap-shaped, revolute, tridentate; inner lobe smaller, bipartite. Anthers bisetose at base and
 appendiculate at apex. Achenia ovate, cylindrical, beakless, papillose setose. Pappus in one series. Paleæ concrete,
 combined into a ring at base, equal, subplumose.

Order 2. SUPERFLUA. Florets of the disk hermaphrodite, of the ray female.

3181. 1730a. *Helipterum*. All as in *Helichrysum*, except that the pappus is plumose.

3182. 1744a. *Monolopia*. Heads many-flowered. Florets of the ray ligulate, sometimes subbilabiate; those of the
 disk tubular, hispid. Scales of involucrum 8-10, in one series, concrete to the middle. Receptacle convex, chaffless.
 Anthers tailless. Branches of the styles of ray florets terminated by a cone. Achenia glabrous.

3183. 1746a. *Eurybia*. Heads many-flowered. Ray florets in one series, ligulate. Receptacle small, flat, or a
 little convex, alveolate. Involucrum imbricate with chartaceous scales. Stigmas of the ray florets elongated, erect,
 obtuse, scarcely hispid. Achenia obovate-oblong, cylindrical, striated, or angularly winged, glabrous or downy at top.
 Pappus in one series. Bristles scarbrous.

3184. 1746b. *Oleëria*. Heads many-flowered. Ray florets in one series, ligulate. Receptacle alveolate, flattish,
 seated on the top of a hollow oboconical peduncle. Scales of involucrum at first adpressed, but at length spreading.

to be excellent. *Citrus deliciösa* is nearly allied to *Citrus nobilis*, the mandarin orange, with which it is confounded
 in Italian gardens. It differs from that kind of orange in the plant being spiny, in the leaves being a little toothed,
 and in the fruit being small, 2 inches in diameter, and by no red outside or inside, and has a very agreeable pulp.

3170. *Severinia buxifolia* is the small box-leaved orange. It is best propagated by grafting on the common orange,
 3171. *Citöphora* is a genus of pretty twining annual plants, with beautiful reddish flowers. They require the
 treatment of *Loösa* or other tender annuals.

3172. *Microsperma bartonioides* only requires to be treated like other tender annuals, by being raised on a hot-
 bed, and afterwards planted out in the open border.

Stigmas of disk florets shell-shaped. *Achenia* cylindrically tetragonal, villous. Pappus double: outer short, paleaceous; inner setose, long, and scabrous.

3185. 1746c. *Macharanthèra*. Heads radiate. Ligulæ female or neuter, linear, 3-nerved. Involucrum of many series, imbricate: Scales green with pale edges, spreading at top. Receptacle naked, alveolate, or fringed. Stigmas of the disk florets elongated at top, sterile. Anthers longer than corolla, mutic at base, and terminated by a cultriform appendage. *Achenia* compressed, hairy. Pappus pilose, equal.

3186. 1748a. *Espalètia*. Heads many-flowered, monœcious. Ray florets numerous; Disk florets bisexual, or male only from abortion. Involucrum campanulate, imbricate, of many leaves. Receptacle flattish, paleaceous: Paleæ membranous. Anthers exerted. Styles of ray florets bifid, slender; those of the disk florets simple. *Achenia* obovate, subangular, naked.

3187. 1749a. *Suamnerdâmia*. Heads many-flowered. Ray florets few, tridentate. Scales of involucrum imbricate, linear-oblong, obtuse, yellow, rather scabrous. Receptacle narrow, naked. Anthers of the disk florets tailed. Styles bifid, of the ray florets exerted; branches of those of the disk florets deflexed, both capitate. *Achenia* nearly terete. Pappus one series, hairy; the bristles rather clavate.

3188. 1752a. *Schæria*. Heads many-flowered. Florets all tubular; few in the circumference hermaphrodite, fertile; the rest central, male, sterile, with abortive styles. Involucrum cylindrical, of many series of scarious scales; outer scales shortest without any appendage, but the inner ones are furnished with a petaloid radiating appendage at top. Receptacle without paleæ, rather convex, alveolate. Corollas slender, 5-toothed. Styles in hermaphrodite florets bifid, swollen at base; in the male florets simple. Fertile achenia obovate, beakless, silky: Sterile ones filiform nearly naked, pilose at base. Pappus all similar, in one series, setose. Setæ serrated or subplumose.

3189. 1754c. *Burrièlia*. Heads many-flowered. Ray florets ligulate, female, obovate; Disk ones tubular, 5-cleft, hermaphrodite, or sterile from abortion. Involucrum spreadingly campanulate. Scales oval acuminate, a little longer than the disk, in 1 or 2 series, equal. Receptacle without paleæ. Lobes of disk florets bearded outside. *Achenia* of the disk tetragonal, with 3-4-leaved pappus; and those of the ray obcompressed, bearing long 2-3-awned pappus.

3190. 1754d. *Callichrœa*. Heads many-flowered. Scales of involucrum about 20, in two series; the outer series;

History, Use, Propagation, Culture,

3173. *Mulgedium macrorhizon* grows well in a mixture of loam, peat, and sand; but should only be planted in very dry situations, as the large fleshy roots are often destroyed by moisture in winter. It is an excellent plant for decorating rockwork among autumnal flowers.

covering the achenia of the female florets. Ray florets ligulate. Achenia fusiform, compressed, truncate: those of the hermaphrodite florets downy, crowned by pappus; those of the female florets naked and glabrous. Bristles of pappus numerous, in one series, serrulately scabrous, persistent. Receptacle flat, downy, scaly on the margins.

3191. 1754c. *Myridictis*. Heads many-flowered. Ray florets in 2-3 series, ligulate, entire. Receptacle naked. Scales of involucre in 2-3 series, linear, acute. Achenia compressed, flat, naked, glabrous, beakless, usually glanduliferous at apex.

3192. 1754f. *Hymenozys*. Heads many-flowered. Scales of involucre in 2 series, rigid, adpressed; inner ones longest. Receptacle conical, alveolate from paleæ, and furnished with small glands. Styles truncate, bearded. Achenia uniform, turbinate, villous. Pappus paleaceous. Paleæ 5-8, unequal, membranous, oval-lanceolate, acuminate, erect.

3193. 1754g. *Gynozys*. Heads many-flowered. Ray florets in one series ligulate, female; disk ones tubular, 5-toothed, hermaphrodite. Involucre in one series, with a few bracts at its base. Receptacle flat, alveolate. Styles of hermaphrodite florets drawn out into a hispid acute cone. Achenia beakless, wingless terete. Pappus uniform, pilose, in many series.

3194. 1757a. *Brachycome*. Heads many-flowered. Receptacle subconical, subalveolate, without paleæ. Involucre campanulate, of a few series of scales. Scales membranous on the margins. Achenia compressed laterally, beakless. Pappus subsetiform, very short.

Order 3. FRUSTRANEA. Florets of the disk fertile, of the ray sterile.

3195. 1800b. *Echinæa*. Heads many-flowered. Ray florets neuter, long, ligulate, in one series; disk ones hermaphrodite, 5-cleft, with scarcely any tube. Scales of involucre in 3 series, lanceolate, ciliated. Receptacle ovate, paleaceous. Paleæ stiff, cartilaginous at top, exceeding the disk florets. Filaments rising from the base of corollas. Branches of stigma tipped by a semilanceolate appendage. Achenia tetragonal, obpyramidal, thick, crowned by irregularly jagged deciduous pappus.

ÆQUALIS.

20084 Glab., Root thick, Stems prostrate, Lvs stem-clasping pin. pinnatifid sinuated or entire, Segms roundish toothd, Heads pedicellate subcorymb., Involucel twice shorter than involucre, Scales of invol. blackish when dry

20085 Stem simp. corymb. at top hairy, Lvs persistent obl. acute, Petioles short shaggy winged, Cauline leaves stem clasping ovate acum. with small teeth in middle but entire at ends hairy, Peduncs and invol. setose

[thickish scaly, Invol. farinously downy, Root thick
20086 Glab., Stems solid leafy, Lvs oblong toothed shining fleshy coriac, lower ones tapering to the base, Peduncs
20087 Leaves runcinate toothed or lyrate-runcinate, Cauline lvs sagittate entire or deeply toothed at base, Heads erect, Involucre and peduncles hispid. Outer scales of involucre lanceolate acuminate

20088 Leaves bipinnatifid with linear segments clothed with a few scattered hairs, Heads on long peduncles, Scales of involucre keeled, Receptacle naked, Ray flowers usually three

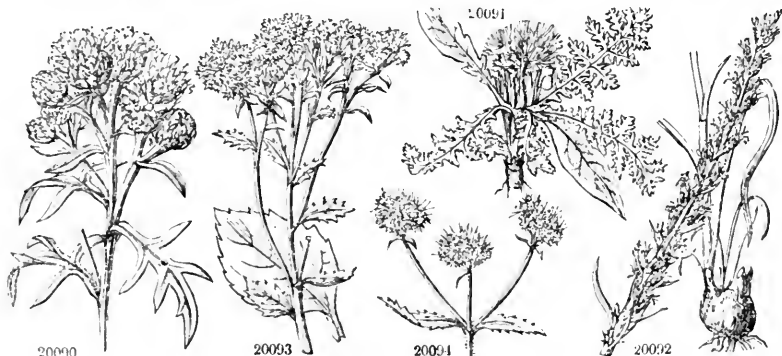

20089 Stem herbaceous downy corymbose at top, Leaves pinnate lobed, Lobes ending each in a spiny mucrone, Root fleshy

20090 Lvs scabrous pinnatifid, segments lin.-acute a little toothed, cauline leaves decurrent, upper ones undivided, Heads globose corymbose, Outer scales of invol. rather tomentose lanc. acum., middle and inner ones ending in a scarious coloured jagged erect appendage

20091 Leaves pinnate, Lobes pinnatifid or coarsely toothed, Heads sessile

[bracts loosely spiculate, Involucre about 6-flowered
20092 Root tuberous, Stems simple, Lvs remote dotted acum. ciliated at base, Heads in the axils of upper leaves or

[much larger ovate acute 3-nerved coarsely serrated, Invol. usually 5-flowered, Pappus crown-formed toothd
20093 Erect downy, Branches corymbose, Lvs opposite sessile cuneate at base lanc. usually quite entire, lower ones
20094 Smoothish, Lvs ovate or ovate-lanc. 3-nerved coarsely and bluntly serrated, Corymbs densely capitate, Invol. clothed with clammy down, Awns of pappus three, two of which are subulate and the third very small

and Miscellaneous Parts as.

3174. *Achyrophorus* requires the same treatment and culture as other hardy annuals.

3175. *Rhaphaniticum*. Cultivated and treated like ordinary perennial plants.

History, Use, Propagation, Culture,

3176. *Cerada furcata* is very nearly allied to *Klerneria*, and the fleshy-stemmed kinds of *Cacalia*. It is said it yields a kind of gum-resin similar to Olibanum. It requires the treatment of other greenhouse succulents.

3177. *Barnadezia rosea* is a spiny shrub with simple leaves and heads of rose-coloured flowers similar to those of *Mutisia*. It requires a warm greenhouse, giving plenty of water in summer but sparingly in winter. Cuttings will strike root in the usual manner.

3178. *Stiffia chrysantha*. This is a beautiful shrub when in blossom, with its simple leaves and heads of orange-coloured flowers. Cultivated and treated like other stove plants; cuttings will strike root in the ordinary way.

3179. *Hebeclinium ianthinum* is similar to *Azgeratum*, and answers well if treated like the species of that genus.

3180. *Chabrea runcinata* is a very pretty annual and may be grown in the open border. It is generally grown in pots like other tender annuals.

- 20095 Branches fleshy horned forked leafy at top, Lvs fascicled spatulate obtuse veinless glabrous, Peduncles solitary naked a little longer than leaves, Leaflets of invol. ovate with membranous edges
- 20096 Heads solitary ovate cylindrical downy sessile, Florets bilabiate, one lip oblong emarginate villous, the other filiform, Filaments free, Hairs on receptacle twisted, Pappus stiff plumose
- 20097 Leaves broad-lanceolate, Flowers in heads indefinite
- 20098 Clothed with rusty down, Lvs large on long stalks rhomb-ovate cuneated at base quite entire scabrous above and hoary and downy beneath, Corymbs terminal compound many-headed, Achenia angular glabrous, Scales of invol. without appendages
- 20099 Beset with pilose glands, Cauline leaves pinnatifid white beneath, Lobes remotish oblong acute entire or somewhat pinnatifid, Heads on long peduncles solitary, Invol. hemispheric with lanc. glandular scales, Achenia silky villous

SUPERFLUA.

- [spatulate green downy narrowed into petiole at base and a little stem-clasping
- 20100 Stems erect scabrous, Heads large solitary terminal, Scales of invol. white conniving ovate mucronate, Lvs obl. [base green on both surf., Heads white rose-col. outside, Inner sc. of invol.-radiat., Recep. naked, Pap. scaly
- 20101 Ascend. or erect scab., Bran. 1-headed, Lvs lanc.-obl., lower spatul. obt. entire narr. into petioles stem-clasp. at
- 20102 Clothed with hoary tomentum, Leaves long linear acute attenuated at base, Cauline ones remote and smaller, Stem simple one-headed
- 20103 Branches numerous slender covered with white tomentum, Lvs subulate erect imbricate, Peduncles scaly 1-flowered
- [sessile ovate-lanc. acum., Ligula linear, Invol. glandular squarrose
- 20104 Stems erect corymbose downy, Leaves glabrous shining, Radical ones spatulate on long petioles, Cauline ones [late, Peduncs axillary corymbosely paniced, Pedicels bracteate, Ray florets about sixty
- 20105 Covered with cobwebbed down, Lvs crowded at tips of branches cylindrical flat at top and often dilately spatulate [invol. ovate-lin. apiculate, Ray 20-flowered
- 20106 Beset with rusty down, Lvs lanc. on short petioles denticulate downy, Flowers corymbosely paniced, Scales of
- 20107 Erect glab. brnchd, Lvs lanc. acum. spinosely dentic., radical larger on longer petioles, cauline sessile, Corymbs large of many heads leafy, Peduncs and peds downy, Lfts of invol. lin. acum. subsquar., Achenia scabrous
- 20108 Villously tomentose, Stems simple 1-headed, Leaves ovate denticulate, Lower cauline leaves with a winged petiole which is auricled at base and stem-clasping, Achenia 4-cornered
- 20109 Lvs ligulate obscurely toothed obtuse half stem-clasping broader, Ligulae thrice as long as involucrem
- [Invol. glutin., Scales of invol. ending in long subul. points squar., Ray frts twice as long as disk ones
- 20110 Stem tall simp. corymb. at top, Lvs stem-clasp. at base coarsely tthd taper. to point from base, Brnchs 1-headed,
- 20111 Suffruticose clammy glab., Lvs oblong narrower at base toothd, Heads solitary pedunculate, Invol. subsquarrose very clammy, Receptacle flat [beneath, Heads densely paniced, Invol. villous
- 20112 Brnchs angular rather toment., Lvs alternate petiolate coriaceous obl. acute toothd glab. above and tomentose
- 20113 Lvs alternate on short petioles ovate-obl. dentately repand bluntish green and scabrous above clothed with yellow silky tomentum beneath as are the branchlets, Peduncs axillary 1-headed twice as long as leaves
- 20114 Clothed with white tomentum, Lvs elliptic-lanc. on short petioles sinuately toothd glabrous above, Peduncles on short branchlets nearly terminal solitary or subcorymbose bracteolate, Achenia tubercularly dotted
- 20115 Whole plant covered with felt except on the upper sides of the leaves which is of a shining green, Heads large solitary axillary on long peduncles, Leaves oblong entire

and Miscellaneous Particulars.

3181. *Helipterum* requires the same treatment as the Cape species of *Helichrysum*.
3182. *Monolopia major* is a rampant plant with dark green foliage growing in our gardens under the name of *Helium Douglasii*. It flowers in great perfection during the summer months, which renders it worthy of a place in the garden. The plant is of easy culture.
20110. *Grindelia grandiflora* comes nearest to *G. inuloides*, and will grow well in the open border in summer, where it makes a showy appearance.
3183. *Eurybia* is a genus of Australian shrubs separated from *Aster*. They only require the treatment and culture of ordinary greenhouse shrubs.
3184. *Oleäria* is similar to *Eurybia*, and the species require the same culture and treatment.

History, Use, Propagation, Culture.

3185. *Macheranthèra tanacetifolia* is a pretty half-shrubby plant with ascending stems and purple flowers resembling those of some species of *Aster*. It will flourish in the open air during summer. It may either be increased by cuttings or by seed; the latter method is the best, as the plant is said to be a biennial.

3186. *Espactia argentea* is a pretty plant when in blossom. A light sandy peat soil suits it best. It should be kept in an airy part of a greenhouse.

3187. *Swammerdamia* requires the treatment and culture of any ordinary greenhouse plant.

3188. *Schœnia oppositifolia* comes very near to *Helichrysum*, is equal in beauty to *Rhodanthe Manglesiæ*, and should be treated in the same manner. The ray and scales of involucre are rose colour, and the centre yellow.

3189. *Burrielia gracilis* is nearly allied to *Lathœnia*, but is readily distinguished from it by the different structure of the involucre. The present plant is often cultivated in our gardens under the name of *Lathœnia californica*.

20116 Downy, Leaves alternate pinnatifid, Heads solitary, Ligulæ purple

[corymbose bracteate, Lvs long-lanc. with oblique nerves, Rays of heads hardly exceeding the involucrem
20117 Clothed with silky tomentum, Stem short thick leafy at length floriferous elongated nearly naked paniculately
20118 Clothed with rufescent wool, Radical leaves lanceolate lined beneath, Corymbs loose simple, Ligulæ about 60

[petioles, Heads in panicles. Bristles of pappus like the antennæ of insects
20119 Branches angular, Leaves alternate obovate cuneate obtuse entire 1-nerved coriaceous whitish beneath on short
20120 Lvs small roundish dull green above white beneath, Branches straggling bearing small clusters of white flowers

[radiating red, Bristles of Pappus stiffish serrated
20121 Stem hairy canescent, Leaves opposite sessile lanceolate acute, Corymbs terminal, Scales of involucrem long

20122 Ligulæ and involucra 8—10—12, Leaves opposite lanceolate, Heads terminating the naked branches

20123 Very like *Burriëlia* in habit, Leaves alternate sessile, Heads solitary pedunculate, Ray florets large cuneate

20124 Stem erect hairy from articulated pili and bristles, Leaves petiolate membranous coarsely-toothed, Scales of invol. 2-3 series 1 near-oblong ciliate fringed, Achenea glandular

20125 Plant erect slender, Lvs pinnatifid glabrous, Peduncles filiform 1-headed, Scales of pappus 5 unequal serrated

20126 Scandent glabrous, Leaves alternate on longish petioles ovate or ovate-lanc. acute rather fleshy entire, Racemes corymbose terminal, Florets of the ray few, Bracts 4—6 spreading subulate

20127 Cauliscent divaricately branched, Leaves entire ciliated, lower ones obovate, upper ones lanceolate, Scales of involucrem smooth so taper-pointed as to appear awned

[exceeding the leaves downy
20128 Stems many ascending, Leaves subradical thick obovate entire attenuate at base rather downy, Scapes much

[of invol. obl. acutish membranous at apex, Achenea subterete clavate plicate at apex, Pappus almost wanting
20129 Glabrous, Stems erect branched, Lvs pinnate, Segms lin.-subulate distant quite entire, Peduncs 1-headed, Scales
β Flowers white very like those of the common daisy

[ovate acute coarsely serrated, Ligulæ female, Outer leaves of involucrem linear spreading
20130 Stem quite smooth fistular, Leaves bipinnate glabrous, upper ones linear undivided, Rachis winged, Leaflets

[Rachis of leaves downy beneath, Outer involucrem 5-leaved erect
20131 Stem almost wanting scaly glabrous 1-headed, Leaves pinnate glabrous, Pinnæ serrated, upper ones decurrent
20132 Stem solid scabrous hairy much branched, Leaflets ovate deeply toothed unequal at base, Heads crowded,

Peduncles slender glabrous at top
β Flowers resembling those of an *Anemone*

[entire, Paleæ bearded on back
20133 Herby toment., Stem shrubby erect brunched, Lvs pinnate, Segms short imbricate approx. 3-lobed, Lobes mu-
[per undiv., Cory. comp. fastig. 30—50-hdd, Sc. of invol. obov. obt. with membr. edg., Lig. 5—6 obov. glab.

20134 Stem shrub. erect nrly simp. white tom., Lvs nearly glab. pectinately pin., Segms distant nrly sessile tripar., up-
20135 Downy, Stems erect subangular or striated simple, Lvs pinnatifid rarely bipinnatifid, Rachis entire, Lbs lanc. obl. deeply scr. at apex, Corymbs compound fastig., Invol ov. obl. Ligulæ 5 obov. obt. hardly thd, Paleæ ac.

FRUSTRANEA.

20136 Stem hispid, Radical leaves fiddle-shaped running along the petiole, Cauline leaves lanc. subserrated

20137 This is a very pretty garden hybrid

20138 Plant rather scabrous, Radical leaves fiddle-shaped subtrilobed subdentate, Cauline leaves ovate-lanceolate, Paleæ shorter than florets

and Miscellaneous Particulars.

3190. *Callichrda platyglôssa* is nearly allied to *Burriëlia* and *Lasthënia*, and requires the same treatment.
3191. *Myriactis Gmelini* will require protection in severe weather. It should be treated like any ordinary herbaceous perennial. Vegetable mould suits it best.

3192. *Hymenoxys californica* is nearly allied to *Burriëlia* and *Callichrda*, and is treated in a similar manner.

3193. *Gynôxys frâgrans*. A pretty climbing plant with a tuberous root and very fragrant yellowish flowers. It is of easy culture and may be increased by cuttings.

3194. *Brachycome iberidifolium* is a most beautiful plant, the flowers exhibiting a variety of colours, as white, lilac, and dark purple. It flowers freely in the open border, and it has a very fine effect when grown in pots.

3195. *Echinâcea*. The species prefer a peat soil. otherwise they require the same treatment as ordinary perennial plants.

Page 748. CLASS XX. — GYNANDRIA.

Order 1. MONANDRIA. Stamens 1.

3196. 2747a. *Physosiphon*. Sepals combined into a ventricose tube, hispid at apex. Petals short, fleshy, in the bottom of the tube. Lip short, similar to petals. Column continuous with the ovarium short, mutic. Pollen masses 2, spherical. Habit of *Pleurothallis*.
3197. 1894a. *Centranthra*. Lateral sepals connate: upper one galeate. Petals smaller, cuneiform. Lip 3-lobed, articulated with the column. Lateral lobes small, acute: middle lobe ovate-obtuse. Column winged, rather membranous, jagged at top. Anthers apiculate, 1-celled. Pollen masses 2, cohering.
3198. 1894b. *Restrepia*. Sepals spreading: lateral ones under the lip, all connate. Petals filiform, with a triangular base. Lip free, similar, biauricular at base, or 2-horned, spreading. Column short, semiterete, drawn out into a wing at apex. Anther 1-celled. Pollen masses 2, waxy, oblong.
3199. 1897a. *Pliëone*. Lip undivided, broad, concave, having the disk crested, the margin fringed, and a free simple base. Column elongated, free, attenuated at base. Sepals and petals uniform. Pollen masses waxy, with a complete dissepiment.
3200. 1897b. *Earina*. Sepals erect, equal, acute, membranous, keeled. Petals fleshy, obtuse. Lip behind continuous with the column, fleshy, cucullate, 3-lobed, with a naked disk. Column short, terete. Anther 2-celled. Pollen masses 4, cohering by pairs, collateral.
3201. 1897c. *Trichosma*. Sepals spreading, equal: lateral ones drawn out at base, and adnate to the foot of the column. Petals conform, erect. Lip 3-lobed, crested, cucullate, articulated with the foot of the column. Column fleshy, marginate. Anther fleshy, arched, 2-celled. Valves vertical, with sphacelate margins. Pollen masses 8, cohering by fours, two in each bundle smaller.
3202. 1908a. *Epiphora*. Sepals free, acute. Petals shorter, obovate. Lip behind articulate with the base of the column, which is much drawn out at base. Lip sigmoid, unguiculate, keeled, 3-lobed. Column and stigma vertical, with 3 tubercles. Anther 1-celled. Pollen masses 4, fixed to linear caudicula.
3203. 1912a. *Mycarãnthos*. Sepals conniving or spreading, equal or unequal, woolly outside: lateral ones unequal at base, adnate to the foot of the column. Petals smaller. Lip articulate with the foot of the column, 3-lobed, cucullate, with a crested or appendiculate disk. Column short, drawn out a long way at base, with a winged introflexed margin. Anther 2-celled. Pollen masses 8, ovate.
3204. 1900a. *Ponera*. Sepals erect, fleshy: lateral ones larger, drawn out at base, combined with the elongated foot of the column; dorsal one flat. Petals oval, free, narrowed at base. Lip cuneate, 2-lobed, ascending, arched, articulated with the base of the column, naked. Column short, terete. Anther membranous, depressed, 4-celled. Stigma roundish, excavated, 2-lobed. Pollen masses 4, adhering by pairs.
3205. 1907a. *Eriopsis*. Sepals and petals almost uniform, oblong-obtuse. Lip concave, 3-lobed, lamellate in the disk, drawn out at the base, articulated with the column. Column semiterete, clavate, wingless. Anther oblong, 1-celled. Pollen masses 4, unequal, fixed by pairs to two elastic threads. Gland rather membranous, square.
3206. 1907b. *Hexadësma*. Sepals connivent: upper one oblong-lanceolate; lateral ones triangular, united with the column into a kind of spur. Petals oblong, about equal to the sepals. Lip articulated with base of the column, nearly entire, plicate. Column semiterete, shorter than petals, clavate at top. Anther 6-celled. Pollen masses 6, equal, four behind and two in front.
3207. 1907c. *Arpophyllum*. Perigone spreading. Sepals connate at base. Petals much narrower. Lip articulated with the drawn-out base of the column, undivided, concave, shortly spurred. Column erect. Pollen masses 8, pear-shaped, glutinous.
3208. 1907d. *Otochilus*. Sepals and petals similar. Lip 3-lobed: lateral lobes short, clasping the column; middle lobe elongated, spreading, crestless. Column elongated, semiterete, clavate. Anther 2-celled, 2-valved. Pollen masses incumbent, granular.
3209. 1907e. *Barkëria*. Sepals and petals equal, free, membranous, spreading. Lip flat, quite entire, naked, pressed to the column. Column petaloid. Anthers 4-celled, fleshy. Pollen masses 4, connate by pairs, on as many reflexed stipulate caudiculae. Flowers large, conspicuous, drooping.
3210. 1907f. *Arundinia*. Sepals linear-lanceolate, equal, spreading, connate a little at base. Petals conform, but broader. Lip convolute around the column, 3-lobed or entire, curled or lamellate in the middle. Column straight, parallel with the lip, semiterete, clavate. Anther 4-celled, truncate, roundish. Pollen masses 8, equal, cohering. Stigma arched, prominent, a little lobed.
3211. 2755a. *Wärrea*. Flowers subglobose, nearly regular, with a short rounded snout. Lip continuous, undivided, with fleshy elevated lines in centre. Column semiterete, clavate. Pollen masses 4, inserted by pairs on a short linear caudicula. Gland triangular. Terrestrial.
3212. 1911a. *Spathoglottis*. Sepals spreading, free, equal. Petals a little broader, spreading, or connivent. Lip articulated with the base of the column usually saccate, tripartite, middle segment unguiculate, tuberculate at base, or crested, generally with one tooth on each side. Column winged, petaloid. Anther 2-celled. Pollen masses 8.
3213. 1911b. *Schümnia*. Sepals fleshy, unequal: dorsal one linear, straight, free; lateral ones large, combined into a sac at base. Petals equal to the dorsal sepal. Lip minute, with a fleshy claw, articulate with the column,

- 20139 Stem branched angular, Leaves hispid, Heads of Flowers with a dark centre
- 20140 Stem branched angular hispid, Leaves petiolate acute tapering at base reticulately veined, lower ones ovate 7-nerved crenately toothed, upper ones lanceolate scabrous obscurely crenated, Stipules hispid on the back, Palea of receptacle pungent, Pappus very short nearly entire
- 20141 Glab., Lvs bipin., Lobes linear remote acute ent. or lobed, Outer Scales of Involuc. ov. acum. Achenia rough mutic or 1-2-awned [centre, Scales of Involuc. lanc. ac., Achenia glab. bistrisate
- 20142 Stem glab., Lvs petiol. bipin., Lobes subapic. with scab. margins, Ray Florets lilac ov-lanc. toothed at top or
- 20143 Stem downy, Leaves pinnate-parted hispid beneath with 2 pairs of lanceolate-oblong subserrated leaflets, the terminal one the largest, Outer Scales of Involucrum lanceolate acute shorter, Achenia bi-trisistrate
- 20144 White from tomentum, Lvs broad linear nearly sessile and stem-clasping entire or a little denticulated bearded at apex, Pappus double, Outer palea linear
- 23145 Stem branched furrowed, Leaves sessile glabrous pinnate, Lobes linear acute entire or a little toothed, Heads globose, Outer Scales of Involucrum drawn out into an ovate pectinately ciliated scabrous appendage, middle bristle longer stiffer and shining

NECESSARIA.

- 20146 Annual, Lvs ov-lanc. coarsely toothed, Peduncs furnished with large setac. brcts, Scales of Invol. reflex at top

tubercular. Limb simple, membranous. Column semiterete, auricled on both sides at apex. Pollen masses 2, waxy; with an elongated cuneated caudicula, and a small lunate gland.

3214. 1911c. *Ania*. Sepals and petals linear-lanceolate, conniving, uniform. Lip connate with the base of the column, which is often drawn out into a spur or sac, 3-lobed, flat, bilamellate in the middle. Column erect, elongated, winged. Anther 6-8-celled. Pollen masses 8.

3215. 2772a. *Dignáthe*. Flower solitary, resupinate, fleshy. Sepals and petals spreading, equal. Lip flat, recurved, rather sarcate at base, with two fleshy lamellæ adnate to the column. Column short, acute, rather conical, emarginate. Pollen masses 2, on a linear caudicula. Gland small, oval.

3216. 2772b. *Pilimna*. Ovary 3-ribbed. Sepals and petals equal, spreading, inserted obliquely. Lip adnate to column at base, nearly entire, unguiculate, convolute, inappendingulate. Column clavate, terete, surrounded by a membranous toothed hood at apex. Stigma vertical. Pollen masses 2, cleft behind, adnate to a short caudicula and ovate gland.

3217. 1902. *Ornitharium*. Flowers resupinate, closed, fleshy. Lateral sepals connate at base, parallel with the lip; the dorsal one separate. Petals conform. Lip free, unguiculate, fleshy, sagittate. Column semiterete, short. Stigma vertical. Pollen masses 2, on an obovate fleshy caudicula, with a triangular gland, and reflexed beak.

3218. 1892a. *Promina*-a. Sepals spreading. Lip 3-lobed: middle one crested, or with many tubercles. Column short, semiterete. Gland ovate. Pollen masses 4, sessile by pairs. The rest as in *Mazillaria*.

3219. 1892b. *Scuticaria*. Flowers ringent, drawn into a roundish snout in front. Lip continuous, membranous, 3-lobed, tuberculate in middle. Column semiterete, clavate. Pollen masses 4, inserted by pairs in a short linear caudicula. Gland triangular. The rest as in *Mazillaria*.

3220. 1892c. *Paphnia*. Flowers nearly regular, expanded, petaloid, rather drawn out into a snout. Lip small, unguiculate, tripartite, beset with filiform glands. Column clavate, elongated, semiterete, auricled at top. Pollen masses 4, fixed by pairs to an elongated caudicula, which is setaceous at top. Gland minute, rather triangular. Rostellum subulate. The rest as in *Mazillaria*.

3221. 1892d. *Lycaste*. Flowers ringent, drawn out into a short snout at base. Petals usually dissimilar. Lip furnished with an entire or emarginate, fleshy, transverse appendage in the middle. Column elongated, semiterete, usually pilose. Pollen masses 4, adnate by pairs to a narrow elongated caudicula. Gland small, roundish. Rostellum subulate. The rest as in *Mazillaria*.

3222. 1892e. *Colax*. Flowers subglobose, scarcely ringent, drawn out in a short snout. Sepals and petals nearly equal. Lip unguiculate, 3-lobed, inappendingulate, flattish. Column rather elongated, semiterete, with a marginate clinandrium. Anther fleshy, crested. Pollen masses 4, collected into globose pairs, adnate to an obovate membranous caudicula. Gland none. Rostellum cleft.

3223. 1892f. *Actinia*. Perianth fleshy, spreading. Sepals connate at base: upper one ascending. Petals conform, a little smaller. Lip continuous with the column, very fleshy. Hypochilum oblong, concave. Epichilum scarcely articulated, tripartite, ascending, furnished with a fleshy appendage at base. Column erect, drawn out into a broad margin on both sides. Anther crested, 2-celled. Pollen masses 2, sulcate behind. Caudicula linear. Gland lunate.

3224. 1892g. *Aganisia*. Perianth spreading, equal. Lateral sepals scarcely drawn out at base. Lip free, movable, undivided. Hypochilum small, concave, separated from the epichilum by a transverse glandular crest. Column erect, semiterete, marginate, furnished with an acute spreading arm on each side. Anther crestless. Rostellum elongated. Pollen masses 4, combined by pairs to a linear caudicula. Gland small, oval.

3225. 1892h. *Houlctia*. Perianth spreading. Sepals nearly free. Petals a little smaller, unguiculate. Lip continuous with the base of the column. Column erect, arched, clavate, semiterete, a little shorter than lip. Anther bilocular, depressed. Pollen masses 2, cleft behind, fixed to a linear-lanceolate elongated caudicula. Gland acute.

3226. 2776a. *Stenocoryne*. Flowers ringent, closed, long-horned. Sepals much drawn out at base, and connate. Petals conform. Lip on a long claw, 3-lobed, with a callous disk. Pollen masses 4, connate by unequal pairs, semi-globose. Caudicula 2. Glands 2, oval.

3227. 2776a. *Hélicia*. Sepals and petals coriaceous, conform, spreading. Lip spreading, membranous, flat, constricted in middle; furnished with a fleshy, elevated, truncate appendage, which is foveate in middle, on both sides at base. Column free, terete. Clinandrium erect, fringed all round. Anther fleshy, 2-celled, drawn out into an obtuse solid pilea or cap. Pollen masses 2, excavated behind. Caudicula cuneated. Gland small, oval.

3228. 2776b. *Trichoglossis*. Perianth spreading. Sepals equal: lateral ones under the lip. Petals a little smaller. Lip connate with the edges of the column, saccate, horned on the margins on both sides, with a fleshy undivided limb. Column erect, 1-horned at base. Anther 2-celled. Pollen masses 2, globose, 2-lobed; with a linear caudicula and a small hooked or peltate gland.

3229. 2778c. *Wailésia*. Sepals and petals equal, spreading: lateral ones rather oblique at base. Lip saddle-shaped, parallel with the column, villous in middle, bidentate at base. Column short, truncate, semi-cylindrical. Anther 2-celled. Pollen masses 2, globose, excavated on back; with two linear diverging caudiculae connected by 2 ovate glands.

3230. 2782c. *Dendrochilum*. Perianth spreading. Sepals and petals similar. Lip 3-lobed, or auricled at base, bilineate. Appendages of column subulate.

3231. 2782d. *Cleisomeria*. Sepals keeled. Lip didymous. Lateral lobes erect bifid: middle one concave bisetose at top. Caudicula cuneate, bifid, elongated.

3232. 2785a. *Scelochilus*. Perianth conniving. Sepals narrow, navicular, keeled, cohering at base: lateral one under the lip and connate in one, and drawn out into a blunt spur at base. Petals broader, free. Lip entire, continuous above the base of the column, callous, and downy on disk, bicostate; bidentate in front; emarginate at apex. Column semiterete, naked, shorter than lip. Anther 2-celled. Pollen masses 2, spherical, solid with linear caudicula on a small obovate gland.

3233. 2786a. *Clowésia*. Flowers subglobose, spreading. Petals nearly equal: lateral ones a little oblique, drawn out in a short snout, connate at base. Petals conform, but broader and fringed. Lip concave, fleshy, continuous with the column, not articulated, obsoletely 3-lobed, with a glandular jagged fringe on the margin, and a smooth disk. Column semiterete, clavate, obtuse, horned. Clinandrium tall, fleshy, serrated. Stigma transverse. Pollen masses 2, linear, furrowed on back. Caudicula membranous.

3234. 2790a. *Lacæna*. Perianth fleshy, spreading, nearly equal, rather connate at base. Petals conform, but smaller. Lip articulated with column in middle. Hypochilum unguiculate, cuneate, 2-lobed, pulvinate at top. Epichilum entire. Column erect, semiterete. Pollen masses 2, cleft behind. Caudicula setaceous. Gland minute.

3235. 2790b. *Odontoglossum*. Lateral sepals spreading, free. Lip flat, unguiculate, ascending, having the limb reflexed, toothed, narrowed at top, concave at base, and furnished with a bilamellate rarely fringed crest, which is generally bidentate in front. Column elongated, auricled, or wingless at apex.

3236. 2793a. *Ansellia*. Sepals oblong, spreading, fleshy, free. Petals conform, straight, broader. Lip sessile, spreading, 3-lobed, bilamellate. Middle lobe smaller and warted. Column elongated, marginate, auricled on both sides. Anther 2-celled. Pollen masses 4, sessile, contiguous at base, the 2 dorsal ones much the smallest. Gland narrow, acuminate at both ends.

3237. 2793b. *Bromheädia*. Perianth cylindrically conniving. Segments all linear-oblong, curved, channeled, bluntish. Lip cucullate, 3-lobed, nearly parallel with the column: middle segment retuse, yellowish, glandular, in disk; lateral segments ovate, shorter, violaceous. Column inarticulate at base, broadly winged, obtuse, fleshy. Anther 2-celled, dehiscing lengthwise. Pollen masses 2, reniform, excavated behind, sessile on a broad triangular gland.

3238. 2807a. *Lcochilus*. Sepals and petals spreading, lateral, connate. Lip undivided, tuberculate, or laminate at base, and furnished with melliferous hollow. Column short, terete, free. Anther broader than column, 1-celled. Pollen masses 2, with a narrow elongated caudicula, on an ovate minute gland.

3239. 1897a. *Acianthera*. Sepals conniving: lateral ones connate; upper ones galeate. Petals smaller, wedge-shaped, dilated at apex. Lip articulated with the column, 3-lobed. Lateral lobes acute: middle lobe flat, obtuse. Column winged, membranous, jagged at top. Anther apiculate, 1-celled. Pollen masses 2, cohering at base.

3240. 1916a. *Telipogon*. Perigone spreading. Sepals narrow, acute. Petals broad-ovate. Lip similar, but larger. Column terete, pilose. Clinandrium furnished with subulate hooked processes behind. Anther 1-celled, 2-valved. Pollen masses 4.
3241. 2817a. *Arrhynchium*. Sepals and petals flat, free, equal at base. Lip sessile, spurred, undivided. Column short, terete, hardly drawn out at base. Stigma circular. Anther roundish, 2-celled, membranous, depressed. Pollen masses 4, by equal pairs; with a subulate caudicula, and a triangular, nearly free, membranous gland. Retellum truncate.
3242. 2817b. *Malachadenia*. Flowers resupinate, lateral. Sepals connate at base, reflexed, and free at forming a galea: dorsal sepal cordate-acuminate. Petals small, scale-formed, roundish. Lip fleshy, with red edges, mucronate at base, articulated with the foot of the column, and adnate to the galeate lateral sepals. with 2 tendrils or horns in front, stretched out at base. Stigma linear-oblong. Anther 2-celled, deciduous. masses 2, waxy, sessile, with a soft naked gland.
3243. 1915b. *Acropsis*. Perigone spreading, nearly equal. Sepals and petals similar. Lip connate w base of the column, with a spreading, cordate, crested limb. Column erect, furnished on both sides with 2 which are glandular at top. Anther 2-celled, hidden by the cucullate clinandrium. Pollen masses 2, fusiform a filiform caudicula, and a small subglobose gland.
3244. 1923a. *Limatodes*. Perianth erectly spreading. Sepals and petals nearly equal, free. Lip undivided, spurred at base, tumid inside. Column erect, semiterete. Anther 2-celled. Cells 4-valved. Pollen masses 8, obovate; with a short filiform caudicula and a minute gland.
3245. 1874a. *Sarcoglottis*. This genus differs from *Spiranthes*, from which it has been separated by Presl, in the sepals being saccate at base, the upper one arched.
3246. 1861a. *Peristylus*. Perianth campanulate. Sepals and petals equal, similar. Lip entire, or tripartite, with a short bag-formed spur. Anther erect. Cells diverging. Beak flat, adnate to the anther. Pollen masses on 2 sub-lateral naked glands.
3247. 2838a. *Physurus*. Perianth subringent. Sepals linear-lanceolate, spreading, upper one combined with the petals into an arch, which is tridentate at apex. Lip pendulous, narrowed at base, and drawn out into a short 2-lobed spur at base. Anther acute, 2-celled.
3248. 2838b. *Cheiristylus*. Perianth bilabiate. Sepals connate at base into a ventricose tube. Petals free, equal. Lip much larger, unguiculate, bicallos inside; with a dilated, deeply spreading, 2-lobed limb. Column short, long-beaked. Beak emarginate. Anther intra-marginal, 2-celled. Cells 2-celled. Pollen masses 2, 2-lobed, with a common caudicula.

MONANDRIA.

- [acute, Lip linear obtuse fleshy with one furrow above
 20147 Leaf spatulate marginate retuse shorter than racemes, Bracts small, Sepals acuminate, Petals linear-lanceolate
 20148 Leaf obl. coriac. keeled subcord. at base, Petiole chan.. Seps linear equal, lateral ones keeled, Petals linear ob-
 ovate minutely serrated glabrous, Lip obovate fleshy with an inflexed tooth on both sides near the base
 20149 Stems 2-edged, Leaf oblong cocciliate fleshy proliferous double the length of the raceme, Bracts cuneate cuspidate
 cucullate shorter than pedics, Seps con., lat. ones semicon., Petals and lip same form, Clinand, toothed
 20150 Leaf coriac. obl. sheathing the stem shorter than rac. Bracts ov., Seps coriac. obl. downy, lateral ones semicon.,
 Petals short acute, Lip obl. hollow in middle bilamellate [late ciliated, Lip ov. emarg. unguic.
 20151 Lvs fleshy oval ac., Spike solit. pend. longer than lvs, Seps conniving ac., lateral ones connate, Petals subu-
 20152 Leaf obov. emarg. much longer than stem and much shorter than loose erect raceme, Bracts small membran.,
 Seps costate obl. ac., lateral ones separate at apex, Petals lanc. ac., Lip linear obt. fleshy 1-furr. above
 20153 Leaf obl.-lanc. emarg. coriac. longer than stem, Rac. nutant many-flwd shorter than leaf, Seps lin.-lanc. acum.
 lateral ones conn., Petals conform much smaller serr., Lip tongue-shpd serrul. with marg. thick warted
 20154 Leaf long lanceolate arched, Sheath close to the stem, Lip 3-lobed unguiculate, Lateral Segments short subfal-
 ceate acute, middle one obovate cuneated denticulated cleft, Lamellæ 2 fleshy
 20155 Stem leafy, Leaves linear-lanceolate distich denticulately serrated, Racemes terminal few-flowered
 [keeled ciliated lin. bifid, Petals ellipt. obt. cili. at top, Lip obov. obt. cili. 3-nerved, Top of Column ciliate
 20156 Leaf narrow lanceolate obtuse about equal to the stem, Spikes secund fasciated not half so long as lvs, Sepals
 20157 Leaf roundish-ovate emarg. shorter than stem, Flowers fasciated, Sepals linear obtuse glabrous, lower one bi-
 partite, Petals elliptic ac. ser., Lip ov. beaked concave at base cili. at top obt., Top of Column serrated
 20158 Leaf coriaceous wavy emarginate narrow and channeled at base longer than stem, Spikes short fasciated, Flws
 glab., Seps and pety lin. acum., Lip lin. abruptly ac. a little constricted in mid., Col. cucul. winged subdentate
 20159 Leaf narrow fleshy semiterete shorter than spike, Bracts memb. cucul. truncate, Flws drooping, Sepals roundish
 ovate free 3-nerved, Petals memb., Lip 3-lobed fleshy concave, Middle Segment elongated acuminate
 20160 Leaf lin.-obl. coriac. emarg. tapering into the channeled petiole longer than short stem, Raceme elong. many
 fld. Sepal equal ovate downy, Petals and Lip nearly equal truncate with glittering silvery particles at top
 20161 Leaf obl. subspatulate retuse, Peduncles scaly longer than leaf, Spike nutant, Flowers sessile, Sepals 3-nerved
 Petals 3 linear smaller roundish-obovate obtuse equal to lip, Lip oval channeled at base bituberculat

History, Use, Propagation, Culture,

3196. *Physosiphon*. Curious little epiphytes, with the habit of *Stelis*, and differ principally from that genus in the sepals being combined into a tube.

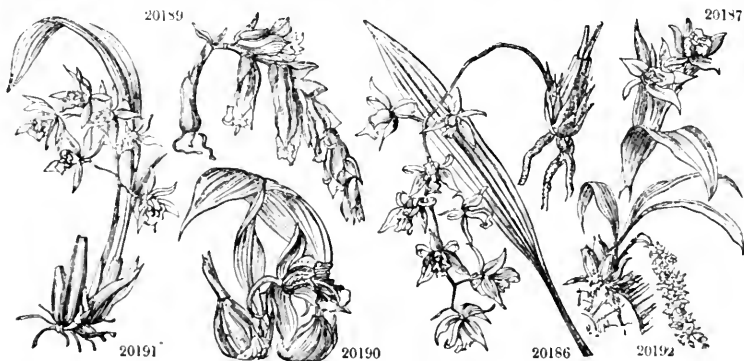

3197. *Centranthèra* is a small epiphyte, with purple flowers.

3198. *Restrepia* is an epiphyte, with recurved flowers, white petals spotted with red, and a yellow lip.

- 20162 Leaf ovate tridentate, Peduncles aggregate shorter than leaf, Sepals ovate glandularly ciliated as also the lip
Lateral lobes of Lip wing-formed spreading, middle lobe 3-lobed pressed to the column
- 20163 Leaf oblong narrow obtuse or emarginate shorter than twin racemes, Tube of Perianth triquetrous with winged angles, Middle lobe of Lip serrated scabrous
- 20164 This differs from *P. carinatus* in the middle lobe of lip being entire and not broken by callous sharp teeth on the surface
- 20165 Leaf ovate obtuse glaucous dotted with brown, Sepals very villous outside dotted with brown inside, Lip purple, Racemes radical drooping
- 20166 Petals white spotted with red filiform recurved with a broad ciliated base, Lip dull yellow ciliated convex, the lateral segments small and bluntish, Leaf solitary, Sepals white
- 20167 Lvs broad ensiform, Raceme long 2-edged at base many-flowered, Flowers verticillate, Bracts fringed, Sepals reflexed, Petals erose, Lip obtuse fringed concave at base absolutely lobed [side, Lip cordate truncate
- 20168 Spike dense cylindrical, Bracts channeled a little cil., Flws small, Seps and pets reflexed fimbriately downy in
- 20169 Caulsc., Lvs equitant subfalca. acute, Spike long pendul. loose-flwd, Bracts linear convol. jagged. Pedics filif. glandul. pilose, Seps ovate erect acute, Petals conform smaller, Lip obl. conc. nar. retuse towards apex
- 20170 Pseudo-bulb ovate sheathed 2-lyd, Lvs broad-ovate membranous, Sheaths elongated involving angular scape at base, Flws corymb., Seps oblong deflexed, front ones coadunate at base, Pets mm. lin. revol., Lip orbic. obtuse
- 20171 Leaves ovate-lanceolate, Flowers party-coloured
- [ilform, Petals linear-oblong, Lip ovate-lanceolate channeled recurved
- 20172 Pseudo-bulb ovate oblong 2-leaved, Leaves ensiform, Scape 2-edged, Rac. dense erect cylindrical, Sepals filif.
- 20173 Lvs 6 obl.-ovate acute plicate petiol., Spike erect many-flowered, Scape winged scaly purple, Wings 6 membr., Seps and pets lin., Lip muc. dark pur. [cren., Seps spread. obl. with rev. marges., Ov. and pets lin. filif.
- 20174 Lvs 2-3 rndsh-ov. ac. petio. plic. obl. at base cucul. shrtr than many-flwd spike, Pedunc. ang., Lip rndsh rfxd
- 20175 Lvs oblong lanceolate acuminate wavy plicate, Bracts foliaceous reflexed, Lip orbicordate-bituberculate
- 20176 Lvs many oblong-acute plicate shorter than few-flwd raceme, Scape angular, Lip cuneate flat 2-lobed bituberculate at base, Petals and upper sepal linear spreading, lateral sepals roundish ovate shorter than lip
- 20177 Pseudo-bulb ovate, Lvs ensiform plicate, Raceme long many-flowered, Bracts linear-lanceolate acute squarrose, Lip lanceolate bisaccate at base
- 20178 Tufted, Rhizoma short, Pseudo-bulb tetrag. ovate rugose 1-2-leaved, Leaves obl. undul. acum. 3-nerved, Racemes short sec., Brcts cucul. obt. persist., Seps ov., Pets lin., Lip obl. ac. conc. at base refracted at top
- 20179 Spike short flexuous, Bracts persistent, Column large somewhat petaloid antheriferous on the face in the middle, Lip concave hastate at top 2-lobed
- 20180 Spike pendulous distich imbricate, Bracts oblong concave apiculated, Lip 3-lobed
- 20181 Pseudo-bulb ovate tapering to the base 2-leaved, Leaves narrow, Racemes drooping, Flws small dull reddish
- 20182 Pseudo-bulb sulcate ovate obtuse fasciated, Leaf oblong coriaceous plicate, Racemes distich pendulous imbricate

[with horny scales, Brcts obl. divar. persist., Pets obl.-lanc. wavy, Lip 3-lbd with a triple interrupted crest

- 20183 Pseudo-bulb obl. seated on a thick scaly rhizoma, Lvs lin.-lanc., Rac. radical erect shorter than lvs sheathed
- 20184 Pseudo-bulb ovate tufted clothed with shining scales, Leaves lanc. acum. narrowed into petiole, Raceme strict, Bracts decid., Seps and pets obl.-lanc., Middle lobe of Lip ov., Disk with 3 lamel. lines, Col. obsoletly 3-lbd
- 20185 Racemes pendulous dense many-flowered downy, Bracts roundish ovate concave dry, Flowers large resupinate, Sepals lanceol. keeled, Pets narrower, Lip cucullate 3-lobed, Lobes obtuse, mid. lobe crested, Disk warted
- 20186 Pseudo-bulb oblong angular covd by coriac. pointed withered scales, Lvs oblong lanceol. on long petioles, Rac. flex. drooping, Bracts decid., Petals lin.-lanc., Lip ov. 3-lobed with 3 elev. flex. lines, Col. tthd at apex
- 20187 Pseudo-bulb ov., Lvs twin lanc. 5-nerved longer than few-flwd rac., Scape naked at base, Bracts convolute, Pe-
- 20188 Pseudo-bulb ovate-oblong, Leaves 5-nerved [tals lin.-lanceol., Lip 3-lobed, Lamellæ 3 curled continuous
- 20189 Pseudo-bulb oval narrow angular, Leaves linear-lanceolate tricostrate, Raceme pendulous, Bracts ovate cucullate, Seps and pets nearly eq., Lip obl., Lat. lobes rndsh obsolete, Middle lobe obt. with 4 papil. crested-sepal
- 20190 Pseudo-bulb ovate ribbed 1-leaved, Leaf oblong-lanceolate 5-7-nerved, Peduncles 1-flowered scaly, Seps oblong, Petals linear, Lip 3-lobed, Lateral segments denticulate, middle one rounded 2-lobed
- 20191 Pseudo-bulb obl. tetrag. at top, Lvs lanc. 5-nrvd, Rac. few-flwd, Lip 3-lobed downy inside with rounded lobes
- 20192 Pseudo-bulbs large, Leaves large 2 feet long, Scape 30 inches, Flowers numerous close set, Sepals and column cream-coloured, Lip slightly 3-lobed cream-coloured marked with orange
- 20193 Pseudo-bulb elongated, Leaves membranous obovate-lanceolate 5-nerved, Racemes recurved, Bracts broad-ovate obtuse cucullate, Flowers closed trisaccate at base, Petals linear, Lip 3-lobed

and Miscellaneous Particulars.

20180. *Pholidota conchoidea*. This species comes very near *P. imbricata*; but the flowers are almost twice as large, and the keels of the lateral sepals are so deep and concave as to give the flowers the appearance of the inside of a bivalve shell.

History, Use, Propagation, Culture,

3199. *Pleione* is a genus of terrestrial Alpine *Orchideæ*. Rich mould, mixed with pebbles or small stones, covered with moss and kept moderately moist, in beds raised with bricks, suits all the species well. *P. Wallichiana* covers the oak trees in its native place.

3200. *Earina suaveolens* is an epiphyte, and a native of New Zealand on trees.

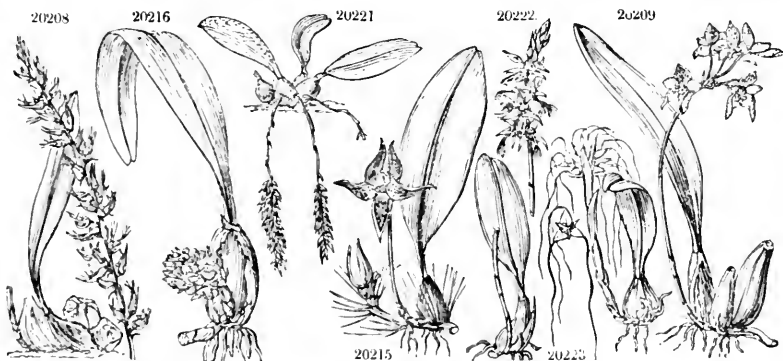

- 20194 The blossom of this species is larger than any of the others
 20195 Caudex creeping scaly, Pseudo-bulbs small obl. compressed smooth, Leaves 2 broad-lance., Rac. term. bract. 4—5-flwd., Seps ov.-oblong, Petals oval smaller, Lip spat. with a bilamel. disk, Mid. lobe cil. fringed orbic.
 20196 Pseudo-bulb flask-shaped clouded, Bract hooded acute tapering to base, Sepals and petals linear-lanceolate acuminate, Lip rounded emarginate with 5 crested lines
 20197 Pseudo-bulb all same colour short thick rounded narrowed at base, Bract short inflated roundish hooded, Sepals and petals ovate acute, Lip rounded emarginate with 7 crested lines
 20198 Pseudo-bulb ovate, Sepals and petals striated, Lip 2-coloured spotted with 5 crested lines
 20199 Pseudo-bulb roundish, Lip crested by 5 lines, Perianth pink, Leaves elliptic-oblong acute nerved
 20200 Pseudo-bulb ampullaceous, Sheath tubercul., Pedunc. radic. sheathed at base, Lip 3-lobed sac. at base, middle lobe denticulated curled trune. at top apiculated with 4—5 incomplete dentic. crests in disk, Col. thhd at top

20201 Spike oblong dense rather compound at base, Lip transverse rhomboid bicallous towards the base obsoletely 3-lobed, Middle segment roundish wavy emarginate, Leaves distich

20202 Stem 2-leaved covered with warted scales, Leaves rather fleshy petiolate, Spikes terminal spathaceous at base

[lose, upper one recurved obt. callous, lateral ones refracted, Petals linear, Lip ovate corrugated

- 20203 Pseudo-bulb ovate trigonal, Leaves oblong-lanceolate emarginate, Rachis linear-oblong crenated, Sepals pibitrac. outside, Seps ov.-obt., lat. ones con. at base, shorter than ov. pets, Lip triq. ac. chan. ser. at back
 20204 Rachis large lanceolate, Flowers covered with black hairs, Seps acute, upper one smooth, lateral ones downy inside, Petals small acute glabrous, Lip ovate fleshy wrinkled
 20205 Pseudo-bulb tufted rather tetrag. 2-lvd, Lvs oval emarg. biplic., Rachis comp. falc. cren.-. Upper seps of Perianth obt. callous on both sides at apex, outer lat. ones reflexed bident., inner ones or pets smaller subulate obtuse
 20206 Pseudo-bulb lenticular 1-leaved shorter than erect racemes, Bracts ovate stem-clasping, Sepals linear-lanceolate acuminate, Petals subulate shorter than column, Lip linear-lanceolate acuminate villous bearded at top
 20207 Ps.-b. ov.-obt. 4-wgd 2-lvd, Lvs nar. obl. fleshy, Sepé radic. pend. mch shrt than fusif. mny-fla rachis, Fls fleshy bitrac. outside, Seps ov.-obt., lat. ones con. at base, shorter than ov. pets, Lip triq. ac. chan. ser. at back
 20208 Pseudo-bulb ovate tetrag. 1-lvd, Lf lanc. shorter than erect many-flwd spike, Brcts membranous lin.-acute, Seps awned, Pets linear denticul. longer than 2-horned column, Lip ov.-lanc. obt. cil. at base fov. under the apex
 20209 Rhizoma creeping, Pseudo-b. obl. ang., Lf obl. lorate obt. emarg., Flws umbel. lateral, Seps oblique falcate obt. upper one short, Pets ov. obt., Lip cord.-ov. complicate emarg., Column furnished with a bristle on each side
 20210 Pseudo-bulb tetragonal, Spike fleshy acuminate conical, Flws sessile fleshy, Bracts ov. obt., Sepals ov. acute, Pets lin. obt, Lip unguiculate ovate flat convex auriculed at base, Column furnished with 2 bristles on each side
 20211 Pseudo-bulb ampullaceous depressed with 2 distant sheaths, Rac. cylind. many-flwd on long pedunc., Brcts small, Seps obt. cil. shorter than pets which are obov. with vil. edges, Lip ov. obt. bident. at base polished in middle
 20212 Pseudo-bulbs obl. compressed covered with 2 membranous sheaths, Leaf narrow at base longer than loose spike, Sepals acum., Petals oblong obcord. acute, Lip bicarinate recurved, lat. lobes undul. obsol., Column 2-horned
 20213 Rhizoma creeping covered with membranous scales distinctly bulbiferous, Pseudo-b. small, Lvs mucr. obl. fleshy convex on back, Flws small, Seps closed ov. equal ending in soft bristle, Pets oval obt., Lip nar. ov. obt. smooth
 20214 Lvs obl. obt. peti. scarcely bulbous at base, Spike second loosely sheathed at base many-flwd, Seps acum. spatn. acute glandular inside, Lip ovate narrow bluntly acum. cil. channeled at base
 20215 Lvs obl. flat petiol. coriaceous, Flws sol. flat resupinate, Dorsal sepal flat ovate acuminate, lateral ones and petals same form twisted, Lip small unguiculate subtrilobed acuminate
 20216 Pseudo-b. obl.-ovate sheathed 1-lvd on a creeping rhizoma, Lf obl.-lanc. obt. narrowed at base, Rac. length of bulbs, Pedunc. short scaly, Flws imbricate, Seps ovate acum., lat. ones twice the size of rest and connivent, Pets small acum., Lip ovate unguiculate undentate on both sides, Column 2-horned
 20217 Pseudo-b. long-ovate, Lvs broad-lig. obt. shorter than glab. scape, Spike tail-formed many-flwd drooping dwny, Seps acum. hairy and gland., Pets short acute fringed, Lip obl.-lin. emarginate obt. hairy above, Anther gland.
 2-218 Lvs obov.-obl. coriac. petiolate, Peduncs naked 1-flwd rising from falcate cucul. brcts, Seps oblong acute, lateral ones falcate, Petals smaller reflexed, Lip unguiculate cordate-ovate acute channeled recurved at apex
 20219 Lvs obl. coriaceous emargin. at top channel-d at base, Flwr large solitary, Seps lanc., lateral ones ventric. at base, Pets lin. converging into the form of the hand, Lip ov. conc. at base beaked at apex, Column toothless
 20220 Flws solitary glabrous, Sepals obl. obt., lateral ones convex longer, Petals conform but narrower, Lip tongue-shaped ovate smooth bijugated at base behind and rough between the juga
 20221 Pseudo-b. tufted ovate compressed 1-lvd, Leaf oval of a different colour beneath unequal at top emarginate, Scape pendulous, Spike imbricate, Sepals ovate acuminate, Petals obovate
 20222 Pseudo-bulb tetragonal, Leaf obl. obt. Scape long, Bracts membranous, Seps triangular downy on edges, Petals horn-formed glabrous, Lip sessile linear downy on edges bearded, Horns of column falcate
 20223 Pseudo-b. ovate tetrag., Leaf obl. convex emar., Sheaths of scape obl. vent., Flws in dense heads, Upper sepal acum., lower ones very long pendulous, Petals triangular acum., Lip ovate bicarinate, Auricle of column acute

and Miscellaneous Particulars.

3201. *Trichosma*. A bulbless epiphyte, very similar in habit to a species of *Cochlyne*; but from that genus it differs in the projecting foot of the wingless column, in the singular fleshy anther, and in the eight 7-10 lien masses.

20204. *Megastilium hüfo*. The rachis of the flowers of this species resembles a flattened snake with a single row of toads on its back; hence its specific name.

History, Use, Propagation, Culture.

20225. *Cirrhopetalum aurätum*. This is the most interesting species of the genus. It hangs down from the branch of a tree or a piece of wood, which it soon overruns with its delicate green roots and egg-shaped furrowed pseudo-bulbs. The leaves are deep green above, and stained with purple beneath. The flower stems or scapes are slender and thread-like, and bear at top an umbel of flowers, which hang down gracefully and are balanced in the air. The flowers have a yellowish ground, striped and mottled with crimson.

- 20224 Pseudo-bulb pyramidal truncate, Leaf oblong convex emarginate, Sheaths of scape oblong ventricose distant, Upper sepal ovate, lower ones very long pend. cil., Pets obl. cil., Lip obl. bicarinate, Auricles of col. setae.
- 20225 Pseudo-b. ovate sulcate, Leaf convex obl. purple beneath, Flws umbellate, Upper sepal and petals setaceous acuminate ciliated, lateral ones acute, Lip linear recurved, Auricles of column rounded entire
- 20226 Pseudo-b. ovate smooth, Leaf oblong acute tapering into petiole shorter than scape, Raceme scarcely umbelled loose, Seps. lanceolate acuminate, lateral ones very long, upper one acuminate incurved, Petals ovate acum., Column winged on both sides bidentate at top, Lip ovate acuminate fleshy recurved
- 20227 Pseudo-b. glomerate ov.-rndsh rather tetrag., Lvs usually 3 ov.-lanc. small ac., Seps rad. slend., Umb. many-flwd Lat. seps nar. ligu. ac. cohering, upper one and pets ov. acum. fringed, Lip small tongue-shaped thick naked
- 20228 Pseudo-b. tetrag., Leaf oblong obt. shorter than scape, Umbel dimidiate many-flwd, Dorsal sepal ovate, lateral ones linear-lanceolate, Petals ovate acuminate fringed, Lip ovate trisulcate bituberculate behind
- 20229 Pseudo-b. ov.-ronndsh rugose, Lvs ov.-obl. obt. thick, Scape terete elong., Umbel many-flwd nutant, Lat. seps very long ligu., Pets ov. ac. cil. at base, Lip tongue-shaped bistrate, Angles of column obsoletely bidentate
- 20230 Leaves lanceolate, Umbel many-flwd, Upper sepal galeate, Petals oblong obtuse serrulate apiculated, lateral ones lanceolate, Lip tongue-shaped obtuse fleshy
- 20231 Pseudo-b. obl. angular, Lf obl. convex emarg., Flws convolute, Upper sepal cil. set. acum., lat. ones obl. obt., Pets acum. cil. villous, Lip linear recurved elevated along the middle, Auricles of column obtuse entire
- 20232 Lvs lanceolate cleft at top length of erect scape, Racemes many-flwd pendulous, Bracts linear acuminate, Sep. glab., upper one acum., lateral ones linear ligulate hardly acute, Pets acuminate subciliate
- 20233 Pseudo-b. compressed one above another with a short 2-lvd neck, Lvs erect ensate, Rac. axil. 2-3-flwd, Brcts on peduncles many ov. acum. revolute, Seps and pets ov. ac., Lip 3-lobed trilamellate, Lobes ac., middle obl. larger
- 20234 Pseudo-b. short obl. usually 2-leaved, Lvs obl. undulated, Rac. erect, Bracts membranous coloured with revol. edges, up. ones lin. refl., Lip 3-lbd with 2 short lamellae and one long one, Mid. lobe of lip trunc. rugged apic.
- 20235 Stems compressed densely and loosely sheathed, Lvs obl.-lanc. many nerved, Racemes dense obl. drooping on short peduncles, Flowers subglobose downy, Lip subcordate-ovate acute without appendages
- β Stems twice the size of those of species, Spikes on longer peduncles, Flwr closer glob. ressembl. small cowrie shells
- 20236 Pseudo-b. oval compressed 3-lvd, Lvs obl.-lanc. coriaceous smooth, Rac. toment. rad. sheathing at base, Lvs of scape or bracts lanc. acum. apricot-eld, Lat. lobes of lip tooth-fmd, middle rhomb. curled with 5 straight lamellae
- 20237 Pseudo-b. obl. smooth 2-4-leaved, Lvs obl., Bracts membranous obl. obt. reflexed, Rac. erect, Petals and sepals erect, Lip 3-lobed trilamellate at base, middle lobe roundish obl. 5-lamellate
- 20238 Stem elongated leafy, Lvs lanc. acute spreading striated, Spikes opposite the leaves many-flwd nutant, Bracts adpressed, Sepals and petals ovate acute erect smooth, Lip cordate-ovate acute bicarinate at base
- 20239 Stems fleshy rather flexuose terete, Lvs lanc. acum., Racemes opposite the leaves spreading many-flwd downy, Bracts ovate concave turned back, Lip narrow naked saccate at base, the middle segm. cuneate tridentate
- β Spikes long, Flowers white
- 20240 Stems pend. densely clothed with decid. hairs, Lvs lanc. coriaceous obt. entire densely vill. beneath, Rac. elong. many-flwd, Brcts coriaceous persistent, Flws villous, Sepals lanceolate, lateral ones ending in a horn connate Petals shorter glabrous, Lip 3-lobed, middle lobe curled emarginate pilose
- 20241 Stems terete jointed sheathed, Lvs obl. obt., Rac. erect lateral many-flwd scaly at base, Bracts ov. acute ovary villous, Lat. lobes of lip erect trunc., middle lobe ov. serrated subuplicate, Crests 4-tthd, middle one fleshy
- 20242 Pseudo-bulb sheathed wrinkled 1-leaved, Leaf coriaceous lanc., Spike axillary few-flowered glabrous
- 20243 Lvs linear-lanceol. acum. glauc. beneath, Stems terete elong. pend., Bracts term. aggregate cylind. many-flwd, Seps woolly ov. obt., Pets smaller spotted, Lip 3-lbd callous at base and apex, Lbs spotted, middle one trunc.
- 20244 Lvs coriaceous ovate or shortly cultrate obt., Flws sol. term., Lip linear-obl. emarginate without a crest ciliately toothed rather downy
- 20245 Lvs lanc. equal-sided approximate acute, Flower sol. axil., Lip cuneated obl. surrounded at apex with a thick [sinuated horseshoe-formed line]
- 20246 Lvs lanc., Flws solitary axillary, Lip. emarg. curled at top with 2 obsolete lines running along the middle
- [Pets obovate-oblong glabrous, Lip broad-oblong revolute villous in middle, the middle lobe roundish
- 20247 Pseudo-bulbs roundish compressed aggregate 1-lvd, Lf petiol. nutant downy, Peduncles bract., Brcts folia. concave,
- 20248 Lvs lin. obl. obt. recurved channeled, Panicle short strict spicate with clavate branches, Lip fleshy, middle lobe emarg. crenate, lat. ones short ac., Disk mealy convex at base [Lat. lobes short, middle one obt. undulated
- 20249 Pseudo-b. ov., Lvs obl.-lin. undulated shorter than the simple obt. raceme, Flws drooping, Lip 3-lobed downy,
- 20250 Pseudo-bulbs conical subcompressed annulate, Scape subclavate racemose at top, Sepals expanded emarginate, lateral ones large, Lip fiddle-shaped crenulated in the middle pulvinate dilated at apex and membranous
- 20251 Lvs 2 obl.-linear flat oblique at apex, Scape 2-edged terminated by yellow flowers streaked with red, Rac. term. 7-8-flwd downy, Sepals lanceolate acute, upper one oblong linear concave spiculate, Pets a little shorter flat obovate obtuse, Lip bidentate bearded with long hairs
- 20252 Lvs broad-lin. fleshy channeled obliquely emarginate shorter than scape, Lat. seps keeled, Lip cuneate 5-lobed clothed with dense deciduous down similar to powder
- 20253 Stems pendulous, Lvs ovate-oblong obtuse nerved subcordate at base, Sepals lanceolate, Petals oblong acute, Lip downy convolute denticulate subunguiculate ovate obsoletely 3-lobed

and Miscellaneous Particulars.

3202. *Epiphora*. A curious little epiphyte, bearing yellow flowers streaked with red.

3203. *Myrcarantes*. A fleshy-leaved epiphyte covered with rusty down, with small white flowers.

20253. *Dendrobium macrophyllum* is said to be one of the handsomest of the species. The flowers being 9 inch in circumference, of a bright rose colour, the lip deeply stained. *D. cucumerinum* is a curious little species, with the stems and branches resembling small cucumbers, and the flowers rather small of a dirty white streaked with pink.

- 20254 Stems terete pendulous, Lvs obl.-lanc. subplc., Rac. lat. strict many-flwd, Brcts short ov. obt., Seps ov. acum. subcord., Petals oblong obtuse more slender and broader, Lip unguiculate shell-shaped very blunt ciliated
- 20255 Stems pendul., Lvs ov.-lanc. acute, Peduncs 2-3-flwd, Sepals oblong acute entire, Petals broader fringed, Lip large shell-formed with plumose edges [evol., Lip cucullate veiny, the limb ov. obt. cil. downy inside]
- 20256 Stems terete pendul. whip-formed, Lvs ov. lanc. rather membran., Flowers by threes, Sepals ov. ac., Petals lanc.
- 20257 Stems ter. pendul., Lvs contorted ov.-lanc. acum., Flws rising from among leaves, Seps fleshy obl. obt. with tuberc. veins outside, Pts above retuse fleshy shorter than up. sepal, Lip cucul. dentic. retuse slightly 3-lobed
- 20258 Stms terete sulcate, Lvs ovate-lanc. acum. obsoletely emarg., Peduncs 2-flwd, Seps oblong acute, Pts broader above, acute serrulat d, Lip unguic. ovate concave undivided vil. with multilid fringed margins
- 20259 Stms pendulous thickened in the middle, Lvs ovate very acute, Peduncs 2-flwd, Pts lanceolate broader than seps, Lip cucullate rounded undivided pilose above
- 20260 Stms pend. terete clav., Lvs obl. ac. flat obliquely emarg., Peduncs usually 2-flwd aggregate lat., Seps lin. ov. acum. obt., Pts broader ov. ac. undulat'd, Lip oval undulated blunt undiv. serrul in middle downy in centre
- 20261 Stems terete, Lvs lanc. obliquely emarg. bluntish, Flws solitary, Seps lin.-lanc. spreading blunthsh, Lip roundish undivided cucul. fimbriately toothed downy on both sides foveate and bilamellate at base, Snout short obtuse
- 20262 Stems terete pendulous, Leaves ovate-lanceolate acuminate oblique at top, Flowers geminate, Sepals acuminate, Petals obtuse larger than upper sepals, Lip oblong undulated ciliated downy inside
- 20263 Stems erect clavate sulcate subflexuous comp., Lvs oblong acute 3-nerved, Peduncles lateral 3-flwd, Bracts small minute adpressed, Pts oblong obt. glab. about equal to seps, Lip obovrd. hairy with a channeled sulcate claw
- 20264 Stems terete, Leaves ovate-lanceolate acuminate flat, Flowers twin, Seps spreading blunthsh convex with reflexed edges, Lobes of Lip rounded, middle ones undulated with an elevated villous line
- 20265 Stems terete pendulous, Leaves ovate-lanceolate, Flowers twin, Sepals and petals ovate blunthsh spreading, Lip 3-lobed glab., Middle lobe retuse plicate, Claw conc. short furnished with a horn-formed downy appendage
- 20266 Leaves ovate-oblong undulated acuminate, Flowers spreading, Sepals and petals ovate, Lip 3-lobed pubescent, Middle lobe denticulated, lateral ones broader serrulated
- 20267 Stems erect hispid flexuous, Lvs ov.-lanc. very oblique at top, Flws fascic. or solitary term., Bracts ovate acum. hisp., Lateral sepals combined with a long spur, Lip funnel-shaped cucul. dentate adhering at base to column
- 20268 Stems terete leafy, Lvs lanc. acute, Racis short 4-flwd, Seps oval obt., Petals broader ovate, Lip rhomb. undul. acute downy in middle, Column tubercled on both sides and furnished with a deflexed horn behind at base
- 20269 Stems terete pendulous pil., Lvs distich ovate obliquely emarginate obtuse, Racis short terminal 4-5 flwd, Bracts short ovate, Seps oblong acute, lateral ones drawn out at base, Pts broader acute, Lip obovate dilated retuse
- β Flower larger, Lip with a large black spot in the middle [joined with column into a spur]
- 20270 Stems terete pendulous, Leaves oblong-lanceolate entire at apex, Racemes 3-4 flowered, Sepals lanceolate, Petals larger oblong undulated obtuse, Lip obovate cucullate ciliated
- 20271 Stems terete pend., Lvs lin.-lanc. and oblong, Racis lateral loose 5-6-flwd, Bracts short, Seps spreading, Pts broader oblong obtuse reticul., Lip unguic. very blunt with abruptly inflexed fringed downy edges [longer than sepals, Lip oblong curled at top and furnished with 3 elevated lines]
- 20272 Leaves oblong obliquely-emarginate, Racemes oblong lateral, Sepals ovate blunthsh, Petals linear contorted
- 20273 Leaves oval-oblong acute 7-nerved, Racemes short many-flowered, Sepals ovate spreading broader than petals, Lip linear-spatulate acute beardless, Spur thick length of ovary
- 20274 Stems erect, Leaves oblong retuse, Racemes lateral terminal secund, Sepals ovate, lateral ones combined into an obtuse incurved horn, Lip entire acute tumid at apex
- 20275 Stems clav. artic. furrowed, Lvs lin. retuse, Pedunc. 2-flwd, Seps oblong acutish undulated twisted, 2 lateral ones running into a retuse spur, Pts oblong, Lip large downy obovate shell-formed pulvinate inside at base
- 20276 Stems strong pendulous, Leaves ovate-oblong obtuse nerved subordinate at base, Sepals ovate-lanceolate, Petals oblong rather undulated, Lip roundish acute
- 20277 Pseudo-bulbs angular, Stems swelling at joints leafy towards the tops, Lvs obl. acute nerved, Racis lateral many-flwd, Bracts plicate, Seps ovate-oblong spreading rose-eld, Pts larger straw-eld ciliated, Lip nearly square broad ciliated straw-eld with a deep yellow blotch
- 20278 Stem erect covered with black villi, Leaves linear acutely and obliquely 2-lobed, Peduncles 2-flowered, Sepals and petals acuminate recurved, Lip linear-lanceolate 3-lobed trilamellate, Lateral lobes short
- 20279 Lvs acuminate, Racemes nutant elongated many-flowered, Bracts minute obtuse, Flowers rather fleshy, Sepals roundish combined into a short horn at base, Pts broader entire, Lip cochleate obtuse villous fringed
- 20280 Stems erect fusiform, Leaves oblong emarginate distich, Racemes terminal many-flowered, Sepals and petals linear-obl. spreading curled, Lip crenulated, Lateral lobes acute, middle lobe lanc-ovate with 5 way lamellae
- 20281 Pseudo-bulbs ovate lengthening into a neck 2-lvd at top, Lvs oval emarg., Peduncles terminal 2-3-flwd, Seps ovate emarg., Pts obovate apiculate, Lip 3-lobed downy, Middle lobe with 3 elevated lines along the centre
- 20282 Stems erect Flowers twin nutant white, Lip blood-coloured, Bracts scale-like, Sepals linear-lanceolate, Petals oblong incurved broader, Lip roundish-obovate flat retuse apiculate entire
- 20283 Stem obovate compressed 2-6-leaved, Leaves oval acute striated dilated at base stem-clasping, Racemes about 4-flowered drooping, Sepals and petals ovate erect, Horn elongated obtuse, Lip cuneate smooth sulcate
- 20284 Stems terete erect, Flowers twin, Sepals and petals oblong obtuse firm, Lip oblong entire subnatised obtuse plicately veined, Horn short obtuse
- 20285 Dwarf intrinc. tufted, Brnchs short artic. cylind. 1-lvd, Lvs obl. terete beset with rows of tubercs, Peduncs short 3-flwd, Seps and pts lin. acum. obt., Lip 3-lbd, lat. lbs triang., middle ones ov. curled with 4 way lamellae in centre, Clmndrindium denticulated [flwd peduncles, Seps and pts lanc., Lip short rhomb.-ovate]
- 20286 Stem clavate short sulcate 3-leaved at top, Leaves ovate-lanceolate obliquely emarginate shorter than 4-5-
- 20287 Stems slender, Racemes loose white with a deep yellow stain on the base of lip, Lip downy fringed near the base with long hairs furnished with a 3-lobed tubercle, Flowers something like hawthorn
- 20288 Stems elongated 3-5-leaved at top, Racemes erect elongated few-flowered, Petals roundish twice as broad as seps, Lip 3-lobed crested in middle bigibbous at base, Lobes roundish, Lateral seps drawn out into a spur

History, Use, Propagation, Culture,

3204. *Ponera*. The species have the roots of *Neottia*; the stems are tall, the leaves are grass-like, and the flowers are fasciated and buff-coloured. They are terrestrial plants.

- 20289 Stems pend., Lvs lin.-lan. acute ent., Flws by threes, Seps and pets ov. obt., Lat. ones broad st with a rounded horn, Lip unguic. ovate conc. apic. closely appressed to the column vill. inside glab. on the disk, Stigma vill.
- 20290 Roots villous, Stems elongated branched, Lvs ovate-oblong obtuse, Panicle racemose terminal many-flwd, Seps ovate acute, Pets and lip obl. undul. rounded emarg. with a 3-lobed yellow tubercle in the middle, Style vill.
- 20291 Pseudo-bulbs clavate many-ribbed 2-4-leaved, Leaves oblong horizontal, Racemes lateral loose slender arched, Seps and pets flat oblong very blunt, Lip undivided cucul. roundish downy minutely pectinated and fringed
- 20292 Stems terete, Flowers loosely corymbose, Pedicels filiform glaucescent, Sepals linear-oblong, Petals broader obovate, Lip 3-lobed, Lateral lobes small acute, middle one linear-oblong villous at base pea-green
- 20293 Stems creeping, Leaves filiform terete, Leaflets of perianth long linear narrower at top, Lip tricarinate, Middle lobe linear-lanceolate curled
- 20294 Leaves linear-lanceolate obliquely emarginate, Spike about 2-flowered axillary on a leafless stem, Lip 2-lobed entire, Climandrium furnished with a dorsal tooth
- 20295 Leaves linear-lanceolate obliquely emarg., Spike about 2-flwd terminal on a leafy stem, Lip acute crenulated and recurved at apex, Climandrium mutic
- 20296 Stem erect compr., Lvs lin., Flws axill. and term. nutant, Seps lin.-lanc. spreading, Pets lin. converging, Lip 3-lobed, Middle lobe linear acuminate [tuse with 3 elevated lines and 2 callosities
- 20297 Leaves long narrow distich recurved, Racemes short drooping nearly sessile, Lip tripartite, Mid. lobe linear re-
- 20298 Leaves ovate obtuse, Peduncles 2-4-flowered sessile, Sepals and petals linear-oblong obtuse spreading, Lip repand a little lobed emarginate bicallos at base
- 20299 Stem branched, Flowers racemose, Ovaries subcuneid pendulous much longer than setaceous bracts, Sepals lanceolate acuminate, Lip adnate 3-lobed bilamellate at base, Lateral segm triang. middle one lanc. elong.
- 20300 Leaves linear obtuse emarginate, Racemes terminal loose few-flowered, Sepals ovate-lanceolate, Petals linear spreading, Lip subcordate-ovate acute concave [lts linear-lanceolate, Lip 4-lobed, Lobes linear blunt
- 20301 Leaves distich lanceolate sheathed with warted sheaths, Flowers rather paniced, Sepals oblong concave, l'e-
- 20302 Stem clavate 2-leaved, Leaves lanceolate, Raceme simple, Bracts ovate channeled, Sepals and petals lanceolate linear, Column clavate, Lip 3-parted bicallos at base, Middle lobe unguiculate obtuse
- 20303 Stem branched sheathed by loose imbricate membranes, Leaf solitary falcate acute, Peduncles long, Sepals and petals linear-lanceolate, Lip 3-parted bituberculate at base, Middle lobe linear-lanceolate
- 20304 Pseudo-bulb fusiform, Leaves oblong obtuse, Raceme radical paniced, Sepals lanceolate. Petals narrower, Lip tripartite, Middle lobe transverse 2-lobed or emarginate fringed
- 20305 Pseudo-bulb obovate 2-leaved, Leaves narrow oblong, Raceme terminal cylindrical, Flowers rising from scales, Sepals linear, Petals linear-lanceolate acuminate, Lip oblong convex entire
- 20306 Pseudo-bulb ovate compressed ribbed 3-leaved, Leaves narrow elongated acute, Raceme dense many-flowered, Ovary 3-winged, Sepals linear, Petals lanceolate, Lip cochleate crenated curled
- 20307 Pseudo-bulb elong. ter., Lvs obl.-lanc. ac., Rac. short term., Seps and pets lanc. acum. reflexd, Lip ov. shell-frmd
- 20308 Leaves distich oblong-lanceolate, Raceme terminal, Sepals and petals nearly equal oblong acute concave spreading, Lip 4-lobed, Sepals keeled.
- 20309 Leaves long distich, Panicle nutant dense many-flowered rising from 2 spathe, Sepals oblong-lanceolate, Petals linear obtuse, Lip 3-lobed, Lateral lobes semicircular, middle lobe 2-lobed linear
- 20310 Stems erect simple, Leaves lanceolate acute subpicate, Racemes pedunculate cylindrical nutant, Sepals ovate, Petals setaceous, Lip subcucullate, Lateral lobes roundish, middle lobes ovate acuminate
- 20311 Leaves distich lanceolate, Racemes terminal and lateral many-flowered, Sepals ligulate obtuse, Petals linear cuneate mucronate, Lip 6-lobed with 3 callosities at base
- 20312 Leaves distich lanceolate acuminate, Stem naked scaly, Racemes cylindrical many-flowered, Flowers drooping, Sepals linear-lanceolate, Petals ovate acute, Lip ovate acuminate entire crested at base
- 20313 Leaves narrow sub-distich keeled concave obtuse, Spike dense terminal, Bracts keeled distich, Sepals keeled, Petals linear spatulate, Lip roundish flat emarginate callous in centre
- 20314 Leaves distich elliptic-obtuse concave, Stems naked scaly, Sepals and petals linear-lanceolate, Lip 3-lobed, Lateral lobes jagged, middle one small truncate denticulate callous at base
- 20315 Leaves distich oblong, Sepals and petals lanceolate nearly equal, Lip 3-lobed keeled bituberculate at base, Lateral lobes jagged, middle one obtusely truncate
- 20316 Leaves distich oblong obtuse with dotted edges, Stem simple leafless at top, Sepals and petals linear-lanceolate acute equal, Lip 3-lobed keeled, Lateral lobes rounded jagged, middle one cuneate curled triangular at top
- 20317 Leaves oblong-ligulate acuminate, Panicle large drooping, Sepals oblong-concave acute, Petals narrow linear, Lip 3-lobed 3-keeled, Middle lobe 3-lobed minute [sulcate bicallos with involute edges
- 20318 Lvs distich obl.-lin. obt., Pedunc. sheathed, Flws paniced, Seps and pets lanc. obt., Lip 2-lobed, Middle lobe tri-
- 20319 Leaves coriaceous oblong acute, Peduncles slender subpaniced at top, Petals long filiform, Lip ovate toothed with 3 tubercles at base
- 20320 Pseudo-bulb ovate acuminate 2-leaved, Lvs oblong-ligulate acute sheathing at base, Raceme erect many-flowered, Sepals and petals ovate-lanceolate acute, Lip linear callous and bifovate at base
- 20321 Pseudo-bulb spherical, Scape paniced, Sepals and petals obovate-oblong, Lip free 3-lobed cucullate, Middle lobe curled acuminate with an elevated callous furrowed downy disk
- 20322 Pseudo-bulb oval compressed 2-leaved, Raceme narrow, Sepals and petals equal linear acuminate, Lip roundish 3-lobed cordate, Middle lobe longer obscurely tridentate downy at base, Capsule 3-winged

and Miscellaneous Particulars.

20304. *Epidendrum Stamfordianum* is found on the coast of Guatemala in shady moist lands; the plant, therefore, will require an unusually moist atmosphere.

History, Use, Propagation, Culture,

3205. *Eriopsis biloba* has the habit of *Eria* when not in flower. It has large plicate leaves. The history of its introduction is unknown.

3206. *Hexadesmia*. The flowers are those of *Aporum*, and the structure of the pollen is that of *Epidendrum*. The stems are erect and rise from rhizomata.

- 20323 Pseudo-b. compressed imbric. ov. usually 2-lvd, Lvs ligu.-obl. undul. rather oblique at apex, Rac. loose about 7-flowered spathaceous at base longer than lvs, Seps and pets equal spreading oval-linear acute variegated with brown, Lip nearly free rhomboid acute deflexed on both sides
- 20324 Pseudo-bulb ovate compressed 2-3-leaved, Leaves linear-lanceolate, Scape flexuous many-flowered, Sepals lanceolate acute, Petals smaller subspatulate, Lip free 3-lobed, Middle lobe obl. cucul. with 3 crested callos.
- 20325 Glaucous, Pseudo-bulb oval compressed 1-leaved, Leaves ensiform, Scape pendulous panicle, Sepals and petals oval obtuse, Lip linear 3-lobed, Middle one oval callous in centre
- 20326 Pseudo-bulb ovate 2-leaved, Leaves linear-lanceolate obtuse mucronate, Scape many-flowered, Sepals and petals linear striated, Lip 3-parted, Lateral segments including the column, middle one long curled
- 20327 Leaves ligulate rounded and obscurely 2-lobed at top, Raceme panicle, Sepals and petals nearly equal lanceolate-obovate, Lip 3-lobed free, Middle lobe ovate with elevated veins in centre
- 20328 Pseudo-bulb oblong 2-leaved, Leaves linear channeled acute, Raceme simple, Sepals and petals linear-lanceolate equal acute, Lip 3-lobed, Middle lobe ovate-oblong, lateral ones linear
- 20329 Pseudo-bulb ovate corrugated many-leaved, Leaves ensiform, Raceme simple very long, Sepals oblong, Petals cuneate, Lip free 3-lobed, Middle lobe oblong obtuse curled
- 20330 Pseudo-bulb ovate-oblong 2-leaved, Leaves ensiform obtuse, Scape panicle tall many-flowered, Sepals and petals lin.-obl. spatulate uniform, Lip nearly orbicular 3-lobed keeled at base, Middle lobe broad lined wavy curled
- 20331 Pseudo-bulb roundish-ovate 2-leaved, Leaves oblong-linear scabrous as are the scape and petioles, Sepals and petals nearly equal obovate-lanceolate, Lip 3-lobed, Middle lobe emarginate bilamellate at base
- 20332 Pseudo-bulb pear-shaped 3-leaved, Leaves linear acute keeled glaucescent, Scape erect simple many-flowered, Flws distant, Seps ovate-lanceolate acute, Pets narrower obt., Lip 3-parted, Middle segment obscurely 4-lobed
- 20333 Pseudo-bulb ovate wrinkled 2-leaved, Leaves linear-oblong bluish, Sepals and petals obovate-lanceolate incurved, Lip 3-lobed, Middle lobe large obovate, Disk callous
- β Lip rose-coloured
- 20334 Pseudo-bulb 3-leaved, Leaves lanceolate, Scape branched, Sepals oblong acute, Petals linear-lanceolate, Lip cuneate 3-lobed, Middle lobe large dilated subreniform furrowed biappendiculate in disk
- 20335 Ps.-b. tufted ov. 2-3-lvd, Lvs lin. ribbed twisted, Rac. panicle term., Ovar. scab. from dots, Seps and pets equal spat. ac. spread., Lip 3-lbd bical. at base, Lat. lbs short conniv. falc., mid. cord., Col. uncinly auric. at top
- 20336 Pseudo-bulb 2-lvd, Lvs ligul. acute, Scape simple slender, Seps and pets nearly equal cun.-lanc. varnished, Lip free unguic. 3-lobed downy at base, Middle lobe renif. emarg. painted with tubercled and varicose veins
- 20337 Pseudo-bulb obversely pear-shaped tufted 1-3-leaved, Lvs lin. acute recurved grassy, Spike term. loose-flwd, Bracts scale-formed, Seps and pets nearly equal lin.-obl. obt., Lip 3-lbd callous in middle, Middle lobe emarg.
- 20338 Pseudo-bulb ovate 2-leaved, Leaves ensate obtuse, Panicle loose. Sepals and petals uniform spatulate unguiculate obtuse, Lip 3-lobed free, Claw concave, Segments rounded
- 20339 Pseudo-bulb ovate smooth tufted 2-leaved, Leaves long linear obtuse, Panicle elongated loose slender, Sepals and petals lin.-spatul., Lip nearly free 3-lobed, Lat. lobes reflexd, mid. one rounded entire undul., Disk bicost.
- 20340 Pseudo-bulb ovate 3-leaved, Scape terminal, Raceme many-flowered. Sepals broad-linear, Petals spatulate, Lip 3-lobed bilamellate, Middle segment roundish curled [als lanc. ac., Lip 3-lobed, Middle lobe roundish
- 20341 Pseudo-bulb obversely pear-shaped aggregate 2-leaved, Leaves lanceolate acute, Scape 2-flwd, Sepals and petals obovate-lanceolate acuminate, Lip 3-lobed, Middle segment cordate plicate cuspidate
- 20342 Pseudo-bulb ovate-oblong terete 2-leaved, Leaves ensiform, Raceme few-flowered, Bracts small, Sepals and petals obovate-lanceolate acuminate, Lip 3-lobed, Middle segment cordate plicate cuspidate
- 20343 Scape few-flowered, Flowers pedunculous on long peduncles closed, Ovary fusiform large warted, Lip 3-lobed, Lateral lobes linear, middle lobe ovate with elevated veins
- 20344 Flowers densely racemose, Sepals oblong-lanceolate acute, Petals roundish unguiculate apiculate, Lip 3-lobed, Lateral lobes oblong truncate reflexed, Middle one longer curled rhomboid acuminate with replicate leaves
- 20345 Pseudo-bulb oblong-ovate wrinkled 2-leaved, Raceme radical many-flowered nutant, Lip hairy striated, Middle lobe small entire
- 20346 Stem succulent leafy at top, Racemes radical many-flowered erect [dle lobe small entire

- 20347 Stem fusiform, Lvs linear, Racs flexuous few-flowered, Bracts ovate membranous, Lip obovate deeply 2-lobed [2-horned on both sides
- 20348 Stems fusiform elongated, Lvs linear obliquely bidentate, Flws usually solitary, Lip ovate retuse subserrated
- 20349 Raceme many-flwd, Bracts lin. acum. membranous, Lip 3 lobed, Lateral segm. roundish, middle one apiculate
- 20350 Stem fusiform compressed 2-leaved, Leaves linear emarginate, Flowers in fascicles of 2-4 rising from bracts, Lip plicate
- 20351 Stem slender with rough sheaths, Leaf solitary long curved, Spike dense, Flowers pink
- 20352 Pseudo-bulbs elongated fusiform, Leaves linear-lanceolate, Sepals and petals obtuse
- 20353 Stems fusiform, Leaves narrow, Peduncles slender racemose scaly terminal, Flowers drooping
- 20354 Stems 2-3-leaved, Leaves oblong coriaceous, Raceme loose many-flowered terminal, Sepals lanceolate-acuminate, Petals ovate-oblong acuminate, Lip ovate subunguiculate lamellate in centre

and Miscellaneous Particulars.

3207. *Arpophyllum* is an epiphyte with pink flowers.
3208. *Otoclipsis*. A curious little epiphyte from Nepal.
3209. *Barkéria*. Elegant Mexican plants, with much the habit of *Cattleya*. The flowers are large, elegant, and drooping.

History, Use, Propagation, Culture.

3210. *Arundinia* is a genus of splendid plants, having the appearance of reeds. The flowers are like those of *Cattleya*. The species are said to grow on rocks. Put them in brown turfy peat, with the pot well drained, giving the plant plenty of water when growing freely. *A. bambusæfolia* grows in a forest of Chittagong on the face of moist rocks.

- 20355 Leaves oval acute, Bracts linear, Lip oblong apiculate-d bicarinate unguic., Column clavate winged tridentate
 20356 Leaves distich lanceolate-acuminate, Stem naked scaly, Raceme cylindrical many-flowered, Flowers drooping, Sepals linear-lanceolate, Petals oval acute, Lip ovate acuminate crested at base
- 20357 Caulicent, Leaves bifarious linear-lanceolate acuminate, Raceme terminal, Sepals linear-lanceolate, Petals obovate ventricose, Lip length of petals 3-lobed, Middle lobe more or less cloven
 20358 Lip obovate rounded 4-lobed apiculated, Segments roundish, Lamellæ 3 equal curled straight, Petals oblong
- 20359 Pseudo-bulb oval compressed 1-leaved, Lvs ensiform flat longer than few-flwd spike, Bracts lin.-lanc. acum. chaffy, Flowers secund, Seps and pets linear-lanceolate, Lip fleshy dilated at top furrowed along the middle
- β Sepals and petals brownish-yellow, Middle lobe of lip spotted [2-lobed
 20360 Bracts cucullate veiny leafy longer than ovary, Seps and pets ovate obtuse, Lip 3-lobed, Middle lobe smaller
 20361 Bracts short ovate, length of pedicel, Dorsal sepal linear-oblong, lateral ones acuminate, Petals falcate, Lip 3-lobed, Lateral lobes falcate, middle one roundish curled emarginate
- β Leaves narrower, Sepals ovate-oblong not obliquely cordate as in the species [Lip sessile roundish acute lobed on margin
 20362 Leaves coriaceous flat obtuse oblong glaucous, Spathe 1-flowered, Sepals and petals linear-lanceolate obtuse,
 20363 Lvs oval flat glauc. fleshy, Lip sess. cucul. cord subtrilobed edged with long hairs and a large callosity on disk
 20364 Lvs lin.-lanc. fleshy channeled, Seps and pets lin.-lan., Lip obcord. acum. veiny ser., at base on long ser. claw
 20365 Lip oval or ovate acum. ciliate-toothed sessile, Pets and seps lin.-lanc. acum., Clinandrium cucullate cut
 20366 Lip cordate acuminate length of claw, Petals and sepals linear acuminate glabrous, Stems nodose at base
 20367 Lvs terete straight, Flws almost sess., Seps and pets lin. spreading, Lip roundish-ov. twice as long as its claw
 20368 Lip 3-lobed, Lateral lobes roundish fringedly denticulate, middle lobe very long cuspidate awl-shaped entire, Sepals and petals long acuminate
 20369 Lip ovate acuminate entire, Sepals and petals linear acuminate, Lateral teeth of clinandrium emarg. behind
- 20370 Stem branched, Leaves teretely compressed subulate channeled, Seps and pets linear-obtuse, Lip cordate
 20371 Stem 1-flowered, Lip entire exterior, Petals tuberculate [acuminate entire
 20372 Scape racemose, Lip large clasping the base of the column deeply 3-lobed, Column broadly winged
- 20373 Leaf flat narrow-lanceolate stiff, Lip large roundish quadrate acuminate longer than claw, Seps and petals linear [lin.-lanc, Pets obl.-lanc. obtuse, Lip large convolute about column roundish, Lateral lobes obsolete
 20374 Pseudo-bulb oblong. Leaves narrow-oblong emarginate, Peduncles 2-flowered rising from the spathe, Sepals
 20375 Pseudo-bulb ovate 2-leaved, Leaves linear shorter than many-flowered spike, Sepals oblong-lanceolate acute, Lip 3-lobed, Lobes roundish, middle larger apiculate reflexed [lamellæ on disk, Crest of anther 2-eared
 20376 Scape long many-flwd, Seps and pets lin.-obl. obtuse, Lip 3-lobed, Middle lobe with 5 large subserrated truncate
 20377 Pseudo-bulb ovate compressed oblong obtuse shorter than scape, Corymb 3-4-flowered, Sepals lanceolate obt., Pets ellipt. obt. flsh, Lip 3-lobd, Lat. lobes roundish, middle one obl. wavy larger with 2 elevated lines
 20378 Pseudo bulb cylindrical elongated 2-leaved, Leaves oblong wavy, Scape slender 4-5-flowered, Sepals and petals lanceol., Lip convol. recurved 3-lobd, Lateral lobes acute, middle one oval curled with 3 elevated lines
 20379 Pseudo-bulb 1-2-lyd. Lvs obl. coriac., Scape longer than lvs with distant sheathing scales, Racemes cylind., Seps and pets obl.-lin. obt., Lip 3-lobd, Lat. lvs wavy having 4 elevated lines, middle one ses. curled recurved
 20380 Pseudo bulb ovate compressed wrinkled 1-leaved, Leaf emarginate, Flowers corymbose, Bracts linear, Sepals linear pointed, Petals lanceolate wavy point-d, Lip 3-lobed, Lateral lobes rounded, middle lanc. wavy pointed
 20381 Leaves narrow equal to few-flowered scape, Bracts ovate, Sepals lanceolate, Petals oblong-lanceolate, Middle lobe of lip roundish emarginate flat, lateral ones small obtuse
 20382 Pseudo-bulb roundish compressed, Leaves oblong-obtuse shorter than sheathing scape, Raceme many-flowered, Sepals linear, Petals lanceolate wavy, Lip auricled downy in centre with 2 elevated lines
 20383 Pseudo-bulb clavate 1-leaved, Leaf coriaceous, Scape 2-flowered, Sepals lanceolate reflexed, Petals broad lanc. denticulately curled conv., Lip membr. veiny undul. 3-lobed, Lateral segments convol. around the column
 20384 Seps erectish ov., Pets lanc., Lip obl. obsolete 3-lobed cucul. ov. curled with an obsolete elevated line at base
 20385 Pseudo-bulb ovate striated 1-leaved, Leaf oblong acute shorter than 1-flowered scape, Sepals lanceolate acuminate, Petals rhomboid-lanceolate, Ovary sublobate, Ovarium black with scurfy glands
- 20386 Scape 1-flowered-dibaccate at top under the flower, Sepals oblong, lateral ones straight channeled, upper one erect revol., Petals erect obl. revol. at apex, Lip roundish 3-lobed emarg. with a pectinate ridish appendage
 20387 Scape 1-flowered with a double acute cucullate bract just under the flower, Ovarium rather downy, Sepals and petals ovate acute spreading, Lip roundish smooth with a 5-rayed appendage [mid. one largest
 20388 Bracts 4 times shorter than pedicel, Lip bidentate at top with convex flabellate veins and elevated lamellæ,
 20389 Spk. shrt. Brcts length of ovary, Seps ov. ac., Pets nearly conf., Lip rdish cune. apic. wavy, with 5 elev. lines
 20390 Rac. elon. many-flwd, Flws expand., Seps and pets lanc. conc. acum., Lip cord. incurv. bifid, with 5 elev. lam.

and Miscellaneous Particulars.

3211. *Warrca* is a genus of terrestrial pseudo-bulbs, with reed-like leaves, tall radical scapes, and racemose very showy flowers.

History, Use, Propagation, Culture,

2766. *Schomburgkia* is a genus of remarkable plants. *S. tibicina*, the cow's-horn orchid of Honduras, has the flower-stem 9 feet high, and the pseudo-bulbs from 1 to 2 feet are hollow and smooth inside, as the Bamboo; and at their base is a small hole which leads to the interior and gives access to colonies of ants.

- 20391 Lvs broad ligulate recurved at top, Flowers 2—3, Sepals and petals oval acute, Lip nearly square narrower at apex retuse saccate at base angular reflexed fleshy with 3 small plicæ in middle on each side
- 20392 Scape many-flowered longer than leaves, Sepals ovate, Petals smaller conform, Lip shortly unguiculate ob-ovate oblong undivided cucullate obtuse with 3 elevated fleshy lines in the middle corrugated
- 20393 Pseudo-bulb conical horn-formed annulate sulcate 3-leaved, Leaves oblong coriaceous, Scape long terete scaly, Panicle pyramidal loose, Sepals and petals wavy and curled, Lip oblong cucullate with 5 elevated approximate lines along the centre, Lat. segs rounded at top, mid. one subrhomboid emarg., Anthers emarg.-
 β Flws twice the size of those of the species, Lip pale outside, Mid. lobe of lip yel. inside white edged with violet
- 20394 Pseudo-bulb fusif., Flws racemose, Bracts about equal to the ovarium, Lip ovate-oblong obtuse scarcely cucull. obtusely 3-lobed about eq. to obl. curled seps and pets with 5 wavy lamellæ and 2 lat. slender straight ones
- 20395 Pseudo-bulb fusiform, Flws racemose, Bracts long spatiate, S-ps and pets equal lin. undulately curled longer than lip, Lip cucul., Lateral lobes rounded, mid. one ov. acute with 5 wavy lamellæ and 2 lat. straight ones
- 20396 Stems clavate sulcate, Leaves oblong marginate, Sepals oblong acute, Petals lanceolate acute broader, Lip 3-lobed, Lat. lbs ac., mid. one transverse emarg. dentic. wrinkled from elev. veins, Callosities 2 behind at base
- 20397 Stems clavate, Leaves ovate-lanceolate, Petals oblong wavy, Lip 3-lobed wavy, Middle lobe large
- 20398 Stems clav., Lvs 2 oval obt., Spathe short, Seps nar. obl.-lanc., Pets obl. broader, Lip entire convol. emarg. flat
- 20399 Stem cylind., Lvs obl. ellipt. coriæc. marg., Seps obl.-lanc. callosely apicu., Pets ov.-lanc. acute broader, Lip 3-lobed cucul., Lat. lobes obliquely trunc., mid. one broad round emarg. flat wrinkled from elev. veins at base
- 20400 Stems clav. obov. angular 1—2-lvd, Lvs ov.-obl., Spathe shorter than peduncle, Seps lin.-obl. obt., Pets roundish-oval wavy, Lip large curled obtuse obsolete 3-lobed, Middle lobe wavy emarginate with a smooth disk
- 20401 Stems short fusiform, Leaves obtuse, Spathe none, Seps lanceolate acute, Petals large thin wavy, Lip convolute with a convex undulated reflexed curled expanded limb [undiv. ov. acum. undul. curled]
- 20402 Stms thick obl.-clav. 1-lvd, Spth lge green, Seps lin.-obov. ac. lanc., Pets broader oblong-lanc. wavy curvd, Lip 20403 Stems ov. covered by loose white mem. scales, Lvs lanc. glauc., Pedonc. long solit., Flws fleshy pendul., Seps obl.-ellipt., Pets conf. broader, Lip 3-lbd, Mid. lb ov. undu. emarg. with a broad elev. line along the middle
- 20404 Lvs narrow lanc., Seps obl. apic., Pets obl., Lip 3-lbd, Lat. lobes rounded, middle narrow curled shorter with numer. elev. lines [ments semi-ov., middle one with a broad sinus dilated rnded plic. granu. dentic.]
- 20405 Stms terete slender 2-lvd, Lvs obl.-lanc. obt. Pets obov.-spatu. wavy obt., Lip cucul. 3-parted, Lateral seg- 20406 Lvs ov.-obl. narrow, Stem tall terete, Seps lanc. falcate acute, Pets broader reflexed wavy obt., Lip undivided flat dilated at top rounded crenated convex [Lip undiv. flat bald orbic. uniformly emarginate]
- 20407 Stems cylind. striated decumb. 2-lvd, Lvs obl., Flws usually solit., Seps and pets lanc. equal incurved spotted, 20408 Stems long fur. 1-lvd, Lvs wavy obl. obt. emarg., Spathe large 1-fwd., Seps lanc., Pets obl. wavy much broader, Lip obl. emarg. wavy cucullate at base [expand. part crim. bord. with white wavy, Seps rosy crim.]
- 20409 Pseudo-b. 2 inches long 2-lvd, Lvs ellipt., Flowers solit. on long drooping peduncs, Pets much larger than seps
- 20410 Pseudo-bulb 2-leaved, Lvs oblong coriaceous, Scape slender 8-flowered, Lip 2-lobed, Segments denticulate wavy recurved having the central veins bearded

- 20411 Sepals linear acute, Petals similar, Lip ovate convoluted acuminate [nivent ov. ac. equal, Disk of Lip with 5 straight wavy lamellæ, Lat. lbs ov., mid. one dilated curled at apex
- 20412 Lvs ensiform plicate, Scape tall radical, Seps two of which are lamellate in the middle and are with petals con- [middle lobe ovate curled with 6 elevated wavy lines]
- 20413 Scape simple long, Sepals and petals lanceolate-linear erect, Lip oblong 3-lobed, Lateral lobes short incurved,
- 20414 Lvs obl.-lanc. 7-nerved acum., Flws racemose, Seps and pets green nearly equal cuneate-oblong second col- lateral, Lip 3-lobed, Lateral segs short erect, middle one mem. obov. emarg. bilamellate along the middle
- 20415 Sepals obl.-lanc., Petals ovate lanc. spreading, Lip cucullate, Lateral lobes rounded short, middle one round- ish emarginate convex unguiculate, Leaves lanceolate
- 20416 Lvs obl.-lanc. plicate acute, Racemes 6—9-fwd, Bracts obl. obt. cucullate deciduous, Seps spreading linear-obl. Pets broader undulate, Lip 3-lbd, Seps obt., middle one creno. curled with 5 lamellæ and 2 short lat. ones
- 20417 Lvs broad-lanc. 9—11-nerved equal to scape, Raceme contracted, Bracts green concave obtuse, Lateral lobes of lip linear erect about equal to column [dle one cuneate emarg. with 3 villous lamellæ]
- 20418 Lvs 2 lanc. lin. shorter than downy scape, Rac. second downy, Bracts acum., Lat. lobes of lip obl. erect, mid- [and 3 second flws, Lower sep. large and grown into a bag beyond which project a pair of lin. reflexed petals
- 20419 Pseudo-b. slender tapering 1-lvd, Leaf petiol. oval thin, Seps radical furnished with about 6 loose distant scales [bilamellate at base, Anther 2-horned]
- 20420 Leaf oblong-lanceolate fleshy petiolate shorter than scape, Middle lobe of lip emarginate apiculate spurless
- 20421 Pseudo-b. broad-ovate furrowed, Leaf solitary lanceolate 1 foot long on a very long petiole, Spike many-flowered bracteolate, Petals and sepals lanceolate, Lip oblong 3-lobed, Middle lobe roundish short, Spur short [entire, Spur subulate arched length of ovarium]
- 20422 Stemless, Leaves broad-lanceolate acuminate, Sepals and petals oblong-lanceolate, Lip cucullate incurved
- 20423 Stemless, Leaves oblong lanceolate acute, Sepals and petals lanceolate, Lip cucullate curled entire acuminate, Spur arched emarginate, Bracts acuminate

and Miscellaneous Particulars.

3212. *Spathoglottis* requires the same treatment as *Bittia*.
3213. *Schlimma*. An epiphyte with much the habit of a *Cypripedium*.
3214. *A'nia*. A terrestrial plant with the habit of the species of *Eulophia*.

History, Use, Propagation, Culture,

3215. *Dignathe* is a genus nearly allied to *Aspasia*. It is a small epiphytal plant, with scaly 1-leaved pseudo-bulbs and green flowers spotted with yellow.

3216. *Pitumna* is a genus said to be closely allied to *Aspasia*. Its habit is that of *Trichopilia*. *P. laxa* has the sepals and petals of a pale watery green, tinged with purple; the lip cream-coloured, and rolled round the column, which is terete; a singular fringed hood overlying the anthers (hence the name), and a nearly vertical stigma. They are pseudo-bulbous epiphytes, with coriaceous leaves and radical peduncles.

- 20424 Bluish, Leaves ovate-lanceolate acuminate spotted, Sepals and petals oblong obtuse, Lip 3-lobed, Lobes plicately crenated at top, Lateral ones small roundish, middle one ovate obtuse, Spur straight obtuse
[tire, middle lobe crenated emarginate]
- 20425 Pseudo-b. oblong 2-edged, Sepals linear-oblong acute, Petals obtuse concave, Lateral lobes of lip roundish emarginate
- 20426 Pseudo-b. oblong 2-edged, Sepals and petals linear obtuse spreading, Lip 3-lobed, Lateral lobes short, middle one flat nearly square wavy, Flowers solitary
- 20427 Pseudo-bulb scaly 1-leaved, Flower green, with a few yellow spots
[Sepals and petals linear-lanc., Lip oblong undivided roundish constricted in middle unilamellate in middle]
- 20428 Pseudo-b. thin 2-edged 1-lvd, Leaf obl. spotted beneath, Raceme loose many-flwd, Bracts loose cucullate obtuse,
- 20429 Leaf broad-oblong, Raceme 2-3-flowered, Bracts lanceolate erect obtuse, Sepals and petals oblong-lanceolate acuminate, Lip oblong apiculated somewhat 3-lobed smooth
- 20430 Flowers sessile, Segments of Perianth oblong-obtuse, Lip 3-lobed, Middle lobe obtuse with a glandular disk Gland wrinkled setose at base
- 20431 Sepals and petals obtuse fleshy, yellow spotted inside, Lip oblong spongy white wrinkled rather scabrous
- 20432 Leaves ovate-oblong, Raceme corymbose few-flowered, Sepals and petals ovate acute, Lip repand acute, Wings of column short obtuse, Ovarium 6-ribbed
- 20433 Lvs roundish-oblong coriaceous, Raceme short corymbose, Ovarium 6-winged long-beaked, Lip ovate crested
- 20434 Pseudo-b. oval 1-leaved, Leaf linear, Scape terminal many-bracteate at base 1-flowered, Lip obovate acute naked gibbous at base, Wings of column fleshy blunt falcate
- 20435 Pseudo-bulb 1-leaved, Leaves lanceolate acuminate at both ends, Petals and sepals linear-oblong bluntish flat, Lip 3-lobed, Middle lobe obovate acute inflexed unguiculate, lateral ones acuminate
- 20436 Leaves ovate-lanceolate, Petals linear-lanceolate, Lip 3-lobed, Middle lobe ovate concave, Lateral ones linear-oblong reflexed hairy
[fleshy obl. ac., Lip 3-lobed, Middle lobe obl. spongy, Lat. segs triang. ascending acum. with 2 cili. warts
- 20437 Caulescent radicans, Lvs obl. fleshy obt. obliquely emarg., Ped short scaly 2-flwd supra-axillary, Seps and pets
- 20438 Lvs distich coriac. rounded at top and obliquely 2-lobed, Spikes dense conical, Dorsal seps and pets narrower lanc. ac., Lat. ones rounded at apex, Lip 3-lobd, Lat. segs ac., mid. one obl. obt. cornute and toothed in disk
- 20439 Subcaulescent, Pseudo-b. rather fusiform sulcate 2-lvd scaly at base, Lvs linear channeled convex on back, Peduncles scaly axil. 1-flwd, Perianth connivent, Seps and pets ovate, Lip undivided oblong obtuse
- 20440 Pseudo-bulb obovate angular 2-leaved, Leaves broad linear, Scape radical 1-2-flwd, Sepals and petals oblong acute, Lip oblong 3-lobed, Lobes short involving the column, middle one acute reflexed
- 20441 Pseudo-bulb ovate compressed, Leaves lanceolate, Scape 1-flowered bracteate deflexed, Lateral lobes of lip oblong, middle one large much fringed ending in a saecate appendage, Spur short conical
- 20442 Pseudo-bulb ovate-roundish 2-edged flattened 1-leaved, Leaves broad-lanceolate coriaceous obtuse, Scape radical short, Sepals and petals nar. lanceol. acuminate with revolute edges, Lip obovate-oblong 3-lobed, Lateral lobes obtuse, middle one large revolute obtuse with dentately fringed edges and a pulvinate hairy disk
- 20443 Pseudo-b. oval flattened 1-lvd, Lvs broad longer than scape which is clothed with scale-like sheaths, Bracts hooded longer than ovarium, Sepals ovate acuminate erect, Petals ensiform smaller, Lip oblong fleshy 3-lobed, Lateral lobes short, middle lobe elongated obtuse apiculated with a spatul. callosity in disk
- 20444 Pseudo-b. ellip. compr. wrinkled 1-lvd, Leaf lanc.-lingulate coriac. obscurely stri. tapering into the compress. petiole, Scape 1-flwd imbr. by bracts, Pets lin.-lanc., Lip 3-lob ed, Lat. lobes incurv., mid. one spread wavy
- 20445 Stem short scaly, Pseudo-bulb aggregate oblong furrowed 1-leaved, Leaf lanceolate, Scape 1-flowered, Petals and sepals erect oblong obtuse, Lip erect oblong obscurely 3-lobed with a callous disk, Middle lobe bifid
- 20446 Pseudo-b. oblong compressed leafy, Lvs oblong wavy obtuse emarginate broadly sheathed, Sep erect 1 flwd loosely sheathed one half shorter than lvs, Seps and pets narrow triangular elongate, Lip obovate obtuse 3-lobd fleshy and curled at top with one tubercle above middle
- 20447 Pseudo-b. or. tetrag. 1-lvd, Lvs obl.-lanc. plic. Fls rad. sol., Seps obl. obt. spread., Pets sim. smaller, Lip fleshy ventric. 3-lobed erect, Lat. lobes small ac., middle one convex outside with tabul. incumb. append. in disk
- 20448 Pseudo-b. or. obt. angular 1-lvd, Lvs lanc., Petioles channeled, Rac. drooping length of radical lvs, Lip cuneate 3-lobed, Lat. lobes ac. crenulated in front, middle lobe 2-lobed cord. cucul. with 3-lobd blunt tubercle in disk
- 20449 Pseudo-b. ovate subtetrag. 1-lvd., Lvs lanc. acum. at both ends, Scape 1-flwd with distant sheaths, Seps and pets obl. obt., Lip obl. 3-lobed without tubercles, Lateral segments small ac., middle ones elong. emarginate
- 20450 Pseudo-bulb ovate-oblong compressed 1-lvd longer than scales, Lvs linear-lanceolate acute recurved, Peduncles axillary solitary scaly at base, Flws drooping, Seps ovate-lanceolate revolute, Pets ovate obtuse connivent, Lip oblong undivided ovate arched reflexed at top contracted below the apex with an oblong callosity in disk

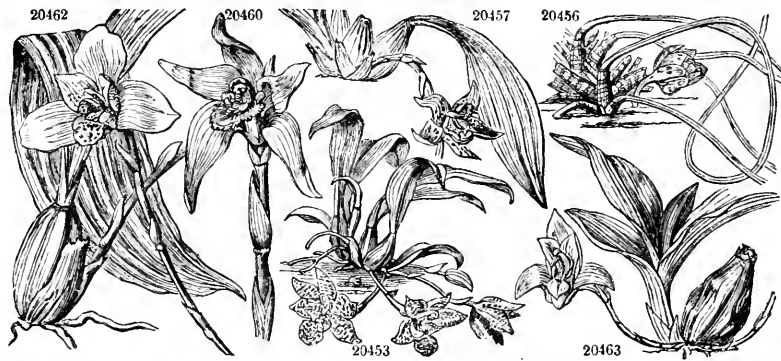

and Miscellaneous Particulars.

3217. *Ornitharium stridulum* is a caulescent plant with distich leaves and spikes of resupinate closed flowers which are yellow and spotted inside; but the lip is white and dark purple at top. It is very nearly allied to *Ornithochilus*.

2771. *Cirrhoëa*. The flowers of all the species have, for what is called the rostellum, a prolongation in the form of a tendril or cirrhous, hence the generic name.

History, Use, Propagation, Culture,

3218. *Prominæa*. A genus of pseudo-bulbous epiphytes separated from *Maxillária*, with 1—2-leaved bulbs and 1—2-flowered-scapes and showy yellow flowers, often spotted or streaked with purple.

3219. *Scuticaria Steelii* is an old inhabitant of our stoves. It has an articulated branched bulbless rhizoma, fan-shaped leaves, and large yellow flowers spotted with purple.

3220. *Paphnia cristata* is a pseudo-bulbous epiphyte with few-flowered pendulous scapes and very pretty flowers, white outside and faced with purple inside, and the petals are altogether purple.

3221. *Lycaste* is a genus separated from the old *Maxillária*, and consists of pseudo-bulbous epiphytes with plicate leaves, and erect, radical, one-flowered scapes. The flowers of all are showy, and propped by a large spathe-like bract.

- 20451 Pseudo-b. obl. compr. 1-lvd, Lvs obl.-lanc. emarg., Rac. axil. densely aggre., Brcts cucul., Perianth bilab., Seps lin.-lanc. acum. keeled, Pets smaller, Lip obl. undiv. recurv. channelled at top with elev. transv. line in mid.
- 20452 Pseudo-b. cylind. elong. 2-lvd, Lvs lanc. 3-ribbed, Scape erect with 2 sheaths, Rac. dense oblong, Brcts setaceous, Seps and pets linear acuminate, Lip ovate-oblong fleshy lobed on both sides and warted on the face
- 20453 Pseudo-b. ovate tetrag. 2-lvd, Lvs thin lanc. spreading pale glaucous reticulated, Pedunc. diffus. 2-flwd, Seps and pets roundish-ovate acute spreading nearly equal, Lip oblong 3-lobed, Lateral segms erect linear oblique obtuse, middle one ovate-oblong cucullate furnished with a fleshy flexuous transverse 1-toothed crest
- 20454 Pseudo-b. oval tetrag. 1-2-lvd, Lvs narrow-lanc., Pedunc. ascend. 1-flwd terminated by a sterile pedicel, Brct ovate mucro. cucul., Seps and pets obl. ac. spread. nearly equal, Lip obl. 3 lobed, Lateral segms erect lin. middle obt. entire, middle one bilabiate, Upper lip fleshy short trunc. 5-dentate, lower lip oblong acute
- 20455 Bracts broad-ovate acuminate, Middle lobe of lip ovate-oblong obtuse, Crest transverse furnished with a quadrate tridentate process, Anther incurved at apex.
- 20456 Plant rhizomatose, Rhizoma articulated branched bulbless, Lvs flagelliform, Flowers large yellow spotted with purple
- 20457 Plant pseudo-bulbous, Scares pendulous few-flwd, Flwrs beautiful, white outside interruptedly banded with purple inside, Petals all purple
- 20458 Lip roundish spotted with crimson, Lateral lobes short, middle one lanc. acute denticulated, Appendage [3-lobed. Column hairy, Petals naked
- 20459 Bract green cucul. acute length of ovary, Seps obl. wavy spreading recurved at top please inside at base, Pets erect longer than column oblong fleshy recurved at top lobed towards the top, Lip shorter oblong concave 3-lobed, Middle lobe roundish created plose with a tongue-shaped appendage, Anther villous
- 20460 Bract green about equal to oblong-lanceolate seps, Lateral seps falcate, Pets conform smaller, Lip lanceolate acuminate, Lateral seps acute, middle one ovate acum. serrated, Appendage fleshy emarginate
- 20461 Scape shorter than lvs, Sheaths ventricose acum., Seps obl.-lanc. spreading, Pets smaller obl. wavy connivent, Lip cucullate 3-lobed recurved at top, Lat. segms roundish, middle one obl. obt., Callosity elevated ovate
- 20462 Brct green cucul. acute much longer than ovary, Seps obl.-lanc. acute spread., Pets much shorter oval erect conv. above the column reflexed at top, Lip 3-lobed, Lat. lobes erect trunc., middle one longer ovate rounded deflexed, Appendages fleshy tongue-shaped, Column downy, Flower 6 inches across
- 20463 Sheaths distant obl. cucul., Seps ovate-obl., Pets conform acute, Lip semicylind., Lat. segms acuminate, middle one cuneate serrulate at apex, Appendage large concave fleshy truncate, Face of column villous
- 20464 Pedunc. rarely 2-flwd, Sheaths distant obtuse cucul., Seps ovate-obl., Pets smaller conform, Lip shorter than seps concave 3-lobed, Lobes roundish, Middle one curled downy, Tubercle small flat, Column downy
- 20465 Bracts green shorter than ovary, Seps lanc., Lateral ones falcate, Pets conform but a little smaller, Lip oblong, Lateral segms small acute, middle one ovate obtuse fringed with a fleshy emarginate appendage
- 20466 Pseudo-bulb large ovate compressed, Lvs numerous oblong membranous nerved, Pedunc radical solitary 1-flwd, Seps oblong-ovate drawn out a little at base, Pets smaller broadish, Lip length of pets 3-lobed with a bilamellate disk, Middle lobe oblong ovate incurved curled
- 20467 Upper bract cucullate, Seps oblong flat, Pets conform, Lip 3-lobed, Lateral lobes crenulated at apex, middle one rounded serrated, Column downy, Anthers villous, Tubercle of lip elevated slightly 3-lobed
- 20468 Seps and pets conniving oblong roundish obtuse nearly equal, Lip short 3-lobed, Middle lobe transversely rhomboid unguiculate flat
- 20469 Seps linear oblong obtuse with a series of spots along the middle, Pets narrower conform spotted, Lip narrow 3-lobed downy smooth, Lateral segs short acute, middle one dilated rounded cuneate, Column lobed at top downy bistulcate towards the base
- 20470 Racemes erect, Hypochilum having a long blunt papillose horn
- 20471 Petals much smaller than seps, Lip 3-lobed, Middle segm. 2-lobed, lateral ones cuneate, Column short with broad wings, Callosity of lip linear simple, Raceme pendulous
- β Flowers vilvous
- 20472 Pets equal with seps, Callosity of lip double, Lower one linear villous, upper one substate tridentate at top and many-dentate at base, Lip 3-lobed, Middle segment emarginate, lateral ones scimitar-shaped, Column elongated with narrow wings, Scape pendulous
- 20473 Rhizoma creeping, Pseudo-b. small 1-lvd, Leaf oblong 5-ribbed, Racemes erect radical shorter than leaves

and Misc. llaucous Particulars.

3222. *Colax* is a genus of pseudo-bulbous epiphytes with terminal and radical plicate leaves. The peduncles are radical, erect, one-flowered, and sheathed; and the flowers are greenish.

3223. *Acnieta*. This genus is composed of subterranean pseudo-bulbs with much the habit of *Peristeria*, with plicate leaves and pendulous racemes of large yellow or purplish brown flowers.

3224. *Aganisia*. A pretty epiphyte with creeping pseudo-bulbous rhizomes. The pseudo-bulbs are 1-leaved, the scapes are erect and radical, shorter than the leaves, which are plicate. The flowers are white with a yellow lip, having a blood-coloured spot at the base.

History, Use, Propagation, Culture,

3225. *Houllettia* is a genus of splendid epiphytes. The leaves are on long petioles and the flowers are in racemes.
 3226. *Stenocoryne longicórnis* is a pseudo-bulbous epiphyte, with a solitary leaf to each bulb, and radical racemes of flowers, which are of an orange colour spotted with brown.
 3227. *Hélcia sanguinolénta* is nearly related to *Trichopitia* and *Aspasia*, and its culture and treatment are the same; but it differs in not having the lip united to the column, and in its deep-fringed anther bed.

- 20474 Lvs on long petioles, Raceme 6-flowered, Sepals oblong rounded at top as are the petals
[rounded at apex with lateral acute angles, Flwrs racemose yellow striped with chocolate colour
- 20475 Petals linear-lanceolate twisted at base, Lobes of hypochilium ovate obtuse straight, Epichilium rhomboid
[Lip large cucullate subrepand downy inside with a downy crest
- 20476 Lvs long terete pendent acute sulcate, Pedicels erect sheathed 1-flwd, Seps oblong acuminate spreading uniform,
20477 Pseudo-b. tetrag., Leaf obl.-ac. plic. curled, Ped. 1-flwd, Seps obl.-obt. with an elevated clav. horn, Pets conform
wavy, Lip 3-lbd cucul. with rounded und. subvent. edges, Mid. lbe pilose. Callosity of disk fleshy cun. emarg.
- 20478 Pseudo-b. ovate obt. tetrag. 1-lvd, Lvs obl.-lanc. plicate, Racemes radical 3-flowered, Lip 3-lobed, Lateral lobes
short diverging, middle one transverse a little 3-lobed revolute suberoso, Callosity in disk tridentate in front
- 20479 Pseudo-b. ov. compressed tetrag. 1-lvd, Lvs obl.-lanc. 3-ribbed, Scape many-flwd slender, Seps obl. ac., Pets
lin. spatul. smaller, Lip obl. cucul. undivided undulate emarg. callous in the axis, Column downy
- 20480 Pseudo-b. rndsh-ov. ang. wrinkled 1-lvd, Lvs obl.-lanc. rbbd ac., Scape rad. many-flwd, Flws on long peds, Seps
lanc. acum., lat. ones reflexed at top, Pets lin.-lanc. stri., Lip unguil. 3-lbd stri. in mid., Mid. seg. lanc. acum.
- 20481 Pseudo-bulb ovate bluntly angular 1-lvd, Lvs lanceolate, Racemes drooping, Lip cuculate 3-lobed, Lateral lobes
acute crenulate with a blunt 3-lobed tubercle in the disk and a downy claw
- 20482 Pseudo-bulb elongated tetragonal, Lvs oblong-lanceolate subplicate shining, Raceme loose many-flwd, Lateral
sepals ovate acute, Pets ovate acute, Lip unguiculate spatulate 3-lobed at top downy in middle with an elevated
disk, Lobes rounded
- 20483 Pseudo-b. compr. roundish, Lvs obt. recurved coriac. shining, Scape filiform strict sheathed, Perianth bilab.,
Hind sepal arched, Pets obl. with revol. edges, Lip 3-lobed short cil. downy, Lateral lobes tooth-formed,
mid. lobe revol. shining in cent. furnished with renif. callosity which is obsoletey triden. in front, Col. downy
- 20484 Lvs lin.-lanc., Sheaths acute, Seps obov., Pets obtuse, Lip tubercled on back, Anther glandularly pilose
[white dashed with pink, Lip large 2-lobed wavy curled white with rose-coloured blotches
- 20485 Pseudo-bulb slender obovate, Peduncs 2-flwd, Lvs broad-oblong coriaceous wavy, Pets linear not twisted
- 20486 Pseudo-b. narrow compressed furrowed, Lvs lanceolate flat slightly cordate, Pets twisted yellow, Lip even flat
carmine with a white border
- 20487 Pseudo-b. ovate elongated, Lvs 4—6 inches wavy narrowed into a channeled petiole, Peduncs shorter than
bulbs 1-flwd bibracteate, Seps and pets olive spotted with blood colour, Lip white striped with blood colour
obovate emarginate with yellow denticulate striated appendages
- 20488 Flws lateral usually solitary, Lip 3-lobed, Lateral lobes scimitar-shaped erect callous in middle, middle segment
obovate denticulate with a villous keel, Column glabrous mutic running into the lip at base
- 20489 Caulescent, Lvs distich coriaceous, Peduncles many-flowered lateral erect
[oblong apiculated smooth inside, Anther with an inflexed mucrone
- 20490 Spike elongated cylindrical, Bracts equal to ovary, Seps narrow acute, Pets obovate-lanceolate broader, Lip
20491 Pseudo-b. ovate enclosed in a large membranous oblong pellucid striated sheath, Lvs twin broad-oblong plicate,
Rac. elongated many-flwd, Seps and pets curved acuminate, Lip oblong-ovate acute
- 20492 Scape bluntly tetragonal sheathed in middle, Raceme elongated, Flws refracted after florescence, Bracts oblong
green, Seps and pets ovate blunth, Lip ovate acute naked marked with 5 marginal spots and 2 convergent
convex lines in middle, Anther horned
- 20493 Rac. ascending 2 feet many-flwd, Lip 3-lobed bearded at base, Lateral segments erect triangular acuminate
equal-sided, Middle lobe rhomb-lanceolate acuminate, Ovary hairy
- 20494 Raceme very long many-flwd, Lip linear-lanceolate, Hypochilium lin., Metachilium horned at base pinnatifidly
margined with terete bent glands [cesses, Column slender very long
- 20495 Rac. very long pendulous, Seps and pets membranac. recurved, Disk of lip roundish broken into clavate pro-
β Flowers pale green
- [segments linear ascending, middle one bearded at base tongue formed at apex
- 20496 Rac. loose, Brcts subulate, Seps lin.-lanc. acute, Dorsal one refracted, Pets lin., Lip membr. hastate, Lateral
- 20497 Lvs coriaceous glaucous beneath, Rac. many-flwd pendulous, Ovary tomentose, Seps oblong acute, Pets
smaller lanceolate narrow at base, Lip flat 3-lobed tomentose in middle, Middle lobe thicker acute
- 20498 Rac. long pendulous compact, Seps lanc. flat, Pets similar rolled backward, Lip unguiculate ov. ac. with round
disk the end of which is broken off into short curved processes forked at the point, Column length of lip
- 20499 Seps and pets lanceolate reflexed, Lip unguiculate, Hypochilium with an incurved horn, Metachilium 4-lobed
- 20500 Pseudo-b. ovate 2-lvd, Lvs oblong narrowed at base equal to raceme, Ovary 6-winged equal to striated
oblong acute deciduous bracts, Lip saccate cordate dilated at top retuse with a tooth between bicallous inside,
Column truncate denticulate with tooth-formed angles in front

and Miscellaneous Particulars.

3228. *Trichoglottis pallens*. A small epiphyte with yellowish green flowers spotted with brown.
3229. *Waillesia picta* is a pretty epiphyte with painted flowers.
3230. *Dendrochilium*. Small epiphytes of little beauty, with two-leaved bulbs, and racemes of flowers.

History, Use, Propagation, Culture,

2231. Cleisomeria. A small woolly epiphyte of little beauty

- 20501 Pseudo-b. conical, Scape filiform terminal elong., Rac. many-flwd, Rachis flexuous angular, Bracts paleaceous convolute, Pets obovate, Lip cuneate-roundish auricled at base, Appendages of column subulate glabrous
- 20502 Leaves oblong-lanceolate coriaceous 3-nerved, Peduncles elongated with a long spike at top, Lip smooth, Lobes linear-lanceolate acuminate ciliate, Segments shorter than the toothed column
- 20503 Lvs broad bluntly 2-lobed, Racemes dense branched much longer than lvs, Bracts ovate concave reflexed, Rachis and ovaria woolly
- 20504 Seps and pets conniving, Lip fleshy galeate inflexed at base with an entire or serrate margin
- 20505 Seps and pets ov. conniving, Lip fleshy galeate roundish compressed apiculated undivided with serrate margin
- 20506 Lvs oblong-lanceolate many-plicate longer than compact raceme, Perianth spreading a little, Lip galeate incurved at apex with denticulated sides
- 20507 Spike elong. many-flwd. Perianth globose, Seps and pets conform ov. ac. concave imbricate, Lip glob. denticul.
- 20508 Lvs very long grassy, Rac. cylind. pend. many-flwd, Seps ovate-roundish conform to the pets, Lip urceol. truncate apiculate waxy inside, fringed on the margin [roundish reflexed thick and denticulate
- 20509 Raceme decurved, Seps and pets spread. ovate acute, Lip fleshy cucul. with a thin pectinate margin, the apex 2-5 lobed
- 20510 Rac. large, Lip membr. infl. in front contract, at mouth the inner margin drawn out undu. and fringed-crested in disk, Pseudo-b. large ellipt., Lvs broad lanc. [dent. plate along the cent. which is 2-lobed at base, Col. tendr.
- 20511 Lip lanc. sac. at base margins incurved at top and fringed towards the base, furnished with a fleshy ent. or 3 Lip, column, and pets spotted with purplish brown
- 20512 Lip ivory-coloured spotted like the column and petals
- 20512 Petals serrated towards the top, Lip saccate beneath the middle fringed with long succulent white slender hairs attenuated and recurved at top with a tripartite spine above at base, Spine large toothed
- 20513 Seps lanc. spread dorsal one and pets arched, Lip rndsh abruptly acum. fringed sac. in middle, Col. cirrhate
- 20514 Spike short erect, Seps oblong-lanceolate complicate equal to lanceolate ascending pets, Lip hemispheric drawn out into an abrupt ovate fleshy blunt appendage at apex lacerated at base
- 20515 Seps and pets spread. oval flat, Lip broad-ov. acum. obt. subcord. concave fringed smooth at top, Column short
- 20516 Pets linear-lanceolate same form as dorsal sep., Lip ovate-oblong obtuse saccate towards the base crenated and furnished above the sac with a large orange-coloured callosity, Column acuminate
- 20517 Lip beardless sagittately triangular, Angles roundish behind and toothed callous and dilated at top with the margin recurved and tuberculated at base
- 20518 Pets spotted linear-lanc., Lip subcordate ovate saccate towards the base furnished with a strong inflexed horn under the sac, Column cirrhate
- 20519 Pets spotted linear-lanceolate, Lip subcordate-ovate fringed saccate towards the base furnished with triparted
- 20520 Lvs. obl.-lanc., Perianth ovate compressed connivent, Seps and pets acum., Lip subconical cucullate contracted at mouth entire, Anther hemispherical compressed umbonate, Umbro bearing scales beneath
- 20521 Lip triangular very acute concavely hemispherical not ventricose, downy inside ciliated with long hairs on the margin at base [tracted entire ciliated mouth
- 20522 Lvs oblong acute, Seps spreading, Pets ovate acute concave, Lip subconically saccate cucullate with a con-
- 20523 Raceme drooping many-flwd, Seps and pets linear acuminate, Lateral ones longer, Lip flat cordate membranaceous toothed or fringed saccate at base conical, Teeth of disk prominent [Fendril short
- 20524 Seps and pets ovate secund, Lip cucullate entire smooth contracted into a short broad blunt fleshy beak at apex,
- 20525 Lip fleshy galeate resupinate rather compressed saccate behind entire and emarg. at top sharply denticulate at the sides, Tendrils hardly longer than column
- 20526 Racemes short dense pend., Seps and pets rndsh spreading incurved, Lip galeate compressed at base and ventri. at top with membr. flat lobes, Lat. ones small and ser., middle one 2-lobed with divaric. fringed segs, Col. mutic [lanceolate acute conniving, Lip 3-lobed, Lateral lobes acute, middle one elongate acuminate
- 20 27 Pseudo-b. turbinate, Lvs strict, Raceme nutant many-flwd shorter than lvs, Seps and pets nearly equal ovate-
- 20528 Pseudo-b. elong. terete articulate streaked 2-3-lyd. Lvs lin.-lanc. acum., Raceme elong. many-flwd, Seps and pets spread. unif. obl.-lanc. ac., Lip obl. narrowed at base unident. on both sides beneath mid. with red. edges
- 20529 Rac. short erect, Seps and pets roundish-ov. ac. conc., Lip narrow cuc. convex, Mid. seg. triang. acum. cucul.
- 20530 Lvs very long narrow glauc. beneath much longer than rac., Raceme obl., Seps ovate-lanc., Pets concave fleshy incurved with scarious edges, Lip concave slightly 3-lobed apiculate cucullate above the column
- 20531 Seps linear-oblong, Lateral ones reflexed, dorsal ones and pets oval-lanceolate erect, Lip unguiculate fleshy roundish cuneate apiculate emarginate on both sides with the edges turned over in form of a shell
- 20532 Seps and pets oblong linear abruptly acute with reflexed edges, Lip linear incurved fleshy sparingly pilose with a short tooth towards the base on both sides, Back and margin of column downy
- 20533 Pseudo-b. obl., Lvs linc. striated, Scape racemose, Flws remote pendulous dotted with brown, Seps reflexed oblong acute with revolute edges, Pets same form, Lip obovate with revolute edges, Column twisted
- 20534 Raceme long many-flwd, Seps reflexed, Pets ascending lanceolate flat acute, Lip stalked fleshy elliptic with a distinct point rolled back on the sides scarcely angular
- 20535 Pseudo-bulb elongate articulate sheathed leafy at top, Peduncles taller than bulbs, Flws yellowish erect pedicellate, Seps and pets linear-lanceolate, Lip obovate apiculate entire, Column twisted [obtuse striped with purple, Rhizoma tufted bulbless

20536 Lvs oblong coriaceous pale green twisted conduplicate acute recurved, Raceme radical branched, Pets obovate

and Miscellaneous Particulars.

3232. *Scelochilus* has much the structure of an *Oncidium*, with broad leaves and spikes of yellow flowers.

History. Use, Propagation, Culture,

3233. *Clowesia* is like *Catasetum* in habit, and requires the same culture and treatment.
 2789. *Angulosa* is a genus of splendid epiphytes which will grow in a compost of peat and rotten wood, in baskets or pots, and they may be tied on blocks of wood.
 2790. *Peristeria* is a splendid genus of pseudo-bulbous epiphytes. They grow well in a mixture of turfy peat and rotten wood. They require plenty of pot-room, heat, and water.
 3234. *Lacæna* is a pretty pseudo-bulbous epiphyte, and it may be grown in a basket, or tied to a block of wood and suspended to a rafter in a moist stove. It requires an ample supply of water and heat.

- 20537 Lip without any horns, Flws in pairs [Inside with 3 straight horns shorter than lip
 20538 Ovary much longer than bracts, Pets fleshy oval convex obliquely ovate-acute, Hypochilum roundish glandular
 20539 Bracts about equal to ovarium, Lip unguiculate with a roundish limb, Horns slender, Column winged [dentate, Column downy with margins a little dilated
- 20540 Lip constricted in middle, Hypochilum short sessile with cirrhose horns at top, Epichilum oblong-linear tri-
 β Flowers white spotted with crimson
- 20541 Spike contracted, Bracts broad-obl., Lateral seps ov.-obl., Hypochilum short saccate bidentate in front, Epichilum roundish-ovate entire longer than incurved horns, Wings of column hardly evident [winged
- 20542 Bracts acum. shorter than ova. Hypoch. obl. sess. cleft, Epich. rndsh ov. ent., Horns fale. incurved. Col. broadly
 20543 Hypoch. compressed sac. bident., Epich. roundish-ov. ent., Horns acum. incurved, Column with broad wings
- 20544 Lip a little contracted in mid., Hypoch. gibbous beneath gland. inside, Epich. 3-lobed, Middle lobe short, Horns
 lanc. incurved equal, Column glab. narrowly marginate [Horns incurv., Column broadly winged
- 20545 Bracts acum. shorter than ovarium, Hypoch. open obov. sess. with inflexed tooth, Epich. roundish-ovate entire,
 20546 Hypochilum subglobose gibbous in front equal to epichilum which is ovate entire or slightly tridentate, Horns
 falcate incurved equal, Column marginate
- 20547 Pedunc. 1-flwd, Bracts spatheaceous imbricate, Pets ovate acute reflexed much shorter than the obtuse sepals,
 Column wingless cirrhate, Lateral horns of lip short fleshy
- 20548 Pseudo-bulb fleshy leafy, Scape radical many-flwd erect shorter than leaves
- [brown and a few large clear distinct blotches of the same colour on the seps, the lip itself is white
 β The ground colour of the flower except the lip is yellow, the column and petals are delicately streaked with rich
 20549 Hypochilum convex longer than awns with the lateral horns papiliform, Epichilum acute triangular
 β Flowers pale purplish, Lip white with a yellowish apex [nate. Pseudo-b. furrowed, Lvs plicate petiolate
 20550 Hypochilum convex having the lateral horns elongate and capitate with setaceous awns, Epichilum acumini-
 β Flowers pure yellow
- 20551 Lateral seps roundish-obl. uppermost one obov. apiculated keeled, Pets small ov. ac. decurrent 5-nerved, Lip
 varnish-d, Hypochilum compressed in the middle 2-horned at apex, Epichilum ovate channeled
 20552 Three exterior petals with reflexed margins, Lip about 7-toothed at apex, Leaves ovate-lanceolate subplicate
- [galeate rather quadrate and roundish, Lateral lobes minute, middle one truncate erect
 20553 Hypochilum stipitate convex subcompressed tomentose at base, Mesochilum plicate and warded, Epichilum
 20554 Pets approximate, Lip saccate with a large stalked galeate appendage, Column lidentate at base
- β Flowers white
- 20555 Leaves narrow lanceolate, Pseudo-bulb ovate-conical deeply furrowed, Lip with 4 deflexed plicæ
- [convining into a globe, Lip 3-lobed. Lateral lobes obt., middle one pilose funnel-shaped bilabiate
 20556 Peduncle 1-flwd radical sheathed by imbricate inflated scales, Seps roundish apiculated and with the obtuse petals
 20557 Pedunc. 1-flwd radical loosely scaled, Flwr fleshy resupinate, Sepals and petals ovate convex convining, Lip 3-
 lid, Middle lobe pilose funnel-shaped bilabiate
 β Flowers yellowish, Middle lobe of lip orange-coloured
- 20558 Pedunc. 1-flwd radical sheathed by 2 inflated scales, Flwr a little longer than spathe-like bract, Seps and petals acu-
 β Flowers rose-coloured [minate, Lip glab. 3-lobed, Middle lobe narrow reflexed, lateral ones rounded
- [Lobes obtuse 1-toothed on disk longer than column
 20559 Scape erect tall, Raceme loose elongated, Epichilum roundish serrulated callous in middle, Hypochilum large,
 20560 Scape short pendulous, Raceme dense, Epichilum roundish entire bilamellate above, Hypochilum elongated,
 Lobes roundish with a large lunate callosity in middle, Column 2-horned, Rostellum truncate
- 20561 Raceme short dense pendulous, Epichilum rhomboid-oblong serrulated warded, Hypochilum short, Lobes
 acute, Column mutic, Rostellum short
- 20562 Habit of *Peristèria*, Racemes long drooping, Flowers pale yellow spotted with dark purple
- [Pets obov. ac. a little undulate, Lip 3-lbd. Lat. segm. triang., middle one obl., Wings of column jagged
 20563 Pseudo-bulb oblong comp. 2-leaved, Lvs linear emarginate, Scape 2-edged, Raceme 6-7-flwd, Seps ovate acute,
 20564 Like *L. pulchellum* but the flowers are smaller, the Lip is acute and excavated behind
- 20565 Pseudo-bulb roundish comp. smooth 1-lvd, Leaf obl.-ligul. obt. shorter than rac., Seps and petals obl. dent. nearly
 equal, Lip unguic. renif. with 2 tubercs at base, Lat. wings of col. rather trunc., dors. ones roundish dentate.
- 20566 Pseudo-b. ov. tuftd 2-edged 1-lvd, Lvs obl.-lanc. longer than radical 2-flwd scape, Bracts memb. keeled acum.,
 Seps lin.-lanc. keeled acum. sprding, Pets obl. obt. rev., Lip roundsh ov. emarg. undul., Col. wingless downy

and Miscellaneous Particulars.

3235. *Odontoglossum* is composed of pseudo-bulbous epiphytes, and forms three different sections or forms. In one the anther bed is surrounded by a deep fringe or membranous border. The other two are without any fringe; these form the subgenus *Trymænum*. In the second the lip is white, and generally broad and flat. In the third the lip is generally yellow, never white, and generally narrow. They will all grow among free turfy peat or rotten wood, or they may be tied to blocks of wood.

- 20567 Pseudo-bulb ovate angular 1-leaved, Leaf oblong, Petiole channeled, Scape few-flowered, Bracts and sheaths membranous acute, Sepals oblong lanceolate acute, Petals broader subunguiculate acute, Lip subcordate ovate acute unguiculate, Claw fleshy cup-shaped downy, Auricles of column rounded
- 20568 Habit of *O. Cerrantesii*, Sepals unguiculate lanceolate, Petals broader oblong obtuse, Lip cordate very blunt unguic., Claw fleshy cup-shaped downy bidentate in front tuberculate in middle, Auricles of column rounded
- 20569 Pseudo-bulb ovate compressed 1-leaved, Leaf lanceolate recurved, Scape 2-flowered, Bracts as high as triquetrous ovary, Sepals and petals equal linear acuminate, Lip rhomboid toothed, Appendage trunc. 4-toothed
- 20570 Panicle loose leafy at base, Sepals and petals expanded linear-lanceolate acuminate, Lip constricted in middle, Hypoch. ovl., Epich. rather fiddle-shaped cusp. ser. furnished with 2 ser. lamellae at base, Col. suberrhose
- 20571 Pseudo-bulb oblong comp. 1-leaved, Raceme 2-6-flowered length of leaf, Sepals linear-lanceolate acute, Pets thin obl. wavy, Lip cord. obt. curled, Crest spoon-shaped fleshy blunt in front bident. in middle, Col. narrow
- 20572 Pseudo-bulb obl. comp. 2-3lvd, Lvs broad-obl. flat acute, Scape sheathed with keeled scales, Rac. short distich, Bracts boat-shaped acum., Lip cord. acum. entire with a 2-lobed append. at base, Col. downy clav. wingless
- 20573 Seps lanc., lateral ones convex falcate, Pets obl. obt. subundulate, Lip roundish auricled at base much shorter than seps with 3 tubercs at base and tooth-formed lat. wing, Col. tom. with rounded conv. incurv. margins
- β Lip white
- 20574 Pseudo-bulb oblong compressed 1-leaved, Leaf oblong nervid acutish, Racemes pendulous many-flowered longer than leaves, Bracts boat-shaped shorter than ovary, Sepals linear-lanceolate acuminate, Petals oblong wavy acum., Lip cord. acum. subnervated, Appendage of claw conc. shell-shaped serrul., Col. downy wingless
- 20575 Pseudo-bulb ovate 2-lvd sulc., Lvs lorate flat, Panicle erect diffuse many-flwd, Bracts minute, Seps ovate-obl. wavy, Pets broader conf., Lip cord. obl. cusp. rather fiddle-shpd dentic. at base, Col. with short jaggy wings
- 20576 Lvs oblong coriac., Branches of panicle spicate, Bracts boat-shaped acum., Seps and pets narrow lanc.-acum. wavy, Lip roundish ov. ac. with lanc. aurics at base and 5 elevated lamellae, Col. downy with obsolete wings
- 20577 Pseudo-bulb comp. furrowed, Lvs obl.-ensif. obt. oblique at apex, Flws panicled, Bracts loose, Seps and pets obl.-lin. acute flat, Lip fiddle-shaped apic. with a smooth bidentate claw, Wings of column rounded curled
- 20578 Pseudo-bulb ovate 2-edged rather angular elongated and 2-leaved at top, Leaves spreading linear-lanceolate shorter than few-flowered raceme, Bracts small, Sepals oval spreading, Pets narrower obt. ascending, Lip 3-lobed flat, Mid. lobe cuneate 2-lobed, lat. ones square with a single tubercle on disk, Col. elong. wingless
- β Fl. purplish [Seps and pets nrly eq. lin.-lanc. spltd, Lip with bilam. claw and cord. acum. lam., Wngs of col. ent.
- 20579 Pseu.-b. ovl.-comp. 2-3lvd, Lvs ensif. wavy spread. longer than rac. sepe, Brcts lanc.-acum. shorter than ovy,
- β Lip white
- 20580 Pseudo-bulb ribbed, Lvs thin lanc. nar. at base, Panic. diffuse, Seps and pets narrow ovate-lanc. acum. wavy, Lip conf. scarcely hastate, Teeth of crest 2 large somewhat 3-lobed downy, Processes of col. subul. spreading
- 20581 Pseudo-bulb comp. atten. towards apex, Lvs 2 oblong obliquely rounded at apex, Raceme 2-edged 1-flowered biarticulate, Sepals and petals lanceolate obtuse recurved, Lip rhomb-lyrate with a bidentate appendage
- 20582 Lvs ensif. stri. obliquely bident. at apex, Rac. short pend., Bracts small scape-frmd, Seps and pets lin., Lip 3-lobd saccate at base downy inside, Lat. sgm. acute, middle obl. wavy obt. with nearly straight lamellae in middle
- 20583 Leaves narrow ensiform, Raceme 2-flowered decumbent furnished with long acute scales, Sepals oblong-lanceolate fleshy acute wavy, Lip 3-lobed, Middle lobe triangular curled, lateral ones rounded
- 20584 Lvs ov.-lanc. coriac. 1 foot long their bases covering the pseudo-bulbs, the midrib strong, Scape pend. 1 to 1½ foot many-flwd with large sheathing bracts, Seps ov.-lanc. ac., Pets broader, Lip ov. bluntish purplish crimson
- 20585 Leaves long linear, Racemes many-flowered bracteate, Perianth spreading, outer 3 segments obtuse, Lip 3-lobed, Middle lobe tongue-shaped glandularly dotted-shining
- 20586 Lvs ensif. obt., Scape erect with imbr. acute scales, Spike few-flwd, Seps and pets lin.-obl. acute, Lip obov 2-lobed downy inside with confluent lamellae, Middle segment oblong wavy, lateral ones rounded flat
- 20587 Leaves ensiform channeled at base, Racemes pendulous, Sepals oval obtuse-apiculated spreading, Petals conform erect, Lip naked oblong, Lateral lobes small, middle one oblong obtuse narrowed a little at base
- 20588 Leaves narrow-strap-shaped thick distich, Scape nutant covered with imbricate scales, Sepals oblong, Petals linear-lanceolate, Lip oblong folded 3-lobed, Middle lobe ciliated
- 20589 Leaves ensiform obtuse recurved, Raceme erect, Bracts very minute, Sepals and petals obtuse, Lip downy at base retuse and emarginate at top, Lateral segments short triangular with distant arched warted lamellae
- 20590 Leaves ensiform coriaceous obliquely-obtuse, Racemes pendulous many-flowered, Bracts minute, Petals and sepals lin.-obl. obt., Lip 3-lobed, Lateral lobes acute, middle one oblong apiculated with confluent lamellae
- β Lip broader, Lateral lobes more acute, middle one roundish-oblong
- 20591 Leaves linear-lanceolate coriaceous erectly-recurved, Scape 1-flowered slender shorter than leaves, Sepals oblong-lanceolate, Pets smaller conform, Lip oblong-lanceolate obtuse cucullate subrepand undivided, Pseudo-bulb ovate-oblong 1-3-lvd

- 20592 Petals oblong obliquely-rhomboid rounded at top disposed into a galea along with the shorter dorsal sepal, Lateral sepals deflexed connate at base, Lip trip-artite, Lateral segments linear, middle one cuneate-truncate with a toothed disk warted from shining tubercles
- [teate, Lip unguiculate saccate with a very long horn at apex
- 20593 Pseudo-b. tufted ovate 2-lvd, Leaves oblong 3-4-ribbed, Raceme basilar pendulous purplish 16-20-flwd bract [Bracts membranous lanceolate, Upper sepal galeate, Ovary furrowed scabrous
- 20594 Pseudo-bulb ovate 2-leaved tapering to apex, Leaves oblong 3-5-ribbed acuminate, Racemes pendulous,
- 20595 Raceme loose many-flowered, Sepals apiculated, Lateral ones oblique rounded at apex, Petals free shorter than column, Lip fleshy free ovate acuminate furnished with a tuberculate crest at base below
- β Flowers citron-coloured

History, Use, Propagation, Culture,

3236. *Ansellia africana*. This plant was first discovered by Mr. Ansell growing on the oily palm, *Elæis guineensis*, at Fernando Po; but, although it is epiphyte in its native country, it will succeed very well in a pot filled with turfy heath mould. It requires plenty of water while growing. A moist atmosphere is necessary at all times.

[Middle lobe oblong rounded, lateral ones erect subfalcate with 4 elevated lamellæ in middle

20596 Rac. long many-flwd, Bracts obl. scale-formed, Seps obl. obt., Pts similar acute narrower, Lip 3-lobed downy,
 β Flowers yellow spotted with purple

20597 Stems tall terete leafy at top, Leaves plicate coriaceous, Panicles terminal

20598 Cau. escent bulbless, Leaves distich oblong-linear emarginate, Spike terminal distich flexuous many-flowered
 on a long peduncle, Bracts short stiff tooth-formed

[upper ones scale-formed and green, Flowers sessile, Lip rhomboid-oblong glabrous

20599 Stem and plicate leaves covered with black pubescence, Leaves sessile oblong-lanceolate acuminate, the 2

20600 Stem short, Leaves broad few terminal elliptic-ovate bluish striated long-sheathed, Lower one the largest,
 upper ones bract-formed, Flowers large solitary sessile terminal, Petals and sepals equal conniving lanceolate,
 Lip obovate striated on disk wavy on margins elevated on disk, Column with short lateral lobes

20601 Lvs plicate ovate acuminate rayed, Flws large 7—8 in. diam., Seps lanceolate spreading acuminate, Pts oblong,
 β Flowers large deep rich crimson purple [Lip emarginate flat smooth

[falcate at apex fleshy on both sides at base with truncate emarginate inflexed teeth

20602 Pts triangular, Lip 3-lobed, Lateral lobes truncate, intermediate lobe constricted in middle ovate and tuber-

20603 Lateral lobes of lip acute with 3 denticulated fleshy lamellæ

20604 Lateral lobes of lip rounded cuneate, middle one ovate rather scabrous with 2 lamellæ which are concave
 at base

20605 Leaves broad ensiform 5-nerved, Spike many-flowered, Lower flowers more remote, Bracts ovate acuminate
 shorter than the acute-angled ovary, Lip oblong 3-lobed, Segments roundish, Middle segment curled emarginate
 naked with many parallel elevated veins, Spur short

20606 Lvs lin.-lanc. much shorter than racemose scape, Bracts small subul., Seps lin.-spatul. obt. recurved, Pts a
 little broader, Lip 3-parted callous at base, Lateral lobes obtuse recurv., middle obovate, Spur cylind. obtuse

20607 Lvs obl. pluc. acum. at both ends, Scape simp. rad., Seps lin.-lanc. acum., Pts similar wavy, Lip suborb. 3-lobed,
 Lat. lbs nearly equal to the middle one which is short 2-lobed with 2 short lam. at base, Spur round. infla. obt.

20608 Leaves strict ensiform plicate, Scape radical sheathed, Racemes capitate, Lip 3-lobed, Middle lobe longest
 bearded, Spur straight conical short, Bracts membranous veiny

20609 Stem simple, Lvs lanc. 3-nrvd, Corymh term., panic. nutant shorter than lvs, Peduncs sheathed with lin.-lanc.

20610 mem. scales, Seps and pts lin.-obl. acutish, Lip large emarg. in front apicul. crenul., Spur equal to ovary

20611 Stem simple, Lvs lanc. 3-nerved, Rac. sessile many-flwd, Lip ovate obtuse crenulate, Anther crested fleshy

20611 Sepals and petals linear-lanceolate reflexed, Lip convolute with curled margins downy inside bicarinate at base,
 Spur acuminate horizontal, Anther furnished with an unguiculate rhomboid crest

20612 Leaves lanceolate striated, Scape very long, Raceme elongated loose simple, Sepals and petals linear-lanceolate,
 Lip stipitate oblong acute with 2 fleshy lamellæ at base, Middle lobe ovate wavy acuminate

20613 Leaves small grassy much shorter than 7—8-flwd racemose scape, Lip roundish concave constricted in middle
 and lunate at top tuberculate in middle [oblong obtuse villous with an emarginate callosity

20614 Leaves broader, Racemes equal or longer, Sepals oblong acuminate, Petals shorter narrower, Lip narrow

20615 Leaves obovate—along longer than 1-flowered peduncles, Sepals and petals ovate-lanceolate conniving, lower
 ones larger, Lip cochleate roundish 2-lobed velvety, Crest arched crenated, Anther crestless

20616 Leaves broad-lanceolate spreading longer than few-flowered scape, Sepals and petals linear-lanceolate wavy
 acum., Lip roundish ovate with a lunate cren. callos. at base, Col. cucul. and toothed at top, Anth. rostrate

20617 Leaves ensiform shorter than raceme, Sepals and petals oblong acute, Lip roundish wavy narrow at base
 broadly 2-lobed downy with a crenulate undivided callosity

20618 Leaves broad-lanceolate, Bracts cucullate, Sepals and petals linear-lanceolate acute, Lip obovate emarginate
 narrowed at base with villous veins and a narrow incurved emarginate callosity

20619 Stemless, Lvs embracing each other at base erect acute slightly plicate, Peduncles axillary 1-flowered pendu-

20620 Sepals roundish conc., Lip ovate convex retuse, Crest thick semicircular truncate plicate, Column large fleshy

20621 Leaves lanceolate plicate, Sheaths large loose membranous, Sepals and petals undulate acute spotted, Lateral
 lobes of lip cuneate, middle one roundish papillose

20622 Raceme many-flowered, Bracts ovate-oblong membranous, Sepals and petals oblong bluntish, Lip sessile cor-

date-roundish with thin plicate edge, Lat. lobes scimitar-shaped erect, Crest pulvinate with 5 series of setae

20623 Lvs linear ensiform twin equal to scape, Scape compressed closely sheathed, Racemes many-flowered, Bracts
 glumaceous yellowish, Flws nearly equal, Lip ses. ov. lanc. repandly curled downy at base inappindulate

[obl. apic., Lip 3-lobed, Lobes roundish, middle one emarg. with a muc. and 3 undu. serru. lamellæ in disk

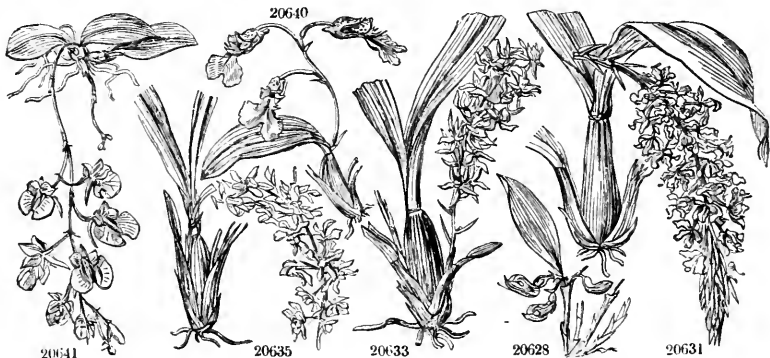

20624 Lvs broad-lanc. ph., Scape sheathed with lanc. distant bracts, Rac. dense bract., Seps spat. conc. reflexd, Pts

and Miscellaneous Particulars.

3237. *Bromheedia palustris* is an epiphyte of a peculiar habit. It will grow with the same culture and treatment
 as *Ansellia*.

- 20625 Lvs linear-lanceolate nerved, Scape simple, Sepals oblong-obtuse, Petals twice the size twisted at base, Middle lobe of lip roundish emarginate, Spur short conical
- [lobed, Petals linear straight acute
- 20626 Lip unguiculate ovate-rhomboid acuminate deflexed on both sides at base, Sepals revolute at top, lower one 2-
- 20627 Lip rhomb. keeled at base downy as is the col., Lat. seps conn. at base, Rac. longer than lvs, Lvs obl. wavy rather concave
- [sides at back, Pets obov. mucron., Lip 3-lobed, Lat. Lobes triangular, middle ovate ciliated
- 20628 Leaf oblong emarginate longer than petiole, Flowers aggregate, Sepals keeled connate at top and free on both
- 20629 Leaf fle-hy spatulate obtuse tridentate longer than 1-flowered scape, Flowers bilabiate, Lateral sepals oblong acuminate, Petals truncate 1-toothed beneath the middle, Lip ovate-oblong smooth with 2 elevated lines
- 20630 Leaves obovate-oblong narrowed into petioles, Scape angular 1-flowered, Sepals ovate erect equal ending each in a long bristle, Petals truncate rather fleshy bluntly tridentate rhomboid serrulated
- 20631 Pseudo-bulb ovate elongated compressed 2-leaved, Leaves oblong-lanceolate undulated, Raceme long dense nutant, Sepals all free undulately curled as are the petals Lip sigmoid lanceolate bicristate
- 20632 Pseudo-b. compressed oval, Lvs lanc. channeled acute, Rac. second shorter than leaves, Upper sepal arched, lower one bident., Pets ov. obt., Lip eared near base bilam. in disk con. and emarg. at top, Col. woolly at base
- 20633 Ps.-bulb oblong compressed leafy at base and apex, Scape many-flwd, Lip ovate reflexed bituberculate
- [rium, Lip recurved ob-ovately bicristate, Front sepal narrow cuneate bifid
- 20634 Pseudo-bulb 2-edged oval, Leaves linear-lanceolate acute, Racemes loose drooping, Bracts about equal to ova-
- 20635 Pseudo-bulb compressed 2-edged oblong, Leaves linear-lanceolate smooth, Racemes drooping, Perianth wavy, Lower sepal formed of 2, nearly bifid to the middle with spreading segments, Lip entire at top
- [arranged
- 20636 Column smooth, Lip in no degree hastate with many shallow ridges on each side near the base, Flowers loosely
- 20637 Lvs coriaceous keeled at top mucronate, Racemes dense pendulous, Lip obovate 2-lobed slightly hastate, Lamellae of crest 3 on both sides, Col. downy with 2 minute subulate white wings and 2 oblong-linear ones
- 20638 Leaves ovate-lanceolate rigid articulated to the petiole the rest without a petiole, Scape bearing an umbel-like raceme of large drooping white flowers tinged with pink
- 20639 Raceme pendulous, Anterior sepal emarginate, upper one and petals ovate-oblong wavy denticulated lacerated towards the claw, Leaves linear-lanceolate
- 20640 Pseudo-bulb 1-lvd compressed, Leaf lanceolate wavy, Raceme 3-5-flowered, Sepals and petals conniving, Lip large 2-lobed dilated with a downy lacerated appendage at base, Spur short conical
- 20641 Lvs sessile, Racemes pendulous loose few-flwd, Lip roundish-oblong furnished with plates, Spur short subulate
- [transverse emarg. narrower, Disk downy pulvinate, Stigma panic. Wings of column semilunate entire
- 20642 Pseudo-b. roundish 2-edged compressed, Lvs oval apicul. fleshy, Pan. divaricate, Lip acuminate, Middle lobe
- 20643 Pseudo-b. cylindrical 1-leaved, Leaf lanc. nerved, Panicle simple many-flwd subsecund, Seps 4 fasciate, Lower one spotted bidentate, Lip fiddle-shaped, Lateral lobes narrow, Crest 2-horned, Wings of column lin. obt.
- 20644 Pseudo-bulb roundish compressed, Leaves flat oblong lanceolate, Scape erect branched at top, Sepals all free, Lip 2-lobed roundish transverse, Lateral segments very short, Base of callosity 5-lobed, Lateral lobes spreading flat truncate, middle one terete, Wings of column cuneate toothed reflexed
- 20645 Pseudo-b. terete 2-leaved, Lvs broad ensiform, Flower stem partly climbing branched, each branch 4-6-flwd
- 20646 Lvs panicled, Lateral sepals free obtuse, Lip roundish 2-lobed wavy auricled at base, Crest 5-lobed tubercled, Wings of column small truncate, Anther downy
- 20647 Pseudo-bulb oblong furrowed 1-leaved, Leaves oval acute sessile shorter than decumbent few-flowered simple scape, Upper sepal as petals obovate concave wavy obtuse, lower ones smaller narrower and connate at base, Lat. lobes of lip linear, middle one obovate repand wavy, Crest warty, Wings of column linear obtuse
- 20648 Pseudo-bulb ovate compressed 1-leaved, Lvs complicate linear-oblong much shorter than erect flexuous few-flowered scape, Sepals lanceolate oblong wavy obtuse, anterior one 2 lobed, Petals obovate and curled, Lip tripartite, segments obovate and sinuses broad and fringed, Crest 5-horned, Wings of col. ovate acute
- 20649 Pseud.-bulb oblong compressed, Leaves ensiform stiff shorter than simple scape, Sepals and petals length of lip linear-oblong wavy, Lip cordate arched inwardly on both sides dilated and rather reniform at apex, Crest of 8 tubercles downy, Wings of column small, Stigma orbicular
- 20650 Leaves acutely triquetrous keeled subfalcate entire, Scape many-flowered drooping, Sepals boat-shaped acuminate, lateral ones connate, Petals ovate wavy acute, Lip 3-lobed, Lateral lobes roundish, middle one roundish sessile retuse or emarginate, Crest 5-lobed, Wings of column scimitar-shaped
- 20651 Lvs radical terete subu., Scape panicled stiff clammy, Seps and pets obov. acute conc. unguic., Lat. segs of lip obov., middle one renif. wavy emarg., Crest wavy truncate tuberc. at base, Wings of column small fleshy
- 20652 Pseudo-bulb subglobose 1-lvd, Leaf fleshy linear-oblong acute recurved, Panicle branched many-flwd, Sepals and petals linear obtuse, Lip 3-lobed, Lateral segments minute ear-formed, middle one unguiculate transverse emarginate, Crest 5-lobed downy in centre, Wings of column deltoid straight
- 20653 Pseudo-bulb oblong compressed 1-2-leaved, Lvs narrow oblong flat obtuse shorter than scape, Scape racemose, Sepals and petals spatulate retuse, Lip downy lunate pilose at base, Lateral segments small reflexed, Crest linear depressed at top bidentate on both sides the teeth bearing glands, Wings of column cuneate
- 20654 Leaves long terete keeled, Panicle contracted many-flwd, Seps and pets conform obov. concave, Lip elongated, Lat. segs linear, middle one unguicul. 2-lbd jagged on margin, Col. short downy with semiovate wings
- 20655 Panicle branched, Seps linear-lanceolate wavy acute, Lip triangular rounded behind acute at top, Crest many-tubercled, Wings of column narrow subdentate drawn out at base
- 20656 Racemes subpanicled, Sepals linear acuminate recurved at top, lateral ones very long, Auricles of lip convex dilated crenated, Middle lobe unguic. crenated many-tubercled at base, Wings of col. semi-cord. acuminate

20665

- 20657 **Leaves 2 straight ensiform**, Scape scandent racemously panicleed, Racemes flexuous, Lip 2-lobed roundish narrower at base auricled, Crest tubercled, Wings of column triangular acuminate
- 20658 Itaceme twining panicleed at base, Flowers few, Bracts oblong spatheac. shorter than ovary, Lat. sepals unguic. connate at base lanc. wavy long, dorsal one rdsh curled auried at claw length of col., Pets lanc. revol. erld, Lip dagger-shpd erld with coarsely-toothed auries and large 3-tongued crest, Wings of col. small setae.
- 20659 Ps.-b. 2-edged slender ribbed, Lvs ensate, Itac. simple, Seps and pets lanc. unguic. acum. wavy nearly eq., Lat. seg. of lip small obl., mid. one semicirc. flat emarg. Crest rhomb. cusp., Wings of col. short fleshy inflexed
- 20660 Ps.-b. oval compr. 2-lvd, Lvs nar. erect, Rac. droop. simp., Sups free, Pets lanc. wavy, Lat. lbs of lip small nrly square, mid. transv. hardly emarg., Tubcr. obl. bilent. at base obsol. 3-lbd at top, Wings of col. short rdsh
- 20661 Ps.-b. ov. flat, fur. 2-lvd, Lvs ellipt. rec. at top, Itacs simp. erect or partly droop., Seps and pets obl. nearly eq. wvy, Lip obov. ret. with deprsd tubercs on both sides at base and t:hd lam. in mid., Wings of col. slendr wvy
- 20662 Pseudo-b. flattened obl. 2-lvd, Lvs obl., Scape rac. m., Seps ov. ac. free, Pets conform broader, Lip large 3-lbd rdsh emarg. apicul., Lat. lobes small obl., Crest 3-lobed warded, Wings of col. semicord. crenul. spotted
- 20663 Lvs terete 3 feet long diffuse, Scape erect densely panicleed, Sepals and petals obtuse apiculate concave, Lateral lobes of lip spreading obliquely oblong nearly square, middle one obovate bifid with a depressed tubercle at base and 3-horned at top glabrous, Wings of column sublunate short rounded
- 20664 Lvs equit. ac., Seps long pend. panic., Seps lin. acum., lat. ones almost conn. to apex, Pets obov. rdsh-apic., Lat. lbs of lip short conv. obt., mid. one ung. renif. emarg., Tuberc. on crest 2—3-lbd, Wings of col. large rounded
- 20665 Lvs short ensiform obtuse, Panicle spreading, Seps ov. acute flat free, Pets conform rather wavy, Lip 3-lobed, Lat. lobes rounded curled downy at base, mid. lobe 2-lobed, Crest flat rather 4-lobed at top, Col. wingless
- 20666 Panicle racemose, Sepals free obovate, Petals larger unguic. obov.-spat., Lateral lobes of lip short serrulated, middle one large wavy emarginate, Crest linear 2-lobed, Column with fleshy truncate glabrous wings
- 20667 Pseudo-bulb oblong sub-tetragonal 2-leaved, Leaves stiff spatulate-lanceolate, Scape slender pyramidal almost simple racemose, Flowers distant, Petals and sepals acute reflexed, Lip large roundish obsolete 4-lobed, Crest triden. arched behind cuneate in front with varicose veins, Upper wings of col. rounded denticulate
- 20668 Pseudo-bulb oval slender, Leaves membranous ovate-lanceolate flat, Panicle racemose, Bracts 3—4-flowered, Middle lobe of lip roundish 2-lobed, Tubercle of crest 5—7-toothed glab., Wings of column triangular
- 20669 Pseudo-bulb oval shining 2-edged 2—3-leaved, Leaves lanceolate erect recurved at top, Scape panicleed, Flowers secund, Sepals and petals lanceolate wavy equal free spotted, Lip 3-lobed, Lateral lobes roundish, middle one unguiculate transverse 2-lobed, Crest linear tridentate at top bidentate in middle, Wings of col. trunc.
- 20670 Bracts ovate membranous obtuse, Lateral lobes of lip short, middle one large transverse emarginate obcordate, Crest bicallous, Tubercles distant one placed in front of the other, Auricles of col. linear falcately recurved
- 20671 Leaves coriaceous acutely triquetrous complicate keeled, Scape panicleed many-flowered, Sepals 2 spatulate, Petals ovate unguiculate wavy, Lateral lobes of lip small linear-obovate, middle one reniformly lunate emarginate, Crest double, upper 5-lobed, lower 3-lobed, Wings of column crenulate
- 20672 Pseudo-bulb oval flattened 3-ribbed on both sides 1-leaved, Leaf oblong sessile striated, Panicle divaricate, Lateral sepals connate at base ovate acute as are the petals, Lip large 2-lobed, Crest tubercled hastate 3-parted, Wings of column rounded toothed
- 20673 Pseudo-bulb ovate 2-leaved, Leaves ensiform recurved, Scape panicleed, Sepals linear-oblong wavy reflexed, Lip fiddle-shaped, Lateral lobes acute, middle one 2-lobed, Crest of 5 crenated lamellae rostrate at top, Wings of column cuneated toothed, Stigma beaked
- 20674 Pseudo-bulb oblong flattened furrowed 1—2-leaved, Leaves oblong-lanc. coriaceous shining, Flws panic, Seps green lanc., lower ones conn., Pets obov. spat., Lip 3-lbd with elong. horn in centre, Col. elong. wingless
- 20675 Pseudo-bulb ovate-flattened furrowed 2-leaved, Leaves linear-lanceolate, Scape long panicleed, Sepals and petals conform ovate acute spreading, Lip broadly cuneate 3-lobed, Crest elevated acutely 3-lobed
- 20676 Pseudo-bulb elongated 2-laved, Lvs oblong, Panicle racemose dense many-flowered, drooping, Lip obtuneate 2-lobed, Auricles ciliated, Crest of 4 tubercles, Wings of column oblong ciliated
- 20677 Pseudo-bulb narrow angular, Leaves lanceolate channelled, Scape panicleed with many-flowered branches, Upper sepal unguiculate obovate, lateral ones longer spatulate-lanceolate, Petals broader obovate curled, Lip deltoid with rounded angles, Crest tubercd at base bilamel. at top, Wings of col. scimitar-shaped toothed
- 20678 Leaves ensiform short equitant, Scape simple 1-flowered, Upper sepal obtuse, lateral ones acute collateral green, Petals obtuse undulated larger, Lat. Lobes of lip small roundish unguic., middle one much larger rdsh 2-lbd emarg. on both sides towards marg., Crest depr. 5 lobed trunc. at top, Wings of col. crenulate
- 20679 Lvs obl.-ac. stiff fleshy, Scape flexuous panicleed many-flwd, Seps nearly ent. upper rdsh., lat. ones spat., Pets rdsh crenately curled, Lat. lobes of lip short revol., mid. one renif., Crest of 2 lobes and 3 callosities
- 20680 Pseudo-bulb 1-lvd, Leaf coriaceous, Scape panicleed elongated, Pedicels 1—2-flowered, Sepals and petals oblong-ovate curled, Lip 3-lobed 5-tubercled above the base, Middle lobe emarginate rather fan-shaped
- 20681 Bulbless, Leaves elliptic-oblong, Panicle ample, Sepals obovate-spatulate wavy, Petals conform but narrower, Lip tripartite with 5 tubercles in middle, Wings of column deflex'd oblong
- 20682 Pseudo-bulb ovate 2-leaved, Leaves ligulate-lanceolate, Scape racemose, Lateral sepals united almost to the middle, Lip 3-lobed bilamellate at base, Middle lobe bifid
- 20683 Bulbless, Leaves oblong acuminate flat spotted growing singly, Racemes compact stiff, Sepals and petals similar spatulate wavy, Lip roundish auricled at base with scarcely any crest wavy in front like the letter W elevated with a toothlet on each side, Wings of column rounded a little lobed [white tinged with green]
- 20684 Column short obtuse protuberant at base forming an obtuse angle with the lip, Flowers large variegated, Lip [dulous connate at base, Petals oblong flat, Lateral lobes of lip small obtuse, middle one transverse
- 20685 Pseudo-bulb oval 2-leaved, Leaves narrow thin, Scape 2-flwd eqal to leaves, Lateral sepals elongated pen-
20686 Pseudo-bulb 2-leaved oblong compressed ribbed, Leaves terete blunthish shorter than racemously panicleed scape, Sepals and petals distinct oblong obtuse uniform all sessile, Lip cuneate dilated retuse at top some what lobed at sinus, Crest excavated smooth 3-lobed bilamellate in front, Wings of column short truncate

History, Use, Propagation, Culture.

3238. *Leochilus*. Similar in habit to *Oncidium*, and they may be cultivated and treated in the same manner.
 3239. *Acianthera punctata* is a small plant with the habit of *Pleurothallis*, with oval leaves and 5-6 greenish grey flowers.

- 20687 Lip fiddle-shaped 2-lobed much larger than sepals, Segments roundish flat with 3 tubercles above the base villous at base, Wings of column short
- 20688 Leaves fleshy acuminate serrulated, Flowers panicle, Upper sepals united into a spoon-shaped body, Petals obovate emarginate unguiculate cuspidate, Lip 3-lobed, Lateral lobes small, middle one broad 2-lobed with a toothed claw and double fleshy crest, Wings of column hatched-shaped acuminate entire
- 20689 Pseudo-bulb ovate 2-edged 3-4-fibred 2-3-leaved, Leaves ensiform acute, Scape long racemose panicle, Sepals linear-lanceolate wavy free, Petals conform incurved, Lateral segments of lip short rounded, middle one roundish concave acute, Crest ovate depressed, lower half lined, upper ribbed, Column nearly wingless
- 20690 Bulbless, Leaves thick ovate-lanceolate acute, Scape panicle, Sepals roundish wavy unguiculate concave free quite entire, Pets much larger oblong obtuse emarginate curled, Lateral lobes of lip oblong fleshy acute with revolute edges, middle lobe reiform 2-lobed with 4 twin tubercles in mid., Wings of column linear obtuse
- 20691 Pseudo-bulb ovate furrowed 1-veined, Leaves narrow lanceolate acute, Racemes subcompound many-flowered, Sepals and petals linear-lanceolate wavy acute reflexed, Lip reniform emarginate, Lateral segments roundish erect glabrous 5-toothed bilentate at apex, Wings of column large oblong toothed
- 20692 Pseudo-bulb elongated ovate 2-edged, Leaves long ensiform recurved at top, Raceme compound many-flowered Seps and petals linear-lanc. wavy equal to lip, Lip constricted in middle cuneate at base dilated and rounded at top 2-lobed, Crest depressed downy 3 lobed at top, Wings of col. elong. truncate erose spheacelate
- 20693 Tufted, Pseudo-b. nar.-lin. scaly furrowed 1-lvd, Lvs lin.-lanc. obt. wavy apic., Scape 1-flwd short, Lat. seps connate at base obov.-obl. like petals, Lip fiddle-shaped, Mid. lobe large emarg., lat. ones short fringed in β Mid. lobe of lip yel. with a brown border [sinus Crest downy fringed, Wings of col. trunc. erose
- [short, mid. emar. obt., Disk pulv. with small tub. behind at base
- 20694 Leaves acuminate keeled, Corymb loose, Bracts obtuse membranous, Lip linear 3-lobed, Lateral lobes straight
- 20695 Racemes nutant sheathed at base, Lateral sepals connate, Lip oblong convex retuse with downy crest below the middle melliferous at base
- 20696 Pseudo-bulb ovate, Leaves lanceolate, Scape erect, Flowers secund racemose, Sepals and petals linear, Lip lin.-obl. emarginate with a melliferous crest at base, Lamellæ 2 short truncate furnished with 2 filif. glands
- 20697 Leaf solitary ovate obtuse glaucous dotted with purple, Sepals villous outside dotted with purple inside, Lip purple, Petals dotted, Racemes few-flowered drooping spatheous at base
- 20698 Rachis flexuous winged, Bracts ovate acute falcate cucullate, Petals oblong acute, Lip large obovate-roundish
- 20699 Leaves distich imbricate blue from bloom beneath, Flowers pure white except a spot of yellow at base of each division
- 20700 Pseudo-b. very narrow 2-edged smooth, Lvs linear ensif. twin, Scape compr. closely sheathed, Rac. many-flwd, Bracts yellowish keeled length of peduncs, Seps and petals lin. acum., Lip ov.-lanc. curled downy at base inappen.
- 20701 Pseudo-bulb ov. 2-lvd, Lvs nar. shorter than racs, Bracts ov. scale-formed, Seps and petals obl. eq., Lip round- β Column and lip yellowish [ish curled convol. about the col. with 5 lamellæ, Col. downy 2-eared at base
- 20702 Pseudo-bulb oval 2-leaved, Leaves ensiform narrow erect longer than scape, Raceme few-flowered loose, Bracts small setac., Seps and petals lanc. equal, Lip cord. constricted in middle rounded at apex with 5 abrupt lamel.
- 20703 Scape panicle, Sepals and petals oblong-lanceolate apiculate, Lip obovate rigid crestless lamellate with central incurving veins, Margins of column simple, Flower 2 inches in diameter
- 20704 Pseudo-b. ov. ribbed 2-lvd, Lvs ligu.-lanc., Rac. few-flwd, Bracts acum., Seps and petals conform ovate-oblong wavy, Lip obl.-cun. retuse apic. subsinuated with many trun. lamellæ in disk, Col. biden. with falcate wings
- 20705 Pseudo-bulb ovate-oblong, Leaves striated, Racemes many-flowered, Sepals and petals lanceolate wavy, Lip cuneate roundish bilamellate at base, Column bidentate in middle, Clinandrium entire
- 20706 Pseudo-bulb 2-leaved oval 2-edged, Leaves ligulate obtuse, Scape terete erect sheathed, Raceme distich many-flowered, Bracts keeled convolute acuminate, Sepals and petals linear-obovate acute stellate, Lip oblong wavy acute, Wings of column scimitar-shaped entire
- 20707 Pseudo-bulb ovate compressed subangular 2-leaved, Leaves broad-ligulate acuminate striated obliquely emarginate, Scape simple, Flowers racemose, Bracts short scale-formed, Sepals and petals fleshy obovate-lanceolate acute, Lip membranous oblong apiculate toothed on both sides bilamellate at base, Wings of column falcate
 β Lip subsheath, Lateral segments larger [cuneate entire
- 20708 Scape long filiform few-flowered, Sepals and petals lanceolate conform acute flat, Lip cuneate bifid furnished at base with sub tuberculate teeth, Wings of column small cuneate truncate
- 20709 Pseudo-bulb short ovate furrowed 2-lvd, Lvs lin.-obl., Scape longer than leaves, Rac. 8-10-flwd, Bracts small, Seps ov.-lanc. acuminate, Pets ovate wavy, Lip large roundish fiddle-shaped bilamellate, Column bidentate
- 20710 Pseudo-b. oval compressed corrugated 1-lvd many-lvd at base, Lvs ligulate acute flattish keeled much shorter than branches of scape, Bracts lanc. much shorter than peduncs, Seps and petals ov. acum., Lip unguic. cord. obov., Lvs subrep. and flat reflexed at apex downy in mid. obsoletly lamel. at base, Wings of col. multifid

and Miscellaneous Particulars.

3210. *Tetipogon*. Curious little terrestrial plants. They will grow well in turfy peat. The plants require moisture, heat, and shade.

- 20711 Close to *maculatum* in habit, but has a yellow wedge-shaped lip. It differs also from *C. filipes* in the shape of the lip
- 20712 Leaves shorter than slender scape, Lateral sepals acuminate, Lip unguiculate obovate apiculate warty shorter than sepals with villous recurved lamellæ
- 20713 Sepals ovate-lanceolate acuminate, Lip oblong acuminate wavy much shorter than lateral sepals
 β Flowers green, Sepals and petals longer and narrower
- 20714 Lateral sepals elongated double the length of the lip, Lip oblong lanceolate at top rather wavy
- 20715 Pseudo-bulb oblong 2-edged, Leaves twin oblong sessile wavy length of raceme, Sepals linear-acuminate, lateral ones tailed, Petals linear acuminate, Lip linear-lanceolate acuminate with downy lamellæ
- 20716 Pseudo-b. obl. 2-edged 2-leaved, Lvs oblong obt. shorter than many-flwd raceme, Bracts spreading scale-formed, Sepals linear acuminate, Petals conform shorter, Lip cordate-ovate curled with connate downy lamellæ
- 20717 Pseudo-bulb oblong compressed 2-leaved, Leaves obtuse shorter than many-flowered raceme, Bracts spreading scale-formed, Seps and petals lin. acum. very long, Lip cord.-subrhomboid acum. curled with bidentate lamellæ
- 20718 Pseudo-bulb oval 2-leaved, Leaves narrower eusiform erect larger than scape, Raceme loose few-flwd, Bracts small setaceous, Sepals and petals lanceolate equal, Lip cordate constricted in middle with 5 unequal lamellæ
- 20719 Sepals and petals nearly equal linear acuminate, Lip elongated cochleate acuminate
- 20720 Pseudo-bulb compressed 2-3-leaved, Scape nutant many-flower-d, Sepals linear acuminate, lateral ones very long, Lip oblong-lanceolate acuminate longer than petals with villous lamellæ
- 20721 Pseudo-bulb narrow 2-edged, Leaves oblong-lanceolate, Scape many-flowered equal to leaves, Sepals acuminate, lateral ones twice as long as lip, Lip rhomboid wavy shorter than petals with straight lamellæ
 [Mule between *P. amabilis* and *P. rosea*.]
- 20722 Petals broadly rhomboid acute, Lat. lobes of lip cuneate obtuse angled, middle one ovate bicirrhose at apex,
- 20723 Lvs obl. cori.-ac. recurv. at top, Scape nod. brnchd twisted clav., Flws fleshy, Seps ov., Pets oval a little broader, Lip ascend. tripar., Lat. segs lin.-spatu. lunate, mid one ovate, Crest lunate roundish depressed emarginate
- [deeply 3-lobed downy inside and with a conical spur at base, Lat. lbs incurv., mid. one dilated at apex 2-lob]
- 20724 Lvs terete obt., Racs 2 or many-flwd longer than lvs, Seps and petals suborbicular rather wavy spreading, Lip
- 20725 Leaves distich channeled, Racemes many-flowered, Seps coriaceous unguiculate obovate obtuse, Lip 3-lobed 3 lined with a short blunt spur, Lateral segments rounded, middle one broader cuneate emarginate
- 20726 Lvs channeled recurved truncate obliquely tridentate, Raceme erect 3-flowered, Seps oblong obtuse arched, Pets narrower incurved, Lip 3-lobed, Lateral lobes short incurved, middle one vittate oblong saccate at apex unequal 3-horned, Horns short conical
- 20727 Leaves coriaceous, Spike loose many-flowered
- 20728 Lvs distich coriaceous truncate, Spike dense erect many-flowered, Bracts oblong concave obtuse, Lip leathery linear-obl. with 2 diverging lobes having 3 lamellæ along the middle and 2 trian. acum. lobes, Spur short obt.
- 20729 Leaves channeled obliquely 2-lobed, Raceme many-flowered dense pedunculate pendulous, Seps obovate obl. obtuse flat incurved, Petals narrower, Lip obl. apiculated flat with 5 thick elevated veins, Sac downy inside
- 20730 Roots thick, Leaves distich coriaceous obliquely emarginate obtuse shorter than many-flowered lateral raceme, Bracts coriaceous cucullate scale-formed, Flowers large flat coriaceous but the flower buds are globose, Seps obovate-cuneate obtuse, Lip triangular saccate at base with a transverse line in the middle
- 20731 Stem tall, Leaves lobose membranous obliquely tridentate, Racemes lateral many-flwd, Flowers distant, Seps and petals obl. obovate wavy of one colour obt., Lip 3-lobed, Lat. lbs obt., middle one cuneate 2-lob
 [oblong channeled spongy bilamellate denticulate, Spur narrow obtuse]
- 20732 Raceme simple, Sepals oblong, Petals linear-spatulate, Lip 3-lobed, Lateral lobes ascending acute, middle one
- 20733 Lvs distich coriaceous obliquely and acutely bidentate, Spike many-flwd, Seps and petals obov. undulate, lower ones incurv. & larger, Lip teated at base obtuse ret. auricled bilamel. bituber. behind ben. the apex
- 20734 Lip fleshy sessile with a small bearded tubercle, Column short tomentose unidentate on both sides, Lvs distich, Peduncles long racemose at top
- 20735 Lip slipper-shaped, Terminal lobule truncate obsolete tridentate inflexed furnished with a 2-lobed channeled appendage inside, Column twisted
- 20736 Raceme dense cylindrical on long peduncles panicled and simple, Sepals and petals obovate-linear obtuse, Lip ovate acute, Spur obtuse
- 20737 Lvs long channeled truncate, Racemes cylindrical dense-flowered arched equal, Sepals ovate, Spur compressed downy inside
- 20738 Stem short, Leaves thick distich ligulate truncate or toothed at top, Racemes oblong erect shorter than leaves, Sepals and petals ovate spreading nearly equal, Lip acuminate concave, Spur short compressed drooping
- 20739 Stem strong erect, Lvs large oblong acute, Racemes lateral many-flwd, Sepals and petals oblong bluish
- 20740 Leaves distich imbricate lorate channeled obliquely truncate at apex, Racemes short spreading, Bracts small, Sepals and petals ovate acute spreading, Lip linear obtuse recurved, Spur straight pendulous
- 20741 Leaves long channeled arched acute mucronate equal to pendulous racemes, Seps ovate, Pets oblong narrower, Lip oblong emarginate ribbed on both sides, Spur compressed very blunt downy inside
- 20742 Leaves distich coriaceous obliquely 2-lobed at apex, Racemes a little branched, Sepals and petals linear obtuse fleshy, Lip subsagittate recurved papillose with erose edges, Spur obtuse [formed, Spur obtuse fleshy]
- 20743 Young stem 2-edged, Lvs distich stem-clasp wavy obt. obliq. triden., Rac. cylind. pend., Lip fleshy small tooth-
- 20744 Stemless, Leaves lorate acuminate obliquely bidentate at apex, Corymbs many-flowered on short peduncles, Sepals and petals obovate-oblong obtuse, Spur of lip indated orbicular, Lamina lunate roundish ciliated

History, Use, Propagation, Culture,

3241. *Arrhynchum*. A pretty little epiphyte.
 3242. *Malachadenia*. A singular plant requiring the culture of the hothouse epiphytes.

- 20745 Leaves distich coriaceous, Lip fleshy concave at base blauriculate oval cleft horizontally wrinkled adnate to spur, Spur ascending obtuse recurved thickened at the mouth and nearly closed
- 20746 Plant with creeping 1-leaved pseudo-bulbs, Scapes radical, Flowers fleshy galeate
- 20747 This plant has flowered in several hot-houses, but appears to be nothing but a narrow-leaved variety of *S. 2708*-
[*tritus*
20748 Leaves terete filiform, Racemes many-flowered drooping, Sepals and petals reflexed, Lip ovate at top, Throat bidentate on both sides didymous at top of spur, Column glabrous
- 20749 Lvs lorate keeled truncate at top nearly equal, Spikes cylind. drooping dense-flwd equal to lvs, Lat. seps ov. obt., Petals and upper sepal twice the size, Lip ovate-oblong obtuse, Spur blunt shorter than ovarium
- [one and pets lin. blunt, Lip fleshy 3-lobed, Mid. lobe roundish, lat. ones very thick transversely truncate
- 20750 Stem leafy, Lvs narrow-lanc. coriac. acute, Corymbs few-flwd nearly sessile, Lat. seps obliquely ov. acute, upper
- 20751 Lvs distich coriaceous ensiform obliquely retuse, Panicle spreading, Seps and pets obov. obt. nearly equal, Lip hastate fleshy downy, Middle segment cordate triangular, Spur conical, Column downy bidentate in front
- 20752 Leaves distich lorate obliquely emarginate wavy, Spike recurved compound, Sepals and petals oblong rounded, Lip roundish transverse with a subventricose downy sac
- 20753 Spikes dense short many-flowered, Flowers pliose, Lip ovate acute crested in middle with a 2-lobed dorsal tooth, Lobes acuminate denticulate, Spur blunt longer than lip
- 20754 Lvs oblong distich rounded emarg. at top much shorter than elong. peduncle, Panicle small contracted, Flws crowded corymb., Seps and pets obl. obt., Lip 3-lob. Lat. lbs erect rdsh, mid. ov. acute smooth, Spur fleshy
- 20755 This species has the habit of *Tanda*, with long stalked spikes of small ysh brown and pink rdsh fleshy blossoms.
- 20756 Leaves oblong obtuse almost equally 2-lobed at top, Flowers paniced, Branches simple rigid, Petals and sepals linear obtuse, Lip reniform with membranous 2-lobed tooth, Spur ventricose
- 20757 Leaves fleshy channeled arched stiff, Branches of simple panicle densely spicate nutant, Lateral lobes of lip minute erect, middle one roundish, Spur small obtuse fleshy
- 20758 Flowers small pink stained at base with dingy purple
- [ment roundish emarg., lat. ones acute, with an elevated tooth in middle, Cup of clinandrium entire rounded
- 20759 Pseudo-b. oval, Rac many-flwd cylind., Pedicels longer than internodes, Lip downy fiddle-shaped, Middle seg-
- 20760 Pseudo-bulb ovate, Lvs solitary linear channeled spreading emarginate, Scape paniced, Lip 3-lobed, Lateral segments triangular, middle one elongated linear with a bilamellate disk, Arms of column biglandular
- 20761 Leaves linear-lanceolate seated on the pseudo-bulbs, Peduncles radical paniced, Flowers pedicellate
- 20762 Leaves distich channeled obliquely tridentate at apex, Ovarium twisted, Petals oblong-ovate wavy [obtuse, Petals conform larger, Lip larger ovate absolutely 3-lobed, Claw saccate jointed, Spur small
- 20763 Leaves channeled retuse mucronate, Racemes cylindrical many-flowered erect equal to leaves, Seps oblong [frutale somewhat bidentate, lateral ones erect ovate, Spur horned incurved
- 20764 Lvs flat obtuse oblique, Rac many-flwd nutant, Seps and pets nearly equal obtuse, Lip large ovate retuse ser- [shaped, Lateral lobes erect, middle oblong inflexed toothed, Spur conical second green
- 20765 Lvs obliquely emarg. mucronate, Rac pendulous many-flwd longer than lvs, Seps and pets fleshy, Lip funnel-
- 20766 Leaves coriaceous oblique and obtuse at apex, Raceme dense nutant rather paniced, Sepals roundish-oblong, Petals conform but twice the size, Lip ovate wavy entire with one tooth at base on each side, Column short
- 20767 Leaves distich channeled broad thick obtuse oblique at top, Raceme pendulous many-flowered, Sepals obovate obtuse, Petals conform, Lip large 3-lobed denticulate at top, Middle lobe large
- 20768 Lip horned, Lat. seps roundish quite entire, middle one short stiff glabrous. Near *quinquevulnerum*.
- 20769 Racemes oblong horizontal 12-flwd, Bracts ovate small scabrous, Sepals and petals oval obtuse, Lip horned ascending 3-lobed pressed to column, Lateral lobes oblong denticulate, middle one linear biid
- 20770 Leaves rounded at end 2-lobed sometimes toothed, Spikes strict, Sepals and petals acute, Lip rhomboid quite entire acuminate, Ovarium 3-winged equal
- [pets lanceolate spreading, Lip conform a little larger shorter than filiform emarginate spur
- 20771 Stem short, Leaves cuneate-obovate obliquely 2-lobed reticulate, Racemes long pendulous many-flwd, Seps and
- 20772 Stem imbricate, Lvs distich compressed recurved imbricate obtuse channeled, Flws axil. solitary, Seps ovate, Pets narrower second obtuse, Lip behind obl. concave triden., Spur terete horizontal shorter than peduncle
- 20773 Stem short, Lvs obl. 3-nrvd oblique at apex, Spikes second many-flwd horizon. crowded shorter than lvs, Seps and pets nrly eq. nar. ov. spread. at top, Lip similar 2-lobd at base biden. downy in mid., Spur obt. inc. behind
- 20774 Stemless, leafless, Roots copious elongated articulated, Peduncles generally 2-flowered, Petals and sepals oblanceolate reflexed, Lip 3-lobed, Lateral lobes small erect, middle lobe broad obovate, Spur filiform
- 20775 Stem short radiant, Lvs distich obov.-lanc. obliquely acum. opaque striated, Rac long pend. many-flowered, Seps and pets lanc. spreading, Lip conform a little broader shorter than filif. spur, Crest of anther glandless
- 20776 Stems creeping, Lvs distich coria. ovate obliquely erose at top, Spikes eqal in length to the lvs, Flws resupin., Seps and pets galeate. dentic. ov.-lanc., Lip fid.-shpd obtuse dentic. 1-trhd at base, Spur arched length of lip
- 20777 Stemless, Leaves distich oblong rather wavy recurved oblique at top, Racemes dense nutant axillary shorter than leaves, Sepals and petals linear-lanceolate, Lip fringed cordate-ovate truncate, Spur short lanceolate

and Miscellaneous Particulars.

3243. *Acriopsis*. Curious little epiphytes, with compactly arranged flowers in racemes about 2 inches long. Their nature is the same as for other orchideous epiphytes.

History, Use, Propagation, Culture,

3244. *Limatodes rosea* is a terrestrial plant, has much the habit of a species of *Calanthe*, and may be cultivated and treated like the species of that genus. It is a splendid plant when in blossom, and flowers most abundantly. The

- 20778 **Caulces, Leaves distant lanceolate acute, Peduncles axillary 1-flowered, Sepals and petals ovate-lanceolate acute, Spur slender pendulous equal to peduncle**
- 20779 **Caulces, Lvs distich channeled acutely and obliq. biden. at apex. Spikes lat. horizontal secund, Seps ov., Petals linear, Lip 3-lobd, 1. lat. lbs acuminate longer than triang. middle one, Spur pendulous clavate compr. at base**
- 20780 **Leaves broad distich, Lip roundish convolute at top cuspidate with an elevated acuminate broad flat line in middle, Spur horizontal acuminate straight twice as long as lip**
- 20781 **Stemless, Leaves channeled recurved equal to pendulous recurved raceme. Flowers distant divaricate, Sepals ovate, Petals linear acute Spur arched inflated at top diaphanous**
- 20782 **Leaves coriaceous distich uniformly 2-lobed at apex, Flowers in lateral horizontal racemes, Bracts membranous, Sepals and petals almost uniformly linear taper-pointed, Spur long blunt**
- 20783 **Leaves narrow channeled obliquely obtuse, Spikes short dense cylindrical, Flowers beset with black hairs outside, Lip truncate 3-lobed, Spur curved clavate obtuse length of lip**
- [short, middle roundish crested undivided]
- 20784 **Scapes slender many-flowered sheathed at base, Lip saccate at base 3-lobed bilamellate, Lateral lobes acute**
- 20785 **Scape erect, Lvs broad obl. petiolate acum., Racs many-flwd, Lip 3-parted crested by 5 series of tubercles, Lat. segs lin. subfal., mid. one cun. emarg., Spur long fale. clav., Col. oblique bifov-ate in front, Ovary downy**
- 20786 **Pseudo-b ovate or roundish striated reticulated, Lvs plicate broad-lance. acum. channeled glabrous, Scape 3 feet radical hairy with small lance. adpressed sheaths, Spike 2 feet. Flws villous white stained with crimson in mid., Seps reflexd., Lip longer than seps 3-parted, Segs ruded, mid. one bifid., C 1. short thick, Spur filif. infld**
- 20787 **Like *C. venetrisfolia* in foliage and general habit, but with far finer flws, at first white, then changing to yellow, so that the upper part of the raceme is pure white and the lower bright yellow [downy acute**
- 20788 **Racs loose dwy, Seps and petals ac., Lip 3-lobd joined with col. dwy at base bilam., Mid. lb. 2-lobd 3-ke-veld, Spur**
- 20789 **Scape shorter than leaves, Scales loose ventricose, Racemes many-flowered corymbose, Lip rather connate with column, Middle lobe cuneate 2-lobed, Disk bilamellate, Spur long straight pendulous clavate**
- 20790 **Leaves oblong glabrous twice as long as thick scape, Raceme dense cylindrical glabrous, Bracts membranous deflexed deciduous, Lip hastate, Lateral lobes short obtuse, middle one lanceolate, Spur hooked**
- 20791 **Leaves oblong-lanceolate concave 7—9-nerved glabrous, Scape downy at top, Raceme dense pyramidal, Lip joined to column 2-lobed, Lateral lobes ovate short, middle one cuneate 2-lobed longer with 3 tubercles at base and warts along the middle, Spur glabrous, Ovary downy**
- 20792 **Pseudo-bulb ovate sulcate 1-leaved, Leaf lanceolate acuminate striated sheathed at base, Scape radical glabr., Spike elong. loose many-flwd, Sepals and petals lanceolate, Lip erect oblong-spatulate clasping the col. 3-lobd, Lat. lbs short obt., mid. one broad semi-orbic. mucr., Disk imbric. spotted, Spur short obt. inervd**
- 20793 **Pseudo-bulb fusiform, Leaves oblong-lanceolate plicate smooth, Scape loosely many-flowered shaggy, Bracts curved backwards, Lip oblong flat retuse, Spur straight blunt horizontal, Column dwarf downy**
- 20794 **Sepals linear acute, Petals conform obtuse, Lip obovate emarginate rather wavy narrowed at base and lamellate, Wings of column semicord. acute [curved length of ovy, Wings of col. cun. dentic., Anthr dwy**
- 20795 **Bracts distich cucullate ovate acute, Seps and petals ovate acute, Lip oblong purple at base bident., Spur reflex**
- 20796 **Bracts ovate acute, Sepals and petals ovate acute, Lip oblong emarginate obsolete bidentate at base spurless gibbous, Wings of column ovate acute, Anther villous**
- 20797 **Lip serrul. roundish slightly 3-lobed, Mid. lobe emarg., Spur conic., Lat. sepals reflexed, Bracts length of flws**
- 20798 **Leaves oblong-lanceolate acuminate loosely sheathed, Spike oblong many-flowered, Sepals ovate acute, Lip broader than long obsolete 3-lobed flat, Lateral lobes emarginate much larger than middle one which is acute, Spur pendulous horned shorter than lip, Bracts green acuminate sometimes longer than flower**
- 20799 **Lip 3-lobed, Lobes ovate, mid. one smaller emarginate all crenately cut, Pets obt., outer ones reflexd., Spur cylindrical ascend. longer than ovary, Bracts foliac. twice as long as flws. There is a variety with purple flws**
- 20800 **Leaves spotted, Spike dense secund, Flowers small, Petals subulate, Lip spreading oblong equal to the sepals gibbous at base 3-lobed, Middle lobe obovate mucronate**
- 20801 **Lip 3-parted, Segments wedge-shaped deeply-toothed, middle one emarginate, Lateral sepals obtuse a little toothed, Horn subulate ascending length of ovarium**
- [obl. obt. many-flwd, Seps lin.-conv. recurved. Petals conform smaller, Lip obl.-ac., Spur shrttr than ovy]
- 20802 **Leaves twin radical cordate orbic. flat papillose, Sheaths adpressed to stem acute foliac. complicate, Spike**
- 20803 **Lower Leaves broad-ovate obtuse many-nerved becoming smaller and oblong as they ascend the stem, Upper ones near the bracts tinged with red Bracts folia-eous coloured, Sepals and petals linear-lanceolate acute, Lip large with a projecting point and curved denticulated border**
- 20804 **Lip wedge-shaped dilated, Lateral segments broad, middle one oblong scarcely emarginate**
- 20805 **Bulb roundish, Racemes loose longer than ovaria, Lip with 2 teats crenate**
- 20806 **Lip obovate-triangular velvety undivided gibbous at base and with an inflexed rhomboid appendage at top, Petals convolute velvety about equal to the short beaked column**
- 20807 **Inner segments of perianth convolute villous shorter than rostrate column, Middle seg. of lip obovate retuse shortly appendiculate velvety, Lat. segments drawn out into a subulate elongated hooked appendage each**

and Miscellaneous Particulars.

pseudo-bulbs have the peculiarity of producing a kind of neck about their middle. The genus was first made known by Blume, and the species mentioned by him are said to be fibrous-rooted plants.

History, Use, Propagation, Culture,

3245. *Sarcoglóttis* is a genus separated from *Spiránthes* by Presl. The species require the constant heat of a stove and thrive in a rich loamy soil, kept moist when in a growing state, but dry after the leaves have decayed.

3246. *Peristylis*. A genus separated from *Habenária*, and may be cultivated in the way recommended for *Sarcoglóttis*.

- 20808 Lip bilobous ovate acute 3-parted villous, Lateral lobes deflexed acute, middle one ovate, Petals ciliated acute
 20809 Lip oblong nearly square violet with a white horseshoe-shaped spot in middle, Sepals rose-coloured
- 20810 Stem 2-leaved, Leaves wavy acuminate, Spike few-flowered, Bracts acuminate green shorter than ovary, Sepals ovate acute nearly equal, dorsal one horizontal, Petals undivided galeate obtuse, Lip entire ensiform, Spur pendulous twice as long as ovary 2-lobed at apex
 20811 Stem leafy, Leaves oblong cucullate at base spreading gradually decreasing into bracts, Racemes many-flowered, Bracts green, lower ones foliaceous, upper ones small ovate, Lip 3-parted, Lateral segments linear a little shorter than the broader middle one, Spur pendulous clavate twice the length of ovarium
 20812 Tubers undivided, Lip tripartite, Lateral lobes curled upwards pectinate, middle one stretched out linear-spatulate, Horns velvety, Two inner petals linear-falcate, Flowers large
- 20813 Leaves radical stellate, Flower nutant, Lips about equal in length, Galea acum., Lip tapering to apex truncate
 20814 Lvs radic. stell., Bracts on scape 2—3, Flower erectish, Lower lip shortest, Gal. acutish, Lamina of lip ent.
 20815 Leaves radical stellate, Bracts of scape near the flower, Flower erect, Lower lip rather the longest, Galea acuminate, Lamina of lip entire tapering to apex and exceeding the column
 20816 Leaves radical stellate, Scape furnished with one bract in the middle, Lamina of lip emarginate equal to column
- 20817 Lip 3-lobed, Lobes ovate obtuse, middle one larger having 9 veins with as many parallel equal lamellæ at base, Sepals obtuse concave warty outside, Veins of petals warty
- 20818 Plant olive-brown hairy, Scales distant lanceolate disposed generally about the stem, Spike 7—8-flowered, Bracts lanceolate acuminate incurved longer, Ovary hairy, Sepals glabrous, upper one retuse, lateral ones obtuse concave at top, Lip glabrous at base sagittate villous above base obov. obtuse conc. shining a little crenated
 20819 Leaves oblong coriaceous rosulate glabrous, Scape leafless hairy with 2—3 sheaths, Spikes ovate hairy, Bracts linear-lanceolate glabrous on back, Lip oblong rounded veiny, Claw excavated at apex 2-legged at base
 20820 Leaves oblong acute spotless, Scape rufoescens downy as is the ovarium, Lateral sepals deflexed, Lip 3-lobed cucul., Mid. lobe renif., lat. ones ascending roundish, Claw vill. on both sides, Callusities elong. free twisted
 20821 Leaves before flowers, Sheaths of stem inflated glabrous diaphanous, Flowers capitate tomentose outside, Lip flat at top oblong quite entire
 20822 Leaves radical spatulate acute, Scape glabrous, Flowers villous, Leaflets of perianth narrow dirty white at length rufoescens glabrous towards apex, Lip spreading acuminate
 20823 Leaves radical spatulate acute pale green, Scape downy towards apex, as are the flowers, Leaflets of perianth yellowish green, outer and lower ones falcate obtuse, Lip deflexed tridentate
- 20824 Leaves oblong-lanceolate acute, Scape pilose, Spike conical thyrsoid compact, Bracts lanceolate green shorter than pilose flowers, Sepals and petals linear-lanceolate acuminate, Lip conform glab. nar. at base channelled [spike approximate
- 20825 Lower leaflets of perianth revolute, inner one linear, Lip linear-oblong with naked margins, Flowers of
 20826 Lower leaflets of perianth revolute oblong acute, inner ones linear obtuse, Lip oblong cuneate retuse at apex warty with callous tubercled margins
- 20827 Stem 2-leaved, Lvs cordate acute, Spike secund, Seps and ptes ovate-lanceolate acute nearly equal, Lip 3-lobed saccate at base, Lateral scales of anther elongated clavate
 20828 Stem elongated, Leaves elliptic-lanceolate, Spike many-flowered, Lip nearly entire obtuse as are the ptes, Spur globose saccate, Seps ovate acuminate green
- 20829 Leaves rich green the midrib silvery white and the rest of the surface marked with fine transverse silvery lines
 20830 Leaves narrow-lanceolate marked with a bar of gold colour through the centre upon a dark green ground
 20831 Leaves having a narrow bar of gold colour down the centre, otherwise marked with golden meshes on a dark velvety green ground
 20832 Leaves green thickly netted with silvery lines
 20833 Leaves curiously veined and appearing as if covered with a film of silver, Flowers small white in short spikes
- 20834 Leaves of a deep reddish olive green with a velvety surface traversed by fine golden yellow veins, and a bar of gold colour down the centre

and Miscellaneous Particulars.

3247. *Physurus*. This genus rivals the *Anacochilus* in the beauty of the leaves. It requires the same kind of treatment as that plant. It is found on the hills of Botofogo near Rio Janeiro among decayed leaves.

3248. *Cheiróstylis marmorata* is less beautiful than the *Anacochilus scævus*, a plant of similar habit. A damp heat is required. Three parts of chopped *Sphagnum* and one third of decayed leaf-mould make the best compost for it.

Ovary calcareate

DIANDRIA.

20837 Stemless, Lvs corlaceous acute channeled spotted, Scape downy, Dorsal sepal cuspidate ciliated with revolute edges, Pets linear-oblong rather wavy fringed, Upper margin warty, Sterile stamen lunate downy

20838 Leaves 2 broad plicate, Flowers solitary

20839 Lvs distich long obt. slightly notched at apex sheathing at base, Scape gland. few-flwd, Lip with a notch in front of pouch and a large triang. tooth on each side, Lat. segs narrow lanc-spat. acum. much longer than outer

20840 Stemless, Lvs distich uniform leathery smooth, Scape bearing several flowers longer than leaves, Bracts as long as ovary, Seps ovate-lanceolate gracefully curved, Pets extended into very long pendent wavy linear tails, Lip oblong glandular on edge at base, Sterile stamen broader than long 2-lobed bristly

20841 Stem leafy pilose many-flowered, Lvs ovate acuminate stem-clasping, Sterile stamen ovate acum. rather 3-lobed, Seps and petals oblong equal bearded at base bipartite in front at apex, Lip obovate constricted at mouth

20842 Lvs oblong ac. striated spotted equitant at base, Scape downy leafless, Dorsal sepal acum. ciliated with revolute edges, Petals oblong wavy downy, Sterile stamen lunate

20843 Lobe of col. elongated cord., Mouth of lip shorter than peri. contracted crenul., Anthers awned on back, Stem

20844 Nearly allied to *C. macranthum*, but the 2 lateral innermost segms of perianth are much narrower and longer than the lip, the mouth of the lip is also larger and with a small cleft at the lower extremity, and is not so regularly notched and is deeper purple

20845 Lvs linear ciliated piliferous at top, Scares and flwrs covered with glandular hairs, Rachis very villous, Panicle pyramidal [uncles crowded subcorymbose terminal, Ovarium linear

20846 Stem branched, Lvs crowded at top of branches subulate recurved membranous towards margins at base, Pe-

20847 Stems tufted, Lvs linear-subulate glabrous ending in a bristle-like mucrone, Scape panicled at top, Segments marked with a zigzag line around the mouth ovate nearly equal

20848 Lvs linear ensiform grassy with entire edges, Scape glabrous, Raceme simple downy, Lip appendiculate

20849 Tufted, Lvs radical rosulate copious linear acute ciliate scabrous on margin piliferous at apex, Scape glabrous hardly bracteate, Racemes and flowers covered with glandular hairs, Lip tuberculate

20850 Scape inarticulate glabrous furnished with one whorl of leaves beyond the middle, Radical leaves rosulate spatulate mucronate, Throat of corolla crowded, Lip appendiculate

20851 Stems short branched at base, Lvs glabrous lin-subulate setaceous mucronate, Scares and peduncs terminal naked panicled at top and beset with glandular hairs, Lip appendiculate on both sides, Ovarium cv.ind. elong.

20852 Scape covered with gland. down branched a little, Lvs flat elong. lanc. ensiform, Pets 4 wavy reprod denticul., the 5th obl. deflexed callous in mid, with 2 appends at base, Scares in throat 2 sem-lanc. ciliated denticulate

20853 Glabrous, Stems numerous leafy, Lvs linear acute, Upper ones fasciculately subverticillate, Flowers in terminal racemose spikes, Capsule compressed lanceolate

20854 Glaucous, Radical lvs rosulate lin-spat., Caul. lvs verticil., Racemes loose verticil., Calyx eq. 5 parted, Segments of corolla above 2 smaller, Throat crowned with capitate glands, Lip linear acum. tuberculate at base

20855 Scape beset with acute hairs, Raceme nearly simple, Capsule ventricose ovate, Leaves linear attenuate at base with the margins a little recurved, Scares scarious

20856 Lvs rad. trifid lanc.-lin. acum. reflexed on the marg. naked and shining with elong. sheathing scales at base, Scape twice as long as lvs gland.-downy panicled, Calyx bilab., Up. lip trifid, lower 2-parted, Throat of cor. crowned

20857 Lvs radical linear glabrous piliferous with entire edges, Raceme simple, Rachis downy, Scape glabrous, Throat of corolla naked, Lip appendiculate

20858 Stem elongate intricate, Lvs spatulate acute with denticulated edges, Scape leafless, Raceme cylindrical sim- plecte beset with black glands

20859 Scape beset with acute hairs, Lvs radical spatulate apiculate ciliated, Panicle dense cylindrical glandularly tomentose, Rachis villous, Calyxes obtuse

20860 Scape glandularly pilose decumbent, Lvs linear reduplicate scariously pubescent, Raceme loose subcorymbose glandularly hairy

HEXANDRIA.

20861 Lvs broad-cordate acute Peduncles solitary 1-flowered furnished with a perfoliate bract, Lip large entire ending [in a very long tail, Tube glabrous outside

20862 Leaves large petiolate, Stipules stem-clasping oblong acute, Peduncles solitary axillary, Perianth tubular bilabiate, Lower lip short, upper spatulate emarginate 6 lines long

20863 Lvs downy cordate acum., Peduncle solitary bracteate, Perianth large cordate ribbed outside reticulated downy, Tube inflated contracted in middle, Limb large cordate-ovate with a long tail

20864 Lvs cordate acute, Peduncles 1-flowered, Perianth large unilabiate obliquely pendent, Tube curved upwards, the lower part oblong furrowed and contracted, the upper part assurgent and inflated ending in a large shell-formed concave veiny white purple-spotted lip tailed at top

and Miscellaneous Particulars.

tion, renders powerless a serpent of moderate size, if one or two drops are put into its mouth, when it may be handled with impunity. It also cures the bite of a serpent.

Page 768. CLASS XXI.—MONŒCIA.

Order 2. DIANDRIA. Stamens 2.

3249. 1939a. *Pistia*. Spathe tubular at base, and connate with the spadix. Limb spreading. Spadix female at base and male at apex. Anthers 3—8, or diandrous. Ovarium one, adnate to spadix, seated obliquely. Style thick, terminal. Stigma cup-shaped. Berry 1-celled, few- or many-ovulate. Seeds cylindrical.

Order 4. TETRANDRIA. Stamens 4.

3250. 1971a. *Fortuncea* Lindl. Male aments lateral, heart-shaped, erect. Scales foliaceous, hairy inside, white, tetrandrous at base.—Female aments terminal, composed of dense, 1-flowered, erect, imbricate, mucronate, glabrous scales. Calyx 4-toothed, superior. Corolla none. Ovarium 1-celled, compressed, 2-winged. Ovulum solitary, erect. Style short. Stigmas 2, linear, spreading. Strobile oblong, composed of hard, mucronate, downy scales. Nut small, compressed.

Order 6. HEXANDRIA. Stamens 6.

3251. 1972a. *Hobdella*. Perianth 6-leaved, disposed in two series. Stamens distinct. Glands 6, opposite the base of the stamens.—Female flowers with 6 sterile stamens. Stigma simple. Berries 3, distinct, oblong, follicular, 1-celled many-seeded.

3252. 1972b. *Akēbia*. Perianth 3-leaved. Stamens free. Glands 6.—Female flowers with 6 sterile short stamens. Ovaria 3—9 distinct oblong-cylindrical, terminated by a peltate stigma.

3253. 1985a. *Leopoldina*. Spadix paniculately branched without a spathe. Lower flowers female, at base of branch; upper ones, male. Sepals 3. Stamens 6, flattened, connate at base.—Female flowers. Ovarium turbinate trigonal, 3-celled, 2 of the cells small. Stigmas 3 sessile, short, spreading. Berry drupe-furred, orbicular, compressed, 1-seeded.

3254. 1985b. *Astrocaryon*. Spathe fusiform. Flowers dense.—Male flower. Calyx trifid. Petals 3. Stamens filiform. Rudiment of ovary with 3 subulate styles.—Female flowers below the male ones, bracteate. Calyx urceolate 3-toothed. Corolla urceolate, tridentate. Style 1. Stigmas 3, confluent, conical or lobed. Drupe ovate, 1-seeded, fibry. Nut with 3 pores at top.

3255. 1985c. *Acrocōmia*. Spathe simple, lanceolate.—Male flowers dense on the upper parts of the branch, sessile. Calyx small, of 3 sepals. Petals 3, lanceolate-oblong.—Female flowers on the lower part, remotish, sessile. Calyx of 3 sepals. Petals 3. Cupula annular, 6-toothed, girding the ovary. Ovarium ovate, 3-celled, hairy. Style short. Stigmas 3, lanceolate. Drupe globose, 1-seeded. Nuts lenticular, with 3 pores at the side.

3256. 1985d. *Enocarpus*. Flowers bracteate. Spadix double, inner one complete.—Male flower. Calyx tripartite, with keeled segments. Petals 3. Stamens 6, in bottom of corolla.—Female flowers. Sepals 3. Petals 3. Ovarium 3-celled, 2 of the cells very small. Stigmas 3, sessile, connivent. Berry 1-seeded, fibry, crowned by the stigmas.

3257. 1985e. *Wallichia*. Flowers sessile, bracteate. Spathe many incomplete.—Male flowers. Calyx tridentate. Petals 3. Stamens 6.—Female flower. Calyx urceolate trifid. Petals 3. Ovarium 2-rarely 3-celled. Stigmas 2—3, connate. Berry 2—3-seeded.

3258. 1985f. *Martinsia*. Upper flowers male, lower female. Spathe 1-leaved.—Male flower. Calyx small, triquetrous, 3-lobed. Petals 3, acuminate. Stamens 6, adnate to petals.—Female flower. Sepals 3. Petals 3, with 6 barren filaments. Stigmas 3, sessile, obtuse, connivent. Ovarium 3-celled. Drupe globose, 1-seeded.

3259. 1985g. *Oncosperma*. Spathe triple, inner one incomplete. Male flowers twin, female single.—Male calyx 3-parted, with keeled imbricate segments. Petals 3, valvate. Stamens 6. Anthers sagittate, fixed by the base.—Female male with 3 sepals and 3 petals, convolute. Ovarium 3-celled, only 1 of which is fertile. Stigmas 3, sessile, conniving. Berry 1-seeded.

3260. 1985h. *Sjagrus*. Flowers sessile, bracteolate; male in the upper part, lower female. Spathe double: outer short, open at top; inner one fusiform, rather woody, open in front its whole length.—Male. Sepals 3, triangular, membranous. Petals 3, rather fleshy, lanceolate, carinate, crested, connivent. Stamens 6-16, inclosed.—Female flower with erect sepals and petals, the former keeled, the latter oblong and exceeding the sepals, imbricate. Ovarium 3-celled, 2 of which are abortive, therefore 1-celled. Style none. Stigmas 3, sessile, pyramidately trigonal. Drupe oblong, 1-seeded, fibry. Nut bony, with 3 pores at base.

3261. 1985i. *Eulēpe*. Flowers monœcious in the same spadix: lower ones male, sessile, bracteate. Spathe double, outer one short.—Male. Sepals 3, ovate, concave, keeled, imbricate. Petals 3, coriaceous, ovate or lanceolate, erect, valvate. Stamens 6, inclosed. Anther linear, subsagittate, fixed by the base, erect. Rudiment of pistil trifid.—Female. Sepals 3, ovate, obtuse, concave, imbricate. Petals 3, similar but thinner. Ovarium 3-celled, 2 of the cells small. Stigmas 3, sessile, acute, connivent. Berry 1-seeded, globose, crowned by the stigmas, fibry. Nut smooth.

3262. 1985j. *Martiniāna*. Flowers sessile, bracteate. Spadix girded by a thick, woody, oblong, long-beaked, furrowed, simple spathe.—Male. Sepals 3, membranous, ovate-triangular. Petals 3, lanceolate, subcoriaceous. Stamens 6. Anthers linear, fixed by the back.—Female bracteate, situated at base of spadix. Sepals 3, imbricate. Petals 3, large. Cup membranous girding the ovarium. Ovarium ovate-conical, 3-celled, 2 of the cells abortive, therefore only 1-celled. Stigmas 3, revolute. Drupe ovate, 1-seeded, fibry. Nut bony, acuminate at top, with 3 pores at base.

3263. 1985k. *Gednoma*. Flowers monœcious in the same or in distinct spadices, rarely dioecious, immersed in pits on the rachis; female ones single, male ones in twos or threes. Spathe double, rarely triple; outer one truncate, incomplete, concave; inner one compressed or fusiform.—Male. Sepals 3, concave and keeled. Petals 3, flat. Stamens 6. Filaments connate into a cylinder, free at top. Cells of anthers divaricate.—Female. Sepals 3. Corolla trifid. Stamens 6, urceolate, 6-toothed, covering the ovarium. Ovarium 3-celled. Style basilar. Stigmas 3, subulate, revolute. Berry 1-seeded.

3264. 1985m. *Diplothēmium*. Flowers, lower male, upper female. Spathe double: outer one shorter, open at top; inner one clavate or cylindrical, at length cleft in front.—Male flowers coriaceous, with 3 sepals and 3 petals: the former narrow-lanceolate and keeled, and connate at the very base; the latter ovate and a little keeled, erect or connivent. Stamens 6—12, or indefinite. Anthers sagittate, erect.—Female flowers coriaceous, ovate-globose. Sepals 3, ovate, keeled, imbricate. Petals 3, entire or repandy toothed. Ovarium globose, trigonal, 3-celled, 2 of the cells abortive, therefore only 1-celled. Stigmas 3, sessile, triquetrous, pyramidally conniving, at length spreading. Drupe ovate or obovate, fibry. Nut bony with 3 pores at base.

3265. 1985n. *Duvauā*. Calyx 4-cleft, persistent. Petals 4, concave. Stamens 6—10, inserted in the disk. Disk 8-toothed. Ovary sessile, conical, 1-ovulate. Styles 3—4, short. Stigma capitate. Drupe globose, containing a coriaceous nut. Seed pendulous.

- 20865 Glabrous, Lvs cordate-hastate with a deep broad sinus and rounded lobes on long petioles, Peduncles axillary solitary 1-flowered, Perianth unilabiate, Tube inflated at base striated, Limb ovate with reflexed sides reticulated above glandular, Glands large globose stipitate
- 20866 Glabrous, Lvs and stipules uniformly cordate, Flower large solitary, Perianth tube inflated obovate globose, Limb cylindrical at base bilabiate, Upper lip lanceolate acute densely pilose inside, Lower lip extended from a linear channelled base to a very broad reniform reticulated lamina
- 20867 Lvs on short petioles cordate acuminate, Stipules cordate-roundish, Peduncles axillary solitary 1-flowered, Tube of perianth inflated at base dilated and oblique at the mouth
- 20868 Stem flexuous not twining nearly slimp., Lvs on long petis, unifmly cord. obt. glauc. beneath, Pedunc. axil. sol. 1-flwd, Tube of perianth curved infla. at base, Limb unilat. rndsh obt. painted cil. with long gland, fleshy hairs
- 20869 Glabrous, Lvs cordate acute, Flowers purple tessellate terminated by a short tail, in the centre leading to the throat is a rich spot of golden colour

Order 7. POLYANDRIA. Stamens more than 6.

3266. 2005a. *Ambrosinia*. Spathé convolute at base and cucullate at top, and cuspidate. Spadix flattened; female in front at base, and male at top on back. Anthers usually 10, adnate to back of spadix. Pistil solitary, free. Ovarium subglobose, sessile, 1-celled. Style terminal, curved in towards the spadix. Stigma roundish. Capsule globose, depressed, sessile, 1-celled, indehiscent, many-seeded.
3267. 2005b. *Arise'ma*. Spathé convolute at the base. Spadix naked at top. Anthers verticillate, on distinct filaments. Cells on n by a transverse chink or pore. Ovaria numerous, free, 2-6-ovulate. Style short, or wanting. Stigma capitate. Berry 1- or few-seeded. Seeds globose, with a broad basilar hilum.
3268. 2005c. *Cryptocoryne*. Spathé or spadix inclosed or connate together at apex, or exerted, free. Male flowers very remote from the female flowers. Anthers at top of spadix, sessile, or shortly stipitate. Ovaria 6 or more in a whorl at the base of spadix, combined into one many-celled fruit. Styles distinct.
3269. 2005d. *Peltandra*. Spathé elongated, undulated, recurved at top. Spadix interruptedly androgynous. Sterile appendage short, naked. Anthers 1-celled, verticillate, opening by a pore at apex. Ovaria numerous, scattered, 1-celled. Style short. Stigma subcapitate. Berry 3-4-seeded.
3270. 2005e. *Xanthosoma*. Spathé convolute at base, straight. Anthers 2-celled, verticillate. Cells contiguous, opening by chinks. Ovaria numerous, about 4-celled, cohering by the thick placenta-formed styles. Ovula many. Stigma depressed, lobed, glutinous.
3271. 2005f. *Acónias*. Spathé as in *Xanthosoma*. Spadix interruptedly androgynous. Anthers 2-celled, verticillate. Cells contiguous, opening by transverse chink at apex. Ovaria many, about 3-celled, many-ovulate. Styles combined. Stigma minute, orbiculate, clammy.
3272. 2005g. *Syngonium*. Spathé as in *Xanthosoma*. Anthers by fours or fives, 2-celled. Cells opposite, opening by pores. Ovaria numerous, connate, 1-celled, 1-ovulate. Stigmas distinct, sessile, glutinous. Berries many, concrete, 1-seeded.
3273. 205h. *Culcásia*. Spathé straight, gaping, short. Anthers sessile, 2 from each dot. Ovaria numerous, crowded, free, 1-celled, 1-ovulate. Stigma sessile, capitate.
3274. 2005i. *Phidéndron*. Spathé convolute at base, straight. Spadix continuous, androgynous. Anthers 2-celled, distinct. Cells opening at top. Ovaria numerous, free, 5-15-celled many-ovulate. Style short. Stigma capitate, or radiately lobed. Berries free, many seeded.
3275. 2005k. *Spathicarpa*. Spathé involute. Spadix adnate to spathe. Stamens numerous. Anthers 6-8, 1-celled, opening by a pore in the middle. Ovaria numerous, free, 1-celled, 1-ovulate. Style elongated. Stigmas capitate. Berry 1-celled, 1-seeded.
3276. 2005l. *Dieffenbachia*. Spathé convolute. Spadix adnate to spathe; upper part male, free. Stamens numerous. Anthers 3-4, 2-celled, verticillate. Cells parallel, opening by a pore at apex. Ovaria numerous, free, 1-celled, 1-ovulate. Stigma discoid, sessile. Berry 1-celled, 1-seeded.
3277. 2005m. *Antherurus*. Spathé gaping at base, convolute at apex. Spadix, the female part adnate to the spathe, sterile appendage filiform. Anthers numerous, crowded, coadunate, 2-celled. Cells opposite, opening by a transverse chink. Ovaria numerous, free, 1-celled, 1-ovulate. Style filiform. Stigma depressed, round. Berry 1-celled, 1-seeded.
3278. 205n. *Aglaonéma*. Spathé gaping, convolute. Spadix continuous, androgynous. Anthers many, free, sessile, 4 celled, opening by a pore beneath the apex. Ovaria numerous, free, 1-celled. Stigma discoid, sessile. Berries 1-celled, 1-seeded.
3279. 2005o. *Homalomena*. Spathé gaping. Spadix androgynous. Anthers numerous, sessile. Ovaria numerous, free, 3-celled, many-ovulate. Stigma sessile, trifid, concave.
3280. 2005p. *Monstera*. Spathé gaping, deciduous. Spadix female at base, and pseudo-hermaphrodite at apex. Filaments flattened. Anthers 2-celled. Cells opposite, dehiscing lengthwise. Ovaria 2-celled. Cells bi-ovulate. Style short. Stigma capitate. Berries connate.
3281. 2005q. *Scindapsus*. Spathé gaping, deciduous. Spadix sessile, base female, top pseudo-hermaphrodite. Filaments cuneate, compressed. Anthers 2-celled. Cells divaricate, dehiscing lengthwise. Ovaria 1-celled, 1-2-ovulate. Stigma sessile, oblong. Berries 1-seeded. Seed hooked.
3282. 205r. *Sarranámum*. Spathé tubular at base, with a flat spreading limb. Spadix interruptedly androgynous, rather clavate and naked at top. Anthers sessile, distinct. Cells dehiscing by a short oblique chink. Ovaria numerous, free, 1-celled, bi-ovulate. Stigma depressed, sessile. Berries 1-seeded.
3283. 2005s. *Dracontium*. Spathé convolute at base, with a flat spreading limb. Spadix androgynous, subclavate at top and naked. Anthers combined in clusters, 2-celled. Cell opening by a short oblique chink. Ovaria numerous, free, 1-celled, 3-5-ovulate. Stigma depressed, sessile. Berries 1, few-seed-d.
3284. 2005t. *Pythonium*. Spathé convolute at base, with an arched limb. Spadix androgynous, naked at top and tubercled. Anthers distinct, on short filaments, 4-celled, dehiscing by 4 pores. Ovaria numerous, free, 1-celled, 1-ovulate. Style subulate. Stigma valvately 3-lobed. Berries 1-seed-d.
3285. 2005u. *Amorphophallus*. Spathé convolute at base. Spadix androgynous. Sterile appendage elongated, smooth or warted. Anthers distinct, on very short filaments, 2-celled, dehiscing by a double pore. Ovaria numerous, free, 2-3-1-celled, ovate. Cells 1-ovulate. Stigma capitate, entire or lobed. Berries distinct, 1- or few-seeded.
3286. 2005v. *Renasáta*. Spathé convolute at base, with a refracted convolute limb. Spadix short, interruptedly androgynous. Stamens combined by twos or threes. Anthers 2-celled, connate by the back. Cells verticillately disposed, opening by a longitudinal chink. Ovaria numerous, crowded, free, 1-celled, many-ovulate. Stigma sessile, depressed.
3287. 2005w. *Colocásia*. Spathé straight or cucullate. Spadix interruptedly androgynous. Sterile appendage clavate or acuminate. Anthers numerous, 2-celled, free. Cells contiguous, opening by a pore at apex. Ovaria numerous, free, 1-celled, 6-7-ovulate. Style short. Stigma subcapitate.
3288. 2005x. *Gomálantha*. Spathé convolute at base, with a lanceolate refracted limb. Spadix short, interruptedly androgynous. Stamens connate by threes. Anthers 2-celled, adhering by the back, opening by a longitudinal pore-formed chink. Ovaria numerous, crowded, free, 1-celled, many-ovulate. Stigmas sessile, depressed, orbicular.
3289. 2005y. *Tiphonium*. Spathé convolute at base. Spadix interruptedly androgynous, naked, and subulate at apex. Anthers distinct, 2-celled. Cells opposite, dehiscing lengthwise. Ovaria numerous, free, 1-ovulate. Stigma sessile, depressed. Berries 1-seeded.

3290. 2005*b*. *Biàrum*. Spathe subulate at base, with a flat spreading limb. Spadix interruptedly androgynous, naked at top. Anthers sessile, crowded. Cells opposite, opening by a chink or pore. Ovaria numerous, free, 1-ovulate. Style distinct. Stigma subcapitate. Berries 1-seeded.

3291. 2007*a*. *Orània*. Male and female flowers in different spathe, sessile, bracteolate. Spathe many, incomplete. — Male flowers with 3 sepals and 3 petals. Stamens many, filiform. Anthers linear. — Female flowers. Calyx of 3 sepals. Corolla urceolate, trifold. Ovarium 2-celled. Stigmas 2, sessile, acute. Berry 2-seeded. Seed flat on one side, and convex on the other.

3292. 2007*b*. *Iriàrtia*. Flowers sessile, bractless: outer spathe incomplete, obliquely truncate at top; inner one complete, open lengthwise. — Male. Calyx of 3 concave sepals. Petals 3, erect, valvate. Stamens 12—50, rarely 6. Filaments short, terete. Anthers tetragonal. — Female. Calyx of 3 orbicular sepals. Petals 3, orbicular. Ovarium 3-celled, 2 of the cells abortive. Stigmas 3, sessile. Berry 1-seeded, yellowish.

Order 8. MONADELPHIA. Stamens united into a single body.

3293. 2009*a*. *Desmòncus*. Spadix girded by a double spathe; outer one short, inner one cylindrical. — Male flowers with a triangular trifid calyx and 3 petals. Stamens 6, from the bottom of the flower, filiform, with linear anthers. — Female flower firmer than that of the male. Calyx cupular, truncate, or tridentate. Corolla urceolate, truncate, or tridentate. Ovarium 3-celled, 2 of the cells rudimentary. Style short. Stigmas 3, acute. Drupe ovate or subglobose, 1-seeded. Nut with 3 pores at top.

3294. 2009*b*. *Jubà'a*. Spathe simple. — Male flowers paniced, pedicellate. Calyx 3-parted. Petals 3. Stamens numerous, inserted in bottom of corolla. — Female flowers like those of the males. Ovarium 3-celled, 2 of which are small. Stigmas 3, spreading. Drupe obovate, 1-seeded. Nut with 3 pores at apex.

3295. 2009*c*. *Atàlea*. Flowers sessile, bracteate; upper ones male, lower female. — Male flowers of 3 sepals and 3 petals. Stamens 10—24, crowded. Female flowers of 3 sepals and 3 petals. Ovarium 3- rarely 4—5- and more rarely 2-celled. Stigmas as many as there are cells, subulate, connivent. Drupe elliptic, fleshy, containing a 2—3-celled nut. Cells porose at base.

3296. 2009*d*. *Manicària*. Flowers, lower female, upper male, bracteate. Spathe simple, fusiform, reticulated. — Male. Sepals 3, scarious, ovate-suborbicular, imbricate. Petals 3, coriaceous, oblong. Stamens 24—30. Anthers linear-sagittate, erect. — Female. Sepals 3, scarious, ovate, imbricate. Petals 3, coriaceous, oblong-lanceolate. Rudimentary stamens about 12. Ovarium turbinate, trigonal, furrowed or angular, 3-celled. Stigmas 3, sessile, ovate-triangular, at first erect but at length spreading. Drupe containing 3 nuts, rarely 1—2 nuts by abortion, corky, angularly echinate. Nut crustaceous, covered with reticulated fibres, with a hole at bottom.

3297. 2009*e*. *Arénga*. Flowers sessile, bracteate. Spathe complete. Calyx 3-seepaled. Petals 3. Stamens indefinite. Anthers cuspidate. — Female flowers. Ovarium 3-celled. Stigmas 3, conical, connate at base. Drupe containing 2—3 trigonal nuts.

3298. 2009*f*. *Cyclánthus*. Flowers surrounding the spadix in a spiral manner: the male series alternating with the female series. Spathe 4-leaved, imbricate. — Male flowers earliest. Stamens numerous, free, filiform. Anthers oblong, 4-celled, dehiscing lengthwise. — Female flower. Ovaria numerous, within a double lamina, and surrounded by the spathe, biseriate, sessile, 1-celled, many-ovulate. Style short. Stigma spatulate. Fruit fleshy, spiral, many-seeded.

3299. 2011*a*. *Dámbara*. Flowers diceious, terminal. — Male ament extra-axillary. Stamens numerous, inserted on the axis, imbricate, short, drawn out into a thick connate connective. Cells of anther 8—15, cylindrical, free. — Female ament terminal, nearly ovate. Scales bractless, imbricate. Ovulum solitary under the scales. Strobile ovate-globose, imbricate. Seed ending in a wing at both ends.

History, Use, Propagation, Culture,

3249. *Pistia* is composed of floating water-plants, nearly related to *Lemna*. The species only require to be thrown into water in a stove. Plenty of heat is requisite. They are singular plants, and one species has become very common

3300. 2013a. *Cedrus*. Almost the same as *Larix*; but having the carpels separating from the axes, and the leaves evergreen. Cones erect, large, solitary. Anthers terminated by an elliptic scabrous crest. Carpels coriaceous, compressed, deciduous.
3301. 2014a. *Callitris*. Male catkin terminal, ovoid. Stamens numerous, naked. Filaments peltate, loosely imbricate. Cells of anthers 2-5, longitudinally 2-valved, inserted in the stipe under the pelta.—Female receptacle terminal, very short, girded by 4-5 scales. Ovula 3-9, at base of scales, sessile, erect, open at top. Cone formed of woody, mucronate, connivent scales, which separate into 4-6 valves. Seed drawn out into a wing at both ends.
3302. 2015b. *Phyllocladus*. Flowers terminal.—Male catkin spike-formed, girded by imbricate bracts at base. Stamens numerous, short; the connective drawn out into a lacerated scale. Anthers 2 celled. Cells adnate to the connective, dehiscing lengthwise. Female catkin nearly globose, imbricate by bracts. Flowers terminal by threes; middle one abortive. Disk cup-shaped, fleshy, girding the ovulum, which is sessile and attenuated at apex, obliquely pertuse. Fruit subdrupaceous, peltate at top. Seed nut-formed, erect.
3303. 2018c. *Widdringtonia*. Female receptacle terminal, reflexed, of 4 similar valvately-verticillate scales, with 4-5 ovula at the base of each scale. Ovula erect, disposed in one or two series, pertuse at apex. Strobile subglobose, 4-valved. Valves equal, 5-10-seeded. Seeds ending in a wing at both ends.
3304. 2018d. *Sargothaëa*. Anthers of male flowers peltate. Female cones imbricate. Scales acuminate, monosperous below the middle. Seed nucumtaceous, triangular.
3305. 2018e. *Frenela*. Male catkin terminal, ovate-subglobose. Stamens numerous, ternately verticillate, imbricate, in 6 rows. Filaments short, prolonged into a scale-formed, excentric, peltate connective or process, bearing each 4 horizontal, longitudinally 2-valved cells.—Female catkins solitary, terminal, or panicle, composed of 6 scales; alternate ones narrower. Seeds many, at base of scales, in many series. Cone subglobose, 6-valved, woody. Seeds numerous, wingless.
3306. 2018f. *Fitzroya*. Male flowers unknown. Female catkin solitary, sessile, globose, terminal. Scales 6, inserted by 2 series: the lower 3 ovate-obicular, thick, coriaceous, with a short spine above the middle on the back, 3 exterior, smaller, more spreading and abortive; the inner ones erect, bearing ovula. Ovula 3, at the base of each scale. Fruit like a cone. Seeds orbicular, subbilobed, ciliately compressed.
3307. 2018g. *Cryptomeria*. Male catkin spike. Antheriferous scales roundish, adpressed, imbricate. Cells of anthers 5, connate, altogether adnate to the base of the scales, dehiscing by a broad foramen in front. Ovula erect. Cone solitary, globose, squarrose, composed of 3-6-toothed scales. Bracts acuminate, lanceolate, concrete at base. Seeds 1-2, compressed, angular, hardly winged.
3308. 2018h. *Libocedrus*. Male catkin cylindrical, terminal. Stamens 5-7. Filaments short, prolonged into a scale-formed, deltoid, peltate process, bearing 4 cells on the lower margin.—Female catkin solitary, terminal. Gemmiferous scales 4, verticillate, mucronate beneath the apex. Cone 4-valved, alternate. Valves smaller, 1-seeded. Seed unequally winged at both ends.
3309. 2018i. *Biota*. Male catkins ovoid, terminal. Stamens imbricate, in four rows. Connective peltately orbicular, mutic, with 3-4 horizontal cells.—Female catkins solitary, terminal. Gemmiferous scales 6-8, broad, decussate, opposite, sessile, mucronate, imbricate; inner ones sterile. Scales of cone coriaceous, 2-seeded. Seeds with a wing at both ends.
3310. 2032a. *Codiaëum*. Male. Calyx 5-parted, reflexed, convolute in aestivation. Petals 5, scale-formed, shorter than calyx, and alternating with as many glands. Stamens numerous, hypogynous. Cells of anthers adnate to the rather dilated connective on both sides.—Female. Calyx 5-cleft. Corolla none. Ovarium girded by 5 hypogynous scales at base, 3-celled, 3-ovulate. Styles 3, filiform, reflexed. Berry dry or subbaccate, trilocous. Coccus 1-seeded.

DIANDRIA.

- 20870 Leaves roundish-obcordate with wavy margins, Lamellæform nerves confluent in a basilar truncate area
- 20871 Leaves oblong-obovate retuse, Lamellæform nerve confluent in a large basilar area

20872 Leaves lobed, Flowers axillary

TRIANDRIA.

- [acute, Fruit roundish-ovate compressed with a very short entire beak, Nut elliptic triangular, Leaves flat
- 20873 Fertile spikes 2-3 upon long stalks oblong dense-flowered, Bracts auricled foliaceous, Glumes ovate-lanceolate
- 20874 Barren spikes 1-2 slender acute fertile, 2-3 ovate-obtuse, lower one stalked bracteate sheathless, Fruit oblong-ovate erect inflated narrowed into a short bifid beak, Glumes acute
- 20875 Fertile spikes erect remote 3-4-fld pedunculate, Bracts sheathing leafy, Glumes acute, Fruit large nearly globose with a long bifid beak and rough edges, Nut elliptic trigonal with bluntish angles
- 20876 Spikes panicle, Lower branches rather distant, Fruit ovate ribbed at base, Beak bidentate serrulated, Nut rhomboid convex on both sides with a short beak, Stem trigonal scabrous at top
- 20877 Fertile spikes 1-3 ovate near together sessile, Bracts small membranous the lowest with an awl-shaped point, Glumes of fertile spikes notched and muc., Fruit narrow below obl.-obov. trig. with a short notched beak
- 20878 Spikes 1-4 roundish or oblong continuous nearly sessile, Fruit obovate triquetrous scabrous above with a short beak, Nut obov. trig. blunt with a short beak, Bracts length of spikes, Stem triang. rough towards the top
- 20879 Spikelets several, upper ones simple crowded, lower ones distant composed of alternate staminate, Nut lanceolate plano-convex with an entire beak, Lower bracts longer than spike
- 20880 Fertile spikes remote with distant flowers on exserted stalks, Bracts sheathing scarcely leafy, Glumes bluntish, Fruit ovate triquetrous glabrous with a short truncate beak, Nut elliptic triangular beaked
- 20881 Barren spike solitary, fertile ones 2-4 oblong slightly stalked, Bracts leafy, Fruit longer than glume lanceolate entire beaked many-nerved, Nut obovate rounded at end and shortly beaked
- 20882 Spikelets 4-8 ovate or oblong approximate, Fruit erect ovate plano-convex, Beak short split to the base rough on edge, Nuts elliptic, Glume ovate shorter than fruit
- 20883 Spikelets 3-4 roundish-elliptic contiguous, terminal one longer, Fruit erect elliptic acuminate plano-convex with smooth edges, Nut elliptic tipped with the persistent style, Glumes ovate as long as fruit

20884 Leaves oblong acute bluntish at base clothed with fine fuscous down beneath

20885 Leaves ovate-oblong acuminate serrulated

β Leaves much cut almost palmate, Lobes deeply toothed, Middle lobe long acuminate

20886 Leaves soft round heart-shaped

and Miscellaneous Particulars.

in our hothouse aquaria. In tropical countries the ponds and pools are densely covered with either one or other of the species of *Pistia*. It is doubtful whether they are not all merely varieties depending upon climate.

History, Use, Propagation, Culture,

20888. *Bétula Bhojpátra*. The epidermis of this tree is used by the mountaineers in the Himalaya instead of paper for writing upon. It is of a very delicate texture, and peels off in large masses, of which great quantities are brought down into the plains of Hindostan, where it is employed for covering the inside of the long flexible tubes of the hooka used for smoking. The Sanscrit name of the substance is *Bhoorja*, the Bengalee name is *Bhoorjapattra*, and the Hindostani name is *Bhojpátra*.

3250. *Fortunæa chinensis*. A hardy tree, of as easy culture as the walnut.

3251. *Holböllia*. The natives of Nepal eat the fruit, the pulp of which has a sweetish, but otherwise insipid, taste. The species lower very well trained against a wall, without any other protection.

3252. *Akebia quinata* is a very pretty climber while in blossom. In China it grows in hedges, and there it climbs on other trees, and hangs down in graceful festoons from the ends of their branches. The colour of the flower is dark brown, and it is very sweet-scented. It succeeds very well trained against a wall or trellis, and is perfectly hardy.

- 20887 Leaves very large
 20888 Leaves oblong acute serrated rather cordate at base having the stalks and veins hairy beneath, Branchlets hairy, Female catkins erect, Bracts smooth 2-parted obtuse longer than narrowly winged fruit
 20889 Arborescent, Leaves alternate on short petioles obliquely oblong cuspidate serrated roughish, Male flowers paucifid, female ones capitate, Heads on short pedicels baccate in the fruit-bearing state

TETRANDRIA.

- 20890 Leaves pinnate with 4—5 pairs of ovate-lanceolate biserrated leaflets and an odd one

HEXANDRIA.

- 20891 Leaves ternate or quinate coriaceous, Leaflets oblong obtuse mucronate, Peduncles longer than petioles
 20892 Leaves ternate or quinate coriaceous, Leaflets oblong-lanceolate acuminate, Peduncles shorter than petioles, Sepals acute

- 20893 Leaves ternate or quinate, Leaflets ovate or obovate entire obtuse or emarginate mucronately setaceous

- [Female flowers ovate-globose, Drupe obovate-elliptic
 20894 Caudex dwarf annulate at base, Fronds short with approximate lanceolate pinnae, Petals of male flowers thick,
 20895 Caudex flexuose scaly from the bases of the fallen leaves, Fronds spreading, Pinnae loose curled distantly aggregate linear, Female flowers oblong angular, Drupe oblong beaked

- 20896 Caudex and rachis glabrous beset with long terete prickles, Pinnae nearly opposite or scattered lanceolate sub-falcate ciliated, Spathe densely imbricate by compressed shining prickles, Spadix branched

- 20897 Caudex prickly Petioles sheathing at base prickly, Rachis glabrous prickly behind and unarmed in front, Pinnae scattered deltoid cuneated prae-morse with a longer marginal tooth on each side unarmed clothed with silvery tomentum beneath, Spathe prickly, Spadix bristly branched, Drupe turbinate globose

- 20898 Caudex reed-like unarmed, Sheaths of petioles prickly, Rachis nearly unarmed, Pinnae pectinate linear falcately acuminate pilosely ciliated, Spathe prickly, Spadix 2—5-cleft, Drupe globose unarmed glabrous

- 20899 Caudex tall glabrous as well as rachis but prickly, Prickles large compressed, Pinnae subaggregate falcate-lanceolate or oblong-cuspidate ciliated, Spathe prickly, Spadix branched, Drupe globose glabrous unarmed

- 20900 Pinnae linear acuminate same colour on both surfaces, Outer fibres of berry free and filiform

- Hairs, Bracts of male flws hairy, Calyx ciliate multifid, Female flws sessile, Drupes obovate beaked bristly
 20901 Very prickly, Pinnae narrow-lanceolate acuminate silvery beneath, Peduncle of spadix beset with turned back

- 20902 Very prickly, Pinnae lanceolate subfalcate silvery beneath, Bracts of male flowers smoothish, Female flowers nearly sessile, Calyx glabrous shorter than hairy corolla, Drupe pear-shaped spiny

- 20903 Tall, Pinnae lanceolate acuminate silvery beneath, Bracts of male flowers ciliated, Calyx of female flowers hairy urceolate exceeding the glabrous corolla, Drupe globose unarmed

- 20904 Stemless, Pinnae narrow-lanceolate acuminate paler beneath, Bracts of male flowers penciled on back, Calyx entire, Female flowers pedunculate, Calyx and corollas equal glabrous, Drupes globose unarmed

- 20905 Stemless, Pinnae linear subfalcate white beneath, Bracts of male flowers ciliated, Calyx fringed, Female flowers with glabrous equal calyxes and corollas, Drupes obovate beaked unarmed

- 20906 Pinnae lanceolate acuminate white beneath, Bracts of male flowers ciliate villous on the back, Calyx nearly entire, Female flowers pedunculate, Calyx and corollas equal glabrous, Drupe ovate unarmed

- 20907 Pinnae linear prae-morse paler beneath, outer ones connate, Female flowers sessile prickly, Drupe subglobose unarmed

- 20908 Petioles of fronds prickly or bristly, Pinnae linear-lanceolate downy beneath rather glaucous, Drupes globose

and Miscellaneous Particulars.

3253. *Leopoldina pulchra* is a middle sized palm tree, with a fibry caudex, and pinnate unarmed leaves. The spadix is paniculately branched, and covered with rusty tomentum, as well as the bracts and bracteoles. The berries are small and reddish. The culture is the same as for other tropical palms.

3254. *Astrocaryon* is a genus of middle-sized palm trees, some of which have stems, and some without, which are beset with strong dark prickles. The fronds or leaves of all are pinnate and ciliate with prickles. The spadix is simply branched and prickly, usually white from tomentum. The spathes are woody and also prickly. Flowers dense. Drupe yellow or orange.

3255. *Acrocodmia* is a genus of gigantic palm trees. The caudex or stem is usually swollen in the middle, and prickly. The fronds or leaves are pinnate, and curled. The petioles and spathes are prickly. The spadix is simply branched. The fruit is olive brown.

History, Use, Propagation, Culture,

3256. *Cenocarpus* is a genus of gigantic palm trees, with annulate soft stems and pinnate curled fronds. The spadix rises beneath the fronds, and is fastigiate branched and broom-formed, and the branches are covered with granular brown tomentum. The spathe is double and woody. The drupes are globose and pruinose.

3257. *Wallichia* is a genus of small East Indian palm trees, with pinnate fronds and præmorse cuneate pinnae. The spadix is simply branched, and the branches are pendulous. The flowers are small and cream-coloured, and the berries are brown and dry.

3258. *Martinesia caryotafolia* is a tall palm tree, with roots issuing from the caudex, which is prickly. The fronds are pinnate, and the pinnae are cuneiform, obsoletely 3-lobed, alternate, and having a prickly rachis. The petioles are also beset with straight twin prickles beneath. The spathe is ovate, and also prickly. The spadix is prickly, with flexuous branches. The fruit is reddish yellow.

3259. *Oncosperma filamentosum* is an elegant palm tree, growing in humid places by the sea shore. The stem is tall, slender, and prickly. The fronds are terminal and pectinately pinnatifid, and the segments are conduplicate. The fruit is small and globose.

3260. *Syagrus cocoides* is a middle-sized palm tree. The fronds are terminal and loosely pinnate. The spadix is simply branched. The spathe is sulcate on the back. The flowers are rather larger and cream-coloured. The fruit is dry, and of a yellowish green colour.

3261. *Euterpe oleracea* is a beautiful palm, with pectinately pinnate fronds. The spadix is branched and scurfy

- 20909 Caudex naked, Fronds scattered, Pinnæ linear-lanceolate, Calyx of male flowers 4 times shorter than the acutish petals, Segments ovate-triangular, Berries ovate-elliptic obtuse
- 20910 Caudex subterranean, Pinnæ cuneate præmorse, Branches of spadix drooping, Berry ovate-oblong dry
- 20911 Almost stemless, Pinnæ white beneath, the lower ones rising in twos, the rest solitary linear-oblong cuneated, at base entire, the rest spicately toothed or crosely serrated, Female flowers dense
- 20912 Caudex prickly, Pinnæ wedge-shaped 3-lobed and erose, Rachis prickly, Petioles prickly, Spathe ovate prickly, Branches of spadix simple flexuous
- 20913 Caudex tall slender, Fronds terminal pectinately pinnatifid, Segments reduplicate acuminate, Petioles sheathing a great way at base, Spadix solitary under the leaves simply branched at top, Branches fastigate pendulous
- 20914 Caudex annular below, Fronds pinnate, Pinnæ linear narrow curled a little, Drupes obovate elliptic
- 20915 Fronds pinnate pectinate, Flowers dense covering all parts of the branches of spadix, Sepals of male flowers broad-ovate denticulated, Petals lanceolate not so long as sepals
- 20916 Leaves elliptic-obovate, Pinnæ quite entire lanceolate spreading tapering to apex, Petioles unarmed lepidoted beneath, Floriferous branches of spadix spreading much, Flowers loose by pairs, Fruit roundish
- 20917 Caudex middle-sized crowned by the vestiges of the fallen leaves, Anthers exerted double the length of petals, Female flowers some in each branch
- [Flowers imbricate in 4—5 rows, Calyx and corollas of male flowers equal, Berries nearly globose
- 20918 Fronds terminal lanceolate tapering at base bifid at top sometimes irregularly pinnate cut, Spadix branched,
- 20919 Stemless, Fronds lanceolate cuneate at base bifid at apex, Spadix radical simple cylindrical, Cor. of male flowers exceeding the calyx, Berries ovate [long as the corollas
- 20920 Stemless, Fronds pinnate, Pinnæ lanceolate, Spadix radical simple cylindrical, Calyx of male flws not half so
- 20921 Fronds terminal pinnate, Pinnæ præmorse, Spadix branched downy, Flowers imbricate in 4—5 rows, Male flws with equal calyxes and corollas, Berries globose
- 20922 Fronds terminal undivided lanceolate cuneated at base bifurcate at top, Spadix paniced downy, Flowers imbricate in 6—8 rows, Male flowers with the calyxes about equal to corollas, Berry ovate-globose
- 20923 Fronds terminal pinnate, Pinnæ linear approximate, Spadix paniced with elongated tomentose branches, Female flowers solitary, Berries ovate
- 20924 Stemless, Fronds loose curled, Pinnæ linear glaucous beneath, Drupe obovate pentagonal
- 20925 Stemless, Fronds split, Pinnæ stiff lin. glaucesc. beneath, Male flws hexandr., Anthers obt., Drupes ov. glob.
- 20926 Caudex middle-sized, Fronds rather curled, Pinnæ linear long acum. silvery beneath, Male flowers polyandrous
- 20927 Leaves linear-oblong narrowed at base quite entire, Corymbs sessile axillary, Flowers 7—8-androus
- 20928 Leaves ovate-lanceolate entire and sometimes trifid, Racemes length of leaves, Flowers octandrous
- 20929 Leaves lanceolate toothed, Racemes compound a little longer than leaves, Flowers decandrous
- 20930 Leaves ovate toothed acute or obtuse, Racemes axillary and a little longer than leaves, Flowers usually octandrous [drous
- 20931 Leaves oblong coarsely toothed wavy acute, Racemes dense about equal to leaves, Flowers hermaphrodite

and *Miscellaneous Particulars.*

The spathe is double: the outer one short and open at top; the inner one open all its length. The flowers are sessile, and the fruit dark purple.

3262. *Mazimiliana regia* is a showy middle-sized palm tree. The fronds are pinnate, and the pinnæ are aggregate. The spathes are persistent. The spadix is simply branched. The flowers are compact. The drupe is brownish.

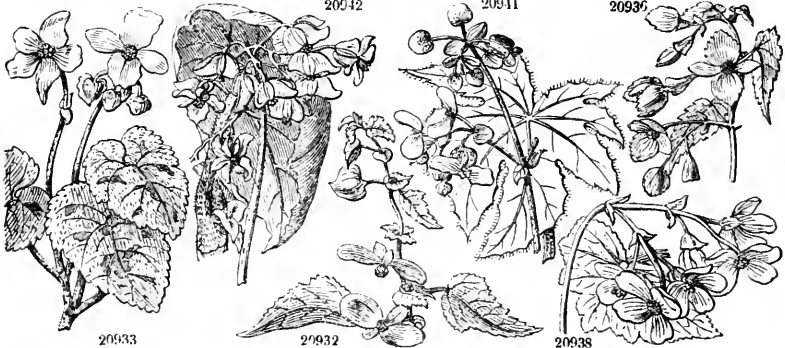

3263. *Geonoma* is a genus of small reed-like palms. The stems are slender, annulate, and smooth, rarely wanting. The fronds are either simple or pinnate. The petioles are sheathing. The spadixes are spicate, and very often paniced. The berries are ovate, or nearly globose, spiny, of an obscure colour, rather fleshy, but insipid.

3264. *Diplothèmium* is a genus of Brazilian palms usually stemless. The fronds are pinnate, on short petioles. The pinnæ are stiffly spreading or curled and interruptedly aggregate. The spadix is simple, bearing the flowers in front. The outer spathe is hidden among the leaves. The flowers are large and cream-coloured. The drupes are yellowish, and the flesh is fibrous but edible.

3265. *Dudaia* is a genus of half-bardy shrubs or trees. They would probably stand in the open air in Devonshire without injury. They require only common treatment, and may be increased by layers or cuttings. The same phenomenon in the leaves as that in those of *Schinus Mille*. After lying a short time in the water, they will begin to start and jump, as if they were alive, while at the same instant of each start a jet of oily matter is discharged into the water. The *D. latifolia* is called *Huingan* in Chili.

POLYANDRIA.

- 20932 Rhizoma tuberous, Stem simple bearing bulbules, Leaves obliquely cordate acuminate angularly crenate rather
 20933 Root tuber., Stem short, Lvs deeply cord. ser. acute rugose hairy spot. ben., Cap. tom. with short unequal wings
 [long pilose, Male fls 2s dipetalous cymose, Cyme dichotomous much branched, Petals obovate hairy beneath
 20934 Stems, Lvs un-qual cordate obsoletely lobed acute glabrous and shining above hairy beneath, Scape very
 20935 Tuberosus, stemless, Leaves unequally cordate denticulate, Peduncles dichot., Wings of capsule 2 unequal
 [tubous, Peduncles axillary few-flwd, Capsule elongated with 2 narrow wings and the third larger
 20936 Rhizoma tuberous, Stem branched bulbiferous, Lvs dimidiately-cordate acuminate angularly serrated gla-
 20937 Root tuberous, Stem scandent radicant, Leaves roundish-ovate obsoletely toothed glabrous shining, Petals
 serrated, Peduncles 2-flowered largest wing of capsule obtuse-angled the rest parallel small
 20938 Leaves large palmate oblique at base, Stipules oblong cuspidate keeled, Male flowers with 4 sepals 2 small and
 2 large, Female flowers with nearly equal petals, Racemes axillary, Peduncles long
 20939 Stemless, tuberous, Leaves peltate ovate acute entire glabrous above clothed with rusty tomentum beneath,
 Wings of capsule 2 roundish and 1 large and obtuse
 20940 Creeping, Leaves ovate acute unequally cordate obtuse
 20941 Rhizoma creeping, Leaves cordate 7-lobed unequally toothed serosely ciliated above and downy beneath, Wings of capsule parallel
 Petioles pilose, Pts 2 rose-cred dotted with scarlet, Cap. 3-winged one of which is large and rose-cred
 20942 Stems short thick short-jointed a little tortuous, Filaments cohering at base, Wings of fruit roundish
 Stemless, Leaves palmate pilose as are the tall scapes and petioles, Leaves 7-lobed, Lobes lanceolate-oblong
 wavy sinuated, Flowers dipetalous, Filaments cohering at base, Wings of fruit roundish
 20943 Stems short thick short-jointed a little tortuous, Leaves obliquely ovate short acuminate many-nerved entire
 studded with numerous fascicles of setae, Petioles as long as leaves beset with fringed-depressed scales, Sti-
 pules ovate concave dry setose, Peduncles longer than petioles beset with similar scales
 20944 Leaves deeply palmate, Segments acuminate subpinnatifid deeply-toothed covered with rusty hairs beneath,
 Stem short fleshy articulated unequal creeping, Panicles dense many-flwd covered with rusty down, Flowers
 dipetalous glabrous as are the bracts, Sepals roundish, Wings of fruit unequal, upper angle rounded
 20945 Downy, Stem thick short creeping scaly, Leaves petiolate roundish-cordate much longer than the axillary
 peduncles, Flowers racemosely panicled all dipetalous, Wings of capsule nearly equal
 20946 Stem simple nodose mucronate, Lvs alternate digitate of 5 or 7 lanc. acum. unequal, leaflets which are shining
 and glandularly mucronate on both surfaces, Petioles terete, Stipules none, Cymes axillary dichotomous on
 long peduncles, Flowers dioctous, male ones 4-leaved, Leaflets equal reflexed in 2 series
 20947 Leaves digitate about 10, Leaflets lanceolate unequally serrated scabrous, Wings of capsule roundish equal
 20948 Stemless downy pilose, Leaves on short petioles obliquely cordate sinuately lobed serrated wrinkled deeply 2-
 lobed at base, Lobes rounded imbricate, Scape much longer than leaves thick paniculately branched, Flowers
 showy, Pts 5 obov., Fruit turbinate triq., 2 of the angles with narrow wings, the third with an elong. wing
 20949 Stems fleshy covered with rusty down, Leaves on long petioles concave obliquely ovate coarsely and deeply
 toothed glabrous above and downy beneath, Panicles axillary covered with rusty tomentum, Bracts roundish-
 ovate convex, Flowers dipetalous glabrous, Wings of fruit emarginate nearly erect
 20950 Covered with brown hairs, Leaves unequally cordate palmately lobed, Scape 3-flowered, Capsule vilous with
 obtuse-angled wings one of which is prolonged
 20951 Much branched glab., Lvs unequally cord. lobed acute bluntly toothed shining pale beneath with col. veins, Male
 fls dipetalous, Female 5-petaled uneq., Peduncs bifid with 2-flwd branches, Wings of cap. nearly equal acute
 20952 Arborescent, Leaves unequally reniform angularly lobed serrated hairy, Cymes dichotomous, Perigone downy,
 Wings of capsule 2 very narrow and the third large and acute-angled
 20953 Suffruticose dichotomously branched glabrous, Leaves on long petioles semicordate 5-6-cleft acute sharply
 serrulated rather hairy, Peduncles terminal elongated dichotomous
 20954 Stemless, Leaves obliquely ovate obtuse subrenif. rmlly peltate fleshy lobately sinuated glabrous, Petioles hairy,
 Two outer sepals scarlet roundish, the rest smaller and whiter, Cap. turbinate 3-winged, Wings broad uneq.
 20955 Cauliscent erect hoary tomentose, Leaves coriaceous peltate oblong acute subangular white beneath, Panicle
 small contracted, Male flowers 4-petaled downy, Female unknown
 20956 Stem fleshy nodose, Leaves unequal-sided reniformly cordate angularly serrated glabrous shining, Peduncles
 axillary dichotomous few-flowered, Wings of capsule nearly equal, 2 roundish, the third acute-angled
 20957 Leaves oblong cucullate denticulated glabrous, Stipules oblong-toothed, One wing of the capsule is large acute-
 angled, the rest parallel [tuse, the third large and acute
 20958 Suffruticose, Leaves unequally reniform clothed with rusty tomentum beneath, two of the wings of fruit ob-
 20959 Lvs oblong acuminate angular serrated glabrous, Petioles thickened, One wing of capsule large obtuse-angled,
 the rest acute-angled
 20960 Cauliscent, Leaves ovate-oblong unequally cordate acuminate denticulate rather angular outside at base, Cymes
 on short peduncles extra-axillary, Capsule tetragonal
 20961 Shrubby erect, Leaves nearly sessile unequally oblong-cordate undulately repand entire glabrous shining,
 Cymes dichotomous, Wings of capsule rounded equal
 20962 Shrubby erect-branched, Leaves on short petioles oblique at base almost equally elliptic-lanceolate glabrous
 shining glaucescent beneath toothed, the teeth setose at apex, Cymes axillary few-flowered shorter than the
 lvs, Petals nearly equal ovate-oblong, Dorsal wing of capsule large dotted acute, the rest almost wanting
 20963 Shrubby erect, Leaves lanc. unequal-sided acum. subcordate at base with crested margins glabrous and shining
 20964 Subherbac., Lvs semicord. uneq. toothed glab., Stips reticu. with veins, Wings of cap. roundish nearly equal

History, Use, Propagation, Culture,

1997. *Fagus antàrtica* and *F. betuloides* form a predominant feature in the Fuegian landscape. The leaves of the first resemble those of our common beech, and are deciduous; but the *F. betuloides* is evergreen, and is the antarctic

- 20964 Tall, Lvs obllq auricled at base obsoletly sinuated hoary tom., Peduncs elong. downy, Panicle simple many-flwd, Male flwr 4-petaled, 2 roundish and 2 smaller obl., Female flwr of 2 obov. peta. Wings of cap. nearly eq.
- 20965 Caulcs., Lvs obl. ac. unequally cordate ser. glabrous shining, Stipules ov. ent., Male flws 4-petaled
- 20966 Shrubby, Leaves long semicordate acuminate repand spotted with white above red beneath, Wings of capsule roundish nearly equal
- 20967 Shrubby erect, Leaves semicordate doubly serrated ciliated, Cymes nutant ditrichotomous, Two of the wings of capsule narrow, the third large and bluntly triangular
- 20968 Shrubby erect, Leaves unequally cordate acuminate shining hairy rather rough, Cymes dichotomous, Wings of capsule nearly equal
- 20969 Leaves obliquely oblong-ovate acuminate fleshy sinuated serrated red on the margin, Stipules large obovate concave coloured deciduous, Panicle nutant, Flws deep scarlet, Male flws of 4 roundish petals 2 of which are small, Female flws of 5—6 nearly equal ovate petals. Capsule pear-shaped with equal wings
- 20970 Glabrous fleshy, Stem woody decumbent, Leaves obliquely cordate repandy toothed acuminate with purple filamentose scales on nerves ben. and on margins, Petioles girded by a mass of connate scales at apex ciliated, Cymes large dichotomous on long peduncs, Male and female flws both dipetalous, Wings of capsule nearly eq.
- 20971 Scandent, Leaves oval unequal-sided subangular serrated plicate hairy, Cymes dichotomous, Two of the wings of capsule very narrow and the third large and acute-angled
- 20972 Erect-branched smooth, Leaves semiovate obliquely falcate acute serrated ciliated, Panicle pendent, Male flws of 4 conniving petals, 2 outer ones largest and boat-shaped, Female flowers of 5 conniving petals, Pedicels triquetrous, Third wing of capsule much larger than the rest
- 20973 Fleshy branched humble, Stem tosetly scaly, Leaves on long bristly petioles deeply cordate roundish 7-nerved repand entire scabrous above pilose on nerves beneath, Stipules cordate, Peduncles terminal corymbosely few-flowered nutant, Third wing of capsule subdeltoide roundish, the other 2 smaller
- 20974 Erect scabrous, Root fibrous, Leaves palmate or 3-lobed biserrated, Peduncles terminal and axillary Flowers of 2 roundish-ovate biserrated petals and 2 smaller subcuneate toothed ones glabrous, Capsule villous
- 20975 Leaves striped like the Zebra. This species is not sufficiently known.
- 20976 Stemless, Lvs all radical aggregate on long petioles obliquely roundish-ov. short acum. glandularly ser. petlate conc. purple beneath, Scapes longer than lvs dichotomously corymb. at apex, Pedicels nutant, Male flws of 4 seps 2 of which smaller, Fem. flws of 3 seps 1 of which is small, One wing of fruit larger than the other two
- 20977 Stemless, Rhizoma short rooting, Leaves large obliquely cordate-ovate short acuminate crenately denticulated red beneath on thick bristly stipulate petioles the lower bristles reflexed, Scape twice as long as leaves, Flws nutant corymbosely yellow, Male ones of 4 oblong-cuneate sepals one of which is larger and more concave, Female flowers small of 6 equal oblong sepals, One wing of fruit horizontally elongated and striated
- 20978 Stemless, Rhizoma creeping, Lvs semipeltate concave obliquely ovate angularly toothed acuminate rounded at base shining above white beneath and covered with rufous tomentum on the nerves, Petioles and dichotomous scapes coloured and covered with rufous tomentum, Flowers dipetalous, Female ones bibracteate, Wings of capsule roundish, 2 narrower green, the third a little broader crenulated and coloured
- 20979 Stemless, Rhizoma creep., Lvs obllq cord. margined with red angularly toothed acum. covered with coloured scales which are usually bipartite and filamentose at top on the nerves beneath and on the margin as well as scapes, Cymes dichot., Flws dipet., Two wings of cap. obt.-angled, the third a little broader ac.-angled
- 20980 Stemless, Lvs nearly regular on long petioles cord. ac. obscurely lobed crenately ser. greenish purple blotched with white and beset with purple hairs as are the petioles, Stipules ov. acum., Scapes numerous shorter than petioles, Flws subumbel. of 4 sepals, Capsule triquetr. with short roundish nearly equal doubly cili. angles
- 20981 Glabrous, Stem short, Leaves on long petioles obliquely ovate acuminate unequally dentate serrated with white blotches above purple beneath, Stipules large acuminate, Peduncles axillary exceeding the petioles, Flowers corymbosely, Petals 4, 2 outer ones largest painted with red veins, the 2 inner ones white, Two of the wings of the fruit short and roundish, third horizontally elongated elliptic obtuse
- 20982 Caulcescent, Leaves stalked obliquely ovate acuminate subcordate at base glossy rather hairy on margins, Panicle dichotomous drooping, Outer sepals roundish-ovate inner ones shorter and narrower, Female flowers of 5 nearly equal oblong sepals, Wings of fruit unequal
- 20983 Lvs obl.-ov. obt. rather obliquely trunc. unequally dent. ser. minutely reticu. beneath when young plicate, Cupula invol.-frmd deeply 4-parted, Segs uneq. ent. with a series of fringed scales on back, Nuts cili. at top
- 20984 Lvs ovate-elliptic obtuse crenulate coriaceous shining glabrous rounded at base on short petioles, Male perianth solitary turbinate 5—7-lobed 10—16-androus, Cupula involucre-formed with marginate angles, Branches covered with a resinous varnish. More the habit of a hornbeam than a beech
- 20985 Leaves ovate-oblong oblique subrhomboid obtuse doubly serrated entire at base tapering into the petiole rather pilose, Male perianth solitary hemispherical sinuated 3—40-androus, Cupula capsule-formed muricate 4-parted, Segments ovate obtuse, Ovaria enclosed triquetrous, Angles winged
- 20986 Lvs deltoid coriaceous coarsely and unequally toothed obsoletly nerved, Cupula capsule-formed at length deeply 4-parted, Segments lanceolate beset with soft spines tipped with glands
- 20987 Brnchs petis and under side of lvs densely tomentum, Lvs cord.-ev. aristately toothed ac. cinerous and covered
- 20988 Lvs ovate-lanceolate acuminate subcordate at base covered with powdery tomentum rusty beneath sinuately toothed, Teeth elongated cuspidate, Fruit by twos or fours on short peduncles
- 20989 Branches rather downy, Leaves nearly sessile obovate cordate remotely toothed coriaceous rugose finely tomentose beneath, Fruit twin on long peduncles, Cupula cyathiform

and Miscellaneous Particulars.

evergreen beech. They are both quite hardy, and grow to trees of large size. The Van Diemen's Land Beech is a fine evergreen tree, with coarsely toothed leaves. The wood is valuable and close grained.

History, Use, Propagation, Culture,

3266. *Ambrosinia Bässii* has a tuberous-branched rhizomatose root and cordate-elliptic entire leaves, and the scapes rise from among the petioles. The culture is the same as for the tropical species of *Arum*.

3267. *Ariseama* is composed of tuberous-rooted plants like those of *Arum*, and should be treated like the tropical species of that genus.

3268. *Cryptocoryne*. Marsh plants with tuberous stoloniferous roots. The leaves are entire, petiolate, and feather-nerved; the inflorescence solitary and nearly sessile at the base of the petioles, or on a more or less manifest scape. The flowers are sweet-scented. The culture of the species is the same as that of the tropical species of *Arum*.

3269. *Peltandra virginica* has rhizomatose tuberous roots and sagittate nerved leaves. The scapes are solitary and elongated, and rise from the sheath of the petioles. The culture is the same as for the other hardy species of *Arum*.

- 20990 Branches tuberc., Lvs on short petioles oblong-lanc. acum. mucronate rounded at base entire coriac. clothed with cinereous toment. beneath, Fruit pedunc. usually twin. Pedunces thickened, Cupula rather turbinate
- 20991 Branches tomentose, Leaves elliptic obtuse cordate remotely and bluntly toothed membranous tomentose beneath, Fruit on long pedunc. es subspicate, Cupula hemispherical
- 20992 Branches and under side of lvs covered with stellate down shining above lin.-obl. acute submucro. somewhat cordate undulate subserrated rather coriaceous, Fruit solitary on a short peduncle. Cupula cyathiform
- 20993 Glab., Lvs wedge-shaped obov. on short petioles entire at base but slightly tilted at top. Flwrs and fruit racem.
- 20994 Branches downy, Lvs obov.-ord. rounded at base sharply and sinuately toothed towards the apex coriaceous shining above but clothed with canesc. down beneath., Fruit usually twin on short pedunces, Cupula cyathiform
- 20995 Lvs smooth oblong-lanceolate serrated rather coriaceous, Fruit sessile, Cup subhemispherical, Nut conical
- 20996 Lvs oblong-acute entire woolly beneath, Fruit nearly sessile and usually solitary
- 20997 Evergreen, Branches toment., Lvs coriac. obov. petiolate cuspidate obtuse sometimes serrated at top quite glab above but clothed with glauc. toment. beneath, Acorns spic. obov. much longer than scaly tomentose cup
- 20998 Evergreen, Branches glabrous, Lvs petiolate coriaceous glabrous acuminate obtuse coarsely serrated beyond the middle glabrous above but clothed with glaucous down beneath, Acorns spicate spherical protruding a little beyond the cup, Cup tomentose tuberculate from scales
- 20999 Evergreen, Lvs roundish-ovate subcordate glabrous remotely spiny-toothed, Cupula hemispherical loose, Acorn ovate acute
- [base female and top male, Spathe elliptic acute reflexed exceeding the spadix
- 21000 Stemless, Lvs pinnate 1-2 feet long, Leaflets alternate nearly sessile obl. ac. reflexed, Spadix obtuse with the
- 21001 Lvs ternately compound, Lfts pinnatifid entire or divided, Scape and petioles mucronate at base, Spathe oblong acuminate exceeding the spadix, Ovaria ovate reflexed tubercled
- 21002 Leaves radical about 4 ovate-cordate, Spathe navicular horizontal terminated by a straight tail
- 21003 Leaves peltate cut into 5-6 ovate-lanceolate acuminate feather-nerved segments, Lower part of spathe green connate with the tube, upper part ovate convex pointed white with a transverse red mark
- 21004 Leaves pedate 6-7-parted, Scape purple, Spathe purple or pink 5-6 inches long obovate-oblong
- 21005 Leaves oblong-lanceolate, Spathe pedunculate long tubular fringed at top
- 21006 Stemless, Lvs hastately cordate acute, Lobes obtuse, Spathe elongated incurved, Spadix male-flowered at top
- 21007 Caulесcent, Leaves cordate-sagittate, Spadix contracted in the middle shorter than the spathe
- 21008 Lvs pedate, Leaflets lanceolate horizontal, Spathe subterete inflated lanceolate at top acute, Spadix acuminate, Petioles a foot high variegated with brown spots
- 21009 Stemless, Leaves sagittate acute rounded at base

- 21010 Caulесcent radican, Leaves deeply tripartite, Lateral segments auricled on the outside at base, Petioles winged below, Spathe exceeding the spadix
- 21011 Stem twining suffrutescent, Lvs ovate-lanceolate acuminate, Sheaths petiolar long equal to scape, Spathe whitish brown

and Miscellaneous Particulars.

3270. *Xanthosoma* are West Indian caulescent plants with sagittate leaves and yellowish spathes. Their culture is the same as that for the caulescent tropical species of *Pothos*.

3271. *Acónitias* are South American plants with rhizomatose tuberous roots and pedate leaves, naked elongated peduncles, and green spathes. Their culture is the same as for the tropical species of *Arum*.

3272. *Synghonium auritum* is a tropical herb having the rhizoma changed into a scandent elongated stem and pedate-parted leaves. The peduncles are short and naked, and the spathes are of a dirty yellowish green. The culture is the same as for the tropical caulescent species of *Pothos*.

3273. *Culcasia scandens* is a tropical African herb with scandent stems, ovate-lanceolate acuminate leaves, and dirty brownish spathes. The petiolar sheaths are equal to the spathes. The culture is the same as for the tropical caulescent species of *Pothos*.

History, Use, Propagation, Culture,

3274. *Philodendron* is a genus of tropical plants having the rhizomas changed into scandent or subarborescent stems. The leaves are large, remote, and often lobed. The culture is the same as for the tropical species of *Pothos*.

3275. *Spathicarpa hastifolia* is a South American herb, with a solitary radical hastately 3-lobed membranous reticulately veined leaf on a long stalk, and slender erect scapes. Culture the same as for the tropical species of *Arum*.

3276. *Dieffenbachia seguna*. This is a tropical plant with a thickish erect stem and oblong-ovate nerved leaves. The peduncles are short and recurved in the fruit-bearing state. The culture is the same as for *Pothos*.

3277. *Antherurus*. Stemless herbs with tuberous roots, and triparted leaves on long petioles. The scapes are solitary, and sometimes bear bulbs as do the petioles. The spathes are narrow, green, and striated. Culture the same as for hardy species of *Arum*.

- 21012 **Caulесcent radicaпt, Leaves cordate sinuately pinnatifid**
- 21013 **Caulесcent radicaпt, Lvs cordate-oblong sagittate, Petiole semiterete marginate, Spadix acute, about equal to the spathe which is cucullately cylindrical contracted in the middle and ventricose at base**
- 21014 **Caulесcent radicaпt, Lvs petiolate lanceolate acuminate with a very thick inflated midrib, Spathe obtuse cucullate** [apiculate length of spadix
- 21015 **Caulесcent radicaпt, Leaves hastate 3-parted subcordate with an open recess, Lobes oblong acuminate wavy divergently veined, Style fleshy, Stigma membranous rayed, Cells of fruit 1-ovulate**
- 21016 **Stemless, Lvs on longish petioles ovate-lanc. acute rounded at base finely ribbed coriaceous deep green shining paler beneath, Midrib thickened, Petioles thick shorter than leaves, Spadix on short peduncles, Spathe convolute at base exceeding the spadix a little**
- 21017 **Stemless, Lvs lanceolate veinless, Leaves 2 feet longer than scape, Spathe bluish red outside and white inside and on the edges**
- 21018 **Caulесcent radicaпt, Lvs shining cordate-sagittate acute, Petioles terete, Spadix obtuse about equal to spathe which is cucullately cylindrical constricted in the middle and ventricose at base**
- 21019 **Caulесcent radicaпt, Leaves on long petioles ovate-elliptic cordate at base rounded at top entire or deeply crenated 5-nerved at base, Petioles longer than leaves thickened a little at base**
- 21020 **Stemless, Leaf radical solitary on a long petiole hastately 3-lobed membranous reticulately veined, Petioles sheathing at base, Scape slender erect exceeding the leaves, Spathe linear**
- 21021 **Stem thickish erect, Leaves oblong-ovate cuspidate, Peduncles short reflexed when bearing the fruit**
 β **Leaves spotted and blotched with white and yellow**
- 21022 **Leaves ternate, Scape longer than the bulb-bearing petiole**
- 21023 **Caulесcent, Leaves oblong with risen veins, Spathe yellowish green and lined lengthwise white and varnished inside**
- 21024 **Caulесcent, Lvs subsagittately cordate acuminate, Lobes rounded and divaricate, Spadix cylindrical obtuse equal to the beak-shaped spathe, Anthers many-celled**
- 21025 **Leaves obliquely ovate-cordate pertuse, Spathe boat-shaped**
- 21026 **Lvs obovate-lanceolate acuminate at both ends ribbed, Spathe oblong acuminate flat subpetiolate sheathed about equal to the spadix**
- 21027 **Shrubby radicaпt, Lvs ovate on long petioles cordate acuminate shining glaucous beneath Irregularly pinnate, Segments oblong-falcate acuminate 3—5-nerved, Spadix axillary solitary on long peduncles**
- 21028 **Caulесcent radicaпt, Lvs elliptic-oblong cordate on long petioles pinnate, Segments linear-falcate cuspidate 3—4-nerved, Spadixes axillary and lateral on short peduncles**
- 21029 **Caulесcent radicaпt, Leaves on long petioles oblong acuminate entire, Spadix nearly terminal pedunculate, Flowers subtetrandrous**
- 21030 **Leaves ovate pinnate filam-ntosely fibrous at base, young ones entire, Spathe ovate-oblong acuminate erect, Spadix oblong cylindrical obtuse.**
- 21031 **Caulесcent radicaпt, Outer branches leaflets whip-formed and pendulous, Leaves ovate-cordate entire or pinnatifid, Segments subsensiform 1-nerved**
- 21032 **Caulесcent radicaпt, Leaves petiolate oblong-cordate cuspidate, Spadix terminal solitary on short peduncles, Flowers suboctandrous**
- 21033 **Caulесcent radicaпt, Leaves on long petioles cordate perforated on one side and pinnatifid on the other, Spadix on short peduncles, Spathe gibbous exceeding the spadix, Flowers subtetrandrous**

and Miscellaneous *Variegatae*.

3278. *Aglonema* is a genus of erect tropical caulescent herbs, with oblong nerved leaves, having the petioles sheathing even to the very top. The peduncles are very short, and the spathes are white and sweet-scented. Culture of *Pothos*.

3279. *Homalonema* are subcaulescent herbs with cordate or sagittate leaves, short peduncles, and aromatic spathes. Culture the same as for the tropical caulescent species of *Pothos*.

3280. *Monstera*. Caulescent scandent radicaпt plants, with simple leaves, cultivated in the same manner as tropical species of *Pothos*.

3281. *Scudapsus*. Caulescent scandent plants, similar to *Monstera*, and requiring the same treatment.

History, Use, Propagation, Culture,

3282. *Sauromatum*. Tropical herbs having globose fleshy tubers and short radical scapes, which are solitary and scaly at base. The leaves are pedate-parted and many-lobed. Culture of tropical species of *Arum*.

3283. *Dracunculus*. Stemless plants with globose tuberous roots and pedate-parted leaves. The petioles are dilated and stem-clasping at the base. The scapes rise from sheaths of the inner leaves. The spathes are fetid. Culture of *Arum*.

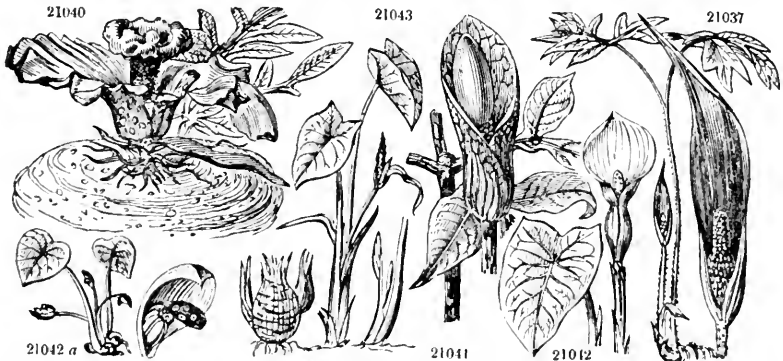

3284. *Pythonium*. Stemless herbs with flattened, nearly globose, tuberous roots, with generally a solitary bipinnatifid compound leaf, longish erect scapes which are sheathed at base, and reticulated spathe inclosing the spadix. Culture the same as for the tropical species of *Arum*.

3285. *Amorphophallus* is a genus of tropical herbs, with flat tuberous roots, decomposed leaves, and radical scapes. Culture same as for tropical species of *Arum*.

3286. *Remusatia vivipara*. Stemless succulent herbs with tuberous rhizomatose roots, having the branches elongated and bearing bulbs. The leaves are petiolate and pedate caudate acuminate, the peduncles are short and bracteate, and the spathes yellow. Culture of tropical species of *Arum*.

3287. *Colocasia*. Herbs with tuberous roots, or shrubs with stems. The leaves are peltate.

- 21034 Stemless, Lvs simple ternate and pedate, Leaflets 5—9 oblong acuminate entire, Spathe ventricose at base connate with a flattish lamina exceeding the spadix
- 21035 Nearly stemless, Lvs pedately many-parted, Lobes oblong acuminate, Spathe irregularly undulately repand at the mouth of the tube
- 21036 Lvs pedate-parted, Segments uniform lanceolate middle one the largest, Spathe furrowed inside warded, Spadix smooth at apex
- 21037 Lvs ternate on long petioles, Lfts pinnatifid, Segms ovate acute entire or divided, Scape and petioles mucronated at bottom, Spathe oblong acim. much exceeding spadix, Ovaria ovate attenuated reflexed tubercled
- 21038 Tuber depressed, Leaf large solitary tripartedly cut several times petiolate, Secondary segms lanceolate acuminate, Outer segments pinnate, Scape variegated with purple involved in two membranous scales at base, Spathe thick boat-shaped couvolute at bottom cucullate at top, Spadix clavate length of spathe
- 21039 Petioles rough from warts, Spathe ovate acute spreading equal to conoid spadix
- 21040 Petioles rough from warts, Spathe ovate bluntish spreading at top exceeding a little the cylindrical fusiform spadix
- 21041 Petioles smooth, Rachis of leaves bearing bulbs, Spathe ovate obtuse cucullate equalling the obtuse clavate spadix
- 21042 Rhizoma tuberous throwing out elongated bulb-bearing leafless branches, Lvs on long petioles peltate cordate acuminate, Peduncles short bracteate, Spathe yellow
- 21043 Stemless, Leaves peltate ovate repand semibifid at base, Scape shorter than petioles, Spathe much longer than spadix, Anthers many-celled
- 21044 Stemless sarmentose, Leaves on long petioles peltate cordate acuminate, Spadix terminating the scape, Spathe yellow
- 21045 Lvs cordate sagittate entire or tripartite, Lobes with a prominent angle outside at base, Spathe ovate-lanceolate reflexed at apex equal to the awl-shaped spadix, Rudimentary organs glomerate bristle-formed
- 21046 Lvs linear-lanceolate, Spathe erectly incurved, Spadix elongated filiform obtuse nutant
- 21047 Soboliferous, Pinnula obliquely triangular cuneate downward, drawn out on the outside, unequally and deeply jagged in front, Male flowers with 12—18 stamens, Berry globose depressed 1-seeded
- 21048 Caudex and fronds very spiny
- 21049 Caudex humble slender annulate, Fronds pinnate, Leaflets sinuately fiddle-shaped with a solitary primary nerve erosely and doubly toothed white beneath
- 21050 Caudex a little tumid above, Lvs pinnate, Pinnæ coriaceous plicate entire bifid at top covered with silvery powder, Spathe solitary deciduous, Spadix compound pendulous hermaphrodite above and mixed with male flowers, Lower female flowers subdodecaudrous, Berries globose

and Miscellaneous Particulars.

3288. *Gonatanthus sarmentosus* is a stemless sarmentose herb, with peltate cordate acute leaves on long petioles, and a yellow spathe. Culture of *Pothos*.

3289. *Typhonium*. Stemless herbs with rhizomatose tuberous roots, and cordate or hastate nerved long-stalked leaves. The scapes are elongated, and rise from the sheathed bases of the leaves. Culture as for tropical species of *Arum*.

3290. *Biadrum* is a genus of European humble stemless herbs, with tuberous rhizomatose roots, and lanceolate or ovate undivided feather-nerved leaves on long petioles; petioles membranous, dilated, and sheathing at base. The scapes are usually solitary, rarely aggregate. The spathes are dirty green outside and purple inside, as well as the naked top of the spadix. Culture the same as for hardy kinds of *Arum*.

3291. *Orania porphyrocarya* is a slender palm tree with annulate unarmed caudex and pinnate fronds. The pinnæ are cuneate and a little lobed, and erosely toothed. The fruit is red, about the size of an olive.

3292. *Iriartia andicola* is a palm tree having a very tall unarmed annulate cylindrical caudex tumid in the middle, pinnate fronds, cream-coloured flowers, and yellowish brown fruit.

History, Use, Propagation, Culture.

3293. *Desmoncus* is a genus of Brazilian palms, with reed-like flexuous stems and sometimes scandent, all of them supported by other plants. They are all furnished with large straight or hooked prickles. The fronds are scattered distantly on all parts of the stem or caudex, and they are remotely pinnate. The petioles are furnished with long sheaths, and are extended into strong tendrils with recurved hooks by which they hold by other plants. Flowers cream-coloured. Drupes red.

3294. *Jube'a*. Tall palm trees, with thick stems, beset with the scale-like rudiments of the petioles. The spadix is branched. *J. spectábilis* is called *Coquito* in Chili, and is cultivated in gardens about Popayan for the sake of the nuts, which are edible.

3295. *Attælea* is composed of tall or middle-sized palm trees, which are often prickly. The fronds are large and pinnate, and very neat. The spadixes rise from the bases of the fronds, and are simply branched, but in the fruit-bearing state they are large, and droop from the weight of the fruit. The flowers are cream-coloured, the fruit is brown, and the nuts are edible.

MONADELPHIA.

[much branched erect, Male flowers twin triandrous uniserial, Fruit oblong

- 21051 Unarmed, Stem tall stoloniferous, Pinnæ oblong-linear. Upper ones usually confluent truncate toothed, Spadix
 21052 Caudex tall, Petioles densely clothed with brown hairs inside and rachis with brown scales, Pinnæ linear-lanc.
 acute at length bifid at apex, Spathe toment., Spadix flexuous at base, Male flwrs 12-androus, Fruit obl.
 21053 Unarmed, Caudex tall, Margins of petioles and nerves reddish, Pinnæ narrow-lanceolate acuminate at length
 equally bifid, Spadix fastigiate, Male flowers hexandrous, Fruit ovate-conical beaked
 21054 Caudex tall, Petioles and rachis prickly, Pinnæ linear-lanceolate acuminate glaucous beneath with setose edges,
 Spadix and spathe prickly at base straight, Male flowers hexandrous, Fruit ovate-globose beaked
 21055 Unarmed, Caudex middle-sized, Pinnæ linear-lanceolate, terminal one præmorse, Ribs and rachis beset with
 black-red dots beneath, Spadix much branched, Fruit ovate
- 21056 Subscandent, Petiolar sheaths as well as hind part of rachis prickly, Prickles straight compressed, Tendrils
 hooked, Pinnæ oblong-lanceolate acuminate, Inner spathe unarmed, Fruit pea-formed
 21057 Petiolar sheaths beset with hooked prickles as is the rachis, Tendrils hooked, Pinnæ oblong tapering to both
 ends, Inner spathe prickly, Prickles nodose at base, Fruit globose
 21058 Prickles on petiolar sheaths straight thickened at base, those of the rachis hooked, Tendrils hooked, Pinnæ
 oblong-lanceolate acuminate, Inner spathe very prickly, Fruit obovate
- 21059 A very pretty palm cultivated in Kew Gardens, but we know nothing else about it
 21060 Caudex tall thick, Fronds pinnate, Spadix branched, Rudiments of petiole acaly
- 21061 Humble, Fronds erectly spreading, Fruit elliptic umbonate
 21062 Caudex middle-sized thick often wanting, Fronds spreading, Base of petioles naked, Drupe obovate beaked
 21063 Caudex tall, Fronds erect, Base of petioles fibry, Drupes elliptic
- 21064 Caudex very tall, Fronds erectly spreading, Drupes oblong rather 5-angled acute
 21065 Caudex very tall, Fronds erectly spreading, Drupes ovate-oblong conically beaked
 21066 Caudex short 3—4 feet or wanting, Fronds erectly spreading, Drupes ovate umbonate, Fronds 18—20 feet
- 21067 Fronds large entire oblong serrated, Calyxes jagged
- 21068 Petioles unarmed, Pinnæ linear-lanceolate acuminate entire or emarginate and subdentate bicarinate a
 base white and silvery beneath, Lower auricle largest, Branches of spadix elongated fastigiate pendulous
- 21069 Leaves deeply bipartite, Segments lanceolate-linear acuminate

[*D. austrâis*

- 21070 Lvs narrow-lanceolate acuminate subfalcate thin willow-like 5—6 in. long, Cone smaller and more rigid than in
 21071 Lvs oblong rounded at top 4 inches long, Cones oblong cylindrical 3 inches long, Tops of scales convex closely
 pressed 4 times broader than long, Timber valuable
 21072 Lvs large ovate-lanceolate acute 7 inches long, Cones spheroid 4 inches long, Tops of scales flat closely pressed 5
 times broader than long
- 21073 Lvs in fives long, Cones pendulous solitary curved, Scales rounded at apex rhomboidal abruptly umbonate in
 middle obtuse smooth, Seeds ovate 5 times shorter than blackish wing
 21074 Lvs in fives long, Cones elongated horizontal verticillate straightish sessile, Scales rhomboidal at apex pyra-
 midal obtuse, Seeds oblong 4 times shorter than their blackish wing
 21075 Lvs in fours 6 inches long, secondary one narrowest primary ones membr. elong. scar., Scales transv., of apex
 depressed in middle umbonate and keeled, Seeds roundish wedge-shpd 4 times shorter than testaceous wing
 21076 Branches stiff thick, Scales of bud linear ciliated, Lvs in fives 1½ foot long triangular, Sheath long smooth,
 Cones elongated obt., Scales with lozenge-shaped depressed pyramidal apexes terminated by an obt. mucrone
 21077 Lvs in fives very long, Cones straight horizontal ovate elongated solitary, Scales transverse at apex rhomboidal
 uncinete, Seed subrhomboidal wrinkled, 4 times shorter than testaceous wing

and Miscellaneous Particulars.

3296. *Manicaria* is a middle-sized palm tree. The fronds are 15—20 feet long on unarmed petioles, which are beset with short brown hairs. The spadix is 2—3 feet long. The flowers have a very strong narcotic smell. The spathe is 3—4 feet long, fusiform or compressed, tapering to both ends, and terminated by a 2-edged echinate mucro.

3297. *Arénga saccharifera*. This palm has various uses: the fibres of the petioles are twisted into ropes, the woody medulla of the trunk is used for the preparation of sago, and the saccharine juice of the spadix is made into sugar. The berries are full of stings.

3298. *Cyclanthus*. A stemless plant nearly related to *Carludovica*. The leaves are all radical, on long petioles, and bifid and plicate. The peduncles are radical, and shorter than the petioles. The spathe are entire or 2-lobed and deciduous. The plants are of easy culture, and require shade and moisture.

3299. *Dammara*. This genus is the same as *Agathis* No. 2011. The species are all broad-leaved coniferous trees which furnish very valuable timber. They are all of easy culture, and can be increased by cuttings.

History, Use, Propagation, Culture.

21086. *Pinus Fremontiana*, or Nut Pine. The kernels of the seed are pleasant in flavour and very nutritious, and they constitute the principal subsistence of the Indians who live in the mountains where the tree grows, for nine months out of the twelve. The shell of the seed is so thin that it can be broken between the thumb and finger.

21089. *Abies jezoensis*, or Jezo Spruce, is so called because it grows in the islands of Jezo and Krafu in Japan, whence it has been introduced to the gardens of the wealthy inhabitants of Jedo. Siebold describes it as a large tree, with a soft light wood, employed by the Japanese for arrows, and in the construction of domestic utensils. The plant is now introduced into England by Messrs. Standish and Noble. The leaves are of a bright green when young in two rows; about 1½ inch long and a line and a half broad; soft when young, but stiff when old, and terminated gradually by a distinct spine. The branches, when young, are covered with rusty down; but, when old, become smooth. The cones are narrow, tapering, rather more than 6 inches long.

21092. *Cedrus Deodara*, or Indian Cedar, furnishes an excellent timber, and possesses all the qualities attributed by the ancients to Cedar of Lebanon. It is very compact and resinous, and has a fine, fragrant, refreshing smell, and

- 21078 Lvs in fives slender glaucescent, Cones oval verticillate horizontal, Scales rhomboidal at apex pyramidal erect with a transverse elevated line, Seed oval 4—5 times shorter than blackish wing
- 21079 Lvs in fives short slender glaucous, Cones pendulous verticillate ovate acute, Scales rhomboidal pyramidal straight sometimes prolonged and contracted in the middle, Seed oval 4 times shorter than the linear wing
- 21080 Lvs by fives 14 inches long triquetrous strong serrulated with rather long subscarcous sheaths, Cones sessile solitary pendulous very long, Scales rhomb-tetragonal wrinkled, Wing 2-lobed longer than the seed
- 21081 Lvs by fives slender very minutely serrulated very long with scaly subscarcous sheaths, Cones usually solitary pendul. ov.-oblong, Scales rhomboid hardly pyram. wrinkled obt., Seed small with a sublan. obt. wing
- 21082 Lvs by fives gliform triquetrous 8—10 inches long with rough angles and terete glabrous sheaths, Cones pedunculate pendulous 4—5 together ovate obtuse, Scales truncate ribbed recurved and obtuse at top
- 21083 Lvs in threes, Cones ovate with unequal sides, Scales cleft radiately truncate with a depressed umbilicus gibbous somewhat recurved
- 21084 Lvs in threes, Cones oblong with unequal sides, Scales quadrangular truncate at apex with a depressed umbilicus, those at base larger elevated and conical [long with 6—7 rows of scales, Scales rudest those at base rather hooked each scale containing 2 wingless seeds
- 21085 Lvs in threes 1½ inch long stiff twisted pale green, Brnchs vert. 5 or more in a whorl, Cones sol. sessile 3 inches
- 21086 Lvs in twos or threes or even solit. glauc. green 1½ to 3 inches long stiff ending in a spiny point, Sheaths very short and rolled backwards, Brnchs in whorls, Cones 2½ inches long with from 6—7 rows of scales, Scale thick larger ones near the middle bluntly pyramidal slightly angular and more or less recurved downwards, Seeds wingless oblong or egg-shaped ¾ inch long dark brown with a thin shell
- 21087 Lvs in threes, Cones ovate with unequal scales, Scales wedge-shaped flattened mucronate, those at base elongated compressed recurved
- 21088 Lvs in threes resembling those of Pinaster 11 inches long, Sheaths slightly shaggy, Cones 3—4 together slightly pendulous 6 inches long, Scales largest in the widest part of the cone all elevated in the centre
- 21080 Lvs green distich mucronate, Cones narrow 6 inches long, Scales loose rounded convex
- 21090 Lvs linear acute entire distich, Cones roundish-oval, Scales trapeziformly cordate, Bracts length of scales spatulate-oblong sharply toothed, Wing of seed plicate

- 21091 Lvs in tufts, Cones ovate abrupt, Scales adpressed, Crest of anther ovate flat erect
- 21092 Lvs in fascicles glaucous acute triquetrous, Cones twin oval-oblong erect

- 21093 Lvs lanceolate all spiny mucronate imbricate in 5 ranks or linear-lanceolate tumid falcate elongated distichly and horizontally spreading, Fruit terminating the short drooping branches
- 21094 Lvs linear-lanceolate mucronate glaucous beneath

- 21095 Lvs pectinate linear-lanceolate acuminate falcate [tacle narrow covered with scattered bracts
- 21096 Lvs ovate-lanceolate acuminate, Male catkins in fascicles axillary on a common peduncle, Nut globose, Recept-
21097 Lvs coriaceous lanceolate acute, Peduncle solitary 1-flowered length of receptacle, Drupe globose oblique bluntly mucronate [the above 2-lobed receptacle, Fruit oblong obliquely and bluntly apiculate
- 21098 Lvs stiff linear mucr. with a double glauc. line ben. very like those of the Yew, Peduncles solitary shorter than
- 21099 Lvs lanceolate acum. glabrous with revolute margins, Male aments by threes 4 times shorter than the leaves

- 21100 Leaves lanceolate obtuse mucronate, Peduncles solitary 1-flowered, Drupe length of receptacle with an obtuse hardly oblique point.

- [or alternate, Cones in clusters of 6—8 scales which are nearly 4-sided with elevated centres many-seeded
- 21101 Leaves bright imbricate in 4 rows in old plants but expanded and awl-shaped in seedlings, Branches opposite
- 21102 Lvs ovate-obtuse imbricate in 4 rows, Berries globose, Scales umbonate, Branches terete tom. divaric spread,
- 21103 Leaves ovate-imbricate in 4 rows grass-green closely set in old plants, but expanded and awl-shaped in seedlings, Branches spiral alternate or opposite dense, Cones 3—4 together oblong 1½ inch long of about 10 scales, the largest of which are in the middle, Seeds large dark brown
- 21104 Leaves ovate-lanceolate taper-pointed pungent scarcely a line in length. A tall tree called Mexican Cedar
- 21105 Branches 2-edged leafy, the younger short alternate 2-rowed spreading

and Miscellaneous Particulars.

is much used in the Himalayas in the construction of buildings, and for bridges and boats. It is much cultivated in Britain as an ornamental tree. It has also been successfully grafted on the Cedar of Lebanon.

21094. *Podocarpus Totarra* is regarded with great esteem by the New Zealanders when growing. The wood is used to construct canoes, it being light, tough, and durable. It grows from 20 to 60 feet high, and the diameter of the trunk is from 6 to 18 feet. *P. ferruginea* is called *Mira-Mairi* by the natives of New Zealand. It grows from 20 to 60 feet high. Its wood is brittle, close-grained, and durable, of a red colour, and capable of receiving a high polish. The fruit is eaten by wood-pigeons. *Podocarpus Yacca* furnishes most beautiful grained wood.

21105. *Cupressus funebris* is, perhaps, the most interesting coniferous tree yet introduced into this country; and will, probably, displace the weeping willow. A figure of it is given in Lord Macartney's "Embassy to China;" where it forms a weeping tree in the foreground of a view of the "Vale of Tombs,"—a place situated in the inclement climate of Zhe-ho. It is used to adorn cemeteries.

History, Use, Propagation, Culture.

3301. *Callitris*. A pretty coniferous tree, and may be increased by cuttings or seed.
 3302. *Phyllocladus rhomboidalis* is a native of Van Diemen's Land, where it is called by the colonists Parsley-leaved, or Adventure Bay, Pine. *P. trichomanoides* is a native of New Zealand, and is called *Taukehaha* by the natives, who use the wood for building purposes, and the bark for dyeing a red colour.
 3303. *Widdringtonia cupressoides*. This is a very pretty tree, and is the cypress of South Africa.
 3304. *Saxegothaea conspicua* is an evergreen tree, about 30 feet high, with the habit of *Taxus*. The leaves are linear and flat, and marked with a pale double line beneath.
 3305. *Frenela* is a genus composed of resinous trees or shrubs. The leaves are ternately verticillate, scale-formed, adnately decurrent, persistent, and glandless. Being natives of New Holland they require protection, and may be increased by cuttings.
 3306. *Fitzroya patagonica* is a graceful drooping evergreen tree with the habit of *Libocedrus tetragona*. When young, the leaves are spreading and linear; when old, they become triangular, sessile, and closely imbricated scales. The female flowers are terminal and stellate cones, remarkable in having the axis terminating in three short clavate glands or abortive scales. The fruit is of 9 scales, 3 in each whorl; the middle 3 are alone fertile, and each fertile scale has 3 erect seeds surrounded by a broad wing and ending in a narrow neck.

- 21106 Branchlets compressed spreading, Leaves rhomb-ovate adpressed imbricate in 4 rows tubercled in middle, Cones oblong nodding, Seeds orbiculate
- 21107 Leaves flattened articulated, Female catkin tetragonal with 4 oval valves each furnished with a point and 2 of which bear seed only
- 21108 Fronds rhomboid lined deeply serrated, Lower ones cuneate decurrent
- 21109 Fronds pinnate, Leaflets cuneate deeply lobed, Lobes truncate toothed
- 21110 Branches elongated fastigiate, Leaves on branches acute distant spreading, those on the branchlets bluntish more approximate and adpressed arranged in 4 rows, Fruit nearly globose, Scales of strobile thick terminated by a conical mucrone, Seeds 10 in a double series
- 21111 Branches erectly spreading rather drooping, Leaves in young plants strong and elongated linear spreading flat sessile glaucouscent, in more adult trees short and triangular acutish adpressed on the pendulous branches subimbricate and cypress-like, Fruit subglobose
- 21112 Habit of Yew, Leaves linear flat apiculated marked by a pale double line beneath
- 21113 Resembles an Evergreen Cypress
- 21114 Habit of Cypress, Branches thin articulated, Lvs imbricate adpressed, Female catkins small solitary terminal
- 21115 Leaves linear crossing adpressed, Branches very slender
- 21116 Habits of *rhomboidea*, but the catkins are much longer
- 21117 Tree evergreen drooping, Leaves sessile imbricate, Female flowers of 9 scales in 3 series stellate
- 21118 Tall, Leaves like those of *Araucaria Cunninghami* but larger subulate disposed in 5 rows vertically compressed hardly 1 inch long, Male aments aggregate into a terminal spike, Seed solitary globose
β A small stunted variety
- 21119 Leaves opposite scale-formed, so placed on the branches as to constitute a 4-sided arrangement, Cones consist of 2 opposite pairs of scales each having a long horn or beak
- 21120 Habit of Arbor Vitæ, Leaves opposite ovate-oblong scale-formed decussate imbricate in 4 rows, Cones oval-oblong of 4 scales, Seed winged at top
- 21121 Leaves pectinate on the young branches linear mucronate, adult leaves small compressedly triquetrous distich closely imbricate keeled obtuse concave above, Branches opposite flattened
- 21122 Branches pendulous filiform terete tetragonal at top, Lvs spreading acute, Scales of strobile roundish bluntly mucronate at apex recurved 1-seeded, inner one abortive, Seed wingless
- 21123 Branches flattened imbricate, Leaves in 4 ranks smaller than in other species

and Miscellaneous Particulars.

3307. *Cryptomeria japonica*, or Japan Cedar, is a fine evergreen perfectly hardy tree. Thunberg, who was the first to make this tree known in Europe, states that it is found, both cultivated and spontaneous, on the mountains of Nagasaki and elsewhere. The Japanese call it *Sun*, or *Sugi*; which, in their language, means evergreen tree. It is a tall upright tree, with a pyramidal head. The timber is said to be soft, and easily worked; and is used for various purposes, particularly for cabinetwork, among the Japanese. According to Siebold, it is a majestic tree, growing from 60 to 100 feet high. Nothing was known of the living plant, until Mr. Fortune succeeded in obtaining seed at Shanghai, in the North of China, where it had probably been introduced from Japan; and from these seeds the first plants were raised in Britain.

3308. *Libocedrus tetragona* promises to outvie the *Araucaria imbricata*, and to be as hardy; for it comes just below the snow-line in the Andes of Patagonia. The leaves are rather broad, and are imbricate in four ranks. It is a magnificent evergreen tree. *L. chilensis* is a fine evergreen tree, resembling the Chinese Arbor Vitæ; but is of a less robust habit, and will, probably, prove hardy. *L. Domiana* is a tree from 30 to 40 feet high, and is called *Kaua* by the New Zealanders. Its trunk is from 1 to 3 feet in diameter. The wood is beautifully grained and heavy, and would make handsome picture-frames if they were required of a deep colour.

3309. *Biota*. The species are very showy coniferous trees, of easy culture.

History, Use, Propagation, Culture,

3310. *Codiaëum*. This genus is separated from *Croton*. They are Asiatic trees, with alternate, entire, glabrous, shining leaves, which are sometimes beautifully variegated. The flowers are disposed in unisexual, axillary, and terminal racemes, each of which is furnished with a bract. They are of easy culture, and only require the treatment of ordinary stove shrubs.

21128. *Sterculia pubescens*. There is a gum collected from this tree resembling gum *Tragacanth* in its properties.

Page 816. CLASS XXII. — DICECIA.

Order 2. DIANDRIA. Stamens 2.

3311. 2044a. *Gynæreum*. Spikelets 2-flowered; one flower sessile, the other stalked.—Male. Glumes lanceolate, membranous; keel unequal. Paleæ 2, membranous, 1-nerved, concave, beardless; upper one shortest, bicarinate. Stamens 2. Scales 2, minute, collateral.—Female. Glumes 2, upper one longest. Paleæ 2, upper one beset with long hairs; inner one small, bicarinate; Keels pectinately ciliated. Stamens 2, effete. Ovaria 2, glabrous. Styles 2, terminal. Stigmas plumose. Scales 2, membranous, subciliated.

Order 5. PENTANDRIA. Stamens 5.

3312. 2066a. *Cordkia*. Male plant unknown.—Female flowers having the calyx tube adhering to the ovarium. Limb 5-cleft, valvate in aestivation, persistent. Segments lanceolate, deciduous. Petals 5, epigynous. Disk fleshy, glandular. Ovarium 2-celled, inferior. Style simple. Stigma capitate, lobed. Drupe dry, spherical, brittle, shining, umbilicate, villous. Seeds solitary in the cells.

Order 6. HEXANDRIA. Stamens 6.

3313. 2084a. *Coscinium*. Sepals and petals in threes.—Male flowers with 6 stamens.—Female flowers with 3 ovaria. Styles slender. Berries 1—3 together. Seed pierced by a large hole.

3314. 2085a. *Helmia*. Diccious, rarely monœcious.—Male. Perianth rotate or urceolately campanulate. Stamens usually 6, sometimes only 3.—Female. Perianth 6-cleft, with equal spreading or reflexed segments. Styles combined into a column, or wanting. Stigmas 3, entire, or 2-lobed. Ovarium triangular, 3-celled. Capsule triquetrous, 3-celled. Cells 2-seeded. Seeds winged at base.

3315. 2086a. *Litsæna*. Flowers covered by bud-scales. Perianth 4—5—6-parted.—Male. Stamens 6, of which 4 or 2 are biglandular. Anthers introrse, 4-celled, dehiscent by as many ascending valves.—Female. Sterile stamens 4, submucronate. Style short. Stigma discoid, lacerated. Berry 1-celled, 1-seeded, naked, standing on thickened pedicels.

Order 8. ENNEANDRIA. Stamens 9.

3316. 2089a. *Anâcharis*. Calyx 3-parted. Petals 3.—Male with ovate-oblong sepals, and linear petals. Stamens 9. Filaments combined into a column at base.—Female flowers with a long filiform tube, 3 abortive filaments, and ligulate stigmas. Capsule 1-celled, few-seeded.

3317. 2090a. *Tetrantliæra*. Diccious, rarely hermaphrodite. Perianth 6-parted, nearly equal, deciduous, sometimes fewer or wanting altogether. Stamens 9, in 6-cleft flowers, in three series, fertile: In petaloid or naked flowers 12—21, the inner ones furnished each with 2 sessile or stipitate glands at base. Anthers introrse, 4-celled, dehiscent by as many ascending valves. Ovarium immersed in the tube of the perianth. Style short. Stigma peltate. Berry 1-seeded.

- 21124 Leaves oblong-lanceolate obtuse at base variegated and stained with red and yellow, Spikes axillary erect
- 21125 Stem erect-branched gouty at base, Leaves peltate-cordate 5-lobed glabrous, Lobes subovate blunt, Stipules glandularly fringed, Cymes on long peduncles terminal, Teeth of calyx and lobes of corolla blunt
- 21126 Leaves palmately 5-lobed with wide recesses, Lobes spatulately obovate acuminate hairy on the nerves beneath and petioles
- 21127 Leaves coriaceous obtuse lanceolate entire or 3-lobed glabrous, Lobes acuminate
- 21128 Leaves oval-oblong cordate at base downy as are the petioles and young branches, Flowers axillary paniced, Segments of calyx cohering at apex, Carpels 4—5 downy 4—5-seeded, Seeds small red
- 21129 Leaves oblong acuminate entire smooth on long petioles, Flowers paniced axillary, Carpels 4—6-seeded, Seeds white large
- 21130 Leaves oblong acuminate entire smooth on long petioles, Flowers axillary paniced, Carpels 1—2-seeded, Seeds red large

and Miscellaneous Particulars.

but it is probable that many of the species have the same kind of substance, as it seems nothing more than the concrete state of the mucilage.

21129. *Stercilia macrocarpa* and *S. acuminata*. The seeds are known in Africa by the names of White and Red Cola or Kola. They have long been celebrated by voyagers as possessing a high degree of value among the natives of Guinea, who take a portion of one of them before each meal, for they enhance the flavour of anything they may subsequently eat or drink. The seeds are extremely bitter.

Order 9. DECANDRIA. Stamens 10.

3318. 2092a. *Nuttallia*. Calyx free, campanulate, 5-cleft; of the female separating transversely above the base. Petals 5, oblong-oval, rather unguiculate. Stamens 10, in 2 series. Anthers roundish.—Female. Stamens as in the male, but sterile. Ovaria 5, free, 1-celled, obliquely obovate, glabrous, biovulate. Style filiform, articulated at base, deciduous. Stigma dilated. Carpels subdrupaceous, 2—3, sometimes solitary by abortion, 1-seeded, a little incurved.

Order 12. POLYANDRIA. Stamens numerous, inserted under the ovarium.

3319. 2106a. *Boldoa*. Male. Perianth campanulate, 5-cleft, having 5 petaloid scales in the throat, alternating with its segments. Stamens numerous, inserted in the throat of the calyx. Filaments flattened, auricled on both sides above the base. Anthers 2-celled.—Female. Perianth as in the male, but with the scales in the throat narrower, and abortive and gland-formed stamens. Ovaria 2—9, conical, conniving, on short stipes, cohering at top. Styles filiform, distinct. Stigmas simple. Drupes 2—9, 1-seeded, naked in consequence of the perianth being deciduous.

3320. 2106b. *Tasmúnnia*. Diccious or polygamous.—Male. Stamens indefinite, a little curved. Pistil rudimentary.—Female. Sepals 2. Petals 2—5, deciduous. Stigma adhering longitudinally to the inner side of the ovaria. Fruit membranous, indehiscent. 1-celled, many-seeded

3321. 2108a. *Enccephalartos*. Male. Anthers open, collected into a terminal pedunculate strobile, inserted all over the common rachis.—Female. Carpels numerous, collected into a terminal pedunculate strobile all over the common rachis. Fruit syncarpous. Single scales oblong-euneate, thickened at apex, obtuse or acuminate.

3322. 2108b. *Dion*. Strobile ovate, dense, woolly, size of an infant's head, composed of densely woolly stalked scales, which are cordate acuminate, smooth inside, with a solitary seed on each side at base. Seed size of a Spanish chestnut.

3323. 2108c. *Freyzinétia*. Diccious or pseudo-polygamous.—Male. Spadix simple, covered with flowers. Filaments filiform. Anthers 2-celled, dehiscing lengthwise.—Female. Spadix simple, covered with pistils. Ovaria combined in bundles, 1-celled. Fruit baccate, many-seeded and many-celled from the carpels being combined. Seeds numerous, minute, fusiform.

Order 13. MONADELPHIA. Stamens united into one body.

3324. 2109a. *Plectocómia*. Flowers on an elongated spadix, disposed in simple or branched spikes, hidden by incomplete scale-formed distichly sessile imbricate spathes. Male flowers twin: female solitary. Calyx trifid. Corolla 3-parted, valvate. Stamens 6, subulate, monadelphous at base.—Female calyx as in male. Filaments without anthers, combined into a 6-cleft membranous cupula. Ovarium 3-celled. Stigmas 3, nearly sessile, subulate. Berry 1-celled, 1-seeded, loricate from retrograde scales.

3325. 2109b. *Lodoëca*. Male catkins cylindrical, closely imbricate from the coalition of the scales. Flowers bracteate, arranged in 2 rows in the pits of the rachis, aggregate. Calyx deeply 3-parted, or of 3 sepals. Stamens 24—36, monadelphous at base. Anthers linear, truncate, rather 2-lobed at both ends.—Female flowers solitary within the perfoliate scales of the catkin. Calyx of 3 sepals. Petals 3. Ovarium 2—4-celled. Stigmas 2—4, sessile, con-

niving. Drupe fibry, 2-lobed, 2-4-seeded, but usually only 1-seeded. Sarcocarp thick, fibry. Nuts or seeds bony, adhering to the fibres of the sarcocarp.

3326. 2114a. *Torreya*. Male catkins at first globose, but at length elongated, the rachis ultimately becoming naked, except at the base, where it is bracteate by quadrifariouly imbricate scales. Stamiferous scales pedicellate, rather peltate, each bearing a 4-celled anther.—Female catkin ovate, 1-flowered, bracteate at base as in the male. Seed ovate, bony, bracteate at base by the increased scales.

3327. 2114b. *Cephalotaxis*. Male catkins axillary, capitate, propped by bracts. Stamens 4-6, or more, in each scale.—Female catkins from the axils of the shoots of the present year. Fruit 2-3 in each head, drupaceous, adnate to a closed fleshy urocelus.

3328. 2114c. *Dacrydium*. Male catkin ovoid, girded by imbricating bracts at base. Stamens numerous, imbricate,

History, Use, Propagation, Culture,

21141. *Gynèream argenteum* is a noble grass, called Pampas grass in consequence of its inhabiting the vast plains of South America called Pampas. It rivals the Bamboo in height, exceeding several times that of a man. It appears to be hardy.

short, dilated into an ovate-lanceolate connective. Anthers 2-celled. Cells adnate to the connective.—Female flowers solitary, sessile on a cup-shaped fleshy disk. Ovary solitary, sessile at the bottom of the disk, open at top.

3329. 2116a. *Sphærostemma*. Calyx bibracteate, of 3 sepals. Petals 6, ternary. Stamens numerous, seated on a globose receptacle, monadelphous.—Female. Ovary numerous, seated on a conical receptacle, which is at length elongated. Berries 2-seeded.

3330. 2116b. *Lardizabala*. Sepals and petals ternary, in 2 or 3 series.—Male. Stamens 6, monadelphous.—Female. Berries 3—6, 6-celled. Cells many-seeded. Pulp of fruit sweet and edible.

3331. 2116c. *Phytolœnc*. Flowers collected on a globose fleshy receptacle.—Male. Scale urceolate, 4-lobed, bearing a 4-parted perianth. Stamens 4, monadelphous. Anthers versatile. Rudiment of pistil pilose, pedicellate between the filaments, and beset with purple hairs.—Female flowers unknown.

MONANDRIA.

21131 Trunk spiny, Leaves very long glaucous smooth, Male spadix spicate with distinct bracts

21132 Diffuse, Leaves ensiform channeled unarmed shining

21133 Heads solitary pedunculate, Nuts 1-seeded pyramidal at top, Tree pyramidal, Lvs a foot long 9—10 lines broad

21134 Heads solitary conical drooping, Nuts 1-seeded flat at top armed with spines, Top of tree conical, Lvs oblong

21135 Partial racemes or thyrse male simple, Ovaria distinct, Drupes spinosely cuspidate, Nuts 1-celled dense short

21136 Drupes of compound fruit oblong cuneated crowned by smooth acuminate incurved forked spines, Nuts 1-celled, Leaves broad-lanceolate having the keel and margins serrulated

21137 Heads oblong racemose erect, Nuts 1-seeded flat at top, Pulp sweet and edible

21138 Heads racemose erect, Nuts 1-seeded pyramidal at top, Leaves 6 inches long and 6—9 lines broad

21139 Caudex stolonifer, Bundles of drupes 8—12-celled depressed and tessellated at top and rather angular at base

21140 Diffuse, Leaves linear 3-nerved broad at top spinosely serrated, Trunk and branches emitting roots

DIANDRIA.

21141 Tall tufted, Leaves spiny serrulated, Panicle much branched, Spikelets pedicellate

TRIANDRIA.

21142 Pinnæ solitary ensiform flaccid bifarious, Embryo at base of seed, Spadix branched

21143 Pinnæ disposed in nearly opposite fascicles ensiform terminated by a spine

TETRANDRIA.

21144 Leaves oval laurel-like downy under side; a handsomer plant than *G. elliptica*

PENTANDRIA.

21145 Armed with small incurved prickles. Leaves abruptly or impari-pinnate with 5—6 pairs of unequal ovate-lanceolate entire acuminate smooth leaflets, Panicles terminal crowded

21146 Branches erect white from tomentum, Lvs alter. petiol. lanc. acute coriaceous, usually glab. and shining above and white from tom. ben., Flws small paniced, Panicles short axil. and term. white from pil, Fruit pea-formed

HEXANDRIA.

21147 Fronds forked, Segments scimitar-shaped serrated outside, Spadix branched, Male branches erect, Berries elliptic

21155

21157

21161

21162

and Miscellaneous Particulars.

21145. *Xanthoxylum Budrunga* is a tree, a native of Sylhet, where it is called Budrung by the natives, who use the seeds medicinally, being of a warm spicy nature, with the fragrance of lemon peel.

21146. *Cordia buddicoides* is a very pretty shrub, and only requires the culture and treatment of ordinary greenhouse shrubs.

History, Use, Propagation, Culture,

21151. *Mauritia vinifera*. The berries are ovate, the size of a hen's egg, and of a chestnut colour, and are called Buriti or Bruti, by the natives of Brazil. These berries are used for many purposes. The caudex yields a large quantity of palm wine when wounded, which is of a sweetish acid taste, not unlike ginger beer.

21156. *Helmia racemosa* is nearly related to *Dioscœrea*, or Yam. The flowers are small, yellow and purple. The root is tuberous and fleshy. The plant requires the same treatment as *Dioscœrea*.

21155. *Cosciniium fenestratum* is in repute among the inhabitants of Colombia, in Ceylon, who slice the wood, which is yellow and bitter, in thin pieces, and swallow them with the liquid, after steeping them in water several hours. They commend it as an excellent stomachic. It is the Colomba wood of commerce.

- 21148 Caudex ringed, Sheath short auricled at top, Pinnæ neat lanceolate, Spadix loose angular, of the female doubly branched, Female corollas tridentate, Dripes subglobose
- 21149 Stolonif., Caudex covered with sheaths of fronds, Petis short nearly terete, Lvs pin., Pinnæ flat lanc. subfalc. taper-pttd at both ends, Spadix under the fronds simply brnchd, Berries glob. size of a pea blackish green
- 21150 Caudex flexuous spinose, Fronds pinnately fan-shaped, Pinnæ linear glaucescent beneath, Petioles terete, Spadix glabrous, Fruit ovate, Scales of fruit broader than long, Spadix 2 feet
- 21151 Caudex tall erect unarmed, Fronds pinnately fan-sh-ped same colour on both sides, Petioles semi-terete channeled, Scales of fruit ovate-rhomboid, Spadix 6—10 feet
- 21152 Stem prickly, Leaves ovate-cordate smooth 3-nerved, Berries acuminato
- 21153 Leaves sagittate
- 21154 Very like the Cape species, and perhaps only the same plant cultivated in Mexico
- 21155 Leaves cordate entire 5—7-nerved shining above hoary beneath, Peduncles umbellulate, Berries villous
- 21156 Twining glabrous fleshy, Root tuberous, Leaves scattered cordate-ovate acuminato 9-nerved glandular at base, Male raceme axillary solitary
- 21157 Leaves alternate nerved, Flowers in axillary fascicles imbricated by dense scales

OCTANDRIA.

- 21158 Leaves loose drooping coriaceous ovate rather concave wavy generally cordate acuminato coarsely crenated on [long loose weak petioles, Stipules acute spreading] [spreading]
- 21159 Leaves flat erect oblong-lanceolate obtuse glandularly crenated paler beneath on short petioles. Stipules acute
- 21160 Leaves spreading flat ovate or roundish-ovate shortly acuminato closely and slightly glandularly crenated paler beneath on long petioles, Stipules apparently adpressed
- 21161 Leaves flat oblong or lanceolate oblong rounded or cordate at base acuminato glandularly crenated paler beneath on longish petioles, Stipules erect mucronate
- 21162 Leaves spreading variable in form oblong-roundish rhomboid-oval or ovate-elliptic cordate at base closely and minutely glandularly crenated whitish beneath on short petioles, Stipules obtuse adpressed

ENNEANDRIA.

- 21163 Leaves 3 in a whorl obtuse serrulated, Male flowers unknown, Female flower with a long tubular bifid spathe many times longer than the sessile ovary, Sepals and petals broad nearly equal, Stigmas reflexed
- 21164 Leaves cuneate obovate obtuse smooth
- 21165 Segments of perianth petaloid ovate lanceolate, Leaves oblong marginate glabrous above and hoary tomentose beneath, Umbels axillary aggregate on short peduncles, Involucrum 5-leaved 5—6-flwd, Calyx 5-cleft

DECANDRIA.

- 21166 Leaves ovate-lanceolate acute opposite about 5-nerved nearly sessile, Racemes fascicled axillary, Flowers hermaphrodite
- 21167 Arboreous, Lvs rising with flowers from same buds alternate cuneate oblong apiculate entire downy or glab. narrowed into the short petioles, Raes pend., Bracts memb. acum., Flws white with odour of bitter almonds

21164

21170

21178

21175

and Miscellaneous Particulars.

3315. *Litsæ'a*. A plant of easy culture, only requiring the treatment of other stove shrubs.

21163. *Anácharis alsiudástrum* is a plant in habit much like some species of *Potamogeton*, and has been recently discovered as a native of Britain, but may have been introduced from North America, as the female plant has only been found. It grows so fast when introduced into canals, ponds, or rivers, that it soon chokes them up, and for this reason is a great pest wherever it grows.

3317. *Tetranthéra*. Cultivated and treated like an ordinary hothouse plant.

21167. *Nuttáltha cerasifórmis* is a hardy shrub, with much the habit of a species of *Spiræ'a*, or *Cérasus*, or Bird-cherry.

History, Use, Propagation, Culture,

3319. *Boldo'a*. The plant is valued in Chili on account of its wood, which forms a valuable charcoal; and the aromatic fruit is eaten.

3320. *Tasmannia* is a genus of smooth shrubs, having the flowers crowded in the axils of the upper leaves, and readily increased by cuttings.

21180. *Plectocônia elongata* is a climbing palm, extending to the length of 500 feet, with pinnate leaves and lateral spadices, which are divided into elongated branches. The spathes are coriaceous, and loosely imbricate. The fruit is chestnut-coloured.

3321. *Encephalartos* is a genus separated from *Zâmia*, and requires the same treatment as the species of that genus. They are principally natives of the Cape of Good Hope. The New Holland species of *Zâmia* are now called *Macrozâmia*. There is another genus, *Dipsacozâmia mexicana* of Benthman, which does not appear to differ from *Zâmia*.

21176. *Dion edule*. The seeds of this plant are said to be a source of arrow-root in Mexico. This is probably only a species of *Macrozâmia*.

3323. *Freycinetia* is a genus of trees having stems often radiant or scandent. The leaves are imbricate and narrow, sheathing and stem-clasping at the base, having the margins and back spinulose. The floral leaves are bract-formed and coloured. The spadix is terminal, sometimes disposed in spikes, and sometimes in fascicles, cylindrical, or oval-oblong.

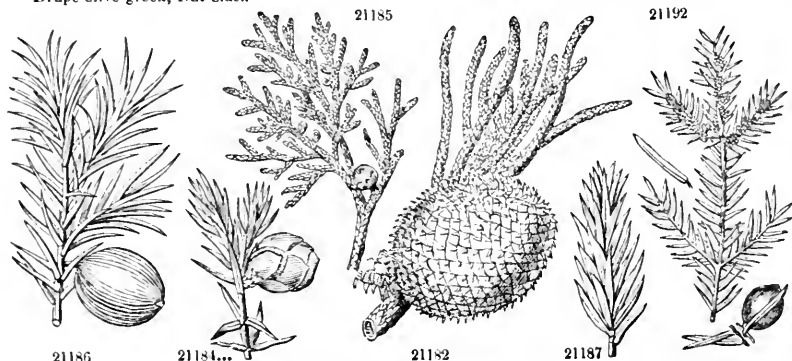

3325. *Lodoicea*. According to Mr. Clark the *Lodoicea* is completely extirpated in Round Island, and exists at present in a state of nature, only on the islands of Praslin and Curieuse. The few which are found in the islands of the Seychelles Archipelago have all been planted, and only two or three of these appear to thrive. The native plant of growth of the *Lodoicea* was not discovered until 1743; the nuts were solely known from having been found floating on the ocean. It was highly prized, and the value of one was estimated at from 60 to 100 crowns. It was considered to possess great medicinal virtues, and many fabulous accounts have been given of it. The trees which produced the nut were supposed to form a forest at the bottom of the sea. Water kept in the shell was considered to preserve those who drank of it from every complaint. The crown or texture of the top of the tree is said to be used like that of the cabbage palm, *Arca oleracea*, but is less delicate, and slightly bitter, and is often preserved in vinegar. Out of the

POLYANDRIA.

- 21168 Aromatic tree with opposite short-stalked ovate-oblong coriaceous evergreen entire papillosely scabrous leaves and axillary racemes of flowers
- 21169 Leaves oval-oblong abruptly eared at the top of the very short petiole
- 21170 Leaves oblong gradually tapering at base along the petiole, Fruit globose subdidymous
- 21171 This plant is cultivated in Kew Gardens, but is not yet described any where
- 21172 Rachis rather spiny, Leaflets erectly incumbent tapering to apex acuminate contracted at base coriaceous spinose
 β Leaflets less attenuated towards the apex
 γ Leaflets narrowed towards the apex
- 21173 Lvs pin. consist. of many pairs of ellip. lanc. lfts which are ac. at both ends and serru. near point, Petis prickly
- 21174 Stem cylindrical short, Leaves pinnate consisting of lanceolate glabrous coriaceous leaflets
- 21175 Caudex glabrous, Leaves pinnate, Leaflets lanceolate acute mucronate green glabrous furnished with 1 or 2 teeth when young but entire in the adult state glabrous
- 21176 Shrub dwarf, Leaves pinnate, Leaflets broad at base adnate to the petioles
- 21177 Caudex scandent, Leaves linear-lanceolate spiny toothleted at apex, Spadix terminal on short peduncles, Fem. 3—4-gynous
- 21178 Caudex scand., Lvs long-lin. spiny-toothed, Spadix term. on short peduncles, Fem. ellipt.-glob., Ovaries 3—6-gynous
- 21179 Caudex scandent rooting annulate, Leaves linear-lanceolate elongated spiny on the back and margins as are the ovate acuminate bracts, Ovaria 9—12 in bundles, Stigmas sessile emarginately horseshoe-formed

MONADELPHIA.

- 21180 Caudex long scandent, Fronds large pinnate, Pinnae reduplicate, Rachis often ending in a tendril armed with many-lobed hooked prickles
- 21181 Caudex tall, Wood black, Fronds terminal ample palmately fan-shaped, Segments bifid, Spadix large persistent, Drupe olive-green, Nut black

and Miscellaneous Particulars.

nuts vessels of different forms and uses are made. The leaves are employed to thatch houses. The young foliage affords an excellent material for hats. The trunk is split and used for palisades for surrounding houses and gardens.

Lodoicea seychelliarum is the Sea or Double Cocoa-nut of the Seychelles or Praslin, and is a beautiful palm tree, growing to the height of 60 to 80, or even to 100 feet; the trunk is annulated from the scars of the fallen leaves, about a foot in diameter, and is equal in thickness from top to bottom. The trunk yields to the slightest breeze, and when the wind is moderately strong the huge leaves are crashed together with an astonishing noise. The part of the trunk immediately above the surface of the ground forms an inverted cone, which is terminated below by a hemispherical base, whence spread in all directions a great number of cord-like roots, penetrating to a considerable distance around. These roots remain long after the destruction of the plant itself. So firmly are the leaves attached to the trunk, that a man may seat himself at the end of one of them with perfect safety. The texture of the leaflets is very strong, and consists of fine threads or fibres, disposed in three layers; the direction of the two outer layers is longitudinal, and that of the central layer transverse. Mr. Clark estimates that three of the leaves, only one of which is produced each year, occupy 8 inches on the stem, and that consequently a tree of 80 feet in height must be about 400 years old. According to the same authority, the male and female spadix, instead of rising from the angle of the accompanying leaf-stalk, passes through a fissure at its base: he also states that, although the tree puts forth only one spadix in a year, ten or more may be seen flowering at the same time; this is to be explained by the multiplicity of flowers in each catkin, which blossom successively. The female trees bear flowers and fruit in all their different states at the same time. As many as seven well-formed drupes are sometimes produced on a single spadix, and 7 or 8 years are required for the full maturing of the nut. This fact Mr. Clark states to have been ascertained on one of the female *Lodoicea* planted at Mahé, which had flowered for several years without producing fruit, owing to the absence of the male plant. A male flower was procured from an estate a few miles distant, and suspended in the tree, and about two months afterwards one of the buds expanded, and finally arrived at maturity. The experiment was made in 1833, and the fruit fell at the latter end of 1841. The drupe attains the length of 15 inches, is about 3 feet in circumference, and weighs from 30 to 40 pounds. When the fruit has reached its full size but is still soft (in which state it is called

History, Use, Propagation, Culture,

coco-tendre), it may easily be cut through with a knife. A transverse section, Mr. Clark states, successively displays the husk, green on the outside, but whitish within, of a harsh astringent taste, much like the husk of a common cocoa-nut, inside of which is a substance which is destined to form the shell; next follows a layer, more or less thick, of a mealy insipid substance, of a white colour, covering a yellow substance of a very decided bitter, and said to be poisonous, which encloses the perisperm. This is a white translucent mass of a gelatinous consistence, and sweetish taste; taken at the proper period it furnishes an agreeable food, much esteemed by the Schellois. In the centre of this, where the two lobes of the perisperm unite, is the germ, at this period scarcely visible. The germination of the seed sometimes commences before the surface of the earth, in a situation not too much exposed to the sun. The length of time from the germination to the period when the trunk begins to form above the ground, is stated at from 15 to 20 years, and even in favourable situations the *Ladocicea* is full 25 years before producing flowers.

21182. *Araucaria Cookii* is more dense in habit than *A. excelsa*, the Norfolk Island pine. The scales of the cones do not terminate in a hard woody truncate extremity, as in that species, but in a long reflexed appendage. In the island of Aitutera, where it was first discovered, the tree has become scarce, the English having cut down the trees for ship spars. Mr. Moore, the colonial botanist in New South Wales, saw only one plant there, and this was tabooed or rendered sacred by the natives; but in New Caledonia, on the south-east coast, whole forests of this tree alone were observed. In such situations the tops are not unlike basaltic columns. Mr. Moore mentions the first plant of it noticed by Captain Cook, who describes it in his account of New Caledonia as an elevation like a tower. It still stands, and is in a flourishing condition. Its appearance now is like a well proportioned factory chimney of great height. *A. Bidwillii* is a fine species, and grows also to a large tree. It is called *Banza-Tunya* or *Banya-Tunya*.

21192. *Torreya taxifolia*. This tree has a strong and peculiar odour when burnt or bruised, and hence it is called Stinking Cedar in its native country. The wood is not liable to the attacks of insects. *T. Humboldtii* is a tree of much paler green colour than *T. taxifolia*.

- 21182 Adult leaves closely imbricate incurved convex obtuse keeled on the back, Female aments ovate-elliptic, Scale 2-seeded terminated by a long reflexed mucrone
- 21183 Branchlets opposite, Leaves flat ovate-lanceolate pungent, young ones subsecund, adult ones spreading on all sides, Scales of strobile with a hooked reflexed point
- 21184 Leaves tern spreading acute 3 times shorter than fruit, Nut 3-celled
- 21185 Arboreous, Leaves all scale-formed in 4 ranks obtuse marked by a circular hollow on the back, Branches slender tetragonal, Fruit spherical glaucous on short stalks
- 21186 Leaves tern spreading mucronate keeled 1-nerved, Berry elliptic longer than leaf. A handsome shrub covered with violet bloom [biliccate, Branches and branchlets crowded terete, Stem prostrate
- 21187 Leaves tern adpressedly imbricate ov.-oblong ac. or acuminate persistent young ones inflexed, Berries ovate unilvs lin.-lanc. muc. loosely imbr. smooth convex ben., Berries rndsh-oval tuberc., Berries and brachlets recurv.
- 21189 Branches flattened, Leaves in 4 rows closely imbricate rather thick obtuse ovate, Berries globular small
- 21190 Branches pendent, Leaves ovate lanceolate in 4 rows, Berries globular with projecting pointed scales
- 21191 Leaves in 3 rows often only opposite ovate acuminate, on the young shoots they are only half-line long
- 21192 Leaves distich stiff mucronate exstipulate, Branches distich and forked
- 21193 This species is in the Gardens, but is not yet described, but it appears very distinct
[on short bracteate peduncs, Amentules or scales shorter than the broad-ov. conc. erose bracts
- 21194 Lvs of brnchs distich sessile pectinately disposed lin. acum. 3-4 inches long stiff paler ben., Male aments glob.
- 21195 Leaves distich flat $1\frac{1}{2}$ inch long green above and glaucous beneath except on the midrib and revolute edges where they are green mucronate on short foot-stalks
- 21196 Leaves linear-subulate tetragonal mutic green with elevated angles, when young divaricate but loosely imbricate in the adult state, Branches hexuous dependent
- 21197 Arboreous, Leaves crowded without order erectly spreading mucronate. A large timber tree of slow growth
- 21198 Branches tetragonal, Leaves small opposite adpressed ovate-acuminate keeled, Female aments terminal curved drooping 5-7-flowered, Fruit loosely spicate, Male scales small, Fructiferous scales concave cleft in front, Seed small erect elliptic subtripucous
- 21199 Leaves loosely imbricate subulate compressedly tetragonal mucronate glaucous with depressed angles
[branches stiff, younger ones twiggy
- 21200 Lvs turned linear obtuse with a callous point and revolute margins green above and glaucous beneath, Adult
- 21201 Leaves twice or thrice ternate often simple, Leaflets oblong acute unequal at base and with one or two teeth on one side, Bracts 2 large unequally cordate at base of peduncles
- 21202 Twining, Leaves ovate-lanceolate entire, Flowers in fascicles, Peduncles bracteate hardly equalling the petioles in length, Anthers sessile immersed, Berries 2-seeded, Spike a tuberculated receptacle
- 21203 Leaves broad cordate a little lobed at base villous beneath, Racemes crowded at the base of the branches [naked

and Miscellaneous Particulars.

21194. *Cephalotaxus Fortunii* is said by Mr. Fortune to grow to the height of 40 to 60 feet. The leaves are distich, alternate, opposite, close together, 3 or 4 inches long, acuminate, 1-nerved. It increases by cuttings, like the Yew.

21196. *Dacrydium cupressinum* is a red pine which attains the greatest perfection in moist rich soil. The tree grows to the height of 80 feet, and the trunk is 4 feet in diameter. The foliage is said to be graceful. Captain Cook prepared a kind of spruce-beer out of the bitter resinous juice, which he found excellent in scorbutic complaints. The wood is close-grained, and much resembles the Bermuda Cedar. It is the New Spruce Tree of New Zealand, mentioned in Cook's "Second Voyage," vol. 1, p. 70, t. 51. *D. excelsum* grows to a very large tree, and is called *Kahi-Katen* by the New Zealanders. *D. Franklinii* is the Huon Pine of Van Diemen's Land. It is a noble timber tree, growing in swampy places, is of a pyramidal form with rather drooping branches, the ultimate ones are pendulous. The wood burns briskly, giving out a pleasant aromatic odour. It is close-grained and valuable for ship-timber, and for all purposes to which pine wood is applied; and is readily obtained in logs 40 or 50 feet long. The Huon Pine forms the principal article of exportation from Macquarie Harbour, 2009 logs were collected, in one year, from different spots near the neighbourhood.

3329. *Lardizabala biternata* is a hardy evergreen creeper, well adapted for covering high walls, the foliage being dark green. The flowers are of a deep purplish chocolate colour. The fruit is sweet and edible, and is sold in the Chilian markets under the name of *Aquibonuil*, of *Guilboguj* in Peru, and of *Coguil-Fuchi* in Chili.

3330. *Sphaerostemma propinquum* is a climbing shrub requiring protection in winter, but it is otherwise of easy culture.

3331. *Phytocréne gigantea* is a large twining shrub, with soft porous wood, from which issues a quantity of limpid watery juice in great quantities on being cut. The leaves are large, cordate, and petiolate. This plant should be cultivated and treated like other stove climbing shrubs.

Page 852. CLASS XXIII. — POLYGAMIA.

Order 1. MONŒCIA. Flowers monœcious.

3332. 2126a. *Nephtia*. Flowers polygamous. Calyx 5-toothed. Petals 5, distinct, oblong, spatulate. Stamens 10, rarely 5, having the filaments of the lower flowers of the spike all sterile and petaloid. Legume oblong, dry, 2-valved, 4—6-seeded, broadest at base.

3333. 2126b. *Prosopis*. Flowers polygamous. Calyx 5-toothed. Petals 5, free. Stamens 10, with the filaments scarcely connected at base. Legume continuous, filled with pulp, linear, rather compressed, swollen above the seeds, and at length separating into 1-seeded parts.

3334. 2128a. *Stenánthum*. Flowers either hermaphrodite or polygamous. Perianth of 6 coloured persistent sepals turbinate at base, where they are adnate to the ovarium. Stamens 6, filiform. Anthers reniform, 1-celled, opening outside. Seminiferous ovarium 3-celled. Cells many-seeded. Styles 3, continuous, distinct, stigmatose at top. Stigma simple. Capsule oblong, 3 celled, tripartite crowned by the styles. Carpels dehiscing inside. Seeds many, subultriform, compressed, bract-formed. Testa girded by a wing.

History, Use, Propagation, Culture,

3332. *Nephtia* is a genus of floating water-plants, with leaves sensitive to the touch, like those of the sensitive plant. They grow well in a stove aquarium, or in tubs or pans filled with water, having a few inches of mould in the bottom. They require to be placed in a warm situation in a hothouse.

- 21204 Leaves petiolate oblong, Pitchers naked somewhat ventricose at base thickish marcescent above depressed and striated at the mouth, Racemes very long, Pedicels 1-flowered
- 21205 In the Gardens, but not yet described, not having flowered
- 21206 Stem creeping at base with uniferous surcell but at length foliiferous and erect, Tendrils of leaves mutic, Pitchers petiolate winged in front coarctate at the mouth roundish and striated having the lid lanceolate reflexed and tricuspidate behind, Plant covered with rusty down
- 21207 Leaves petiolate, lower ones bearing ventricosely campanulate pitchers which bear broad membranous wings in front, Wings ciliated, those of the upper leaves funnel-shaped and naked, all beautifully striped
- 21208 In the Gardens, but not yet described
- 21209 In the Gardens, but not yet described
- 21210 In the Gardens, but not yet described
- 21211 Dwarf, Pitchers deep reddish brown outside and marked with the same colour inside

Order 2. DICECIA. Flowers diœcious.

3335. 2153a. *Phytélephas*. Flowers polygamous, diœcious. Spathe 1-leaved. Spadix simple, clavate, densely beset with flowers. Calyx urceolate, obsoletely many-toothed. Stamens numerous. Styles 5—6-cleft. Drupes aggregate, muricate, 4-celled. Cells 1-seeded. Albumen horny.

3336. 2154a. *Skimmia*. Flowers polygamous. Calyx 4-cleft, persistent. Petals 4, unguiculate, deciduous — Male. Stamens 4, hypogynous, alternating with the petals. Disk fleshy, 4-lobed, girding the short apiculated rudiment of an ovarium.—Female flowers with rudiments of stamens on an annular disk, which girds the ovarium. Ovarium free, 4-celled. Ovula solitary in the cells, pendulous. Style cylindrical, simple. Stigma thick, 4-lobed. Drupe fleshy.

3337. 2157a. *Antiàris*. Flowers monœcious.—Male. Involucrum many-leaved, many-flowered. Leaves in many series, imbricate, connate at base, girding the orbicular flat convex receptacle, which is concave below. Flowers sessile, crowded. Perigone 3—4-leaved. Leaves spatulate, conniving at top. Stamens 3—4, opposite the leaves. Filaments short or wanting. Anthers extrorse, 2-celled.—Female flowers. Involucrum 1-flowered, urceolate, multifid at top. Perigone wanting. Ovarium 1-celled, combined with the involucrem, containing only one pendulous ovulum. Style terminal, bifid, the legs filiform and stigmatose inside. Drupe formed of the baccate involucrem.

MONÆCIA.

- 21212 Branches slender spreading villous when young. Leaves with 1—5 pairs of pinnae, each pinna bearing from 20—26 pairs of small lin. obt. closely imbricate adpressedly ciliated leaflets, Heads solitary pedunculate pendulous
- 21213 Glabrous, Prickles scattered straight, Stipules broad-ovate acute, Leaves of 2—3 pairs of pinnae, each pinna bearing 8—12 pairs of obl.-lin. leaflet, Peduncs rather longer than lvs, Bracts small, Legume lin.-fal. scab.
- 21214 Stems prostrate compressed, Leaves with 2—4 pairs of pinnae, and each pinna bearing 12 pairs of leaflets, Peduncles bracteate
- 21215 Prickles scattered, Leaves with 1—2 pairs of pinnae, and each pinna bearing 7—10 pairs of oblong-linear obtuse [leaflets
- 21216 Spines stipular or wanting, Leaves with 1—2 pairs of pinnae, each pinna bearing 18—25 pairs of ciliated leaflets, Petiole bearing 1—2 small glands
- 21217 Spines stipular straight small, Leaves with 1—2 pairs of pinnae, each pinna bearing 18—20 pairs of linear lifts, Gland small on the petiole between the pairs of pinnae, Spikes cylindrical sessile
- 21218 Phyllodia lanceolate-linear ending in a sharp point verticillate, Spikes axillary cylindrical, Branches stiff dec. [flexedly divaricate
- 21219 Stipules spiny, Phyllodia scattered or verticillate linear-lanceolate 3-nerved ending in a sharp point glabrous glandless, Spikes axillary solitary elongated, Flowers 4-cleft
- 21220 Branches angular, Phyllodia very long linear hard striated narrow at base retrorsely hooked at apex glandular above the base, Stipules wanting, Spikes ament-formed twin shorter than phyllodia
- 21221 Phyllodia linear in clusters deep green mucronate glandless, Spikes solitary axillary loose

and Miscellaneous Particulars.

3333. *Prosopis* is a genus of large trees, which require the same treatment and culture as the stove species of *Mimosa* or *Acacia*. The pulp in the pods has a sweetish taste, not unlike gingerbread, or the Spanish Algaroba, or St. John's bread (*Ceratonia Siliqua*), and is eaten by the inhabitants where the trees grow.

- 21222 Glab. or resinously puberulous, Branches angular, Phyllodia long, lin.-subul. flat recurved mucr. 3-nerved with an obscure gland near the base, Spikes usually twin dense on short peduncs cylind., Seps free spatulate
- 21223 Glabrous but when young downy, Phyllodia subulate teretely compressed many-nerved inutile or uncinately mucronate, Peduncles short solitary or twin, Sepals free narrow spatulate
- 21224 Phyllodia lin.-spatul. 1-3-nerved rounded and mucronate at apex, Spikes solit. or hairy, Calyx usually 5-lobd
- 21225 Phyllodia lanceolate-linear falcate striated tapering at base, Spikes cylindrical axillary twin nearly sessile
- 21226 Phyllodia long lanceolate bluntish 3-nerved and reticulate tapering at base with an obscure gland on the upper margin at base, Spikes twin, Flowers 4-creft
- 21227 Phyllodia oblong-lanceolate obliquely cuneate at base 3-nerved terminating in a mucrone with one gland on the upper margin, Spikes axillary usually twin
- 21228 Phyllodia oblong acuminate at both ends 1-nerved and feather-veined with one gland in front at base, Heads of flowers racemose
- 21229 Stipules caducous, Phyllodia ovate-oblong oblique marginate falcate mucronate downy as are the branches, Heads solitary axillary
- 21230 Powdery, Phyllodia elliptic-obvate wavy 1-nerved terminated by an oblique mucrone, Heads of flws racemose
- 21231 Glabrous, glaucous when young, Branches triquetrous, Phyllodia obliquely ovate or obovate mucronate coriaceous tapering at base marginate with a gland beneath the middle, Heads racemose on short peduncs
- 21232 Branches angular, Phyllodia cultriform ending in a hooked mucrone which leans to one side and furnished with a gland in the middle on the upper margin 1-nerved, Heads racemose
- 21233 Branches angular, Phyllodia long linear-lanceolate falcate acute feather-nerved glandless tapering at base, Racemes at first leafy, Heads numerous globose, Legume long linear-terete
- 21234 Branches angular, Phyllodia obovate-oblong obtuse feather-nerved silky with one gland towards the middle, Heads many-flowered solitary or racemose, Petals clavate ciliated as is the calyx
- 21235 Branches angular, Phyllodia elliptic ending in a spine-like mucrone 1-nerved and feather-nerved glaucous with a gland on one side, Heads racemose
- 21236 Glabrous, Phyllodia ovate acute bearing a gland on the upper margin, Heads axillary twice the length of the phyllodia
- 21237 Erect, Branches slender, Phyllodia linear clammy as are the branches, Heads globular on short stalks axillary solitary or twin
- 21238 Much-branched glabrous or minutely downy viscid, Phyllodia narrow oblong-lanceolate subfalcate obtuse obliquely mucr. or glandulif. at apex many-nerved, Peduncs dwyn shortly rac. or solit., Heads about 20-flwd
- 21239 Articulos, Branches drooping, Phyllodia lanceolate often 1 foot long glaucous green almost blue, Racemes axillary, Heads globose
- 21240 Glabrous or hispid, Branches angular, Stipules setaceous-spinescent, Phyllodia petiolate ovate-lanceolate oblique subulately acuminate wavy, Upper margin often crenated 2-nerved or forked and 2-3-nerved transversely veiny or retic. with large gland near base, Peduncs simple or shortly rac., Heads few-flwd glab.
- 21241 Phyllodia green curved 8-9 inches long marginate 1-nerved and feather-veined, Heads racemose, Racis short
- 21242 Branches and phyllodia straight recurvd at top glandless acute terete glabrous, Stipules none, Heads twin or tern pedunculate rising from deciduous imbricate bracts
- 21243 Greyish Branches weeping or pendulous, Phyllodia linear-lanceolate arched a little tapering to both ends terminated by a hooked mucrone with one gland in front at base and 2-3 longitudinal nerves, Heads racem.
- 21244 Stipules acicular twin spinescent Phyllodia dolabriform smooth terminated by a spine-like mucrone many-nerved convex on the upper side and nearly straight on the lower, Branches slightly angular downy, Heads of flowers solitary pedunculate, Peduncles longer than phyllodia
- 21245 Stipules spinescent, Phyllodia obliquely oblong-lanceolate 1-nerved rather pilose ending in a hooked mucrone with a gland-bearing tooth on the upper margin, Branches hairy, Heads of flowers solitary or twin
- 21246 Stipules spinescent, Phyllodia obliquely oblong-lanceolate entire wavy 1-nerved, Branches clammy glabrous, Heads solitary [mucronate with one glandular tooth on the upper margin, Heads solit. on short peduncs]
- 21247 Hairy, Branches broadly winged, Stips small pungent, Phyllodia short bifarious decurrent obliquely truncate mucr.
- 21248 Stipules wanting, Phyllodia linear-lanceolate rather falcate tapering at base 1-nerved terminated by an incurved callous mucrone clammy as are the branchlets, Heads of flowers twin
- 21249 Villous, Phyllodia lanceolate acute stiff nerved falcate ending in a pungent mucrone, Heads twin
- 21250 Hairy, Stipules deciduous, Phyllodia linear ending in an oblique callous mucrone 1-nerved glandless, Heads of flowers twin on long peduncles
- 21251 Branches angular puberulous, Stipules scale-formed very minute, Phyllodia on short petioles obliquely rounded obtuse or retuse mucr. with one gland towards middle on upper margin, Heads glob. solit. on long peduncs
- 21252 Silky from minute down, Branches rather angular, Phyllodia obovate or oblong rather obtuse very blunt marginate glandless or with one obscure gland 1-nerved feather-veined, Heads solitary or few shortly racemose many-flowered
- 21253 Stipules almost wanting, Phyllodia linear-lanceolate many-nerved rather pilose mucronate, Heads solitary
- 21254 Stipules almost wanting, Phyllodia oblong-lanceolate obtuse obliquely mucronate tapering at base 3-7-nerved with one gland on the upper margin, Heads solitary
- 21255 Stipules almost wanting, Phyllodia lanceolate tapering to both ends shining 2-nerved with a gland on upper margin at base clammy as are the branches, Heads of flowers usually twin
- 21256 Glaucous glabrous or branches and petioles hairy, Leaves with 2-8 pairs of pinnae with a depressed obscure gland on the petiole beneath the pairs of pinnae, Leaflets 4-8 pairs on each pinna obovate-oblong obtuse obscurely 2-3-nerved, Heads in racemes, upper ones paniced
- 21257 Branches hairy, Spines axillary subulate often wanting, Leaves with one pair of pinnae, each pinna bearing 3-7 pairs of linear leaflets having revolute subclinated margins, Heads globose solitary

History, Use, Propagation, Culture,

3334. *Stenanthium frigidum* is said to be poisonous, and may be supposed to furnish a part of the venomous Sal-adilla seeds of commerce from which veratra is obtained.

3335. *Phytelephas* is the genus the nuts of which are the vegetable ivory, now imported to this country in large quantities, so much used by the turners for toys, knobs of umbrellas and walking-sticks, buttons, &c. It is called *Cabezo de Negro* in Peru, where the leaves are used for thatch for houses. The young fruit is devoured by bears. The plant has been cultivated by Messrs. Loddiges of Hackney since 1820, and therefore is an old inhabitant of our hot-houses. Whether the plant found on the banks of the Magdalena is the same as the plant from Peru is doubtful. This has also been introduced to Kew Gardens by Mr. Purdie, formerly a collector for that establishment. The substance of the nuts is the hardened perisperm.

3336. *Skimmia japonica* is a tree generally cultivated in Japan in gardens and around temples. *Skimmia*, in Japanese, is said to mean a hurtful fruit.

21280. *Antiaris toxicaria* is the Upas tree of Java and Jpu of Macassar, and is a large lactescent tree with alternate stipulate unequal-sided subordinate costately veined entire leaves, and axillary or lateral drooping peduncles. Many of the older travellers who have visited the islands of the Indian Archipelago make mention of this tree growing in the kingdom of Macassar on the Island of Celebes, and producing a poisonous juice of the most deadly character. The substance of these several statements is, that the natives of Macassar make use of the juice to poison small darts

- 21254 Branches hairy, Leaves of one pair of pinnae, each pinna bearing 8-10 pairs of linear-lanceolate leaflets, Peduncles solitary or twin axillary 1-headed, Heads globular
- 21259 Branches downy and hispid, Spines axillary subulate, Leaves of one pair of pinnae on a short petiole bearing a pedicellate gland between the pairs of pinnae, Leaflets 5-7 pairs on each pinna linear glabrous or ciliated on the margins, Heads globose
- 21260 Silky unarmed, Leaves with 2 pairs of pinnae, each pinna bearing 2-3 pairs of linear obtuse leaflets, Petioles marginate glandless, Peduncles longer than leaves, Spikes axillary drooping simple
- 21261 Stem simple leafy, Leaves linear complicate, Flowers large pedicellate racemose hermaphrodite
- 21262 Stem erect, Leaves usually opposite nearly all hastately triangular with spreading lobes, Perigone ovate-triangular muricate on back scarcely longer than fruit united only at base, Fruit paniced in dense spikes, Seeds black polished and a few dark brown and larger than the others
- 21263 Stem erect, Leaves oblong-lanceolate irregularly toothed rarely entire, Perigone obovately triangular obtuse toothed tubercled on the back closed
- 21264 Leaves alternate obovate entire glabrous glandless as are the petioles
- 21265 Leaves oblong-lanceolate entire coriaceous smooth rounded at base rather glaucous beneath, Racemes compound, Fruit hairy in disk, Wings short parallel smooth
- 21266 Lvs oblong acum. serrulated shining smooth, Corymbs term., Petals cuneate, Wings of fruit diverg. cultriform
- 21267 Leaves truncate at base smooth and glaucous beneath palmately 5-lobed, Lobes deeply toothed, Flowers apical-lous pentandrous conglomerate on short pedicels, Ovaria downy [9 hairy, Ovaria hairy
- 21268 Lvs digitately 5-lobed, Lvs rather 3-lobed repandy toothed downy beneath, Racemes compound erect, Filaments 21269 Leaves cordate 5-lobed downy beneath short, smooth in the adult state, Lobes ovate acuminate doubly serrated, Serratures awned, Racemes smooth, Wings of fruit diverging
- 21270 Lvs 9-10-parted, Lobes oblong acuminate deeply serrated or pinnatifid, Umbels 4-6-flowered
- 21271 Lvs smooth palmately divided into 5-7 lobes beyond the middle, Lobes oblong acum. serrated, Umbels 5-7-flwd
- 21272 Lvs orbic. rather cord. at base 7-lobed smooth, Lobes acutely toothed hairy at the origin of the nerves beneath
- 21273 Lvs cordate 5-lobed villous beneath as are the petioles, Lobes ovate acute, Racemes lateral, Petals bearded at apex, Fruit villous with cultriform crenulated wings
- 21274 Lvs glabrous glaucous beneath and bearded in the axils of the veins suborbicularly cordate 5-cleft, Lobes obovate cut or toothed acutish, Corymbs nearly sessile nutant in the fruit-bearing state, Pedicels glabrous, Samara glabrous roundish with obovate erectly conniving wings

DICEIA.

- 21275 Fronds very long pinnate, Caudex humble, Heads of fruit large
- 21276 Fronds very long pinnate, Caudex none, Heads of fruit small
[Spadix paniculately branched, Berries globose blue furrowed on one side
- 21277 Frond digitately many-parted, Petioles unarmed or denticulated, Segments linear bluntish bidentate or bifid,
- 21278 Frond multifid, Segments bifid at top, Petioles toothed and covered with white scurf above, Partial spathes many, Berries ovate nearly solitary lepidoted furrowed on one side
- 21279 Lvs alternate crowded towards the tops of the branches petiolate oblong coriaceous entire full of pellucid dots green above and pale beneath, Flowers terminal dichotomously paniced
- 21280 Segments of male involucrem ovate length of perianth, Leaves oblong-elliptic cordate at base, Heads hemispherical pendulous

21265
and Miscellaneous Particulars.

which are discharged through a tube, so fatal in its effects that a slight wound even in the heel, just sufficient to draw blood, not only produces immediate death but renders the flesh, within half an hour, so putrid as to separate from the bones on the mere application of the hands. "This," adds Bontius, "is no idle invention, but depends on the ocular experience, not only of our own countrymen (the Dutch), but also on the English and French." Tavernier states the poison to be the produce of a certain tree growing on the Island of Borneo, and capable of being so tempered as to shorten or prolong the suffering of the victim. Deschamps describes the tree as having much the habit of an elm tree, having both male and female flowers growing on the same tree; and that the mere atmosphere of the tree is far from being so pernicious as it has been represented, he himself having cut branches from it with impunity. The fables related concerning it, he thinks, may be explained by transferring the odium to the marshy and unwholesome exhalations of the low island on the southern coast, to which, he says, state criminals and especially those of the highest class, are sometimes banished, and where they speedily die of malaria, not as the vulgar believe of emanations of the Pohon-Upas. He states also that the poison is the inspissated juice obtained by means of incision in the bark, and says that if introduced into the circulation by the slightest wound it proves instantly fatal, a though the natives feed with impunity upon the animals killed by arrows impregnated with the poison. The Antsjar Dr. Horsfield states, is one of the largest trees in the forests of Java, the stem being completely naked to the height of 60 to 70 or 80 feet, and the bark white. A puncture or incision being made in the bark, the juice or sap appears oozing out, of a yellowish

History, Use, Propagation, Culture,

colour and rather frothy from old trees, but paler and nearly white from young trees; when exposed to the air its surface becomes brown. The consistence much resembles milk, only it is thicker and viscid. The sap is contained in the true bark (cortex), which yields the juice in considerable quantities. The inner bark (liber) is of a close fibrous texture like that of *Morus papyrifera*, and when separated from the outer bark resembles a coarse piece of linen, and is made into ropes and coarse clothing. It is only when the trees are largely wounded and when felled, by which a large portion of the juice is disengaged, the effluvia of which mixing with the atmosphere affects the persons exposed to it with cutaneous eruptions, and heat and itching of the eyes. The rapidity of the effects of the poison,

- [10-celled seated in a campanulate 6-lobed calyx
 21281 Glabrous, Leaves sessile stem-clasping coriaceous orbicular obtuse or acute. Fruit turbinate woolly 10-seeded
 21282 Leaves bifarious oblong-lanceolate glabrous, Peduncles axillary on the younger branches, Flowers silky, Male
 peduncles 3- or many-flowered, Female 1-flowered, Corolla urceolate with a 5-lobed spreading limb those of
 the hermaphrodite flowers with about 16 stamens and a 5-lobed stigma
 21283 Lvs large smooth rndsh cord. 3-nerved downy on the nerves beneath sometimes repandy thld. Fruit collected
 in bundles of 8-12 near root, turnip-shpd ribbed villous having umbilicus closed by numer. cord. limbric. scales
 21284 Lvs broad cord. obt. ser.-crenate 3-nerved downy, Fruit axil. and lat. pedunc. sol. oval smooth. Near *F. Cáricea*
 21285 Branches and petioles clothed with rusty tomentum, Lvs broad-elliptic and obovate long-acum. glabrous above
 but downy beneath with prominent nerves, Fruit solitary globose pendulous almost as long as peduncles
 21286 Brnchs and petioles rather scaly, Lvs alternate on short petioles elliptic or obov.-ellip. ending in a long bluntish
 oblique point shining above and rufescent beneath ent. 3-nerved and reticulately veined. Fruit axil. twin or
 lateral subsessile globose or ellip. contracted into a long stipe at base tribracteate, Stipe hispid
 21287 Leaves crowded oblong narrowd at base fiddle-shaped 3-nerved entire deep green above puberulous on the nerves
 beneath
 21288 Branches terete hairy at tops, Petioles hairy. Lvs broad-oblong lanc. short acum. tapering to base entire feather-
 veined shining above glabrous, Fruit usually twin sessile globose rather depressed covered with silky villi.
 Habit of *F. elástica*.
 21289 Creeping radican, Branches subretroersely villous, Lvs distich alternate on short petioles ovate cordate acutely
 apiculated entire 3-nerved 4-ribbed on both sides, glabrous above or pilose, villous beneath

and Miscellaneous Particulars.

Dr. Horsfield states, depends in a great degree on the size of the vessels wounded, and on the quantity of the poison carried into the circulation, but in general it is from a quarter to half an hour after its introduction it proves fatal. He regards the convulsions accompanying the action of the poison as a subordinate and secondary symptom, and not as the result of any direct action of the poison upon the brain or nerves, but by rendering the heart insensible to the stimulus of the blood and stopping the circulation.

2167. *Ficus Roxburghii*. The fruit is larger than the common fig, and eaten by the natives in their curries, where the tree is indigenous.

G. D.

The following additional Figures are illustrative of Plants described in Pages 1334, 1356, and 1358.

SUPPLEMENTARY LIST

OF

PLANTS LATELY INTRODUCED, AND NOT INCLUDED IN THE BODY OF THIS SUPPLEMENT,

WHICH ARE REMARKABLE FOR THEIR RARITY, UTILITY, OR BEAUTY.

- ABĒLIA UNIFLŌRA** *R. Br.*, Bot. Mag. t. 4694. An ornamental hardy shrub from the north of China, with blush-tinted flowers, the sepals of the calyx being of a reddish brown.
- A'BIES BRACTĒATA** *Hook. & Arnott*, Bot. Mag. t. 4740. A very beautiful fir from California, remarkable for the long spiny bracts of its cones. Seeds of this species have been sent home to Messrs. Veitch by their collector, Mr. William Lobb, and numerous plants have been raised.
- A'BIES KE'MPFERI** *Lindl.* This species forms a beautiful tree, 120 or 130 feet in height, with a deciduous habit. It has been introduced by Mr. Glendinning, and it is supposed that it will prove quite hardy, having been found in the central, northern, and eastern provinces of China.
- A'BIES HOOKERIĀNA** *Murray*. This exceedingly beautiful A'bies is one of the conifers introduced by Mr. William Murray of San Francisco, who found it high up in the Californian mountains, about lat. 41° N., where the ground was already covered with snow on the 16th of October. It is closely allied to *A. Pattoniāna*, but there are distinguishing characteristics. The cones are of a light fawn colour, somewhat of the hue of the cone of the common larch. The scales are larger than those of *A. Pattoniāna*, and are not crenulated. The bract commences to contract near the top. The seed and the wing are longer than in *A. Pattoniāna*, and the wing is entirely fawn-coloured. The tree attains the height of about 50 feet.
- A'BIES PATTONIĀNA**. This is also a very beautiful species, introduced by Jeffrey, and figured by the Oregon Committee. Jeffrey describes it as attaining the height of 150 feet, towering over the rest of the forest. The cones are uniformly of a dark brown colour. The scales are at least a third less than those of *A. Hookeriāna*, and are deeply and firmly crenulated. The bract does not contract near the top. The seed and wing are about one third shorter than in *A. Hookeriāna*, and the wing has a purplish brown tinge at the top and back.
- ACROLĒNUM RŌSEUM**. A beautiful new half-hardy annual from South-West Australia, with everlasting lively rose-coloured flowers. It requires the same treatment as other greenhouse annuals.
- ALLOPLĒCTUS CHRYSĀNTHUS**. A rather showy species from Colombia, requiring the ordinary treatment of other stove perennials. Flowers golden yellow, with a red velvety calyx. The leaves are of a glossy velvet-like purple on the under side.
- ALLOPLĒCTUS SCHĒMII**. A coarse-growing stove perennial from New Grenada, with violet flowers, which are yellowish below and have a red calyx. The leaves are purplish violet on the under side.
- ALONSOA ACUTIFŌLIA** *R. & P.* A rather pretty greenhouse undershrub from Bolivia, with bright scarlet flowers.
- AMŌMUM DANIFĒLLI**. This is a curious stove perennial from western tropical Africa, and is one of the Mellagetta Peppers. The flowers are red and whitish, tinged with rose and yellow.
- ANGULŌA RŪCKERI SANGVIŒNA**. A handsome variety of a beautiful and well known orchid, with flowers of a uniform rich chocolate brown.
- ANĒCTOCĒILUS ĀLBO-MARGINĀTUS**. A dwarf variegated-leaved terrestrial orchid, requiring a warm damp stove.
- APHELĀNDRA LATĒRITIA**. A beautiful stove shrub from Guatemala. The flowers are arranged in a cone-like head, and are of a dull scarlet, with the tube yellowish.
- APHELĀNDRA SQARRŌSA LEOPŌLDI**. A very showy variegated-leaved soft-wooded stove shrub from Brazil, with very handsome spikes of yellow flowers. The leaves, which are of a deep green, are marked by well-defined broad whitish veins.
- ASTROCĀRYON ROSTRĀTUM**. A noble palm from Brazil, which has flowered in the palm-house at the Royal Botanic Gardens, Kew. The leaves are from 6 to 8 feet in length, and the flowers are whitish.
- AZĀLEA AMĒNA Lindl., Bot. Mag. t. 4724. A neat-growing and very pretty species from China, with purplish crimson flowers, the calyx being large and coloured like the corolla. It requires a greenhouse.**
- AZĀLEA CRISPIFLŌRA Hook., Bot. Mag. t. 4726. A very showy plant, differing from other Chinese Azaleas chiefly in the flowers, which are of a rosy crimson, having a crisped margin, which is a very pleasing feature. Introduced from China, and requires the treatment of the greenhouse species of *Azalea*.**
- AZĀLEA ĪNDICA BEĀLEI Hort. A very beautiful variety from China, with the flowers striped with bright vermilion on a white ground. An evergreen shrub, very suitable for conservatories.**
- AZĀLEA ĪNDICA NARCISIFLŌRA**. A curious and, at the same time, handsome variety, with double white flowers, from China, and forming an useful greenhouse evergreen shrub.
- AZĀLEA ĪNDICA STRIĀTA FORMOSISSIMA**. A seedling raised by Mr. Taylor, gardener to J. Coster, Esq., of Streatham, and brought out by Messrs. Veitch and Son. The flowers, which are of good form and substance, are of a pure white, flaked and spotted with light purple; and the habit of growth of the plant is exceedingly good.

- BÀHIA LATIFÒLIA** *Lindl.* A handsome hardy Californian annual with deep yellow flowers.
- BEGÒNIA MINIÀTA.** This is a broad-leaved variety of *B. fuchsoides*, with vermilion-coloured flowers. Introduced from Colombia, and requiring the treatment of a stove perennial.
- BEGÒNIA OPULIFLÒRA.** An ornamental stove undershrub from New Grenada, with pure white flowers, which have golden stamens, produced in heads resembling the Guelder Rose.
- BEGÒNIA PRESTONIÈNSIS.** A very beautiful variety of this fine hybrid scarlet-flowered Begonia, named *superba*, was exhibited in the summer of 1854. It is, like the original, a very showy plant.
- BÉRBERIS CONCÍNNA** *J. D. Hook.*, Bot. Mag. t. 4744. A very pretty hardy shrub from the Sikkim Himalaya, with small spiny-edged leaves and yellow flowers, which are succeeded by oblong scarlet berries.
- BILLBÉRGIA BÍFRONS** *Lindl.* A showy dry-stove perennial from Brazil. In one variety the flowers are of a fiery red, while in another they are of a whitish yellow.
- BORÒNIA DRUMMONDI** *Hort.*, Planch. Flore des Serr. ix. t. 881. This is a charming little shrub from the west coast of New Holland; the flowers are of a beautiful rose colour, with a balsamic odour. It requires only a moderate greenhouse, and is easily multiplied by cuttings.
- BRASSAVÒLA LINEÀTA** *Hook.*, Bot. Mag. t. 4734. An ornamental stove epiphyte from South America, with large white flowers, the sepals being tinged with yellowish green and red.
- BRAVÒA GEMINIFLÒRA** *La Llave et Lex.*, Bot. Mag. t. 4741. This is a very beautiful Amaryllidaceous plant from Mexico, where it is found, according to La Llave and Lexarça, growing on the mountains of Valladolid and Michiacan. It has a tuberous root, and is easily cultivated in a warm greenhouse, where it blossoms in July. The flowers, usually geminate in the upper part of the raceme, are very graceful, always drooping, and of a rich orange-red.
- BRILLANTÀSIA OWARIÈNSIS** *Palis. de Beauv.*, Bot. Mag. t. 4717. *Aconthaceæ.* This plant in its habit of growth resembles some of the largest species of *Sátvia*; the flowers are of a violet blue. It is a native of Sierra Leone, whence it was introduced in 1853.
- BÚDDLEA CRÍSPA** *Benth.*, Bot. Mag. t. 4793. A native of the Himalaya, much hardier than the common kinds: the leaves are heart-shaped at the base, and covered on both sides with a thick whitish down; and the flowers are of a pale violet. It was introduced by Major Madden.
- BRYA E'BENUS** *Dec.* Under this name is figured in the *Bot. Mag.* t. 4670, the well known Jamaica Ebony, which is given in p. 604. No. 10,034, under the name by which it was formerly known, viz. *Amerimum E'benus*.
- CALCEOLÀRIA ERICÒIDES** *Vahl.* A curious half-hardy subshrubby species from Colombia, with small yellow flowers.
- CALCEOLÀRIA HYSSOPIFÒLIA** *H. B. et Kunth.* An elegant half-hardy undershrub from Quito, the flowers of which are white and yellow.
- CALCEOLÀRIA VIOLÀCEA.** A half-hardy shrub from Chili, having a novel and interesting appearance. The flowers are of a dull violet.
- CALYPTRÀRIA HEMÁNTHA** *Planch.*, Flore des Serr. ix. t. 924. *Melastomæcæ.* A magnificent plant, nearly allied to *Medinilla magnifica*: the flowers are large, of a dark purple, with long white anthers. It is a native of New Grenada, and requires only a moderate stove.
- CAMPANOMÈA LANCEOLÀTA** *Sieb. & Zucc.*, Flor. Jap. 1, 174. *Campanulæcæ.* A curious perennial plant found in Japan, with greenish flowers, requiring protection during winter.
- CASSIOPE PASTIGIÀTA.** A charming little hardy evergreen shrub from the Himalaya, requiring a cool, moist, peat soil. The leaves are closely imbricated in four rows; the flowers are drooping, white, and bell-shaped.
- CATTLEYA LUTÈOLA.** A rather pretty small-flowered epiphytal orchid from Brazil. The flowers are of a clear yellow.
- CEANÒTHUS FLORIBÚNDUS.** A beautiful hardy evergreen shrub from California, having a good habit. The flowers are of a rich deep blue, and are produced in dense globular heads, which are thickly studded over the branches and branchlets. Introduced by Messrs. Veitch through Mr. Lobb.
- CEANÒTHUS LORBIÁNUS.** This is another of Mr. Lobb's introductions from California. It is a distinct and showy hardy evergreen shrub, with deep blue flowers, which are produced on stalked oblong or roundish heads.
- CENTROPÒGON TOVARIÈNSIS.** A very handsome stove perennial from Venezuela, with beautiful rosy-crimson flowers.
- CERATOSTÈMA GRANDIFLÒRUM** *Ruiz & Pav.*, Bot. Mag. t. 4479. A small shrub, a native of the Andes of Peru, extremely elegant in its appearance, and remarkable for the beauty of its flowers, which are of a reddish-orange, and bear considerable resemblance to those of *Cântua depéncens*.
- CÉRCIS JAPÓNICA** *Van-Houtte*, Flore des Serr. viii. p. 269. t. 849. A species of the Judas-tree, with leathery leaves and an abundance of flowers. It is a native of Japan, and is perfectly hardy in this country.
- CÈREUS LEMÀIRII.** This is a very fine new bright-blooming species, which is reported to have been introduced from Antigua. The flowers are very large, being twelve inches long and nine inches broad, on the outside yellow tinged with red, and white inside. The plant, which has a straggling habit of growth, requires a dry stove.
- CÈREUS MACDONÁLDIÆ** *Hook.*, Bot. Mag. t. 4707. A magnificent species of *Cercus* from the Honduras, nearly allied to *C. grandiflorus*, and flowering in the night, like that species.
- CEROCÍLUS RËBENS.** An orchid of no great beauty, allied to *Physochilus*. The flowers are greenish with pink bracts. The plant requires the treatment of stove perennials. It is supposed to be from the East Indies.
- CEROPÈGIA THWAITÈSII.** A botanically interesting stove climber from Ceylon, with the flowers green and brown.
- CÈSTRUM REGÈLII** *Planch.*, Fl. des Serres, ix. t. 946.; *Habrothamnus aurantiacus* *Reegl.* This very elegant shrub, which is quite different from *C. aurantiacum*, is a native of Central America, and flowered for the first time in Europe in the Botanic Garden at Zurich in 1850.
- CHETOGÁSTRA LINDONIÀNA.** A very ornamental species from the alpine districts of the Andes of Colombia, and requiring a cool stove or greenhouse. The flowers are large, and of a blackish purple.
- CHEIRANTHÈRA LINEÀRIS.** A handsome greenhouse shrub from New Holland, with violet-blue flowers.
- CHIONÁNTHUS REFËSUS.** A shrub with white sweet-scented flowers, from China, which will probably prove hardy in this country.
- CLÈMATIS BARBELLÀTA** *Hook.*, Bot. Mag. t. 4794. A very beautiful species from the Himalayas, introduced by Major Madden, which flowered for the first time in Europe in the Glasnevin Garden in 1854. The flowers are violet-coloured, with the edges of the sepals marked with white.
- CLÈMATIS CORIÀCEA** *Dec.* This is a showy greenhouse climbing species from New Holland, with large panicles of white flowers.

- CLÉMATIS LANUGINOSA PÁLIDA.** A variety with much paler flowers than the species. While in the species the flowers are blue, in this variety they are greyish, almost white. A hardy climber, from the north of China.
- CLÉMATIS PÁTENS.** This is the correct name for the species which in England is generally called *C. carulea*. A fine large-flowered variety of it, called "Sophia," has recently been raised, having a broad green band down the sepals of the calyx.
- CLERODÉNDRON BÉNGÉI.** When well cultivated, this forms a showy shrub, somewhat resembling the single-flowered *C. fragrans*. It is from the north of China, and has rose-coloured flowers.
- CŒLÓGYNE PANDURÁTA.** A fine stove epiphyte from Borneo, introduced by Messrs. Low, of Clapton. The flowers are large and of a pale green, the lip being of a yellowish green with broad black veins and stains.
- CŒLEPS BLŪMEL Benth.**, Bot. Mag. t. 4754. The leaves of this species, which forms an undershrub requiring a stove, are curiously and beautifully variegated with dark chocolate on a pale green. The plant is a native of Java, and produces its purple and white flowers in whorled racemes.
- COMACLIŪM AURANTIACUM.** This is a showy subshrubby greenhouse species from Central America, with brilliant orange-scarlet flowers.
- COUTARÉA DIERVILLŌIDES.** A very showy stove shrub from Colombia. The flowers, which resemble those of the beautiful *Weigela rŕosa*, are white inside and pink on the outside, and they are produced in rich terminal panicles.
- CROSSÁNDRA FLÁVA Hook.**, Bot. Mag. t. 4710. A rather weedy-looking stove undershrub from Sierra Leone. The foliage is somewhat coarse, and the flowers, which are yellow, are sparingly produced and of short duration.
- CUPRÉSSUS LAWSONIÁNA.** This was the handsomest tree seen during the whole of the expedition under the direction of Mr. William Murray of San Francisco, for exploring the range of mountains which runs between the coast range and the Rocky Mountains, lat. 40°, 41°, &c., N. "It was found on the banks of a stream in a valley on the mountains, attaining the height of 100 feet, with a stem 2 feet in diameter. The foliage is most delicate and graceful. The branches spread upwards like a Spruce Fir, and hang down at the tips like an ostrich feather, the top shoots drooping like a Deodar. The timber is good, clear, and workable."
- CUPRÉSSUS MACNABIÁNA.** "This is the same species as one sent home by Jeffrey, without a name, and distributed by the Oregon Committee in 1852. The cone is about the size of a hazel nut, with hard scales, having a projecting umbo in the centre." The plant is of low growth, and very suitable for a shrubbery.
- CYCLAMEN MACROPHÝLLUM.** An ornamental very large-leaved species from Algiers, with pink and rose-coloured flowers, requiring the treatment of a greenhouse tuberous-rooted perennial.
- CYMBIDIUM PÉNDULUM ATROPURPUREUM.** A variety of the well-known orchid *C. péndulum*, with deep purple flowers, the lip being ribbed with yellow. Introduced from Borneo, and requiring to be treated as a stove epiphyte.
- CYPRIPÉDIUM VILLŌSUM.** This fine showy orchid, which in some degree resembles *C. insignis*, was introduced from Moulmein by Messrs. Veitch and Son. The flowers are green, brown, and purple; and the plant requires the treatment of a stove perennial.
- DENDRŌBIUM CYMBIDIŌIDES Lindl.**, Bot. Mag. t. 4755. An epiphytal orchid from Java, with ochreous yellow and not very showy flowers.
- DENDRŌBIUM MACROPHÝLLUM GIGANTÉUM.** This is a very showy plant, with light rose-coloured flowers, which are considerably larger than usual. Obtained from the Continent by Messrs. Veitch and Son.
- DICHORIZÁNDRA LEUCOPHITHÁLMOS Hook.**, Bot. Mag. t. 4733. An interesting stove perennial from Brazil, the flowers of which are of a deep blue with a white eye, and are produced in radical panicles.
- DICHORIZÁNDRA PÍCTA.** This is a very neat and pretty stove perennial, introduced by Messrs. Low and Co., and said to come from Brazil. The leaves are longitudinally blotched with brown on the upper side, and are pink on the underside. The flowers are white and purple.
- DICTYÁNTHUS PAVŌNH Decaisne**, Bot. Mag. t. 4750. A somewhat curious stove climber from New Spain, with rather dingy Stapelia-like flowers, which are greenish and marked with concentric pale-brown lines.
- DIDYMOCÁRPUŠ HUMBOLDTIÁNA Gardn.**, Bot. Mag. t. 4757. A pretty little plant, with pale violet flowers, introduced from Ceylon by Mr. Thwaites, in 1853.
- DIERVILLA AMÁBILIS Carr.**, Flor. des Serres, t. 855; *Weigela amábilis Hort.* A very handsome shrub, a native of Japan, nearly allied to *Weigela rŕosa*.
- DIERVILLA MIDDENDORFIÁNA.** This is the plant which is called the yellow *Weigela*. It is a hardy shrub with primrose-coloured flowers, which are about half the size of those of *Weigela rŕosa*. Continental nurserymen received the plant from Russia.
- DIOSCŌREA BATÁTA Dec. & D. japonica Hort.** This new Chinese yam, which promises to be one of the most valuable vegetables introduced since the potato, differs from the *D. japonica* of Humb., with which it was at first confounded. The edible part is a long tuberous rhizoma, which, when cooked, is white, extremely farinaceous, and almost destitute of woody fibre; in fact, it is only to be distinguished by the shape from the best kind of potatoes. The plant is perfectly hardy; and M. Vilmorin, who has cultivated it on a large scale near Paris, finds its produce enormous. The only difficulty is, that the long tubers penetrate deeply into the ground, and are troublesome to take up; and on this account the plant is generally grown in trenches, so that the tubers may extend horizontally.
- DIOTOSTÉMON HOŪKÉRI.** A succulent greenhouse shrub from Mexico, resembling a species of *Echeveria*. The flowers are of a yellowish red.
- DIPLODÉNTIA FLÁVA Hook.**, Bot. Mag. t. 4702. A showy climbing shrub from New Grenada, requiring a stove. The flowers, which are produced in May, are large and of a rich yellow, resembling those of a species of *Atlanánda*.
- DRACŒNA ELLÍPTICA MACULÁTA.** An evergreen stove shrub from Java, with variegated leaves and greenish flowers. Very ornamental in the habit of its growth.
- ECHITES PELLIERI.** This is a synonyme of *Neriánda suberécta*, which see.
- EMBŌTHRIUM LANCEOLÁTUM.** A fine evergreen Proteaceous shrub from Chili, which will probably prove half-hardy in this country. It is allied to *Telopœa*.
- EPÍSCIA MELITTIFŌLIA Mart.**, Bot. Mag. t. 4720. A rather coarse-growing stove perennial from the West Indies, with tall stems, large leaves, and small red flowers, which are produced in March and April.
- ERÍOGONUM COMPOSITUM Dougl.**, Bot. Mag. t. 4703. This is a hardy perennial, of botanical interest, from Oregon, having rather a weedy appearance. It produces its small yellowish-white flowers in great abundance.
- ESCALLŌNIA DÉNSA Linden.** A pretty greenhouse shrub from Merida, producing numerous pinkish-white flowers.
- ESCHSCHŪLTZIA TENUIFŌLIA.** A very pretty hardy annual from California, with a compact and dwarf habit. The flowers are yellow, and an inch across. Introduced by Messrs. Veitch and Son.

- EUGÈNIA OLEGIODES.** An evergreen greenhouse shrub, having a very graceful appearance. The flowers are white, and are produced in axillary panicles. It does not appear to be known whence the plant has been obtained.
- EXACUM MACRANTHUM.** A beautiful stove annual or biennial (probably an annual) from Ceylon, with rich deep-purple flowers.
- FRAXINUS DIPÉTALA.** A fine hardy tree from Mexico, with purple branches, green leaves, and elegant white flowers.
- FRITILLÀRIA OXYPÉTALA** *Royle*, Bot. Mag. t. 4731. A pretty half-hardy bulbous perennial from Kumaon. The flowers are of a purplish-lilac, with purple dots near the centre, and are produced in June.
- FUCHSIA DOMINIÀNA.** This is a fine hybrid, raised in the nursery of Messrs. Veitch and Son, at Exeter, by the foreman of the house there, in compliment to whom it is named. In it the distinguishing characteristics of the two beautiful species *F. serratifolia* and *F. spectabilis*, may be said to be combined; for it has the foliage of the former, with the flowers very much resembling those of the latter species. Moreover, it is very valuable for the conservatory, as it blossoms during the winter months, a period of the year when generally there are so few plants in flower.
- FUCHSIA VIOLEFLORA PLÈNA.** This is a beautiful new double purple variety, raised by Messrs. Lucombe, Pince, and Co., of the Exeter Nursery, with a rich purplish-blue corolla, resembling a fine double violet.
- FUCHSIAS WITH A WHITE COROLLA.** Some very beautiful hybrids, with the corolla of a beautifully pure white, are just being brought out by Messrs. E. G. Henderson and Son, of the Wellington Nursery, St. John's Wood, London, and Messrs. Lucombe, Pince, and Co., of Exeter. These were raised by the late W. Storey, Esq., of Newton, in Devonshire, an energetic hybridiser, who, by well-directed efforts, succeeded in obtaining, after two or three generations of seedlings, varieties of improved form, good substance, and excellent habit of growth. One of these hybrids has a pure white corolla, with brilliant scarlet sepals, which are finely reflexed; while another has a pure double white corolla, resembling a fine large double Snowdrop, the sepals being of a rich scarlet.
- GALÉANDRA BAÛERI FLÓRIBUS LÛTEIS** *Hook.*, Bot. Mag. t. 4701. This pretty epiphytal orchid from South America has drooping bunches of deep yellow flowers, the lip being marked with crimson dotted lines.
- GARDÈNIA GLOBÒSA.** This is a neat evergreen greenhouse shrub from Caffraria, with fragrant white flowers.
- GEISSOMÈRIA NITIDA** *Nees*. An ornamental stove undershrub from Brazil, with brilliant scarlet flowers.
- GENTIÀNA FORTÛNI.** An exceedingly beautiful herbaceous plant, the flowers of which are of a deep blue, spotted with white. It is from the north of China, and it is considered that it will prove quite hardy.
- GÈSNERA DONCKELARIÀRIÀ.** This is a beautiful hybrid, which is said to have been raised in the Ghent Botanic Garden, between *Gèssnera discolor* and *Gloxinia rubra*. The plant is very showy, bearing panicles of rich crimson Gloxinia-like flowers.
- GILIA LÛTEA.** See *Leptosiphon luteus*.
- GOLDFÛSSIA GLOMERÀTA SPECIÒSA.** A showy, although a coarse-growing, soft-wooded stove shrub from Sylhet, the flowers of which are of a deep purple.
- GOMPHRÈNA COCCINEA.** An ornamental perennial from Mexico, requiring a warm greenhouse, and the treatment usual for tender annuals.
- GONÓLOBUS PYRRHÓTRICHUS.** This is rather a coarse-growing, though curious stove climber, from Brazil. The flowers are of a dull green, with obscure netting and fine bright yellow coronal teeth.
- GYMNOSTÀCHYUM ZEYLÓNICUM** *Arn. et Nees*, Bot. Mag. t. 4706. A stove perennial from Ceylon, with variegated leaves, having milk-white stains upon a dark green ground. The flowers are white, tipped with green and yellow.
- HÈMÀNTHUS INSIGNIS** *Hook.*, Bot. Mag. t. 4745. A very showy greenhouse bulbous plant from Natal, with crimson flowers, which are produced in large heads surrounded by leafy bracts.
- HEDARÒIA TULIPIFÈRUM.** This promises to be a valuable greenhouse evergreen shrub. It resembles a broad-leaved *Diòsma*. The beauty of the plant consists in the involucre surrounding the flowers: this is cup-shaped, and of a greenish white stained with dull red. The plant is from New Holland.
- HÈDERA GLOMERULÀTA.** This is a curious evergreen stove shrub from Java. It is very elegant when in flower, though the flowers themselves are green and inconspicuous.
- HEXACÈNTRIS MYSORÈNSIS LÛTEA.** One of the many beautiful introductions of Messrs. Veitch and Son. It is a showy evergreen stove climber from India, with large yellow flowers, which are produced in pendent racemes.
- HIPPEÀSTRUM FORMOSISSIMUM.** A very showy stove bulb, the flowers of which are of a deep crimson, resembling in colour the Jacobean Lily, but being larger and of the form of *H. vittatum*.
- HÓLCUS SACCHARÀTUS** *Hort.*; *Andropogon saccharatus Kunth*; the Chinese sugar-cane. This plant, though of very recent introduction into this country, appears to have been first sent to Europe nearly a century ago, as it is mentioned in the *Bon Jardinier* for 1855, from which the following account is extracted, that a Chinese plant apparently identical with it was used in the fabrication of sugar at Florence, in 1766, by Pietro Arduino; it appears, however, to have been soon lost, as no other traces have been discovered of it. The present plant has the habit of growth of the maize or Indian corn, and it forms a tuft of eight or ten stalks from each root. The flowers, which are in conical panicles, are green at first, but afterwards become purple. The plant, which is an annual, appears quite as hardy as the Indian corn, and it should be sown in a light rich soil, about the same time as the first sowing of kidney-beans. Juice is found in abundance in the pith of the stalks, and it produces sugar and alcohol, like the juice of the true sugar-cane. The leaves also furnish an excellent forage, and a kind of cider is made from the young or imperfectly ripened shoots. The importance of this plant, if only a part of the qualities attributed to it prove correct, can hardly be overrated, not only as regards the sugar, which is about a third more than is produced by an equal weight of beet-root, but with regard to the alcohol, which is in the proportion of 63 to 3 equal weights of the *Hólcus* and the Beet-root.
- HOÛA PRATÈRNA** *Blume*, Bot. Mag. t. 4684. This very fine, new, and distinct species of *Hoûa* was first detected in Java by Blume; subsequently it has been found by Mr. Thomas Lobb, and sent by him to Messrs. Veitch and Son. It is a climbing stove plant with leaves remarkable for their great size, firmness, and thickness. The flowers are of a pale yellowish buff colour, and are produced during a great part of the summer and autumn.
- HYDRÓLEA AZÈREA.** A pretty little greenhouse branching perennial plant from Mexico, profusely covered with beautiful azure flowers, against which the stamens stand out like little stars.
- HYPERÍCUM OBLONGIFÓLIUM** *Choisy*. A handsome and, it is said, a hardy shrub from the East Indies, with reddish-yellow flowers.
- HYPÓXIS LATIFÓLIA.** An interesting bulbous or tuberous-rooted greenhouse perennial from Natal, with star-shaped yellow flowers.

- ILLAÏREA CANARIÑOÏDES** *Leun. & Koch*, Fl. des Serres, t. 913. *Loasææ*. A splendid climbing plant from Central America, with orange-scarlet flowers as large as those of the *Coba'a*. It is half-hardy, and may be propagated by cuttings or by seeds, which it ripens freely.
- IMANTOPHYLLUM MINIATUM** *Hook.*, Bot. Mag. t. 4783. *Amaryllidæææ*. Introduced in 1854 from Western Africa, with crimson or rose-coloured flowers, as large as those of a *Crinum*.
- IMPATIENS HOOKERIANA** *Arn.*, Bot. Mag. t. 4704. A lovely Balsam from Ceylon, which blossomed in the stove at the Royal Botanic Gardens, Kew, in the summer of 1852. The leaves are large and glabrous; and the flowers, which are of a pure white with deep blood-coloured veins on the lower portion, are the largest of any known species.
- IMPATIENS JERDÖNÏE** *Wight*, Bot. Mag. t. 4739. This is a very beautiful species received from the Neilgherries, at the Royal Gardens of Kew, in 1852. It has a neat dwarf habit, is of easy cultivation, requiring the temperature of a warm greenhouse or stove, and continues to produce a profusion of its large and strikingly formed flowers, which have a mixture of green, bright red, and yellow in them, for several months. Messrs. Veitch and Son have succeeded in raising a good supply of this charming little Balsam.
- INGA FERRUGÏNEA**. A beautiful stove shrub from Brazil, with the flowers crimson shading off to pink.
- IXORA LÖBBII**. This handsome *IXORA* is one of the numerous beautiful plants received by Messrs. Veitch and Son from their collector Mr. Lobb, in compliment to whom it is named.
- KNIPHÖPIA UVÄRIA**. This is an old name, proposed to be revived for a Cape plant bearing a dense ovate cylindrical head of rich orange or scarlet flowers, and forming one of the handsomest of border plants, introduced long since, and known as *Tritöma*.
- LACHENÄLIA ACREA**. This is a very handsome greenhouse bulbous plant from the Cape of Good Hope, with tubular pendent flowers, which are of a deep orange-yellow.
- LAURËLIA AROMÄTICA**. A handsome fragrant fleshy-leaved evergreen shrub from the mountains of Chili. Introduced by Messrs. Standish and Noble, who are not able as yet to speak positively as to its hardness.
- LËPACHYS COLUMNÄRIS** *Dec.* *Compositæ*. A native of Texas, nearly allied to *Rudbeckia*.
- LEPTOSIPHON CHILÄTIS** *Benth.* A rather pretty hardy annual from California, the flowers of which are rose-coloured, with a yellow throat.
- LEPTOSIPHON LUTEUS** *Benth.*; *Gilia lutea* *Steud.*, Bot. Mag. t. 4735. This highly ornamental dwarf half-hardy annual, was introduced in 1852 by Messrs. Veitch and Son, through Mr. William Lobb, from California. The unusual length and tenderness, in conjunction with the colour, of the corolla, which is of a bright sulphur-yellow, with a dark, almost orange-coloured eye, and the great quantity of flowers produced on the stems and branches, render this plant extremely ornamental, especially when cultivated in beds in masses. There is a variety called *L. luteus aureus*, the flowers of which are of a deeper colour than those of the species.
- LIBODËRUS DECÜRRENS** *Torrey*. This is a newly introduced species of this fine genus of conifers. It is in the possession of Messrs. Lawson and Son, of Edinburgh and London. By some it is thought to be synonymous with the rare *Thuja gigantea*.
- LILÏUM GIGANTËUM** *Wall.*; *L. cordifolium* *Don*, Bot. Mag. t. 4673. For the discovery of this noble plant, which may justly be called the Prince of Lilies, we are indebted to the exertions of the late Dr. Wallich, who detected it in moist shady places on Sheopore in Nepal. "This majestic lily," observes Dr. Wallich, "grows sometimes to a size which is quite astonishing; a fruit-bearing specimen of the whole plant, which is destined for the museum of the Honourable East India Company, measures full ten feet from the base of the stem to the apex. The flowers are proportionably large and delightfully fragrant, not unlike those of the common White Lily." Nor is it found to degenerate in cultivation, for flowering plants have attained a height of ten feet in one season, the flower portion occupying twenty inches. Such a raceme of flowers, accompanied by broad heart-shaped leaves ten or twelve inches long and eight inches broad, cannot but afford a striking spectacle. The flowers are white, or rather cream-coloured, marked with purplish-crimson. The plant should be treated as a greenhouse half-hardy bulb. It produces seed abundantly.
- LIMNÄNTHES SULPHURËA ODORÄTA**. A new and beautiful hardy annual, with a rather dwarf bushy habit of growth, and very suitable for pot culture as well as for the open border in the flower garden. The lower half of the petals is of a deep sulphur colour, while the upper half is of a beautifully pure white, and there are rosy pink markings down each petal, which are darker near the base than at the apex. The filaments of the stamens are also of a rosy pink. The flowers are larger than those of either of the other kinds of *Limnänthes*, and delightfully fragrant.
- LITÖNIA BONËSTA** *Hook.*, Bot. Mag. t. 4723. *Uvulariææ*. A native of Port Natal in Western Africa. It produced its fine orange-coloured flowers in the Kew Gardens in April 1853, only three months after the planting of the tubers.
- LOBËLIA GHIESBRËGHÏI**. A rather pretty Mexican greenhouse perennial with red flowers, which continue expanding in succession the whole of the summer.
- LOMÄRIA CHILËNSIS**. This is a fine robust-looking and ornamental hardy fern from Chili.
- LOPËZIA MACROPHYLLA** *Benth.*; *L. grandiflora* *Fl. Bot. Zeit.*; *Jöhli fuchsiioides* *Hort. Germ.*, Bot. Mag. t. 4721. An ornamental greenhouse undershrub from Mexico, with bright-red fuchsia-like flowers, which are produced in March. The root is said to be tuberous and fleshy.
- LYCÄSTE COSTÄTA**. A large-flowered epiphytal orchid from Peru. The colour of the flowers is green with a yellowish-white lip.
- LYSIMÄCHIA LESCHENÄULTII**. This is a pretty plant, and it is found to be very useful for planting in the flower garden, as well as suitable for being grown in pots. It is a half-hardy undershrub, a native of the Neilgherries, whence it was introduced by Messrs. Osborn and Son, of the Fulham Nursery. The flowers are rose-coloured, and are produced in dense racemes.
- MARÄNTA WARSEWICZII**. This is a stove perennial from Central America, remarkable for its finely variegated leaves, which are of a deep green, marbled with grey about the midrib, and purple on the underside. The flowers do not appear to be known.
- MARCËTIA ANDÏCOLA** *Linden*, Fl. des Serres, t. 914. *Melastomæææ*. A beautiful little shrub from the mountains of Venezuela, with leaves like those of a myrtle, and rose-coloured flowers, which it produces in great abundance. It only requires protection from frost.
- MARNËNIA LÛCIDA**. This is a robust-growing climbing plant from the Himalayas, with rather dingy purple flowers and fine thick foliage. In Ireland it has proved to be hardy.
- MATHËEA GALANTHÖIDES**. A rather diminutive stove bulb from Peru, with the habit of a Snowdrop. The flowers, which are erect, are white tipped with green.

- MAXILLÁRIA HIRTILÁBIA** *Lindl.* A showy epiphytal orchid from New Grenada, the flowers of which are velvet stained with purple.
- MERIÁNA MACRÁNTHA.** This is an ornamental stove shrub from Venezuela. The habit of growth is compact and neat, and the flowers are scarlet.
- METHÓNICA VIRÉSCENS PLÁNTII.** This is the *Glóriða Plántii* of English gardens. It is a native of Natal, and is curious and showy. The flowers are orange-coloured. The plant should be treated as a warm-greenhouse tuberous-rooted perennial.
- METTERNÍCHIA PRÍNCÍPIS** *Mikan*; *M. prínceps* *Miers*; *Lisiánthus ophiorrhiza* *Vell.*, *Bot. Mag.* t. 4747. This is a new genus from Brazil, belonging to *Solanáceæ*, which has been named in compliment to the Austrian Prince Metternich. In its native country it attains the height of twenty-five feet. In England it must be regarded as a cool-stove shrub, and as flowering in August. The flowers are large and funnel-shaped, though not very showy, their greatest charm, perhaps, consisting in their being powerfully and deliciously fragrant. They are white, with the tube greenish.
- MONÓCERA GRANDIFLÓRA** *Hook.*, *Bot. Mag.* t. 4680. This is the new name for *Elæócarpus grandiflora* *Smith*; syn. *E. lanceolata* *Blume*: a handsome evergreen stove shrub from Java.
- NERIÁNDRA SUBERÉCTA.** This is a fine showy stove climber with yellow flowers, which has been recently re-introduced from France under the name of *Eclytes Peltiéri*.
- NYCTERÍNIA SELAGINÓIDES.** A pretty greenhouse annual from the Cape of Good Hope, with a dwarf spreading habit. Introduced by the Horticultural Society of London. The flowers are white, with a deep yellow eye, and they are produced in corymbs.
- ODONTOGLÓSSUM EHRENBERGHII.** A very neat and pretty epiphytal orchid from Mexico. It resembles, in some degree, *O. Rössii*. The lip and petals are white; the sepals are of a greenish-yellow and spotted.
- ONCÍDIUM IONÓSMUM.** A beautiful species with yellow flowers, the sepals and petals being spotted with brown. The flowers have a delightful fragrance resembling that of violets.
- ONCÍDIUM REFLÉXUM CÆSIUM.** This is a glaucous-leaved variety of *O. refléxum*, bearing the name of *O. cæsium* in the German gardens.
- ONCÍDIUM UMBRÓSUM.** A species from New Grenada, with unattractive flowers, which are green and dull purple.
- PAPÁVER PILÓSUM** *Smith*; *P. olympicum* *Sibth. MSS.*, *Bot. Mag.* t. 4749. This is a hardy herbaceous Poppy, with, it is believed, perennial roots, the flowers of which are large and handsome and of a brick-red colour, with a pale, nearly white, spot at the base of each petal. It is said to be from Greece, but when or by whom introduced into this country, there is no record.
- PÉNTAS CÁRNEA RÓSEA.** This is an improved variety of the well-known *Péntas cárnea*, which has been imported by Messrs. Osborn and Sons, of the Fulham Nursery, and which has much deeper coloured flowers, of a rosy tint.
- PHACÉLIA RAMOSÍSSIMA** *Benth.* A hardy annual from California, with unattractive dull white and violet flowers.
- PHRYNÍUM MÍCANIS.** This is a stemless stove perennial from Peru, with dark-green leaves, having a central longitudinal streak of whitish red, while the underside is of a dull brownish red. The flowers are white, with rusty bracts.
- PINKNÉYA IONÁNTHA.** A fine stove shrub from New Grenada, with dark violet flowers and a purple calyx, which is divided so as to resemble a stalked petaloid leaf.
- PINUS BEARDSLÉYI** *Murray*. From the description given of this new pine (which is one of those introduced by Mr. Murray, of San Francisco), it would appear more nearly to resemble *P. Benthamiana* than any other described species. The cone, however, is not so long, being only three inches in length, while the leaves are only six inches in length. The sheath of the leaf is short, being only an eighth of an inch. Both the wing of the seed and the seed itself are neither so long nor so large as in *P. Benthamiana*. The timber of *P. Beardsleyi* is homogeneous all through. "The tree is of great beauty and size: one that was cut down measured 123 feet in height and 44 inches in diameter at the stump. Another tree next it measured 17 feet 4 inches in circumference, at 3 feet from the ground. The stem was a very handsome column, about 30 feet to the first branch; the timber good and clear. It was found on the top of the mountain, at the same altitude as *P. Jeffreyana*, *P. monticola*, and *P. gravis*, and higher than either *P. Benthamiana* or *P. Lambertiana*." The species has been named in honour of A. F. Beardsley, Esq., who accompanied Mr. Murray in his expedition.
- PINUS CRAIGIANA.** This is a Pine which also bears some resemblance to *P. Benthamiana* as well as to the preceding species (*P. Beardsleyi*), from which, however, it differs in having the prickle of the scale pointing towards the tip instead of the base: the prickle, too, in *P. Craigiana* is strong and firm, while in *P. Beardsleyi* it is small and weak; and the excrescence on the exposed part of the scale is much more developed in the former than in the latter species, which has the exposed part somewhat flat, while in *P. Craigiana* the upper part projects considerably over the lower. "The wing of the seed of *P. Craigiana* is shorter and relatively broader; the seed is nearly twice the size of that of *P. Beardsleyi*, although the cones are about the same size. The leaf of *P. Craigiana* is also very distinct from that of *P. Beardsleyi*; it is much finer and not so long, while its sheath is considerably longer and more delicate. This species was found in the same mountains as *P. Beardsleyi*, but one-fourth of a mile further down, though higher up than *P. Benthamiana*. It spreads its branches wider from the stems than *P. Benthamiana*, and sheds its seed a month later. This Pine has been dedicated to Sir William Gibson Craig, who has done so much for the introduction and cultivation of this valuable family."
- PINUS JEFFREYANA.** This is a hardy Californian Pine in the possession of Messrs. Low and Co., of Clapton, of which very little is at present known.
- PINUS PARRYANA.** Another hardy Californian Pine, respecting which also little is known. Also in the nursery of Messrs. Low and Co.
- PINUS ROYLEANA.** A new Indian two-leaved Pine, with small cones, named in honour of Dr. J. Forbes Royle. It is supposed that the species will prove quite hardy in this country, from its having been found growing in Nepal at an elevation of from 8,000 to 10,000 feet. Introduced through the Horticultural Society of London.
- PITCAIRNIA ECHINÁTA** *Hook.*, *Bot. Mag.* t. 4709. In a flowerless state this curious stove perennial may be said to be stemless; the leaves, which are two or three feet long, being all radical, as in the common Pine-apple. The sepals of the calyx are red and yellow, and covered with prominent glands: the petals are white or cream-coloured, and twice as long as the sepals. The plant is reported to have been introduced from Mexico. It flowered for the first time in England in January, 1853, and continued a long time in blossom.
- PITCAIRNIA LONGIFOLIA.** This is an ornamental species from Lima. It is a stove shrub, with an erect elongated stem, and branched panicles of scarlet flowers.
- PITCAIRNIA MACRÓCALYX** *Hook.*, *Bot. Mag.* t. 4705. This is a South American species, coming nearest to *P. suarezensis*, but quite distinct. It has the largest calyx of any known species, and it is altogether a fine-looking plant. The sepals of the calyx are yellow; the petals are large and white, and thrice as long as the calyx. The plant requires a stove, and it flowers in December.

- PITCAIRNIA MUSCOSA.** This is a Brazilian species, forming a pretty and lively winter-blooming plant. It is a stove perennial with red flowers.
- PITCAIRNIA NUBIGENA.** A showy stove perennial from Venezuela, with the flowers rose and scarlet.
- PITTOSPORUM CRASSIFOLIUM.** This is a fine greenhouse evergreen shrub from New Zealand, with crimson flowers.
- PITTOSPORUM FLAVUM.** A very fine showy species from East Australia. It is a greenhouse evergreen shrub with large yellow flowers, which are produced in large corymbs.
- PLUMIERIA JAMESONI Hook., Bot. Mag. t. 4751.** This handsome stove shrub is named in honour of Professor Jameson, by whom it was found in the vicinity of Guayaquil. "Its great beauty consists in the fine red of the peduncles and pedicels, and outside of the flower, and the rich yellow of the upper or inner side of the corolla, and which, together with the great breadth of the lobes of the corolla and their acute apices, constitute the chief specific distinction." In these particulars no other species is found to accord with it. The plant flowers in the stove in July.
- PODOLÉPIS CHRYSANTHA Endlicher.** A showy half-hardy annual from New Holland, with golden yellow flowers.
- POSOQUËRIA REVOLUTA Nees.** This beautiful Brazilian stove shrub has recently been introduced by Messrs. Veitch and Son. It has fine laurel-like leaves, and clusters of graceful snow-white flowers, the tube of which is more than three inches long. "The specific name," Dr. Lindley observes, "was given upon the supposition that the leaves have their edges rolled back, but this occurs in so slight a degree as to cause regret that so fine a plant should not bear a more characteristic title."
- PRÍMULA MÓLLIS.** This is a very handsome hardy or half-hardy perennial species, with the habit of *P. cortusoides*. It has been introduced from the Mountains of Bhotan, and it has deep rose-coloured flowers.
- PSAMMISIA PENDULIFLORA Dec. Ericaceæ.** A handsome low-growing cool-stove shrub from Venezuela, probably belonging to the genus *Triplaris*. The flowers are vermilion, with yellowish green.—*P. sarcantha* Dec. is another dwarf shrub from the same country.
- PSAMMISIA SCLEROPHYLLA.** This is a showy stove shrub from Venezuela, with tubular drooping crimson flowers, which are tipped with yellowish white.
- PÛYA CHILËNSIS Molina, Bot. Mag. t. 4715.** This is from North Chili, and is one of the most striking of Bromeliaceous plants. The stem, or caudex, of a plant in the Royal Gardens of Kew, has now attained a height of four feet, independent of the leaves, which are from three to four feet in length, spreading in all directions, the lower ones being reflexed. "The compound spike of flowers upon the column-like perfectly straight peduncle, is remarkable for its size; the large full yellow (but inclining to green) flowers and the copious bractees turning brown or black in age." This plant is called *Cardon* and *Puya* in Chili, where the soft substance of the stem is used for corks and bungs. "The flowers yield a remedy for hernia, and the Indians use the spines of the leaves for fish-hooks." In this country the plant requires a cool stove. A young plant was first brought home by Mrs. Maria Graham, afterwards Lady Calcott.
- PÛYA SULPHÛREA Hort. Hernhaus., Bot. Mag., t. 4696.** Although this species is far inferior in point of beauty and of size to the splendid *Puya Altensteinii* var. *gigantea*, it is nevertheless a handsome-looking plant, and has the merit of flowering in the winter months (in December in the stove at Kew). The native country is unknown. The principal leaves of the plant at Kew spring directly from the root; they are two or three feet long, and gradually taper to a long point upwards, while below they lengthen into a narrow channelled base. From the centre of the plant the peduncle arises, two feet or more in length and leafy below, the leaves like those from the root, but smaller, passing gradually into bractees, which latter are erect, of a purplish-red, and taper to a slender, rather pungent, green point. The moderately large, pale, sulphur-coloured flowers are protruded much beyond the bractees, and are sessile.
- QUËRCUS INFECTORIA Olivier.** This is the Nut-gall Oak, a small evergreen tree from Kurdistan, which it is thought will prove scarcely hardy in this country.
- RHODODËNDRON CAMELLIFLORUM J. D. Hooker.** This is one of the six new Rhododendrons of Assam and Bhotan discovered by Thomas J. Booth, Esq., and introduced in 1854 by Messrs. E. G. Henderson and Son, all of which have been described in *The Magazine of Botany*, by Mr. Booth's uncle, Thomas Nuttall, Esq., of Rainhill, the well-known botanist and traveller. This is a somewhat curious species, with pure white flowers, having a faint rosy tinge, and resembling a single Camellia. It was found at Lablung, and also on the Bhotan Alps at an elevation of from 9,000 to 12,000 feet. Dr. Hooker first found this plant, but he did not succeed in sending either seeds or living plants home.
- RHODODËNDRON CINNABARINUM PALLIDUM.** This is an elegant variety of one of the beautiful Sikkim Himalaya species, with rosy pink flowers. It is quite hardy.
- RHODODËNDRON CITRINUM Hasskarl, Bot. Mag. t. 4797.** An interesting greenhouse species, with pretty primrose-coloured campanulate flowers. It is a native of Java, where it was found growing at an elevation of from 5000 to 9000 feet.
- RHODODËNDRON KEYSI Nutt.** Another of the beautiful Rhododendrons discovered by Mr. Booth on the Bhotan Alps. It was found on the northern ridges of the Lablung at an elevation of 10,000 feet, forming low thickets, above the range of *R. Hookeri* and *R. Falconeri*. The habit of the plant is very distinct, and it is quite hardy. The flowers are produced in corymbs below the summit of the branch, each corymb containing five or six flowers.—The other four species detected by Mr. Booth are: *R. Jenkinsii* Nutt., a fine species, hardy, or nearly so, somewhat similar to *R. Middeni*, growing to the height of six or seven feet, and having, it is believed, yellow flowers; *R. longifolium* Nutt., a plant with magnificent leaves, discovered on the slopes of the Oola Mountains, at an elevation of from 6900 to 7000 feet, and likely to prove hardy in this country; *R. Nuttallii* Booth, a magnificent greenhouse species from Bhotan, with very large white flowers tinted with rose and yellow at the base, and delightfully fragrant, the flowers are indeed larger than those of any other known Rhododendron; and *R. Windsorii* Nutt., a fine hardy species, having a dwarf habit, and producing its deep crimson-scarlet flowers in large trusses.
- RHODODËNDRON NIVELM J. D. Hook., Bot. Mag. t. 4730.** This very beautiful species was found by Dr. Hoeker in the Sikkim Himalaya, at an elevation of from 10,000 to 12,000 feet. It flowered for the first time in this country in the Royal Gardens of Kew, in May, 1853. It forms a small shrub, with moderately large leaves and rather numerous flowers, which are externally of a yellowish lilac, internally of a palish lilac blotched with deeper lilac, and having, at the inner base five deep blood-purple spots. The form of the flower is broadly campanulate.
- RIBUS BIFLORUM Buchanan; R. pedunculatus D. Don, Bot. Mag. t. 4678.** This extremely handsome Bramble was received by Messrs. Veitch and Son from Nepal, and cultivated by them for some time under the name of *R. leucodermis*; a name which it might justly claim (from the pure white of the stems of the plant) were it not that a North-west American species had been so designated by Douglas, and the name adopted by Drs. Torrey and Gray in their *Flora of North America*. The plant is quite hardy, and very ornamental and striking from the tall very white stems and the copious white flowers, which are produced in May and June, and which are succeeded by "the good-sized and well-flavoured orange or rather deep amber-coloured fruit in the early autumn." It would be worth considering, whether this very handsome and agreeable fruit would not be deserving of cultivation for the table.

- SABBÄTIA STELLÄRIS.** A beautiful greenhouse herbaceous perennial from the Southern United States, with deep rose-coloured flowers, having a yellowish-green star-shaped eye.
- SÄLVIA IÄNTHINA** *Otto & Dietr.* This very ornamental species has flowers of a dark violet, the calyx and bracts being of the same colour. It is a native of the mountains of Peru, and half-hardy in this country.—**S. PORPHYRÄNTHA** *Dec.* is a dwarf species, a native of Mexico and Central America, with erect racemes of brilliant scarlet flowers.
- SANDERSÖNIA AURANTIACA** *Hook., Bot. Mag. t. 4716. Liliäcca.* This remarkable plant was discovered on "Field's Hill near D'Urban, and on the Swartkop Hill, near Pietermaritzburg, Natal, flowering on the 15th of November, 1851," by John Sanderson, Esq., secretary of the Horticultural Society of Natal, in compliment to whom the genus has been named. The flowers are produced from the axils of the superior leaves; they are large for the size of the plant, sub-globularly campanulate, drooping, and of a deep orange colour. The plant is a tuberous-rooted greenhouse perennial.
- SCHÆERIA MEXICÄNA** *Scemann, Bot. Mag. t. 4743.* A splendid plant with large violet flowers, nearly allied to *Achimenes*. It is a Mexican cool-stove perennial.
- SCHIZÄNTHUS VIOLÄCEUS** *Hort.* A handsome half-hardy annual, with violet-coloured flowers, which has been raised in the French gardens.
- SCIADÖCALYX WARSCEWICZII** *Regel, Gênera Regeliäna Hort.,* is a magnificent plant from Santa Martha, with a profusion of scarlet and purple flowers.
- SCUTELLÄRIA VILLÖSA.** A rather coarse-leaved soft-wooded stove shrub from the Andes of Peru, with brilliant scarlet flowers.
- SEMEIÄNORA GRANDIFLÖRA** *Hook., Bot. Mag. t. 4727.* A dwarf shrub, with scarlet flowers about the size of those of a *Fuchsia*, to which genus it is nearly allied.
- SENËCIO PRÆCOX.** This is a tree groundsel from Mexico, the foliage of which is coarse, but its yellow flowers are extremely showy in the spring. It is a greenhouse shrub.
- SIPHOCÄMPYLUS ORBIGNIÄNUS** *D. C., Bot. Mag. t. 4713.* This plant has a peculiarly lax habit, so that the stem has to be supported by a stick, and the branches are quite pendent. It is a native of Bolivia, where it was discovered by D'Orbigny, after whom the species is named. It is a stove perennial, with handsome foliage and good-sized yellowish flowers, tinged on the back or superior side with red, which, however, are not so highly coloured as those of many of the other species.
- SIPHOCÄMPYLUS PENOUFLÖRUS.** A handsome scandent stove perennial from the Caraccas, the flowers of which are white and rose.
- SOLLYA DRUMMÖNDII.** A pretty, slender, greenhouse evergreen climber from Australia, with bright blue flowers.
- SONERILA MARGARITÄCEA.** A beautiful little stove perennial from India, with deep green leaves, marked with white oval spots, "as if sown with pearls," and bright rose-coloured flowers. Introduced by Messrs. Veitch and Son.
- SONERILA ORBICULÄTA** *L'ndl.* This is a pretty perennial species from the Neigherries, also with rose-coloured flowers. It requires a stove.
- SOPHÖRA SECUNDIFLÖRA** *Dec.* A shrub with blue flowers and one-seeded legumes, the seeds being as large as a nut, and the colour of coral. It is a native of Texas, and nearly hardy in Europe.
- SPIREIA GRANIFLÖRA** *Hook., Bot. Mag. t. 4795.* A splendid species, introduced by Mr. Fortune, which flowered in England for the first time in May 1854; the flowers are large and white, resembling those of an *Amelanchier*, and the shrub appears hardy in the climate of London.
- TÄXUS LINDLEYÄNA.** This species was found growing on the banks of a creek, under the shade of lofty trees, by Mr. W. Murray of San Francisco, when exploring the range of mountains which runs between the coast range and the Rocky Mountains, lat. 40°, 41°, &c. N. It formed a tree of considerable size, with the trunk measuring fifty inches in circumference at five feet from the ground. The branches were very long and pendulous, and the wood, which is used by the savages for their bows, is extremely elastic. The berry is red, and grows on the under side of the branches. It is exactly like the berry of the Irish Yew, each berry having one seed.
- TËCOMA SPECTÄBILIS.** A very showy cool-stove shrub or small tree from New Grenada, with large, bright-yellow flowers, which are produced in terminal clusters.
- TRUÏÖPSIS BOREÄLIS.** This is a garden name for some unrecognised and possibly new hardy conifer, which is reported to have come from the north of India. It is in the possession of Mr. Pontey, of Plymouth.
- TRUÏÖPSIS DOLÄBRÄTA** *Sieb. et Zucc.* A very beautiful large evergreen tree, indigenous to Japan, the Island of Nippon, &c., with a thick trunk and verticillate drooping branches. It is doubtful whether it will prove hardy in this country. It is the *Platygladus dolabräta* of Spach, and the *Thüja dolabräta* of Thunberg.
- THÜJA GIGANTËA** *Nutt.* A very handsome hardy evergreen tree indigenous to North-West America, along the banks of the Columbia River, and Nootka Sound, and attaining the height of from 60 to 170 feet. The branches, which resemble some of the more graceful species of *Lycopodium*, are spreading, with compressed, flattened, erect branchlets. It is the *Thüja Menziesii* of Douglas, and it has, in addition, as synonyms the names of *Thüja Croigiänna* and *Libocedrus decurvens*. The species is in the possession of Messrs. Low and Co., of Clapton, and of Messrs. Lawson and Son, of Edinburgh.
- TORRËYA MYRÄSTICA** *Hook., Bot. Mag. t. 4780.* A very ornamental tree, found on the Sierra Nevada, a mountain range in California, by Mr. W. Lobb, the well-known and very successful collector of Messrs. Veitch, of Exeter. Its habit of growth resembles that of the *Cephalotaxus*; but the fruit is very curious, as it forms a kind of drupe about the size of a walnut, the stone of which contains a kernel enveloped in a ligament resembling that of the nutmeg, and hence the specific name. The plant is called the Californian Nutmeg.
- TOVÄRIA PËNDULA.** A greenhouse annual from Venezuela, with yellowish-white flowers. Of botanical interest chiefly.
- TRICHÖCËNTRUM PINËLI** and **T. PURPËREUM.** These are two small and rather unimportant stove epiphytes; the first from Demerara, with olive-green flowers, and the second from Rio, with cinnamon-coloured flowers.
- VACCËNIUM ÖYÄTUM** *Pursh; V. prunifölium Hort., Bot. Reg. t. 1354., and Bot. Mag. t. 4732.* This very little known species was first discovered by Menzies in North-west America, and afterwards traced by Lewis and Scouler and by Douglas, extending in the Oregon territory from the 40° to the 49° of latitude. It was introduced by Douglas to the Horticultural Society of London, and is perfectly hardy, and very ornamental. The leaves are glossy and evergreen; and the flowers, though much concealed by the foliage when looked on from above, are of a waxy yellowish-white, delicately tinged with pale pink.
- VALLISNERIA SPIRÄLIS.** For a considerable time we only possessed the female plant of the curious and interesting *Vallisneria spirälis*; recently, however, the male plant has been obtained. It has sessile flowers. At present it is extremely rare in this country.
- VERÖNICA KERMESINA.** A handsome dark variety of *Veronica speciosa*, which has been raised by J. Luscombe, Esq.,

of Coombe Royal, Devonshire, and which is being sent out by Messrs. Lucombe, Pince, and Co., of Exeter. The flowers, which are produced in beautiful large spikes, are of a deep purplish-crimson; and the plants blossom when in a young state, which is not often the case with *V. speciosa*.

VERÓNICA VARIEGÁTA. A very beautiful hybrid Veronica, raised by J. Anderson, Esq., of Maryfield, Edinburg, between *V. Andersonii* and *V. salicifolia*, and being intermediate between the two parents. It has a compact habit of growth, and small glossy foliage. The flowers are produced in racemes abundantly; on first appearing they are of a clear bright pink, gradually shading off to a pure white, and producing a striking effect. The plant has been brought into notice by Messrs. Veitch and Son.

VIBURNUM SUSPENSUM Hort. This promises to be a valuable evergreen shrub. It resembles the *Laurustinus*, and has greenish-white flowers. It has yet to be ascertained whether it will prove hardy in this country.

VIOLA PEDÁTA Willd. This plant was introduced long ago, but it has been little known: now, however, it is being again brought into notice. It is in the possession of Messrs. Low and Co., of Clapton.

WÁRREA QUADRÁTA. A pretty orchid from Central America. The flowers are large and white, with an involute *Gloxinia*-like lip, which is deeply bordered with red.

WEIGÉLIA AMÁBILIS. See *Dicrúlla amabilis*.

WELLINGTONIA GIGANTÉA Lindl. ; Sequoia gigantéa Endl. ? The following particulars respecting this beautiful and remarkable tree, are extracted from an interesting account given by Dr. Lindley, in the *Gardeners' Chronicle*, at the close of 1853, when the plant received from that able botanist the name which it now bears. "The other day," Dr. Lindley observes, "we received from Messrs. Veitch, branches and cones of a most remarkable coniferous tree from California, seeds and a living specimen of which had just been brought them by their excellent collector, Mr. William Lobb, who, we are happy to say, has returned loaded with fine things. Of that tree Mr. Lobb has furnished the following memorandum:—'This magnificent evergreen tree, from its extraordinary height and large dimensions, may be termed the monarch of the Californian forest. It inhabits a solitary district on the elevated slopes of the Sierra Nevada, near the head waters of the Stanislaus and San Antonio rivers, in lat. 38° N., long. 120° 10' W., at an elevation of 5000 feet above the level of the sea. From eighty to ninety trees exist, all within the circuit of a mile, and these varying from 250 feet to 310 feet in height, and from 10 to 20 feet in diameter. Their manner of growth is much like the *Sequoia (Tarddium) sempervirens*; some are solitary; some are in pairs; while some, and not unfrequently, stand three and four together. A tree recently felled measured about 300 feet in length, with a diameter, including the bark, 29 feet 2 inches, at 5 feet from the ground; at 18 feet from the ground it was 14 feet 6 inches through; at 100 feet from the ground, 14 feet; and at 200 feet from the ground, 5 feet 5 inches. The bark is of a pale cinnamon brown, and from 12 to 15 inches in thickness. The branchlets are round, somewhat pendent, and resembling a cypress or juniper. The leaves are of a pale grass green; those of the young trees are spreading, with a sharp acuminate point. The cones are about 2½ inches long, and 2 inches across at the thickest part. The trunk of the tree in question was perfectly solid, from the sap wood to the centre; and, judging from the number of concentric rings, its age has been estimated at 3000 years. The wood is light, soft, and of a reddish colour, like Redwood or *Sequoia (Tarddium) sempervirens*. Of this vegetable monster 21 feet of the bark, from the lower part of the trunk, have been put in the natural form in San Francisco for exhibition; it there forms a spacious carpeted room, and contains a piano with seats for forty persons. On one occasion 140 children were admitted without inconvenience.' An exact representation of this tree, in lithograph, from a drawing made on the spot, has been published by Messrs. Veitch, since the return of Mr. Lobb from his successful mission to California. From an account by Dr. C. F. Winslow, given in the *Californian Farmer* (a weekly journal published at San Francisco), subsequently to that by Dr. Lindley, from which the above is a quotation, we learn that the dimensions recorded by Mr. Lobb do not give us the full height to which this splendid conifer attains, by more than 100 feet, one specimen having been found measuring 450 feet from its head to its root! This specimen is said to have been 10 feet in diameter at 350 feet from its upturn root! We learn further from Dr. Winslow's observations, that the locality in which this gigantic tree is found, seems to be confined to an area of a few acres; and that the soil and atmosphere of the place of growth are singularly humid. But what concerns us most to know is, that this very important acquisition to our hardy conifers is now readily obtainable, those enterprising nurserymen, Messrs. Veitch and Son, having succeeded in raising a large number of fine healthy young plants from the seeds brought home by Mr. Lobb. In the *Bon Jardinier* for 1855 it is said to be identical with the *Sequoia gigantéa* of Enlicher; but a plant growing under that name in the Exeter Nursery appears to be quite distinct.

WHITLÁVIA GRANDIFLÓRA. A very beautiful hardy Californian annual, with the habit of *Eitoca viscida*. Introduced by Messrs. Veitch and Son. The flowers are large and bell-shaped, and of a deep purple.

XANTHORRHŒA HASTILE R. Br. Bot. Mag. t. 4722. In describing this plant in the *Botanical Magazine*, Sir William Hooker observes, "The Gum trees, or Grass Gum trees, as they are sometimes called, of Australia, are among the most remarkable vegetable features of the colony. An excellent group of them is represented in Mr. Backhouse's *Narrative of a Missionary Journey in New South Wales*, in the table at p. 171. That peculiar species, however, is considered to be the *X. arborescens*, having an arborescent and branched stem." All the species, probably, yield a resinous gum, which, when strewn on hot coals, emits a fragrant smoke, "smelling like a mixture of balsam of Tolu and benzoin," and now used, we are told, as incense in the Roman Catholic churches of the colony. The "Yellow Resin" is the product of the plant under notice, *X. hastile*, which is said to have been introduced as long ago as 1803, but soon lost. It was, however, reintroduced from Port Jackson in 1845, through Mr. Kidd, then having the temporary charge of the Botanic Garden of Sydney. The specimen thus obtained blossomed in the Royal Gardens of Kew in the spring of 1853, while still, it is presumed, comparatively a small plant, the whole height being barely six feet; whereas in its native country the scape of the plant alone attains a height of eighteen or twenty feet, and is used by the natives in making spears (whence the specific name *hastile*) and fish-gigs, being pointed with the teeth of fish or other animals. The leaves are three feet or more in length; the scape is terminal, solitary, and quite erect, bearing at the apex a dark-crown downy spike (not unlike the head of the greater Reed-mace), consisting of a vast quantity of scaly bracts, which give the colour to the spike; and the flowers are amongst these bracts, and are small and sessile. This plant is the Yellow Resin Tree of White.

GENERAL INDEX,

COMPREHENDING

THE SYSTEMATIC AND ENGLISH GENERIC NAMES, AND THE ENGLISH AND
SYSTEMATIC SYNONYMES IN COMMON USE.

Where *n.* is added after the name, it refers to the note: *s.* indicates a synonyme.

Smith, Rev. Sydney.—*THE WIT AND WISDOM OF THE REV. SYDNEY SMITH.* Crown 8vo. 1s. boards; 1s. 6d. cloth.

Smith, T.—*A MANUAL OF OPERATIVE SURGERY ON THE DEAD BODY.* By THOMAS SMITH, Surgeon to St. Bartholomew's Hospital. A New Edition, re-edited by W. J. WALSHAM. With 46 Illustrations. 8vo. 12s.

Southey.—*THE POETICAL WORKS OF ROBERT SOUTHEY,* with the Author's last Corrections and Additions. Medium 8vo. with Portrait, 14s.

Stanley. — *A FAMILIAR HISTORY OF BIRDS.* By E. STANLEY, D.D. Revised and enlarged, with 160 Woodcuts. Crown 8vo. 6s.

Steel.—*A TREATISE ON THE DISEASES OF THE OX;* being a Manual of Bovine Pathology specially adapted for the use of Veterinary Practitioners and Students. By J. H. STEEL, M.R.C.V.S. F.Z.S. With 2 Plates and 116 Woodcuts. 8vo. 15s.

Stephen. — *ESSAYS IN ECCLESIASTICAL BIOGRAPHY.* By the Right Hon. Sir J. STEPHEN, LL.D. Crown 8vo. 7s. 6d.

Stevenson.—*WORKS BY ROBERT LOUIS STEVENSON.*

A CHILD'S GARDEN OF VERSES. Small fcp. 8vo. 5s.

THE DYNAMITER. Fcp. 8vo. 1s. swd. 1s. 6d. cloth.

STRANGE CASE OF DR. JEKYLL AND MR. HYDE. Fcp. 8vo. 1s. sewed; 1s. 6d. cloth.

'Stonehenge.'—*THE DOG IN HEALTH AND DISEASE.* By 'STONEHENGE.' With 78 Wood Engravings. Square crown 8vo. 7s. 6d.

THE GREYHOUND. By 'STONEHENGE.' With 25 Portraits of Greyhounds, &c. Square crown 8vo. 15s.

Stoney. — *THE THEORY OF THE STRESSES ON GIRDERS AND SIMILAR STRUCTURES.* With Practical Observations on the Strength and other Properties of Materials. By BINDON B. STONEY, I.L.D. F.R.S. M.I.C.E. With 5 Plates, and 143 Illustrations in the Text. Royal 8vo. 36s.

Sully.—*WORKS BY JAMES SULLY.*

OUTLINES OF PSYCHOLOGY, with Special Reference to the Theory of Education. 8vo. 12s. 6d.

THE TEACHER'S HANDBOOK OF PSYCHOLOGY, on the Basis of 'Outlines of Psychology.' Crown 8vo. 6s. 6d.

Supernatural Religion; an Inquiry into the Reality of Divine Revelation. Complete Edition, thoroughly revised. 3 vols. 8vo. 36s.

Swinburne.—*PICTURE LOGIC:* an Attempt to Popularise the Science of Reasoning. By A. J. SWINBURNE, B.A. Post 8vo. 5s.

Swinton. — *THE PRINCIPLES AND PRACTICE OF ELECTRIC LIGHTING.* By ALAN A. CAMPBELL SWINTON. With 54 Illustrations engraved on Wood. Crown 8vo. 5s.

Taylor. — *STUDENT'S MANUAL OF THE HISTORY OF INDIA,* from the Earliest Period to the Present Time. By Colonel MEADOWS TAYLOR, C.S.I. Crown 8vo. 7s. 6d.

Text-Books of Science: a Series of Elementary Works on Science, adapted for the use of Students in Public and Science Schools. Fcp. 8vo. fully illustrated with Woodcuts. See p. 23.

Thomson's Conspectus.—Adapted to the British Pharmacopœia of 1885. Edited by NESTOR TIRARD, M.D. Lond. F.R.C.P. New Edition, with an Appendix containing notices of some of the more important non-official medicines and preparations. 18mo. 6s.

Thomson.—*AN OUTLINE OF THE NECESSARY LAWS OF THOUGHT*; a Treatise on Pure and Applied Logic. By W. THOMSON, D.D. Archbishop of York. Crown 8vo. 6s.

Three in Norway. By TWO of THEM. With a Map and 59 Illustrations on Wood from Sketches by the Authors. Crown 8vo. 6s.

Trevelyan.—*WORKS BY THE RIGHT HON. SIR G. O. TREVELYAN, BART.*

THE LIFE AND LETTERS OF LORD MACAULAY.

LIBRARY EDITION, 2 vols. 8vo. 36s.

CABINET EDITION, 2 vols. crown 8vo. 12s.

POPULAR EDITION, 1 vol. crown 8vo. 6s.

THE EARLY HISTORY OF CHARLES JAMES FOX. Library Edition, 8vo. 18s. Cabinet Edition, crown 8vo. 6s.

Trollope.—*NOVELS BY ANTHONY TROLLOPE.* Fcp. 8vo. 1s. each, boards; 1s. 6d. cloth.

The Warden.
Barchester Towers.

Twiss.—*WORKS BY SIR TRAVERS TWISS.*

THE RIGHTS AND DUTIES OF NATIONS, considered as Independent Communities in Time of War. 8vo. 21s.

THE RIGHTS AND DUTIES OF NATIONS IN TIME OF PEACE. 8vo. 15s.

Tyndall.—*WORKS BY JOHN TYNDALL, F.R.S. &c.*

FRAGMENTS OF SCIENCE. 2 vols. crown 8vo. 16s.

HEAT A MODE OF MOTION. Crown 8vo. 7s. 6d.

SOUND. With 204 Woodcuts. Crown 8vo. 10s. 6d.

ESSAYS ON THE FLOATING-MATTER OF THE AIR in relation to Putrefaction and Infection. With 24 Woodcuts. Crown 8vo. 7s. 6d.

LECTURES ON LIGHT, delivered in America in 1872 and 1873. With 57 Diagrams. Crown 8vo. 5s.

LESSONS IN ELECTRICITY AT THE ROYAL INSTITUTION, 1875-76. With 58 Woodcuts. Crown 8vo. 2s. 6d.

NOTES OF A COURSE OF SEVEN LECTURES ON ELECTRICAL PHENOMENA AND THEORIES, delivered at the Royal Institution. Crown 8vo. 1s. sewed, 1s. 6d. cloth.

NOTES OF A COURSE OF NINE LECTURES ON LIGHT, delivered at the Royal Institution. Crown 8vo. 1s. sewed, 1s. 6d. cloth.

FARADAY AS A DISCOVERER. Fcp. 8vo. 3s. 6d.

Ure.—*A DICTIONARY OF ARTS, MANUFACTURES, AND MINES.* By Dr. URE. Seventh Edition, re-written and enlarged by R. HUNT, F.R.S. With 2,064 Woodcuts. 4 vols. medium 8vo. £7. 7s.

Verney.—*CHESS ECCENTRICITIES.* Including Four-handed Chess, Chess for Three, Six, or Eight Players, Round Chess for Two, Three, or Four Players, and several different ways of Playing Chess for Two Players. By Major GEORGE HOPE VERNEY. Crown 8vo. 10s. 6d.

Ville.—*ON ARTIFICIAL MANURES,* their Chemical Selection and Scientific Application to Agriculture. By GEORGES VILLE. Translated and edited by W. CROOKES, F.R.S. With 31 Plates. 8vo. 21s.

- Virgil.**—*PUBLI VERGILI MARONIS BUCOLICA, GEORGICA, ÆNEIS*; the Works of VIRGIL, Latin Text, with English Commentary and Index. By B. H. KENNEDY, D.D. Crown Svo. 10s. 6d.
- THE ÆNEID OF VIRGIL.* Translated into English Verse. By J. CONINGTON, M.A. Crown Svo. 9s.
- THE ÆNEID OF VIRGIL FREELY TRANSLATED INTO ENGLISH BLANK VERSE.* By WILLIAM J. THORNHILL, B.A. Crown Svo. 7s. 6d.
- THE POEMS OF VIRGIL.* Translated into English Prose. By JOHN CONINGTON, M.A. Crown Svo. 9s.
- Walker.**—*THE CORRECT CARD*; or, How to Play at Whist; a Whist Catechism. By Major A. CAMPBELL-WALKER, F.R.G.S. Fcp. Svo. 2s. 6d.
- Walpole.**—*HISTORY OF ENGLAND FROM THE CONCLUSION OF THE GREAT WAR IN 1815.* By SPENCER WALPOLE. 5 vols. Svo. Vols. I. and II. 1815–1832, 36s.; Vol. III. 1832–1841, 18s.; Vols. IV. and V. 1841–1858, 36s.
- Watts.**—*A DICTIONARY OF CHEMISTRY AND THE ALLIED BRANCHES OF OTHER SCIENCES.* Edited by HENRY WATTS, F.R.S. 9 vols. medium Svo. £15. 2s. 6d.
- Webb.**—*CELESTIAL OBJECTS FOR COMMON TELESCOPES.* By the Rev. T. W. WEBB. Map, Plate, Woodcuts. Crown Svo. 9s.
- Webb.**—*THE VEIL OF ISIS*: a Series of Essays on Idealism. By THOMAS W. WEBB, LL.D. Svo. 10s. 6d.
- Wellington.**—*LIFE OF THE DUKE OF WELLINGTON.* By the Rev. G. R. GLEIG, M.A. Crown Svo. Portrait, 6s.
- West.**—*WORKS BY CHARLES WEST, M.D. &c.* Founder of, and formerly Physician to, the Hospital for Sick Children.
- LECTURES ON THE DISEASES OF INFANCY AND CHILDHOOD.* Svo. 18s.
- THE MOTHER'S MANUAL OF CHILDREN'S DISEASES.* Crown Svo. 2s. 6d.
- Whately.**—*ENGLISH SYNONYMS.* By E. JANE WHATELY. Edited by her Father, R. WHATELY, D.D. Fcp. Svo. 3s.
- Whately.**—*WORKS BY R. WHATELY, D.D.*
- ELEMENTS OF LOGIC.* Crown Svo. 4s. 6d.
- ELEMENTS OF RHETORIC.* Crown Svo. 4s. 6d.
- LESSONS ON REASONING.* Fcp. Svo. 1s. 6d.
- BACON'S ESSAYS,* with Annotations. Svo. 10s. 6d.
- White and Riddle.**—*A LATIN-ENGLISH DICTIONARY.* By J. T. WHITE, D.D. Oxon. and J. J. E. RIDDLE, M.A. Oxon. Founded on the larger Dictionary of Freund. Royal Svo. 21s.
- White.**—*A CONCISE LATIN-ENGLISH DICTIONARY,* for the Use of Advanced Scholars and University Students. By the Rev. J. T. WHITE, D.D. Royal Svo. 12s.
- Wilcocks.**—*THE SEA FISHERMAN.* Comprising the Chief Methods of Hook and Line Fishing in the British and other Seas, and Remarks on Nets, Boats, and Boating. By J. C. WILCOCKS. Profusely Illustrated. Crown Svo. 6s.
- Wilkins.**—*THE GROWTH OF THE HOMERIC POEMS*: a Discussion of their Origin and Authorship. By GEORGE WILKINS, M.A. late Scholar, Trinity College, Dublin. Svo. 6s.
- Wilkinson.**—*THE FRIENDLY SOCIETY MOVEMENT*: Its Origin, Rise, and Growth; its Social, Moral, and Educational Influences.—*THE AFFILIATED ORDERS.*—By the Rev. JOHN FROME WILKINSON, M.A. Crown Svo. 2s. 6d.
- Williams.**—*MANUAL OF TELEGRAPHY.* By W. WILLIAMS, Superintendent of Indian Government Telegraphs. Illustrated by 93 Wood Engravings. Svo. 10s. 6d.
- Willich.**—*POPULAR TABLES* for giving Information for ascertaining the value of Lifehold, Leasehold, and Church Property, the Public Funds, &c. By CHARLES M. WILlich. Edited by H. BENCE JONES. Crown Svo. 10s. 6d.
- Wilson.**—*A MANUAL OF HEALTH-SCIENCE.* Adapted for Use in Schools and Colleges, and suited to the Requirements of Students preparing for the Examinations in Hygiene of the Science and Art Department, &c. By ANDREW WILSON, F.R.S.E. F.L.S. &c. With 74 Illustrations. Crown Svo. 6d.

Witt.—*WORKS BY PROF. WITT.*
Translated from the German by FRANCES
YOUNGHUSBAND.

THE TROJAN WAR. With a Preface
by the Rev. W. G. RUTHERFORD, M.A.
Head-Master of Westminster School.
Crown 8vo. 2s.

MYTHS OF HELLAS; or, Greek Tales.
Crown 8vo. 3s. 6d.

THE WANDERINGS OF ULYSSES.
Crown 8vo. 3s. 6d.

Wood.—*WORKS BY REV. J. G.
WOOD.*

HOMES WITHOUT HANDS: a De-
scription of the Habitations of Animals,
classed according to the Principle of Con-
struction. With 140 Illustrations. 8vo.
10s. 6d.

INSECTS AT HOME; a Popular
Account of British Insects, their Struc-
ture, Habits, and Transformations. With
700 Illustrations. 8vo. 10s. 6d.

INSECTS ABROAD; a Popular Account
of Foreign Insects, their Structure,
Habits, and Transformations. With
600 Illustrations. 8vo. 10s. 6d.

BIBLE ANIMALS; a Description of
every Living Creature mentioned in the
Scriptures. With 112 Illustrations. 8vo.
10s. 6d.

STRANGE DWELLINGS; a Description
of the Habitations of Animals, abridged
from 'Homes without Hands.' With
60 Illustrations. Crown 8vo. 5s. Popular
Edition, 4to. 6d.

HORSE AND MAN: their Mutual
Dependence and Duties. With 49 Illus-
trations. 8vo. 14s.

ILLUSTRATED STABLE MAXIMS. To
be hung in Stables for the use of Grooms,
Stablemen, and others who are in charge
of Horses. On Sheet, 4s.

OUT OF DOORS; a Selection of
Original Articles on Practical Natural
History. With 11 Illustrations. Crown
8vo. 5s.

[*COMMON BRITISH INSECTS: BEETLES,
MOTHS, AND BUTTERFLIES.* With 130
Illustrations. Crown 8vo. 3s. 6d.

PETLAND REVISITED. With 33
Illustrations. Crown 8vo. 7s. 6d.

Wood-Martin.—*THE LAKE
DWELLINGS OF IRELAND:* or Ancient
Lacustrine Habitations of Erin, common-
ly called Crannogs. By W. G. WOOD-
MARTIN, M.R.I.A. Lieut.-Colonel 8th
Brigade North Irish Division, R.A.
With 50 Plates. Royal 8vo. 25s.

Wylie.—*HISTORY OF ENGLAND
UNDER HENRY THE FOURTH.* By JAMES
HAMILTON WYLIE, M.A. one of Her
Majesty's Inspectors of Schools. (2 vols.)
Vol. 1, crown 8vo. 10s. 6d.

Wylie.—*LABOUR, LEISURE, AND
LUXURY;* a Contribution to Present
Practical Political Economy. By
ALEXANDER WYLIE, of Glasgow. Crown
8vo. 6s.

Youatt.—*WORKS BY WILLIAM
YOUATT.*

THE HORSE. Revised and enlarged
by W. WATSON, M.R.C.V.S. 8vo.
Woodcuts, 7s. 6d.

THE DOG. Revised and enlarged.
8vo. Woodcuts. 6s.

Younghusband.—*THE STORY OF
OUR LORD TOLD IN SIMPLE LANGUAGE
FOR CHILDREN.* By FRANCES YOUNG-
HUSBAND. With numerous Illustrations
from 'Longmans' Illustrated New Testa-
ment.' Crown 8vo. 2s. 6d. cloth plain,
3s. 6d. cloth extra, gilt edges.

Zeller.—*WORKS BY DR. E.
ZELLER.*

*HISTORY OF ECLECTICISM IN GREEK
PHILOSOPHY.* Translated by SARAH
F. ALLEYNE. Crown 8vo. 10s. 6d.

*THE STOICS, EPICUREANS, AND
SCEPTICS.* Translated by the Rev. O.
J. REICHEL, M.A. Crown 8vo. 15s.

*SOCRATES AND THE SOCRATIC
SCHOOLS.* Translated by the Rev. O. J.
REICHEL, M.A. Crown 8vo. 10s. 6d.

PLATO AND THE OLDER ACADEMY.
Translated by SARAH F. ALLEYNE and
ALFRED GOODWIN, B.A. Crown 8vo.
18s.

THE PRE-SOCRATIC SCHOOLS; a His-
tory of Greek Philosophy from the Earliest
Period to the time of Socrates. Trans-
lated by SARAH F. ALLEYNE. 2 vols.
crown 8vo. 30s.

*OUTLINES OF THE HISTORY OF
GREEK PHILOSOPHY.* Translated by
SARAH F. ALLEYNE and EVELYN
ABBOTT. Crown 8vo. 10s. 6d.

TEXT-BOOKS OF SCIENCE.

- PHOTOGRAPHY.** By Captain W. DE WIVEL-
LESLIE ABNEY, F.R.S. late Instructor in Chemis-
try and Photography at the School of Military
Engineering, Chatham. With 105 Woodcuts. 3s. 6d.
- ON THE STRENGTH OF MATERIALS AND
Structures:** the Strength of Materials as depend-
ing on their quality and as ascertained by Testing
Apparatus; the Strength of Structures, as depend-
ing on their form and arrangement, and on the
materials of which they are composed. By Sir J.
ANDERSON, C.E. 3s. 6d.
- INTRODUCTION TO THE STUDY OF ORGANIC
Chemistry:** the Chemistry of Carbon and its Com-
pounds. By HENRY E. ARMSTRONG, Ph.D.
F.C.S. With 8 Woodcuts. 3s. 6d.
- ELEMENTS OF ASTRONOMY.** By Sir R. S.
BALL, LL.D. F.R.S. Andrews Professor of Astro-
nomy in the Univ. of Dublin, Royal Astronomer
of Ireland. With 136 Figures and Diagrams. 6s.
- RAILWAY APPLIANCES.** A Description of
Details of Railway Construction subsequent to the
completion of Earthworks and Masonry, including
a short Notice of Railway Rolling Stock. By J.
W. BARRY. With 207 Woodcuts. 3s. 6d.
- SYSTEMATIC MINERALOGY.** By HILARY
BAUERMAN, F.G.S. Associate of the Royal School
of Mines. With 373 Diagrams. 6s.
- DESCRIPTIVE MINERALOGY.** By the same
Author. With 236 Woodcuts and Diagrams. 6s.
- METALS, THEIR PROPERTIES AND TREAT-
ment.** By C. L. BLOXAM and A. K. HUNTING-
TON, Professors in King's College, London. With
130 Wood Engravings. 5s.
- PRACTICAL PHYSICS.** By R. T. GLAZE-
BROOK, M.A. F.R.S. and W. N. SHAW, M.A.
With 62 Woodcuts. 6s.
- PHYSICAL OPTICS.** By R. T. GLAZEBROOK,
M.A. F.R.S. Fellow and Lecturer of Trin. Coll.
Demonstrator of Physics at the Cavendish Labora-
tory, Cambridge. With 183 Woodcuts of Appara-
tus, &c. 6s.
- THE ART OF ELECTRO-METALLURGY,** in-
cluding all known Processes of Electro-Deposition.
By G. GORE, LL.D. F.R.S. With 56 Wood-
cuts. 6s.
- ALGEBRA AND TRIGONOMETRY.** By the Rev.
WILLIAM NATHANIEL GRIFFIN, B.D. 3s. 6d.
- NOTES ON THE ELEMENTS OF ALGEBRA
and Trigonometry.** With Solutions of the more
difficult Questions. By the Rev. W. N. GRIFFIN,
B.D. 3s. 6d.
- THE STEAM ENGINE.** By GEORGE C. V.
HOLMES, Whitworth Scholar; Secretary of the
Institution of Naval Architects. Fully Illustrated.
6s.
- ELECTRICITY AND MAGNETISM.** By FLEEM-
ING JENKIN, F.R.S.S. L. & E. late Professor of
Engineering in the University of Edinburgh. 3s. 6d.
- THEORY OF HEAT.** By J. CLERK MAXWELL,
M.A. LL.D. Edin. F.R.S.S. L. & E. With 41
Woodcuts. 3s. 6d.
- TECHNICAL ARITHMETIC AND MENSURA-
tion.** By CHARLES W. MERRIFIELD, F.R.S.
3s. 6d.
- KEY TO MERRIFIELD'S TEXT-BOOK OF
Technical Arithmetic and Mensuration.** By the
Rev. JOHN HUNTER, M.A. formerly Vice-Prin-
cipal of the National Society's Training College,
Battersea. 3s. 6d.
- INTRODUCTION TO THE STUDY OF INOR-
ganic Chemistry.** By WILLIAM ALLEN MILLER
M.D. LL.D. F.R.S. With 71 Woodcuts. 3s. 6d.
- TELEGRAPHY.** By W. H. PREECE, C.E.
and J. SIVEWRIGHT, M.A. With 160 Wood-
cuts. 5s.
- THE STUDY OF ROCKS,** an Elementary
Text-Book of Petrology. By FRANK RUTLEY,
F.G.S. of Her Majesty's Geological Survey. With
6 Plates and 88 Woodcuts. 4s. 6d.
- WORKSHOP APPLIANCES,** including Descrip-
tions of some of the Gauging and Measuring In-
struments—Hand Cutting Tools, Lathes, Drilling,
Planing, and other Machine Tools used by Engi-
neers. By C. P. B. SHELLEY, M.I.C.E. With
292 Woodcuts. 4s. 6d.
- STRUCTURAL AND PHYSIOLOGICAL BOTANY.**
By Dr. OTTO WILHELM THOME, Professor of
Botany, School of Science and Art, Cologne.
Translated by A. W. BENNETT, M.A. B.Sc.
F.L.S. With 600 Woodcuts. 6s.
- QUANTITATIVE CHEMICAL ANALYSIS.** By
T. E. THORPE, F.R.S.E. Ph.D. Professor of
Chemistry in the Andersonian University, Glasgow.
With 88 Woodcuts. 4s. 6d.
- MANUAL OF QUALITATIVE ANALYSIS AND
Laboratory Practice.** By T. E. THORPE, Ph.D.
F.R.S.E. Professor of Chemistry in the An-
dersonian University, Glasgow; and M. M. PATTISON
MUIR. 3s. 6d.
- INTRODUCTION TO THE STUDY OF CHEM-
ical Philosophy;** the Principles of Theoretical
and Systematical Chemistry. By WILLIAM A.
TILDEN, B.Sc. London, F.C.S. With 5 Wood-
cuts. 3s. 6d. With Answers to Problems, 4s. 6d.
- ELEMENTS OF MACHINE DESIGN;** an Intro-
duction to the Principles which determine the
Arrangement and Proportion of the Parts of
Machines, and a Collection of Rules for Machine
Designs. By W. CAWTHORNE UNWIN, B.Sc.
Assoc. Inst. C.E. With 325 Woodcuts. 6s.
- PLANE AND SOLID GEOMETRY.** By the Rev.
H. W. WATSON, formerly Fellow of Trinity
College, Cambridge. 3s. 6d.

EPOCHS OF HISTORY.

EPOCHS OF ANCIENT HISTORY.

Edited by the Rev. Sir G. W. COX, Bart. M.A. and by C. SANKEY, M.A. 10 Volumes, fcp. Svo. with numerous Maps, Plans, and Tables, price 2s. 6d. each volume.

- THE GRACCHI, MARIUS, AND SULLA.* By A. H. BEESLY, M.A.
- THE EARLY ROMAN EMPIRE.* From the Assassination of Julius Cæsar to the Assassination of Domitian. By the Rev. W. WOLFE CAPES, M.A.
- THE ROMAN EMPIRE OF THE SECOND CENTURY, or the Age of the Antonines.* By the Rev. W. WOLFE CAPES, M.A.
- THE ATHENIAN EMPIRE.* From the Flight of Xerxes to the Fall of Athens. By the Rev. Sir G. W. COX, Bart. M.A.
- THE GREEKS AND THE PERSIANS.* By the Rev. Sir G. W. COX, Bart. M.A.
- THE RISE OF THE MACEDONIAN EMPIRE.* By ARTHUR M. CURTEIS, M.A.
- ROME TO ITS CAPTURE BY THE GAULS.* By WILHELM IHNE.
- THE ROMAN TRIUMVIRATES.* By the Very Rev. CHARLES MERIVALE, D.D.
- THE SPARTAN AND THEBAN SUPREMACIES.* By CHARLES SANKEY, M.A.
- ROME AND CARTHAGE, THE PUNIC WARS.* By R. BOSWORTH SMITH, M.A.

EPOCHS OF MODERN HISTORY.

Edited by C. COLBECK, M.A. 18 vols. fcp. Svo. with Maps, price 2s. 6d. each volume.

- THE NORMANS IN EUROPE.* By Rev. A. H. JOHNSON, M.A.
- THE CRUSADES.* By the Rev. Sir G. W. COX, Bart. M.A.
- THE BEGINNING OF THE MIDDLE AGES.* By R. W. CHURCH, D.D. Dean of St. Paul's.
- THE EARLY PLANTAGENETS.* By W. STUBBS, D.D. Bishop of Chester.
- EDWARD THE THIRD.* By the Rev. W. WARBURTON, M.A.
- THE HOUSES OF LANCASTER AND YORK.* By JAMES GAIRDNER.
- THE EARLY TUDORS.* By the Rev. C. E. MOBERLY, M.A.
- THE ERA OF THE PROTESTANT REVOLUTION.* By F. SEEBOHM.
- THE FIRST TWO STUARTS AND THE PURITAN REVOLUTION, 1603-1660.* By SAMUEL RAWSON GARDINER.
- THE AGE OF ELIZABETH.* By the Rev. M. CREIGHTON, M.A. LL.D.
- THE FALL OF THE STUARTS: AND WESTERN EUROPE FROM 1678 TO 1697.* By the Rev. EDWARD HALE, M.A.
- THE AGE OF ANNE.* By E. E. MORRIS, M.A.
- THE THIRTY YEARS' WAR, 1618-1648.* By SAMUEL RAWSON GARDINER.
- THE EARLY HANOVERIANS.* By E. E. MORRIS, M.A.
- FREDERICK THE GREAT AND THE SEVEN YEARS' WAR.* By F. W. LONGMAN.
- THE WAR OF AMERICAN INDEPENDENCE, 1775-1783.* By J. M. LUDLOW.
- THE FRENCH REVOLUTION, 1789-1795.* By Mrs. S. R. GARDINER.
- THE EPOCH OF REFORM, 1830-1850.* By JUSTIN MCCARTHY, M.P.

EPOCHS OF ENGLISH HISTORY.

Edited by the Rev. MANDELL CREIGHTON, M.A.

- EARLY ENGLAND TO THE NORMAN CONQUEST.* By F. YORK POWELL, M.A. 1s.
- ENGLAND A CONTINENTAL POWER, 1066-1216.* By Mrs. MANDELL CREIGHTON. 9d.
- RISE OF THE PEOPLE AND THE GROWTH OF PARLIAMENT, 1215-1485.* By JAMES ROWLEY, M.A. 9d.
- TUDORS AND THE REFORMATION, 1485-1603.* By the Rev. MANDELL CREIGHTON. 9d.
- STRUGGLE AGAINST ABSOLUTE MONARCHY, 1603-1688.* By Mrs. S. R. GARDINER. 9d.
- SETTLEMENT OF THE CONSTITUTION FROM 1689 TO 1784.* By JAMES ROWLEY, M.A. 9d.
- ENGLAND DURING THE AMERICAN AND EUROPEAN WARS, FROM 1765 TO 1820.* By the Rev. O. W. TANLOCK, M.A. 9d.
- MODERN ENGLAND FROM 1820 TO 1874.* By OSCAR BROWNING, M.A. 9d.

* * * Complete in One Volume, with 27 Tables and Pedigrees, and 23 Maps. Fcp. 8vo. 5s.

THE SHILLING HISTORY OF ENGLAND; being an Introductory Volume to the Series of 'Epochs of English History.' By the Rev. MANDELL CREIGHTON, M.A. Fcp. 8vo. 1s.

EPOCHS OF CHURCH HISTORY.

Edited by the Rev. MANDELL CREIGHTON, M.A. Fcp. Svo. price 2s. 6d. each volume.

- THE ENGLISH CHURCH IN OTHER LANDS; or, the Spiritual Expansion of England.* By Rev. W. H. TUCKER, M.A.
- THE HISTORY OF THE REFORMATION IN ENGLAND.* By GEORGE G. PERRY, M.A.
- THE EVANGELICAL REVIVAL IN THE EIGHTEENTH CENTURY.* By the Rev. JOHN HENR. OVERTON, M.A.
- THE HISTORY OF THE UNIVERSITY OF OXFORD.* By the Hon. G. C. BROLICK, D.C.L.

°°° Other Volumes in preparation.
